Thus, it appears that things are back where they were prior to the April 12 announcement that Nasser had seen the light. As a matter of fact, the society had never been impressed by this highly publicized report. Our skepticism was not based on an inflexible prejudice but only on the nature of the regime which now rules the peoples of Egypt and Syria. It is a totalitarian dictatorship and like every dictatorship, it controls all channels of information and propaganda. It is not responsive to the basic needs of the people but must act always along lines which will strengthen its grip over the people. Furthermore, policy and propaganda are interrelated. Since Nasser's power is, to a large extent, predicated in his antiwesternism, it follows that he must develop the necessary supporting propaganda or else he is lost.

At the present time Nasser is in deep trouble economically. The guns and other military aid which he has received from the Soviet bloc, are no substitutes for the bread which his hungry people needs so desperately. Thus, the Nasser regime is compelled to turn to the West for economic help. However, such overtures as he makes to the West, must be examined with circumspection. It would be foolhardy, to say the least, if the United States based its own policies on Nasser's smiles, behind which he tries to hide his deepseated hatred for us.

The People's Right To Know—Tribute to California State Assemblyman Ralph M. Brown

EXTENSION OF REMARKS
OF
HON. JOHN J. McFALL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. McFALL. Mr. Speaker, in the State of California, the people's "right to know" is no longer a crusade toward better government. The crusade has been replaced by a citizenry intensely interested, accutely aware, and accurately knowledgeable of the activities and the procedures of its public bodies.

California is unique in the fact that it has recognized that good and just local government is very often and in large part a mere by-product of an alert and informed population.

The opportunity for the people to observe and the press to report on the transactions of the public's business with the public's funds is conducive to Californian's direct participation in matters of government, locally as well as on the State level.

The practice of "star chamber" and "secret sessions" is virtually eliminated by California's antisecrecy bill authored by State Assemblyman Ralph M. Brown of Stanislaus County. Assemblyman Brown's bill, giving the press and the public access to the activities of publicly elected officials and groups, is the subject of a recent award of merit presented him by the California Newspapers Publishers Association, Inc.

Under leave to extend my remarks, I offer the text of the CNPA's resolution and its tribute to Mr. Brown:

RESOLUTION

Whereas the people's right to know is an essential part of their democratic freedom, and

Whereas the Nation's press is an agent of the people in this right to know: Now, therefore, be it

Resolved by the California Newspaper Publishers Association, Inc., assembled in annual convention this 8th day of February 1958, at Coronado, Calif.:

1. That the legislature, particularly Assemblyman Ralph Brown, and the Governor of the State of California be commended for their action in enlarging this right to know by the passage and approval of necessary legislation to keep open the workings of State and local governments; and

2. That the national administration and the Congress be urged to extend this right to know to all segments of government save where the national security precludes the revelation of military information, and we commend Congressman JOHN MOSS of California, for his determined efforts on behalf of freedom of information; and

3. That the free exchange of newsmen be encouraged by the National Administration between this Nation and all nations of the world except where a state of war exists between the United States of America and any nation, so that the people have full access to the information necessary for sound decisions; and

4. That copies of this resolution be sent to the President of the United States, the Secretary of State of the United States, the President of the Senate of the United States, the Speaker of the House of Representatives, the Governor of the State of California, the president of the senate of the State of California, the speaker of the assembly, the California congressional delegation, and to Congressman JOHN MOSS and Assemblyman Ralph Brown.

Fair-Trade Paradox

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. ALGER. Mr. Speaker, since there is every likelihood that advocates of a Federal fair trade law will be in full cry shortly, and certainly by the time a new Congress convenes, I want to call to the attention of my colleagues some very pertinent remarks on the subject by Robert A. Bicks of the Justice Department's Antitrust Division.

The Department's official views, of course, will be contained in the hearings published by both House and Senate committees. However, Mr. Bicks' statement is so cogent, goes so straightly to the heart of the matter that I especially want to commend it to your attention. Excerpts from his statement follow:

Thus, fair trade—urged by some as a benefit to the small independent retailers—in fact facilitates the very discount-house competition of which some small independent retailers now complain. On the other hand, apart from discount-house operations, large mass retailers—for example Sears Roebuck and Macy's—may perhaps use fair trade as an umbrella to preserve from competition their own private brands which smaller retailers cannot afford. Thus, even apart from the discount houses, in the mass retailing field, fair trade, again, may thwart rather than aid small independent retailers' ability to compete * * * fair-trade prices

may afford such wide profit margins as to invite the discount operation's slash.

* * * * *

More difficult to gage is the impact of fair trade on small retailers' ability to compete with mass department store vendors, like Macy's and Gimble's, and large mail-order sellers, like Sears Roebuck and Montgomery Ward. The discount house, as we have seen, prospers by selling nationally branded items with only more or less careful observation of fair-trade restrictions. The large department store or mail-order house, in contrast, avoids fair-trade prices largely through resort to private brands.

We have insufficient data available to sketch the precise significance of this private brand phenomenon. We attempted to get such information by request from some of the companies above. Unfortunately, we have not proven successful. Accordingly, I can present little significant new data for your consideration here.

I can, however, suggest a possibly profitable path for this subcommittee's inquiry. Thus, large department stores or mail-order houses may well encourage manufacturers to fair-trade national brand items—the only items which the small retailers can secure. At the same time, such mass sellers may market their own private brands—substantially identical to nationally branded goods—at prices lower than fair-trade markups for the nationally branded counterparts. The result could be to enable large retailers, by hampering their smaller competitors' ability to cut prices, to hold an umbrella over the market for their own private branded items. In closing, I take the liberty of suggesting that this question might well be an area ripe for this subcommittee's inquiry.

The National Defense Education Act of 1958

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1958

Mr. DENT. Mr. Speaker, in adding my voice in support of H. R. 13247, the National Defense Education Act of 1958, I do so with full knowledge of the importance of this legislation.

The purpose of this bill, H. R. 13247, is to assist in the improvement and strengthening of our educational system at all levels and to encourage able students to continue their education beyond high school. It is designed to accomplish these objectives by, first, establishing a limited program of Federal scholarships; second, establishing loan programs for students at institutions of higher education; third, providing grants to States for strengthening science, mathematics, and modern foreign language instruction in public schools; fourth, establishing language institutes and area centers to expand and improve the teaching of languages; fifth, assisting in the expansion of graduate education; sixth, assisting in the improvement of guidance, counseling, and testing programs; seventh, providing for research and experimentation in the use of television, radio, motion pictures, and related mediums for educational purposes; and, eighth, improvement of statistical services of State educational agencies.

The bill contains all of the corresponding proposals recommended in 1958 by the Department of Health, Education, and Welfare, plus two others, the loan program and the provision for research and experimentation in more effective utilization of television, radio, motion pictures, and related mediums for educational purposes.

America is confronted with a serious and continuing challenge in many fields. The challenge—in science, industry, government, military strength, international relations—stems from the forces of totalitarianism. This challenge, as well as our own goal of enlargement of life for each individual, requires the fullest possible development of the talents of our young people. American education, therefore, bears a grave responsibility in our times.

It is no exaggeration to say that America's progress in many fields of endeavor in the years ahead—in fact, the very survival of our free country—may depend in large part upon the education we provide for our young people now.

The primary responsibility for education, in the future as in the past, should remain with the States and local communities and higher educational institutions. The Nation looks primarily to citizens and parents acting in their own communities, to school boards and city councils and State legislatures, to teachers and school administrators, and to the trustees and faculties of our colleges and universities to develop the support and the educational effectiveness needed to bring our educational system more abreast of today's needs.

In an effort which is so critical to the national interest and to national security, however, the Federal Government can and should play a constructive role. This role should be one of encouragement and assistance to the States and communities and higher educational institutions as they strive to meet certain critical national needs.

There is ample precedent for such action. For example, as early as 1862, the Federal Government acted to meet a national need in education by providing aid to land-grant colleges. During World War I, Congress recognized a great national need for more agricultural and mechanical training by enacting the vocational education program. With Federal support and encouragement, the States and communities greatly strengthend their own educational activities in these fields. This program over the years has contributed greatly to individual opportunity and to national strength.

In much the same way, H. R. 13247 is designed to help our educational system meet the grave challenge of our time. Although the bill embraces a variety of approaches, its central purpose is to encourage improvement in the quality of education particularly with respect to those aspects which are most important now to national defense.

A number of provisions in the bill are aimed specifically at reducing the waste of needed talent which results when students with great potential ability drop out of school or college too soon. Several other provisions are designed to encourage an improvement and expansion in the teaching of science, mathematics, and modern foreign languages. Another provision recognizes the need for more college teachers to prepare future scientists, teachers, and leaders in many fields.

It is exceedingly important to maintain a balanced program of instruction in all fields. The committee does not desire that one field of training be developed at the expense of another. It is evident, however, that many of our elementary and secondary schools today are not providing instruction in science, mathematics, and modern foreign languages of sufficient quality or quantity to meet today's increasing needs in these fields. Serious shortages of equipment in all three fields exist. H. R. 13247 provides financial assistance to State for use by local school systems in improving equipment and materials in the fields of science, mathematics, and modern foreign languages, both in quality and in quantity. Grants also are provided to assist State departments of education in expanding their professional services to local schools in these subjects. In addition to grants to the States, the legislation authorizes the establishment of institutes for teachers to improve the quality of instruction of modern foreign languages in the elementary schools, the secondary schools, and the colleges and universities. Language institutes and area study centers would also be established to provide training in the so-called "rare" languages, many of which are not now taught in the United States, but which are spoken by many millions of people and are essential to the conduct of our economic, cultural, and political relations with other peoples. Grants for basic research in improved instruction and newer methods and materials in the teaching of modern foreign languages are also provided.

In the development of this legislation we have sought to preserve the fundamental principle that education in our country is a State and local responsibility. States and institutions of higher education retain basic responsibility for planning and administering the programs authorized in the bill.

The estimated cost of the bill is approximately $840 million for the basic 4-year period, and an additional $230 million during the next 3 years as the program is phased out on an unusually reduced level.

We believe this is a modest amount when measured against the need and the benefits we can derive from the enactment of this legislation.

In conclusion, I want to pay my respects to Congressman ELLIOTT for his untiring efforts in behalf of this legislation.

His work, in and out of committee, has been a contributing and determining factor in bringing this bill to the floor.

He was ably assisted by others too numerous to mention; however, their work was needed to finish the project headed

by Mr. ELLIOTT, the chairman of the subcommittee.

This is a start, not everything we hoped for, but a start on the road of educational opportunity for our children with the ability but lacking the funds to pursue their education without help.

Let us get it started and then add as we go.

Statement by Hon. James A. Farley

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 6, 1958

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a statement by the Honorable James A. Farley, of New York, former Postmaster General of the United States:

An American election is something more than a political contest. From the earliest days of this Republic, the American people have elevated important campaigns into national ceremonies, which are occasionally great theater, and seldom lacking in high entertainment value. The torchlight parade, the bunting, the posters, the village bandstand and long-winded orators are part of our historic folklore. But this is the dynamic age of raido, television, and daily five-edition newspapers. However much we may have loved the old standbys, and none loved them more than I, we must take notice of a changing world. Television has eliminated the professional spontaneous demonstrations from conventions, just as modern communications have made ridiculous the spurious draft to public office. Much as all of us liked and enjoyed these delightful old customs, they are gone. But tens of millions of past generations enjoyed the hoary, hackneyed plot; the rehearsed enthusiasm for the shy candidate, his initial withdrawal, the ardent pursuit, the coy consent to listen to the passionate plea of the desperate professional partisans, the troubled candidate's withdrawal to the mountaintop to wrestle with himself, the anguished wait, the breathless suspense, the candidate's final mock-reluctant acceptance, the wild exaltation of the carefully assembled claque that the country is saved, must ever remain one of the most cherished folk-operas of times past. In the days when this was in vogue it was a surefire cliffhanger, a real-life soap opera. But, unfortunately, history repeats itself only as a farce.

It would be a pity to drag out this time-honored though time-worn comic opera and tag it on a fine young mayor like Robert Wagner. As one who has witnessed various presentations of this show, it is my considered opinion that it has its hallowed and nostalgic place along with Weber and Fields

But this is the sixth decade of the 20th century and the solution is in facing facts, not in a search of a theatrical warehouse. Mayor Wagner is enough of a star in his own right to deserve better props and better material. Further, if I may speak as one with some professional experience in these matters, it seems to me downright amateurish to take a very able young mayor and cast him as the juvenile lead in the most transparently absurd production since Charlie's Aunt. Nor can I easily imagine as seasoned and distinguished a leader as Carmine De Sapio accepting a buffoonish role.

Since Gen. William Tecumseh Sherman's classic refusal, over 90 years ago, anyone in politics knows full well that no draft is possible unless the recipient has given his previous approval. I doubt very much whether Mayor Wagner has ever seen this preposterous script, much less accepted the part. I am certain that he will disdain any clumsy device whereby a few well-intentioned zealots will importune him to break a solemn promise extended by him and accepted by the people of New York City in the last campaign.

I have just returned from several up-State New York tours, where I was afforded a good old Democratic reception by good old Democratic friends. They tell me that if there is an open convention I will be nominated With their usual good humor and good sense they urged me not to be asleep at the switch. One gave me a hearty laugh by suggesting that I might be side tracked via the Union Pacific but I told him that that would be both unfair and unwise, and our Governor is neither.

With the Buffalo convention only 3 short weeks away, it is not improbable that my opponents will prevail upon some prominent and innocent citizen, as yet in the wings, to come forth as their pinch-hitter. I am not naive enough to believe where will not be a last desperate effort to prevent my nomination, a nomination which I know is the wish of the thousands and thousands of New York Democratic men and women who feel I am entitled to it.

Accordingly, it looks to me as if one of those healthy old-fashioned intra-Democratic Party battles is developing, the kind which caused Will Rogers to jovially remark that a Democrat always reserves his best shillelagh for another Democrat. My position, of course, is clear; I most certainly want to be the second Senator from New York and I, even more certainly, am not going to be the first American Irishman who ran away from a fight.

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. ALGER. Mr. Speaker, a most illuminating report on resale price maintenance was made several years ago by the Canadian Committee To Study Combines Legislation. In its report to the Honorable Stuart G. Garcon, P. C., Q. C., Minister of Justice and Attorney General of Canada, dated March 8, 1952, the committee expressed opposition to the establishment by law or private agreement of minimum resale price maintenance because such agreements place a real and undesirable restriction on competition and have a general tendency to discourage economic efficiency.

That is why—

The committee stated—

the prescription and the enforcement of minimum resale price maintenance must be viewed as manifestations of a restrictive or monopolistic practice which does not promote general welfare.

In view of the bill, H. R. 10527, now pending before the Committee on Interstate and Foreign Commerce to establish fair trade on a national basis, I should like to bring this report of the Committee To Study Combines Legislation to the attention of Members of Congress. The general conclusions and recommendations of this committee are reproduced below:

GENERAL CONCLUSION AND RECOMMENDATIONS

The committee has studied resale price maintenance in the light of the two standards of judgment originally set up, namely, the desirability of a free economy and the need for economic efficiency. This study has led the committee to the general conclusion that resale price maintenance, on the growing scale now practiced, is not justified by either of these standards. It represents a real and undesirable restriction on competition by private agreement or "law" and its general tendency is to discourage economic efficiency. That is why, in our opinion, the prescription and the enforcement of minimum resale prices must be viewed as manifestations of a restrictive or monopolistic practice which does not promote general welfare.

The committee, therefore, recommends that it should be made an offense for a manufacturer or other supplier:

1. To recommend or prescribe minimum resale prices for his products;

2. To refuse to sell, to withdraw a franchise or to take any other form of action as a means of enforcing minimum resale prices.

It is to be noted that the committee does not recommend that it be made an offense to prescribe and enforce resale prices which are not minimum. It follows that suppliers would be free to suggest and enforce maximum resale prices. It should not be overlooked that the fixing of a specific resale price unavoidably involves the fixing of a minimum price. It is useful to compare these recommendations with the British proposal which reads as follows:

"The Government proposes to provide in the legislation to be introduced that manufacturers shall be entitled to indicate, recommend, or prescribe only maximum prices for the resale of their goods and it will be unlawful to give any indication of resale price unless it is clearly stated that the price indicated is a maximum."[1]

As can be readily seen, the committee's recommendations do not go as far as the British proposal. While in the legislation which is contemplated in the United Kingdom the manufacturer will not be entitled to mention any price, unless it is clearly indicated that it is a maximum, it would still be possible, in the framework of our proposals, to indicate a maximum or other price and to issue price lists, provided that it is made clear that the price mentioned is not recommended or prescribed by the manufacturer as a minimum.

The committee is not prepared to recommend action so drastic that it would interfere with established practices of issuing list prices. It is of the opinion that it will be sufficient to prohibit the recommendation, prescription, or enforcement of minimum resale prices. If all list prices were to be made enforced maximum prices, we think it not improbable that the result would be merely higher list prices.

As to the "loss-leader" device, the committee believes that it is a monopolistic practice which does not promote general welfare and therefore considers that it is not compatible with the public interest. However, we do not believe that it presents any immediate danger: extreme forms of price cutting are not very likely in this period of inflation and relative scarcity. Moreover, we are convinced that there can be found other effective and more desirable methods of controlling the "loss-leader" than minimum

[1] Board of Trade, A Statement on Resale Price Maintenance, June 1951, p. 11.

resale price maintenance. Present circumstances afford time to make a careful study of such methods and the committee, therefore, does not think it imperative to make an immediate and hasty recommendation regarding that practice.

The Civil Rights Act of 1958

EXTENSION OF REMARKS
OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1958

Mr. ENGLE. Mr. Speaker, last month I submitted a statement to the House Judiciary Committee pointing up the urgent need for a civil rights bill to protect the constitutional rights of all persons. Under leave to extend my remarks I wish to include my statement in the RECORD, as follows:

STATEMENT OF HON. CLAIR ENGLE, OF CALIFORNIA, BEFORE THE HOUSE JUDICIARY COMMITTEE IN SUPPORT OF THE CIVIL RIGHTS ACT OF 1958, JULY 11, 1958

Last year I was privileged to be a Member of the House of Representatives when it passed the first meaningful civil rights bill in 82 years. Those of us who stood our ground for a vigorous civil rights measure were proud of the bill that left our Chamber. But in the legislative process that followed we were disheartened to see a vital section torn from the bill, leaving a gaping hole in the measure as it went to the White House.

Nevertheless, we felt a distinct sense of accomplishment. After many years of flagrant violation of the 15th amendment to the Constitution we now had on our statutes books concrete recognition that the Federal Government has a direct responsibility in protecting the voting rights of every citizen whatever his creed, his race, or his color. Supporters of the original bill were therefore not discouraged. They proceeded to pick up the pieces and to set their sights on a restoration of the discarded section of the bill to enforce the constitutional guarantee of equal protection of the laws.

The enactment of the 1957 civil rights law recalled another more dramatic event that took place in 1954. It was in that year that the Supreme Court of the United States handed down its explosive decision declaring that under our Constitution all schoolchildren, regardless of origin, color, or religion, are unequivocally guaranteed equal protection under the law. After 80 long years it was an historic moment.

The 1954 decision broke the logjam. The fight for civil rights took on new momentum—and in 1957 the first civil rights law of any consequence in more than 82 years became a reality.

We have had 4 years to take stock since the Supreme Court's decision, and 1 year to judge the adequacy of the 1957 civil rights law. The findings are a discredit to us as a nation and as a world power.

We find that there has been a shameful flouting of the mandate of the Supreme Court.

We find that some States are making subtle and not so subtle efforts to pass ordinances to render ineffective the law of the land.

We find that in many areas aggrieved individuals who attempt to assert their constitutional rights are blocked by a solid wall of intimidation and repression. We find that many ways are being found to silence the friends and supporters of desegregation. Teachers and other public servants who speak up for equal rights for Negroes suddenly find themselves without jobs. Organization, such as the NAACP, who challenge proclaimed State policy are facing an almost impossible task as their limited resources attempt to buck massive-resistance tactics.

And so we find that 4 years after the Court's decision there remain more than 2,100 segregated school districts in 17 Southern and border States. In those 17 States more than 10 million American schoolchildren, 7½ million whites and 2½ million Negroes, plus the uncounted children in de facto segregated situations in the North and Southwest, are today denied the equal protection of the laws by being denied the opportunity to attend desegregated public schools. Here we have 10 million schoolchildren being taught according to the ways of segregation and discrimination in a land where segregation and discrimination are unlawful.

The moral victory won in 1954 has taken on a hollow ring that can be heard in the far reaches of Asia and Africa.

We have failed in the Halls of Congress and in the corridors of the executive branch. Congress failed in 1957 when it blocked out of the civil-rights bill the section that would have unmistakably committed the Federal Government to enforce the constitutional rights of all persons to equal protection of the laws. The President and the executive failed miserably in showing no leadership, in equivocating when a firm stand was called for at the first flaunting of the Federal mandate.

I am not overlooking the positive side of the picture. I am aware of the fact that desegregation has begun for over 2 million white children and 400,000 Negro children who in 1952 attended segregated schools. But I cannot overlook the deplorable fact that the overall program of desegregation in our public schools has failed to move forward as rapidly as it should.

The 14th amendment to our Constitution states that no State shall "deny to any person within its jurisdiction the equal protection of the laws." In too many areas of this country neither the letter nor the spirit of that decree has been observed. The Supreme Court in 1954 made a valiant attempt to underscore and reinforce that mandate to protect the rights of the schoolchildren of the Nation. Regrettably this was not enough. That is why it is imperative that we have a law that puts the full weight, the full force and power of the legislative and the executive branches of the Federal Government behind that judicial decision.

I believe wholeheartedly that the Celler-Douglas bill entitled "The Civil Rights Act of 1958" answers that purpose. This bill in no uncertain terms commits the Federal Government to the moral and legal responsibility for implementing and enforcing the constitutional guaranty of equal protection of the laws. The most important objective of the measure is to make clear that the Federal Government accepts the leadership and the responsibility in the area of school desegregation. But the bill is not limited to school desegregation. It contains the legal power and remedy to bring suits to guarantee the equal protection of the laws to every American denied his rights because of race, color, religion, or national origin.

The Celler-Douglas bill is a masterly piece of work in combining the ideals of civil rights with a practical plan for bridging the gap between prejudice and enlightenment. It improves on the discarded part III of last year's bill by laying out a working program to guide school districts in the desegregation process. It draws heavily on the know-how and resources of the Department of Health, Education and Welfare by authorizing that Department to work hand in hand with the school districts in providing services of specialists, in appointing advisory councils, in giving the kind of technical assistance not available to the communities. In addition, it authorizes the Department to make grants for school facilities, for additional teachers and specialists, and for training courses. In short, the major emphasis in the bill is on assistance and cooperation.

But the proposed legislation has by no means overlooked the need for legal power and enforcement authority where the helping hand of the Federal Government fails, and it clearly and plainly empowers the Department of Justice to step in and enforce the law when a school district refuses to yield.

Moreover, the bill goes beyond this basic legal power and authority. It embodies additional provisions that reflect the wisdom and experience of realistic men. While the measure strongly reaffirms the principle that all men are created equal, it does not fail to recognize the hard cold facts of life. It recognizes that persons deprived of their civil rights are usually in no position either economically or socially to institute and pursue court actions to enforce those rights. The bill recognizes that high sounding legal rights are not worth a tinker's dam if left entirely in the hands of impoverished, intimidated, unsophisticated persons. And so the legislation does not settle for a restatement of man's inalienable rights or for general enforcement powers of the Justice Department. It gives the Attorney General the authority to step in and start civil court actions for aggrieved persons who are unable themselves to seek legal protection. We would all like to believe that the principle "equal justice under law" is not an empty platitude. But even the most naive of us know that in the absence of a sharp instrument to defend the rights of the underprivileged it is a meaningless phrase. No one penetrated the irony of those words better than Anatole France when he said: "The law, in its majestic equality, forbids the rich as well as the poor to sleep under bridges, to beg in the streets, and to steal bread."

The Celler-Douglas bill will bring order to the disarray in our legal house. It will return to our Negro schoolchildren their right to human dignity. It will bring peace of mind to their parents. And it will, moreover, stop the growing false sense of superiority which segregated public schools nurture in our white schoolchildren.

There is, I'm afraid, some danger that the domestic issue of civil rights may pale against the more dramatic backdrop of events abroad. I hope that the Members of Congress will keep in mind that this is not entirely a domestic issue, and that it may soon be too late to reaffirm in a civil rights law at home the principles that we project in our foreign relations. Now is the time to shorten the gap between our pretensions and our performances in the field of civil rights if we are to maintain the confidence of the peoples of the Middle East, the Far East, and Africa. We will be guilty of grave dereliction if we default this year on a bill urgently needed to buttress our legal stand on school segregation. Without a strong unequivocal measure we will find ourselves buried in a landslide of Little Rocks. And, more important, we will find that we have lost the precious ground gained in the painfully slow march toward the ultimate in equality and justice for all.

Social Security Amendments of 1958

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 4, 1958

Mr. HOLLAND. Mr. Speaker, perhaps the most important unfinished business before this Congress is final action on the social security amendments approved by the House. Although the bill did not go as far as I had hoped it would in increasing the amount of benefits, and in other respects, I voted for it because I realize that it was a compromise measure and it seems of the utmost urgency to me that some change be made in this regard before the Congress adjourns.

Briefly, the bill as reported by the Ways and Means Committee and passed by the House without amendment under a closed rule, would:

First. Increase benefit amounts across the board by 7 percent to bring them in line with increases in the cost of living which have occurred since the last increase in 1954.

Second. Raise the wage base, which serves as a basis for benefit amounts and for taxes from $4,200 to $4,800 to bring it more nearly in line with the increase in wages which has occurred in the past 10 years.

Third. Strengthen the program of benefits for permanently and totally disabled men and women, which was established in the 1956 amendments, by (a) making benefits available not only to the disabled worker aged 50 or over but to his dependents as well, in the same ways that the dependents of a retired worker are not eligible for benefits; (b) removing the eligibility requirement that now denies these benefits to a worker who could not work in covered employment during the last year or two before his impairment became total, so that people with a progressive illness can qualify, and (c) eliminating the provision which now cancels or reduces the amount of the disability benefit by the amount of benefits received under other Federal programs or State workmen's compensation programs.

Fourth. Liberalize the retirement test, which cancels benefits on the basis of earnings, so that retired workers can earn $100 or less—now $80 or less—in a month without loss of benefits.

The bill further recognizes the special health problems which face retired men and women by requesting the Department of Health, Education, and Welfare, to conduct a study including the study of a proposal by a number of Members of Congress that the cost of hospital and nursing home care, up to 180 days a year for people otherwise eligible, be covered by social security. The committee expressed its concern over the fact that the costs of needed hospital and nursing home services is out of the reach of many older people and asked that this proposal, as well as a number of other alternatives, receive careful review so that Congress would be in a better position to decide what legislative measure, if any, should be taken to meet this problem.

I am very much concerned, Mr. Speaker, with the situation of our older men and women on social security because I know very well that each upward step in the cost of living during the past 2 years has, in effect, taken nickels and dimes out of their pockets. We must, also, I believe, be especially aware of the fact that social security checks are a major source of income for the majority of our older people—checks which now average just $65 per month for a retired worker. This fact is attested by a survey last December, conducted by the Department of Health, Education, and Welfare, which showed that 60 percent of the married couples on the rolls had only $1,200 or less of outside income in addition to their social security.

I am looking forward to final action by the Congress, on this measure, now pending in the Senate, at an early date. The security and well-being of some 12 million Americans today—and of most of us tomorrow—depends upon congressional action to keep our social security system in line with our economic system.

The Civil-Rights Bill

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 9, 1958

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting editorial written by Mr. Monroe Sweetland and published in the Milwaukie (Oreg.) Review:

[From the Milwaukie (Oreg.) Review of July 31, 1958]

"MYSELF, I'M NOT PREJUDICED, BUT MY CUSTOMERS—"

Last week several hundred Masons from the Western States, Alaska, and Hawaii, gathered in Portland for the annual convention of Prince Hall Rite of the Masonic order. They met all week at the Masonic Temple, stayed at all the downtown hotels, spent their good money at the downtown cafes and shopped the stores. They delighted in tours to our scenic spots, admired Oregon's beautiful homes, and sang the praises of the hospitality of the City of Roses.

In short, they were received as we like to think we receive all visitors, and they expressed the appreciation we all like to hear.

Why do we even bother to comment on this, when it happens almost every week with some big convention or other?

Well, we mention it because the Prince Hall Masons are Negroes.

Just 20 year ago the Portland branch of the National Association for the Advancement of Colored People, of which Milwaukie's gentlewoman, the late Annie Ross Roberts, was a principal patron, was organizing the fight for equal accommodations in Oregon's public places. A convention like this would have been impossible in 1938. Portland hotels and restaurants frequently refused service to nonwhites, and usually rejected Negroes for service.

When the civil-rights bill was defeated in the 1939 legislature at Salem, the refrain of the innkeepers was always "Myself, I'm not prejudiced, but my customers won't stand for it." The same pious buckpassing was heard from most restauranteurs, motel operators and even hospitals.

Many factors have been at work, notably in the churches, the schools, and labor organizations. By the time civil rights and fair employment practices laws were passed following World War II, the battle for equal rights was won. Only isolated cases have arisen under the acts. Housing remains the principal vestige of bigotry and discrimination, and even there the restrictions of only a generation ago against the foreign born, persons of Oriental or Indian descent, or even against some religious minorities, have gone. Only Negroes still face major housing problems, but that battle is rapidly being won, too.

Nearly a thousand Negroes convened in Portland last week without a ripple of trouble. They were a more orderly, sobrietous group, to be sure, than many veteran and fraternal pow-wows have been. But the big fact is that the dire forebodings of the alarmists of 20 years ago were completely refuted by this and many day-to-day experiences as we work, live, and play together in Oregon.

News Article States That Steel Price Boost Keeps Inflation Rolling Along

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I present the text of a special article appearing in the Christian Science Monitor for August 2, 1958, by William H. Stringer, chief of the Washton news bureau of the Christian Science Monitor:

STEEL PRICE BOOST KEEPS INFLATION SPIRAL ROLLING ALONG

(By William H. Stringer)

WASHINGTON.—The steel companies have increased their prices after all—not as much as in some years—but enough to boost the price of steel in the average automobile by something like $10.

Although a $10 price additive is going to deter few persons from buying a $2,500 automobile, still a bill for an extra million dollars for steel is not going to help a company like Chrysler, already facing a deficit in 1958. Nor will the steel boost fail to show itself, gradually and inevitably, in the cost-of-living index, as steel users, ranging from appliance manufacturers to bobbypin makers, pass along the higher price.

In short, the long-range problem, that annual, persistent wage-price inflation, is still with us, unresolved.

Congressional concern, pleas from the White House for industrial statesmanship, and a brighter public spotlight on the wage-price spiral—all helped to hold the steel increase to $4.50 a ton.

The price decision took account of many factors: On July 1 steel wages went up 13 to 20 cents an hour, due to the steelworkers' 3-year contract. Steel corporation profits have been falling, in some instances, due to reduced capacity. With the recession tapering off, prospects for new orders are hopeful.

price boost or no price boost. With Congress adjourning soon, punitive legislation is unlikely this yeaf. And with the White House having its hands full of Lebanon and summit preparations, it is unlikely that anybody is going to be summoned to Washington and be asked to retract the price increases.

There is also the disinclination of the steel companies to meddle with their union wage contract, at a time when the steelworkers are having their own presidential crisis, with David J. McDonald, steel union president, apparently on the way out.

These reasons are all interesting; some are impressive. Steel officials are not totally oblivious to the problem. One steel official recently said: "I am concerned, but I don't know of any practical remedy."

In tackling the problem the United States now does have some accumulated data.

We know, for instance, that in a moderately serious recession like that of 1957–58, prices do not drop. It takes a riproaring depression to force powerfully based corporations—steel, automobiles, oil, for instance—to capitulate on the price front, or to persuade labor unions to forgo their anual round of wage increases.

We know, also, that Western Europe recently has been reducing steel prices, to gain larger volume. And while it is strange to have the economics minister of a formerly cartelized nation lecturing the United States, still it is significant that West Germany's Ludwig Erhard, after a tour here recently, observed: "The one alarming symptom I have observed in the American economy is the decline in production coinciding with a rise in prices. * * * It is against the spirit of free enterprise to raise prices in an attempt to maintain profits at a certain standard, regardless of production and sales."

We know also that the Henry Ford philosophy—expand your market and create new job opportunities by constantly reducing the price of the product—has been heavily modified, in steel, autos, oil, and now perhaps in aluminum.

And we know that a novel definition of "competition" has developed—when all the big producers boost prices by precisely identical amounts in precisely the same week. The explanation of Roger Blough, chairman of the board of United States Steel, that "a price that matches another price is a competitive price" sounds fine when prices are falling, but not when they are rising. Senator ESTES KEFAUVER, Democrat, of Tennessee, comments that it is as though Macy's in New York proclaimed: "Our prices are always exactly as high as Gimbels."

What should be done? Senator KEFAUVER wants to explore the antitrust angle. Others question whether some companies (notably in the auto field) have not become big beyond any requirements of efficiency. Industrial statesmanship—price restraint, wage restraint—can help a lot. More explanation of all the ramifications—a larger public understanding of all the pros and cons—is in order.

The fundamental fact is that this recession didn't cure the wage-price spiral. It's ready to roll again.

Albert Graichen

EXTENSION OF REMARKS

OF

HON. ROLAND V. LIBONATI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1958

Mr. LIBONATI. Mr. Speaker, a truly great American died Thursday, July 31, 1958, in a small, friendly cooperative hospital situated at Wild Rose, Wis. He died of old age—87—they say. Yes, when the body refuses to perform its natural functions, the soul, beckoned by the Angel of Death, like a frightened bird, takes wing. In this instance, we who knew him say he earned his heavenly fare. "By their works shall ye know them, by their deeds shall ye judge them."

Every one loved Albert, especially the waifs at the American Boys Camp at Coloma, Wis., sponsored by the Legionnaires of Illinois and their friends. He came from a distinguished family of artisans in the Coloma area.

He was born on December 1, 1871, in Chicago's downtown loop, of humble parentage; and, at the age of 1, his family moved to Marshfield, Wis., to live on a farm. His father was more woodsman than farmer and, after several changes to other farms, settled in the Coloma area. Farming lands in these sections had been worked out due to the impoverishment of the soil. This resulted from the constant year after year planting of the potato crops, without enriching the soil by fertilizing it—or rotating other plantings—to restore its productivity.

And so during this recession period, Albert and his dad went to the lumber camps for work. Thus, at an early age—7—Albert went out into the world of logging, with his dad, as a water boy. The sharp ax edge taught him to respect rough men. The vibrant singing, methodical unison of solid blows told the story of power and teamwork. The silence of the forest influenced his watchfulness and alertness to sudden danger.

In a melting sun, water was important to the workmen and always in demand. Albert was always ready and anxious to please. And so he spilled very little; the hike to the stream was nigh on to a mile, he kept it fresh. So the men never cursed at him. He did this simple and important chore well, and his dad was proud of his ever-happy and smiling son. The boss, as well as the men, liked him and gave him coins. He learned what it meant to please others, no matter what type of men they were.

It was not long before he became a "kitchen slave" and did odd jobs for the cook as well as for the crew.

And so from camp to camp Albert put in his apprenticeship, working and learning with the tools of his trade. He became a lumberjack.

His dad was a versatile man and taught him many things, too. Strangely, all sorts of knowledge had to be learned and applied in far away places, far from cities and farms. Dad studied books on medical subjects, and administered to the men in case of illness, even performing operative surgery in critical cases, such as amputations, professional men being inaccessible and hundreds of miles away. Albert acted as his surgical nurse and worked with him, becoming very proficient in the use of medicine and performing minor surgery.

At a time when most young men were seeking pleasures, caresses and love, Albert was facing the cold realities of life's experience in the world of pioneers, back in the wildernesses of northern Wisconsin, upper Michigan, and southern Minnesota.

And so he wandered about, wherever men were needed—even as far west as Spokane, Wash., where he worked on a gigantic building project. He soon became carpenter-foreman, and became an apt student in reading blueprints, structural engineering plans, and concrete specifications and studies related to the building trades. It can be truly said that even without a technical education he was, at 35, thoroughly schooled in experience to handle the entire job involving all the trades, as a general foreman.

In his middle thirties, getting work was difficult—1907 panic—and returning to the central western Wisconsin area, there was little work to be had, outside of several building jobs as foreman, in Milwaukee and Wisconsin Rapids.

Upon returning to Coloma, Wis., he married a genteel and gifted lady, a schoolteacher, Miss Elizabeth, who bore him 1 son and 3 daughters, all wonderful children. They were a closely endeared and loyal family.

His building activities in this area are well known. His great knowledge of lumber and building materials made him a valuable consultant. His freehand drawn plans, platted and squared on rough, meat-wrapping paper, measured to scale, were perfection itself. The State of Wisconsin approved these architectural plans, as they were drawn, without question. His ability carried respect. He had been recognized for his honest and efficient work by the State officials. The law, under the "grandfather clause," Albert, having registered plans before the State Assembly had passed the Architectural Supervisory Act, or the University of Wisconsin had established a School of Architecture, was listed under this classification.

Derrill Follette, the banker, an old pioneer from England, who settled in the Coloma area in the early 19th midcentury, recognized his great ability and talent, and with great confidence in his loyalty and honesty, placed him in charge of the Coloma Lumber Co., formerly owned by other interests, where he remained for over 30 years.

Albert trained many men on the job in the trades of carpentry, concrete and steel work, to say naught of the short cuts and secrets known only to the clever artisan. All the Graichens are master craftsmen, and Albert was their mentor.

Mr. Frank Calugi, a Chicago political worker and court bailiff, an old friend, who not only arranged for the camp purchase, but has been very charitable in many ways, both financially and by donating building materials to the camp, introduced me to Albert and his brother Gust on a matter of business in the latter part of 1937, relating to having purchased from the United States Government a 180-acre tract, with a private lake and farm buildings, 2½ miles from the city of Coloma, Wis., to be used as a boys' and girls' camp for indigent children.

My intimate association with this great man has extended for a period of 22 years.

The building of the camp started in 1937. Albert selected the highest knoll, overlooking the little lake, and broke ground. The excavation was started with an old drag shovel, purchased by him for $5, which he repaired to render it serviceable. Two horses drew it across the land marked for the foundation of the big lodge, 50 by 80 feet, and about 50 feet at its peak—English-type basement, windows at ground level; 2 stories and a first floor with 2 rooms in front for the director, and 2 rooms in back for examination and first-aid rooms; also, a large hall for sessions and lectures. The second floor has a beautiful balcony effect, with room for 50 double-deckers for sleeping quarters. The foundations and stone fronts were built of hewn stones of different colors a beautiful sight, with its high peaked roof reaching to the heavens. Later, he added 2 gigantic fireplaces—15 feet long, one in the basement and the other in the first-floor hall.

The first load of lumber—5,000 feet—arrived at the camp on New Year's Eve. We had started—it was tough—with no money, but we had credit; people believed in the plan and went along. It was nip and tuck all the way. He kept the payroll and ran the show. I hustled the money, and the Lord helped me time and again—something always happened just at the crisis of things. That was a rough winter, snow and ice—the stone men, Muskie, Albert, Strunke, Gust, and Krueger, worked with leather gloves, and Albert ordered fires around the stone piles so that the men could handle them, in splitting them for the front facade.

One hundred thousand feet of lumber went into that building, not including the Indian-skinned trees, 2 feet in diameter, that rise majestically from the basement to the roof, with beautiful hand work of the supporting joists—smaller logs—spliced into their positions into the six horizontals, equally spaced, 3 to either side. Only a master with the axe could have so artistically fashioned them. He could control the cut of the axe to the inch. His men, Leach, Red Howard, August Krueger, John Deukis, Kenneth Woodworth, Emil Britske, August Conrad, Forrest Schmudloch, and his dad, followed his instructions with growing admiration with the years.

So building after building after building took its place in a beautiful setting—a hundred acres of pine and oak wood. He supervised the planting of 75,000 pines over the years, and replaced each one that was lost—so that, today, timber is growing, adding to the beauty and value of the camp. Perhaps in a lean year, it can be thinned out and sold to realize needed money for the camp's maintenance.

Albert used a witchhazel crook and located the water veins in the bowels of the earth. At the knoll I sat with him as he counted the bowings of the pointer below the crook, holding an end of the forked branch in each hand. It stopped at 73 feet—73 separate attractions downward. When the well was drilled, I paid for a 73 foot well. He also located the powerful veins in the same way, and we drilled and hit an over-abundance of water, both at the location we selected for the water plant and at the pool.

Whether with money or not, he said, "Even if you haven't full pay—show up—let the men see you. They are just as interested in the project for poor kids as you are." And so it went on, until today it is by far the finest and most modern camp in the United States.

It was Albert who made it possible—the men and the merchants needed the money that we owed—he prevented any trouble over it by giving all sorts of excuses, until at last each one received his long overdue portion. Albert's old saying. "No one ever was cheated and everyone always got paid," kept us going.

Today, after 11 years of the big camp program, over 6,000 youngsters, poor but proud, have been recipients of true happiness and fun because Albert Graichen persisted in building and completing the greatest monument dedicated to his memory—the work of a master and a great man with a blessed soul.

Under his plans, together with his brother Gust, there were constructed at the campsite, 10 cabins, 5 large huts with long ramps for the wheel chairs of crippled children, 2 large overnight huts for visitors, a large mess hall—seating capacity 500, twin chapels, 1 enormous steel warehouse, a miniature railroad 1 mile long—for the crippled and blind children, a bath and latrine steel building, a complete olympic regulation pool with a 3-story building, including shower rooms, dressing rooms, pump room, observation room and rest rooms, to accommodate the swimmers and waterfront supervisors.

And this simple God-fearing and kind-hearted man, who believed in humanity and loved children, spent 22 years of his life with us in the building program. The Legionnaires and women of the auxiliary of the State of Illinois knew him and loved him. He had an inventive mind and made iron parts—fantastic pulley and bar arrangements for lifting heavy objects—special locks and all sorts of mechanical contrivances. The building of the railroad necessitated the erection of stone bridges and level grading elevation approaches, and so forth, the twisting of rails and levels were perfect. The erection of the pumping station and the laying of extended pipeline feeds and mains to all the large buildings called for the knowledge of a master civil engineer. All in all, under his supervision, 30 buildings were completed. Only through his efforts was the work among the destitute and orphaned children successful. Only a man with natural creative genius could have accomplished so much in his chosen field of endeavor. He gave his superlative talents to the great cause which he loved to serve. He refused many offers of higher salary by men interested in erecting commercial buildings, saying, "I can't let the kiddies down." It is no wonder that the men and women of the Legion bowed their heads in prayer and humble reverence at his passing.

He was buried at Coloma, Saturday afternoon, August 2, in a little graveyard on a hill, where his antecedents rest. Elizabeth is there, too—they are together now, and their work is done. There, on this wind-swept hill, sleeps a great American, who in his deep humility learned the lessons of life the hard way. He did not complain, but carried on. In his simplicity he lived well—he thanked God for the chance to learn and master the things he liked to do. His importance might not be written by a distinguished panegyrist, or listed in the volumes with great men's names. But there is one tome on whose sacred pages every man seeks to be included. That is the Book of Judgment, and there on the paged index of service rendered to the helpless and abandoned children of his time will be written the name of Albert Graichen, sprinkled with the tears of Christ, not in sorrow but in the joy of a true servant of charity, the greatest of the virtues in man.

The kids, I know, will keep his memory alive and, with flowers on his grave, pay their humble respects each year. And the men who knew him best, his many pals who worked with him from the beginning—some from Chicago, volunters without pay, Frank Ralph and Bob DeLetto, Buck Tortoriello, Frank Mallerdino, Tony Girolomi, Tony Venezia, Ralph Madia, Telephone Farrell, and many others; as well as those from the camp area—Sheriff Frozene, Mr. Joe Macham, Flyte, Mr. Primo, and the Constable worked at odd times in emergencies, who, with the others braved the hard winters, and were imbued with his spirit of confidence that doing real charity was the job's reward.

George, Otto and Leonard at Fish Lake, will miss him—and Starshak, Pat Petrone, Dutch Von Bremer, Van Dyk, Clausen, Youngblood, Clamage, Brautigam, Bottigliero, Joe Sweeney, Viggiani, Ringley, Cusack, Monico, and myself, know, as do the others, that Joe Brown, Joe Madia and Joe Cronin—men who have gone before, are building another camp with the old skipper in the Promised Land.

Blessed is the man that is found without blemish, that hath not gone after gold, nor put his trust in money nor in treasures. Who is he, and we will praise him? For he hath done wonderful things in his life. Who hath been tried thereby, and made perfect, he shall have glory everlasting. Ecclesiasticus 31: 8–11.

The end at last, the end at last;
Your start may be fine, old friend,
But the world will finally judge you
By what you are at the end.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

President Eisenhower Calls on the Congress To Complete Action This Session on Legislation To Establish a National Cultural Center

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1958

Mr. THOMPSON of New Jersey. Mr. Speaker, it is my earnest hope that the Committee on Public Works of the House of Representatives will report S. 3335, a bill providing for a National Cultural Center which will be constructed with funds raised by voluntary contributions, in time for the House to vote on it before this session ends. It is important that this bill be reported in the form in which it passed the Senate unanimously on June 20, 1958, for it would be disastrous if it were loaded down with crippling amendments.

The President has now given tremendous impetus to this drive for cultural facilities, and I include the text of his letter urging the Congress to complete action on this legislation during this session.

Included also are two editorials from the Washington (D. C.) Evening Star, an editorial from the Washington (D. C.) Post and Times Herald, and statements presented for the American Institute of Architects, the General Federation of Women's Clubs, the District of Columbia Federation of Women's Clubs, and the Federal City Council by distinguished representatives of those respected and powerful organizations.

THE WHITE HOUSE,
Washington, August 1, 1958.

Hon. CHARLES A. BUCKLEY,
Chairman, Committee on Public Works,
House of Representatives,
Washington, D. C.

DEAR MR. CHAIRMAN: I am writing you with reference to legislation now pending before your committee which would authorize the establishment of a National Cultural Center here in Washington on a site made available by the Federal Government with funds raised by voluntary contributions.

There has long been a need for more adequate facilities in the Nation's capital for the presentation of the performing arts. An auditorium and other facilities such as are provided for in pending legislation, established and supported by contributions from the public, would be a center of which the entire Nation could be proud. I hope that the Congress will complete action on this legislation during this session.

Sincerely,

DWIGHT D. EISENHOWER.

[From the Washington (D. C.) Evening Star of August 6, 1958]

WELCOME THIS OPPORTUNITY

We suppose that if a group of citizens came to Congress with the money in hand for construction of a National Cultural Center and offered to build it, provided the Government supplied an appropriate site, there would be no question concerning the acceptance of such a gift.

The question which seems to worry some members of the House Subcommittee on Public Works, which conducted a hearing yesterday on the legislation, is whether, if the Government supplies the site, the money to construct the center will be forthcoming from private sources.

We do not see why that question should be of any immediate concern. If the Senate-passed bill is approved by the House and becomes law, availability of the site will either produce the construction funds from private sources, or fail to produce it. If the money is not forthcoming, the Government will have lost nothing. It will still retain the site, and the site will be available for some other need.

In other words, the Government gambles nothing. It stands to lose nothing. But if the pending center legislation is approved, it stands to gain another permanent improvement for this American Capital which in time could rank in importance with the National Gallery of Art. The legislation, in short, provides an opportunity which, if declined, may not soon knock again.

[From the Washington (D. C.) Evening Star of August 4, 1958]

ALL WIN, NOBODY LOSES

In expressing his hopes that Congress will complete action on legislation making possible construction of a great cultural center in Washington, President Eisenhower has spoken for many citizens, here and throughout the country. There have been attempts in the past to supply such facilities for the Capital. But we have never been so close to success as now; there has never been such an opportunity for Congress to do so little, and accomplish so much, as offered by the pending legislation.

In brief, the legislation, approved in the Senate without dissent, authorizes purchase from locally derived revenues of less than 2 acres of land. Added to Government-owned land already available, a site—now generally approved—would be provided for construction of an appropriate edifice for the performing arts. Money for such construction is anticipated from private sources. There are indications that it would be forthcoming. If not, the Government would have lost not a penny—for the land would be there for other uses.

Hundreds of thousands of American citizens this summer, in a record year of travel abroad, have been visting the capitals and other cities in foreign lands, almost all of which are supplied with splendid buildings for the performance of opera, orchestra concerts, ballet, and other artistic enterprises reflecting cultural attainment. The singular lack of such facilities in this Capital of the richest Nation on earth is a reproach, an indictment which should be wiped from the record.

We commend Representative JONES of Alabama, chairman of the Public Buildings Subcommittee of the House Public Works Committee, for his willingness to hold hearings tomorrow and his own sympathy toward the project. We believe there will be evidence aplenty at the hearing in its support. The authorization sought represents so small an obligation by the Federal Government, leaving the success of the undertaking in the hands of private contributors, that there is everything to be gained and nothing to be lost.

House approval of this legislation would mean something for people everywhere, not merely those who live in Washington. It would represent a great forward step in completing the development of this Federal City, the city of all Americans.

[From the Washington (D. C.) Post and Times Herald of August 8, 1958]

CULTURAL CENTER PROGRESS

Seldom do Washingtonians and the many agencies which govern them in their local affairs find themselves in such happy and unanimous agreement on a project as that which appears to prevail on the proposed cultural center in Foggy Bottom. The Senate has approved legislation to designate a mostly federally owned tract for the projected theaters and to advance funds, to be repaid by the District, for the purchase of a small added area to round out the site. The plan is to obtain private subscription of money for construction; the enterprises themselves are to be self-supporting. Experience with similar ventures in other cities makes these plans considerably more solid than mere hope or aspiration.

Much will depend, of course, upon the caliber of the proposed Presidentially appointed Commission which would be in charge of fund raising and other aspects of the venture. There is a widespread feeling in the community that the members must be chosen with great care and drawn from the top ranks of philanthropists and art patrons here and elsewhere. The success of the National Gallery of Art, established under similar procedures and auspices, has been due of course to the outstanding sponsorship which it had from its inception.

Chairman ROBERT E. JONES, of the House Public Buildings Subcommittee, has performed a real national service in holding hearings on the measure despite the nearness of adjournment and in proposing to bring the bill up under suspension of rules in the House. This will mean a two-thirds vote will be needed for passage, but surely the House will not turn aside an enterprise so promising and one that places squarely and solely upon interested private citizens the responsibility for its success.

STATEMENT BY JOHN NOBLE RICHARDS, FAIA, PRESIDENT OF THE AMERICAN INSTITUTE OF ARCHITECTS, ON THE FULBRIGHT-THOMPSON BILL FOR THE ESTABLISHMENT OF A NATIONAL CULTURAL CENTER BEFORE THE PUBLIC BUILDINGS SUBCOMMITTEE OF THE HOUSE PUBLIC WORKS COMMITTEE, AUGUST 5, 1958

My name is John Noble Richards. I am a practicing architect with offices at 1600

Madison Avenue, Toledo, Ohio. I am president of the American Institute of Architects and appear here today as its representative to urge prompt and favorable action on the Fulbright-Thompson bill to establish a National Cultural Center in the Nation's Capital.

The American Institute of Architects is the national organization of the architectural profession in the United States. Its 128 chapters and 11 State organizations are located in every State. With a membership of nearly 13,000 registered architects, the Institute represents the majority of practicing architects in the Nation.

We have followed closely the devoted efforts of Members of Congress and leading citizens who have worked unceasingly to make possible this much-needed facility for the proper presentation of opera, music and other performing arts in Washington. In May, 1957, Mrs. Eugene Meyer appeared at our Centennial Convention in Washington to outline the proposal for the cultural center then being advanced by the special commission of which she was chairman.

Great interest and support was expressed and the convention passed a resolution urging that a national competition be held to select the architect for this very important project. As a public service, The American Institute of Architects would gladly name a special architectural advisory committee to assist in the setting up of procedures for such a competition.

As the organization representing the Nation's architects we have long felt a deep responsibility for the Nation's Capital and have demonstrated this concern over the century of our existence. During the Centennial Convention a resolution was passed unanimously, reaffirming our members' deep conviction that the capital city is the heritage, not only of those who dwell in or about the District of Columbia, but the heritage of all the people of this country as well. We therefore fully support all proposals that will in any way enhance the city of Washington.

There is no question bu that the proposed Cultural Center would greatly benefit the capital city. More importantly it would serve as a symbol to all Americans, as well as to peoples overseas, of our Nation's interest in and support of cultural activities.

My distinguished predecessor, Leon Chatelain, Jr., of Washington, appeared before a congressional committee in February, 1957 to express the Institute's support at that time. He urged that the proposed Cultural Center be located in the Foggy Bottom area. We are gratified that an adequate site there can be made available provided Congress takes the appropriate action.

To take full advantage of the broad public enthusiasm that exists and the substantial financial support that has been pledged, we earnestly request your subcommittee to take favorable action at once in order that final approval of the Cultural Center may be given prior to adjournment.

STATEMENT ON A NATIONAL CULTURAL CENTER IN THE DISTRICT OF COLUMBIA, BY MISS CHLOE GIFFORD, PRESIDENT, GENERAL FEDERATION OF WOMEN'S CLUBS, BEFORE SUBCOMMITTEE ON BUILDINGS AND GROUNDS, HOUSE PUBLIC WORKS COMMITTEE, AUGUST 5, 1958

I am Sally Butler, legislation consultant for the General Federation of Women's Clubs.

The General Federation of Women's Clubs has been interested in the cultural aspect of life in the United States ever since our organization was chartered by Congress in 1901.

In Article II of the constitution of the General Federation it states, "The object of the General Federation shall be to unite the women's clubs and like organizations throughout the world for the purpose of mutual benefit, and for the promotion of their common interest in education, philanthropy, public welfare, moral values, civics, and fine arts."

The General Federation of Women's Clubs has a department of fine arts with chairmen in every State. This interest in fine arts prompted the clubwomen of Michigan to raise funds to build the Fine Arts Building of the National Music Camp at Interlochen, Mich., in 1948. To mention a few other States that have done outstanding work promoting fine arts—Illinois Federation has a summer art school, Kansas auditions and gives cash awards for outstanding performance in this field. Virginia actively participated in promoting the Art Mobile, of Virginia Museum of Fine Arts; General Federation of Women's Clubs sponsored a fine arts festival in Estes Park, Colo. The president of General Federation of Women's Clubs attends and participates in Chicagoland's music festival every autumn.

General Federation of Women's Clubs was recognized for its work in this field in 1955, when under the provisions of H. R. 1825, General Federation of Women's Clubs was named as one among the national organizations to be represented on the Federal Commission to formulate plans for the construction in the District of Columbia of a civic auditorium.

In 1956 the General Federation of Women's Clubs passed the following resolution:

"FINE ARTS—CIVIC AUDITORIUM-INAUGURAL HALL OF PRESIDENTS, MUSIC, FINE ARTS, MASS COMMUNICATIONS CENTER (CONVENTION, 1956)

"Whereas the General Federation of Women's Clubs since its inception has been consistently interested in and worked for the development of the cultural life of the United States; has promoted the fine arts in all aspects; and has given encouragement and assistance to many artists; and

"Whereas a District of Columbia Auditorium Commission has been established to prepare plans to erect a civic auditorium including an Inaugural Hall of Presidents, and a Music, Fine Arts, and Mass Communications Center: Therefore,

"Resolved, That the General Federation of Women's Clubs shall use its influence in the promotion of the plans for establishment of a civic auditorium in the District of Columbia, which would include an Inaugural Hall of Presidents, and a Music, Fine Arts, and Mass Communications Center in the national capital."

The General Federation of Women's Clubs certainly commends Congress for passing a bill which created this Commission and the people who have worked long and hard to bring about a cultural center in our National Capital which will portray the cultural aspect of American life.

We know the criticisms of those nations that belittle United States culture—we are sure your Members of Congress know all the arguments for and against the construction of a cultural center in Washington, D. C. We are sure you do appreciate, as we do, the generosity of those individuals who have and will help to raise the necessary funds.

We can assure you that the members of our organization will renew their efforts to help make this national cultural center a reality. The many States that have continued their efforts on a local basis will surely do everything possible to promote plans laid out by Congress to achieve this goal.

We, the women of General Federation of Women's Clubs, with clubs in every State, urge immediate action, so that the Cultural Center in our National Capital will become a reality. It will take time, but let us get started now.

STATEMENT OF MRS. T. DAVID GATES, PRESIDENT, DISTRICT OF COLUMBIA FEDERATION OF WOMEN'S CLUBS, WASHINGTON, D. C., TO COMMITTEE ON PUBLIC WORKS, TUESDAY, AUGUST 5, 1958

Mr. Chairman, this is a distinct privilege and pleasure to come before the committee to reaffirm the stand taken by the District of Columbia Federation of Women's Clubs in regards to the Thompson-Fulbright bill for the Cultural Center in the Nation's Capital.

The Cultural Center is a means of guarding the heritage of this land of ours. To meet the demands of these crucial times how can we overlook or bypass a single opportunity to make us stronger to meet the onslaught of communism from within as well as from without.

Never before has the need been so strongly felt; never before has the very heart of American culture been challenged; never before has Congress had the opportunity to do so little and accomplish so much; never before has the need for exchange of culture of all nations been so evident; never again must we take our own American way of life, nor that of other nations for granted.

No nation is stronger than its local community, no home than each individual member, so we plead with you for the sake of the youth of our land, the future citizens of our country, to place within their reach the proper facilities of all the performing arts.

It is a mutual feeling, I am sure, and the sincere conviction of everyone under the sound of my voice and every Representative of all the States that through this medium of the fine arts one may speak to the infinite being.

True democracy cannot be maintained without a spiritual foundation; therefore, it is necessary that we search ourselves and not be found wanting.

The 11 million members of the National and International Federation of Women's Clubs is a force not to be taken lightly. There are 15,000 clubs in the United States—and over 3,000 members in the District of Columbia federation.

Therefore, Mr. Chairman, as we pledge our support may we expect the same in return. Delay is dangerous.

Mr. Chairman, I thank you for giving of your time to call this hearing.

STATEMENT BY FRANCIS G. ADDISON, JR., CHAIRMAN, FEDERAL CITY COUNCIL, AT HEARINGS OF HOUSE SUBCOMMITTEE ON PUBLIC BUILDINGS AND GROUNDS, AUGUST 1, 1958

Mr. Chairman and committee members, my name is Francis G. Addison, Jr. I am president and board chairman of Security Bank, and chairman of the Federal City Council. The council is a nonprofit, nonpartisan organization of civic leaders dedicated to promoting the economic, social, and cultural growth of our Capital City. I am submitting a membership list for the use of this committee.

I am here this morning to urge that members of your committee assign a top priority to favorably reporting out S. 3335, in order that this bill can be enacted by Congress before adjournment of the current session.

This legislation, already approved by the Senate, would authorize creation of a National Cultural Center in Foggy Bottom, on a site bounded by New Hampshire Avenue, 26th Street, Rock Creek, and Potomac Parkway and approaches to the new Theodore Roosevelt Memorial Bridge.

We believe that passage of this bill is an absolute must, in order that Washington City may finally acquire the cultural facilities commensurate with its position as Capital City of the free world.

S. 3335 represents the culmination of years of effort toward this goal. It has the unqualified support of every major civic or-

ganization in this city. Congress faces a high responsibility to assure its speedy enactment and thereby remove one of the major obstacles remaining to realization of this city's cultural heritage.

To delay the legislation at this point would be a severe blow to the entire cultural-center effort. It would mean that the legislation would have to be started all over again in the Senate next session. This, in turn, would cause the drive for a performing arts center to lose a great deal of its momentum.

I cannot believe that Congress would be so insensitive to the importance of our Capital City and its cultural needs as to allow this to happen.

Therefore, Mr. Chairman, it is our hope that your committee will act immediately to report this bill out favorably, with the recommendation that it be approved by the full House at the earliest possible date.

Thank you.

Savings, the Secret of American Growth

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Friday, August 8, 1958

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Savings, the Secret of American Growth," delivered by Mr. Norman Strunk, executive vice president of the United States Savings & Loan League, before the Stanford business conference on July 21, 1958.

I have been informed by the Public Printer that the address is estimated to make approximately 3⅔ pages of the RECORD, at a cost of $297. Notwithstanding the cost, I ask unanimous consent that the address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SAVINGS, THE SECRET OF AMERICAN GROWTH

(An address by Norman Strunk, executive vice president of the United States Savings & Loan League, before the Stanford Business Conference, July 21, 1958)

All of you, I am sure, are familiar with the proverb, "Necessity is the mother of invention." I would like to refute the claim, at least so far as America is concerned, and attempt to demonstrate to you that abundance, rather than necessity, has been the mother of invention.

I do not pretend to be any more of a historian than any of you, but one does not need to have graduated as a history major from Standford University to know that throughout world history those people who have had to struggle because of their physical or economic environment merely to get enough food to eat and keep a roof over their heads have advanced slowly, if at all, in material and cultural things. It is only those people who have what economists term an "economic surplus" that have developed a culture, art, education, and a constantly rising standard of living.

As you know, most of the original advances of early civilizations took place in the lush river valleys of the ancient world. Egypt, for example, had a fruitful influence on the progress of the early civilizations and for thousands of years its agriculture and stock breeding enjoyed unmatched prosperity. The government of the Pharaohs maintained the fertility of the country by intelligent control of the Nile at its period of floods. Because of the abundance of their economy, they were able to save or conserve part of their energy and build dams, dikes and canals to control the river, to make use of its advantages and to justify the classification of Egypt as "the gift of the Nile."

Incidentally, ancient Egypt used the residential mortgage in a form not too different from what we know in our country today.

Other nations whose people had to scratch constantly for a living and who never knew where their next meal was coming from, never progressed beyond most primitive stages of culture. The Eskimos and nomadic tribes of the East (until the discovery of oil in the Middle East) are illustrations.

Bringing our story to more modern times, to the period after the industrial revolution, we find that the most highly developed nations had an economic surplus early in their history: Examples are Sweden, England and Germany. Here again, abundance and saving were the prime causes of their stature in the world history and the relatively high standard of living enjoyed by their people.

SAVINGS AND AMERICA

The cause and effect relationship between savings and a high standard of living is especially vivid in America. There are three things that make this country great: (1) Natural resources, (2) an abundant and efficient labor supply, and (3) savings. These have enabled our Nation to increase production and, through successive business cycles, to raise its standard of living. Had it not been for savings, our resources and our labor might never have really been put to work.

In modern times there are countries where labor is abundantly available (such as India and China), but where the standard of living cannot even be compared to ours. Likewise, there are countries with ample natural resources but with a very low standard of living. An example of this is Russia until very recently and Brazil to this day.

In comparing our Nation with others which have ample labor and resources but whose people have not saved, we find that savings are the moving force. If savings are not the "mother of invention," they are certainly the key to economic progress and the development of our culture.

Improvement in productive facilities, a fine transportation network, efficiently functioning government and social capital such as schools, parks, hospitals, and the like is not possible unless the people can and actually do produce more than they consume—that is, unless they save, as Americans always have saved.

Ours has always been a thrifty Nation. Its pioneers may not have had cash savings such as we see on the balance sheets of our financial institutions today, but they worked longer hours than necessary to get the next meal and used their surplus labor to improve their land, build fences, produce a surplus crop to buy farm equipment, etc. The fact that Americans have worked hard and have had funds left over after providing for their basic, essential needs and that these savings could be invested in such things as education, housing, research, and improved industrial technology is the factor that has made America great and produced further abundance. Truly, savings are the secret of American growth.

OVER-SAVING THESIS

No doubt about now those of you gentlemen employed in a business which sells things to the American people and who have found this recession actually to be a depression so far as you are concerned are probably thinking: "That's all right in theory, but what we need today is a little less savings and more spending."

You maintain, and with considerable justification, that one of the reasons for this recession was the fact that the American consumer stopped buying new automobiles, appliances, and other durables and has been saving his money. The fact is that the increase in savings in our savings and loan associations in the first half of this year is 20 percent greater than in the first 6 months of 1957. You might well say, no wonder we have a recession.

Your case has strength although I cannot give you credit for originating the idea because the same sentiments were advanced under the heading "the over-saving thesis" during the 1930's by economists you wouldn't then or now want to identify yourselves with.

Let us look a little more closely at this concept. One point we can agree on is this: American consumers, by exercising their free choice, can and do change the pattern of their spending, disturb what appears to be the established business structure, and cause a downturn in our economy. In the same breath I hasten to add that the American consumer ought to have this right. It is much like the right to vote.

If the consumer likes the highly stylized, multi-colored, roomy, chromey, "souped-up" and expensive automobile turned out by a certain Detroit manufacturer, then he can cast his dollar ballots for that care and make its manufacturer successful. By the same token, he has an equal right to vote against this "hot" model if he doesn't like it and to spend his dollars for some other product such as a Volkswagen or to save his dollars. This competition for the dollar-votes of consumers is part and parcel of the American way of doing business.

Savings in some ways are another commodity for which the consumer can cast his ballot. And, as the representative of a group of aggressive savings institutions, I wish to warn you that savings can be sold and merchandised and that the savings and loan associations will continue to compete with you for those dollar-votes being cast continuously by Americans in our economic election.

The fact that Americans have been favorably disposed toward savings at financial institutions recently speaks well for the competitive abilities of savings institutions in the market place. If Americans decide that future needs, such as the education of their children or a new home (fully paid for) are desirable goals, then they have the right to save to purchase such things.

If businessmen have temporarily oversold their market and cannot induce the consumers to part with their funds, perhaps they ought to look back to two fundamentals: The nature of the products they are trying to sell, and the price at which they are trying to sell them. In a money and credit economy such as ours, producing durable goods in large volume, we must accept the risks of cumulative tendencies toward inflation and deflation. The more style we put into our products (and there is no end in sight), the more likely it is that we shall have peaks and valleys. Such fluctuations could not be removed without seriously impairing some things I don't think we want impaired: Individual initiative, freedom of action, and economic growth in the American way.

HISTORY OF SAVINGS IN AMERICA

If I have now convinced you of the importance of savings to our life and times, then you might agree that it should be worth your while to know a little more about the history and current nature of savings—why people save, where they save, how the savings of the American people are made available to American industry and govern-

ment to finance new factories, new roads, schools and houses. You might also want to know how to encourage people to withdraw their savings from their savings accounts and buy more of your products.

There have been some very significant developments in the last few decades in the savings habits of the American people and the way in which these savings are made available to American industry and other users of capital.

We have had what we might call a democratization of savings. That term expresses the fact that millions of individuals are now able to save money and actually are saving and thus providing capital for our continued economic progress. Much of the savings of the American family today is made available to the users of capital through financial institutions, or financial intermediaries, as the economists refer to organizations like savings and loan associations, life insurance companies, pension funds and mutual investment trusts.

In its early years, the United States met its capital requirements or obtained savings funds from two principal sources (1) the wealthy individuals, and (2) foreign investors. Factual data is hard to come by, but we do know that European capital, principally English, built the first American railroads. In 1914 private foreign investments in the United States totaled $7 billion—quite a bit of money in those days and a big part of the total investment in American business and commerce. Of that $7 billion, over half was invested in railroads.

We don't need any data to convince us that the foreign investor has ceased to be a factor in American economic life. Can you imagine any new important American industry, such as the electronics industry, being dependent upon foreign money for its capital needs as were the American railroads during the years of Leland Stanford, Mark Hopkins, Collins Huntington and Charles Crocker, and even later in the days of Harriman and Hill.

America today does not rely so heavily on a relatively few wealthy individuals for its capital requirements as it did a generation ago. In the first place, with the impact of income taxes, there are relatively few people with millions to invest. Second, with American industry today having over $15,000 per worker invested in plant and equipment, compared to $3,900 in 1920, we required a lot more capital than could ever be furnished just by rich people, even if we had never had Federal income taxes. Finally, and most important, the average American family now has income well above the subsistence level. It can afford both a standard of living that permits some luxuries and also afford to save a part of what the breadwinner earns. Last year, for example, individuals—that is, people like you and me—saved about $38 billion out of their current income.[1] This is a tremendous addition to America's savings capital.

GROWTH OF MIDDLE CLASS AMERICA

The great change that has occurred in America in the last generation has been the rise of the middle-class family. The middle-class family now dominates America politically, culturally, and economically. If we define the middle-class family as one with an annual income of from $4,000 to $8,000 we find that today 43 percent of the families are in this bracket as compared with only 15 percent in 1935, speaking in terms of constant 1957 dollars. Today 63 percent of our families earn more than $4,000 a year.

We have plenty of evidence that families making a lot less than $8,000 a year save money—quite a bit of it—but if you have a hard time living within your income (which would be normal for an up and coming business executive), you might be hard to convince that anyone making less than $8,000 a year would be much of a factor in providing capital for America's economic progress. Even so, the democratization of savings which I referred to earlier is well illustrated by the fact that while in 1935 only 3 percent of the people made more than $8,000 today 20 percent of American families earn in excess of $8,000 annually.

Thus the rise of the American middle-class family has broadened the number of investors in American industry and provided much greater capital for the production of better houses, roads, schools, and factories—just as the rise of the American middle-class family has doubled and tripled the market for the products of American industry.

CHARACTERISTICS OF SAVERS

In taking a look at the American saver today, we find that he is very much the same person who buys most of the products of American business.

The United States Savings and Loan League had a survey made in 1955 and these statistics give a picture of savers and their habits in the fall of that year. At that time 35 percent of all savers in banks and savings and loan associations had incomes of less than $4,000. Only 25 percent of all the savers in banks and savings and loan associations had incomes of more than $6,000. We checked those people who indicated that they had more than $5,000 in an account in a savings and loan association and 30 percent of them had incomes of less than $6,000.

There is not much difference between the saver in a bank and in a savings and loan association as to income, occupation, or age. Thus, of the people having accounts only in the savings and loan associations and not in banks, 75 percent had incomes of less than $6,000 and of the savers having accounts only in banks, 71 percent had incomes of less than $6,000.

Most of our savers are either executive, clerical or sales personnel. The same thing is true of bank savers.

Of all the savers in savings and loan associations in 1955, 56 percent had savings accounts of less than $2,000. Fifty-one percent of the bank savers had savings accounts of $2,000 or less. Forty percent of the people with accounts in savings and loan associations also have an account in a bank.

Our savers tend to be people with families, and we find a distinct correlation, of course, between a favorable attitude toward thrift and whether or not the family has any children. We find that women are more thrift-minded than men.

This, I believe, is enough to give you a picture of the people who save in America's leading thrift institutions, that is, the savings departments of banks and the savings and loan associations. You know, of course, that people with pension plans cover the entire range of employed Americans and that the same is true of the holders of life insurance policies.

INSTITUTIONALIZATION OF SAVINGS

The rise of the American middle class family and the fact that most American families now can and do save some money have not only resulted in the provision of a great deal more capital for American industry, it has also resulted to a large degree in the institutionalization of savings and investment.

That is to say, more and more of the savings of American people are going to financial institutions—financial intermediaries—which in turn invest in the American economy in various ways.

Let me cite a few figures to help make my point. Take the 3 years 1926–29 (during the days of the great stock market boom prior to the great depression). Of the total savings, 47 percent went into securities. Only 10 percent went into currency, bank deposits, and savings accounts.

In the year 1955–56 these two figures were virtually reversed. Thirty percent went into currency, deposits, and savings accounts and only 11 percent into securities.

In the 1926–29 period 18 percent of the savings went into private and Government insurance and pension reserves. In the 1953–56 period 28 percent went into insurance and pension reserves. The big gainer here was, of course, Government insurance and pension reserves.

Institutional savings, that is, money placed by Americans into financial institutions rather than directly invested in securities, increased an average of $21 billion annually during the last 5 years. This compares to a direct investment in securities—bonds and stocks—of $5 billion over the same 5-year period. In other words, the people in this country are putting $4 net into savings institutions for every $1 of net investment in securities. Even in 1957 when the yields on bonds were so very attractive and when there was a bullish sentiment in the stock market through most of the year, only $6 billion was invested net in securities compared to a net increase in institutional savings of $22½ billion.

The fact is that today Americans are not bond or stock buyers and that, relatively, only a small portion of the savings of the American people, as individuals, is going directly into securities. Rather, they are putting their money into financial institutions, pension funds, and life-insurance companies, and these institutions then are making the security and mortgage investments for the American people.

You have seen one result of this shift in savings and investment patterns—the great increase in so-called direct placement of new corporate securities with insurance companies and to a lesser extent with pension funds and savings banks. You also see it in the decline in importance of the individual as an investor in real-estate mortgages. The institutional investor, such as the savings and loan association, has put him out of the home-mortgage business in all but the small rural communities. You see it in the tremendous influence currently of the pension funds and mutual-investment funds in the stock market, giving constant support to the market, and in the relatively strong market for the blue-chip stocks which the institutional buyers, for various reasons, prefer.

The principal savings institutions—these private intermediaries in the savings and investing process—today have resources totaling about $290 billion. Some pertinent statistics about them are given on the data sheet left at your seats.

We find that these financial intermediaries consist of 3 big segments or types and 1 small segment. The largest group consists of deposit-type institutions—the savings department of commercial banks, savings and loan associations, mutual-savings banks, the credit unions, and postal savings. At the end of 1957 they held $132 billion, or 54 percent of all institutional savings funds.

Another type of financial intermediary is the insurance company. These held a total in savings of approximately $83 billion.

Next are the pension funds. We refer to them as the noninsured pension funds—that is, funds not handled by life-insurance companies. Most of them are administered by the trust departments of banks, but some are union managed and some are managed by individual trustees. This is the newest form of financial intermediary, and at the end of last year had resources of approximately $19 billion.

Finally, we have a fourth type, the mutual-investment funds. These are open-end funds and have about $10 billion in assets.

[1] Savings by individuals as estimated by Securities and Exchange Commission. New debts incurred excluded.

I have included United States savings bonds in this table for completeness and comparison because they were such a popular form of savings until recent years. The United States Treasury is not what we would call a financial institution.

You will note that almost $48 billion of public savings are currently in savings bonds. Savings bonds reached a total of $50 billion during the middle 1950's. In the last few years redemptions have exceeded sales by a nominal margin each year, and the total outstanding is declining.

It is appropriate to note that total institutional savings have grown tenfold since 1920, while our gross national product has increased only four times. Total savings in financial institutions in 1920 were equal to little more than one-fourth of the gross national product that year; now they are equal to two-thirds of our much-expanded GNP.

The pension funds are the fastest-growing savings medium, having grown from $2½ billion in 1947 to almost $20 billion today. I hope that I will be forgiven if I point out that savings and loan associations now hold twice the proportion of the savings they held in 1920. This great relative increase in the importance of savings and loan savings all has come in the last 10 years.

These financial institutions are getting $4 of every $5 that American families save out of their incomes. These are the institutions that are doing most of the investing today—investing in obligations of Federal, State, and local governments, obligations of public-utility companies and railroads, obligations of manufacturing concerns, mortgage obligations on homes, farms, and commercial real estate—all of which we consider investment versus short-term commercial self-liquidating credit of the type made by banks.

SAVINGS INSTITUTIONS VITAL

I think it may safely be said that these financial institutions have grown up in answer to a definite economic need. To put this concept "democratization of savings" into the frame of reference commonly used by businessmen, we tapped the mass market for savings in much the same way that you developed a mass market for consumer durable goods such as automobiles, refrigerators, and television sets. You streamlined your plants, took advantage of the economies of scale and are able to offer the consumer more goods of better quality at lower prices. In the world of finance we have done somewhat the same thing. Your process has required tremendous amount of capital and I doubt if you would have gone very far without parallel developments in the field of finance.

The financial institution as an investment intermediary came along, I think, for a number of reasons. In the first place, the typical individual investor in American securities got pretty badly burned in 1929 and later. The government savings bond and the account in a financial institution insured up to $10,000 by a Federal agency looked pretty good to him, even though there was no promise of capital gains and the return was only 3 or 3½ percent. In fact, it was in many cases the only investment he would even consider. Prof. Jules Bogen of New York University points to the failure of the mutual investment funds to grow more than $1 billion in each of the past few years as evidence of the fact that people still have a yearning for safety of principal where their dollars are concerned.

With the typical American investor today being a man of considerably smaller average means than a typical investor a generation ago, a different type of investment medium is needed. Today's investor does not have capital sufficient to permit him to take excessive risks. He does not have the time or talent to analyze corporate financial statements and the vagaries of the financial and investment market. Basically he needs an investment that is risk free or virtually risk free or one which provides broad diversification. He needs above all convenience and the ability to set aside varying sums of money at varying times. Liquidity or the ability to cash in his investment without undue loss or paying large brokerage or commission fees is also important. He needs, as you can see, institutions such as our modern-day savings and loan associations. Our institutions provide all of these features to savers and fixed dollar investors. For equity investments something like the investment trust comes closest to meeting the needs of today's average investor.

Along with this development has come the tremendous growth in popularity of life insurance, medical insurance and retirement plans. Whereas in 1928 there were 28 million ordinary life insurance policies in force, or 1 for every 4 persons, today there are 83 million such policies outstanding, or 1 for every 2 persons, virtually no one had a pension or annuity in 1928. Social-security was unknown. Today, considering all types of life insurance policies and annuity contracts, there are 1.6 policies for every American or, on the average, five for every family. The tremendous resources of the life insurance companies and the noninsured pension funds that have resulted from this growth of life insurance and retirement plans have made these institutions tremendous forces in the investment market.

INSTITUTIONAL INVESTMENT PREFERENCES

Most life insurance company and pension fund investment decisions are made by people who know and prefer to invest in securities, either bonds or stocks and who do not really understand or like to invest in mortgages, even FHA insured mortgages.

I know that insurance companies are a big factor in the home mortgage market, but the mortgage is actually a second choice investment for most life insurance companies, to be made after the attractive investments in securities have been made and only if the yield on mortgages is attractive compared with the yield on other investments.

In the same way, commercial banks are essentially commercial lenders and prefer short-term loans and only invest in mortgages as a second choice. This is not true, I realize, with the Bank of America, but that great bank is quite unusual in this respect. Most commercial bankers do not like long-term home mortgages as an investment of the bank's funds, even its savings funds, and if given a choice will almost always prefer short-term loans, even nonsecured consumer loans that savings and loan people wouldn't think of acquiring.

Savings and loan associations, as you may know, invest almost wholly in first mortgage loans on singly family homes. We do this in part because the law points us in that direction, in part by tradition, and in part because our people know and understand and like home mortgages as an investment just as the managers of most pension funds prefer marketable securities.

MULTIPLICITY OF INSTITUTIONS

It is in part because of this fact that various types of investors by tradition and preference invest in different types of securities and obligations that I think it is fortunate that we have a multiplicity of financial institutions and that public policy has permitted, even encouraged, the development of a number of types of savings and investment institutions and competition between them.

Just as in the retail field there are department stores which serve virtually all of a buyer's various needs and specialty shops which handle only one type of merchandise, so is there a variety of financial institutions. The commercial bank is in a way the department store of finance, offering most types of financial services, and then we have the specialty shops such as savings and loan associations which offer only savings accounts and home loans; credit unions which provide a savings facility and make only consumer loans; small loan companies which get their money largely from banks and make consumer loans; mutual investment funds which provide a means for investment of relatively small sums in a broad list of securities, etc.

Savers are offered a broad range of institutions which appeal to them on a different basis. For example, if an individual desires absolute safety above everything else, there are available to him United States Government bonds and postal savings. There is no safer investment in the world, of course, than the fixed dollar, direct obligations of the United States Government. If a saver desires almost equivalent safety but a somewhat higher return and considerably greater convenience, he is offered a savings account in a savings and loan association or a commercial bank. If he wants to take some risks with his capital and invest in the stock market, the mutual investment funds are available to him.

For one who has to be forced to save and wants to combine savings with life insurance or an annuity, there is the life insurance company. As you know, many life insurance contracts are more a savings contract than insurance.

This broad group of financial institutions were developed essentially in the years after World War I, reached adolescence following the great depression and maturity after World War II. Prior to the 1920's, for example, savings and loan associations, known then as building and loan associations were small neighborhood cooperatives, not far advanced from the basic tenets set down in Philadelphia in 1831 when the first savings and loan association was started to provide a means for working people in that area to acquire a home. Even in the 1920's most savers in savings and loan associations were members of a small community group who bought serial shares in the building and loan association as a first step toward home ownership.

Although the term "building and loan" still persists to some degree, the character of our institutions has changed tremendously, physically from one-room, second-floor or club room locations to large and attractive financial offices; managerially from the part-time services of one or a few people to skilled business executives and an experienced staff; financially, from assets of $2½ billion in 1920, $10 billion in 1946, to $50 billion today.

The growth of several of the other types of financial intermediaries is almost as startling and spectacular.

GOVERNMENT'S ROLE FAVORABLE

Public policy has permitted and even encouraged the development of several types of financial institutions. It certainly has refused to give any one type of institution a monopoly in this field.

It is no secret, of course, that the commercial banks have resented and resisted the development of the savings and loan business. This is somewhat natural because one business group never likes to see another come along and provide a competing service. We think it is inevitable that the growth of the credit unions in the next 10 years will also be resisted and decried by the commercial banks and, no doubt, by some of our people as well.

The mutual funds have sometimes employed sales practices that have been at least frustrating to our people, as we compete frequently for the same money. Credit unions have some advantages over us because of the existence of payroll savings arrangements for the credit union right in the factories or places of employment. It, therefore, gets the so-called first chance at the saver.

If the Federal Government had not encouraged the development of different institutions, we would today have a rather stifling monopoly in the handling of the savings and investments of the American people, and certainly not the great volume of savings available to meet the great and wide variety of the capital needs of the country through the mechanism of a free market.

We have now reviewed a bit the history of savings in this country, taken a look at where people save their money, noticed the tremendous increase in institutional type savings versus direct investment in industry by the American people and seen a little of what the American saver looks like.

We also want to explore, of course, the significance of all this in American corporate business financing, but before we do that and in order to have the entire picture, we ought to look just for a few minutes at the reasons why people save money.

WHY PEOPLE SAVE

What is it that motivates a person not to spend all that he earns? What makes a saver?

The United States Savings and Loan League twice has had conducted motivational surveys on this basic question and the results give real clues as to the reasons why people save and some of the differences between the saver and the nonsaver.

We find that people have many different reasons for saving. The most common and powerful seem to be saving for old age, for emergencies, and for children's education. People also save, but not so frequently or so much, for such things as a downpayment on a house, the purchase of durable goods, and vacations. This is true both as to savers in banks and savers in savings and loan associations.

These same reasons may not apply when savers come to get their money.

As to the use made of money withdrawn from banks and savings and loan associations, these are the most frequently cited reasons: To meet general living expenses, to pay medical bills, to make a downpayment on a home, to buy a car, for vacation and travel expenses.

Of these, the most important are to meet general living expenses and medical bills.

This is the case, of course, with so-called passbook-type savings. The other great forms of savings are insurance company and pension fund savings. These clearly are for old age and family emergencies.

We find that a good saver knows how to save and tends to be a rather consistent saver. He knows that he must save regularly and that he must resist, or at least postpone, the purchase of nonessential items. He believes that even an urgent need for things is a poor reason for not saving and he believes that everybody can save if he tries. He believes that the nonsaver has only himself to blame for not saving.

Once the saver has mastered the simple secret of savings—which is merely not to spend everything he has—he cannot blame others if he does not save, and when he does not save he has considerable guilt feelings. The knowledge that there is no real urgency about nonessential items, the realization that the purchase of such items can and often should be postponed is the driving force behind individual and family savings. Most good savers start to save as children or when they first start to work.

I don't know what good that information will be for you whose business it is to urge people to buy rather than to save. Maybe there is some reverse psychology that you could use.

It is fortunate for all of us that the savings habit is pretty well engrained into the typical American. It would be a great tragedy to our country if Americans lost their will to save as they might as the result of a great inflation.

SIGNIFICANCE TO BUSINESSMEN

The growth of these financial intermediaries means that more and more American business will look to financial institutions as a source of capital. When you need investment funds you will find the greatest supply at attractive prices in the financial institutions—the banks, insurance companies, pension funds and savings and loan associations. The financial executives of our corporations will have to know more about the functioning and the investment preferences of the various financial institutions. They will have to know, for example, that savings and loan associations deal almost exclusively in first mortgage loans on homes; that life insurance companies are the chief sources of mortgage loans on commercial and industrial property; and that pension funds have a considerably greater proportion of their resources invested in equities than do the life insurance companies. It will be as important that you become acquainted with the investment officers of quite a number of financial institutions as it was 50 years ago for corporate executives to know the personnel of J. P. Morgan & Co., Kuhn, Loeb & Co., N. W. Harris & Co., or the Walker Bros. of Salt Lake City.

It also means that your financial planning will have to be slanted toward the more conservative investor. Financial institutions dealing with other people's money in a trustee capacity are more conservative investors than the rich individual. Most financial institutions have as their prime objective returning to savers an equal number of dollars as were placed with them, plus earnings on them. Thus the prime objective of a savings and loan association is always to have the saver's dollar ready for him.

Of all the institutional investors, only one does not have a dollar-for-dollar obligation, and that is the mutual investment fund. The life-insurance companies, pension funds, banks, and savings-and-loan associations, all have fixed dollar obligations to their savers and policyholders. As a result, their investments will be largely in bonds and fixed dollar obligations.

You cannot expect that there will be any great move to authorize banks, insurance companies, and savings-and-loan associations to invest in common stocks, or, if they were so authorized, that a significant portion of their funds would be so invested.

Time does not permit any further elaboration here. The point simply is that more and more the users of capital, that is, businesses and governments, will have to reckon with financial institution executives in their search for money.

CONCLUSION

In conclusion, let me remind you that the early financial development of the United States was not unlike that of many lesser developed nations. The fact that both special classes of Americans and foreign individuals provided their savings to American industry until the masses of the people had advanced beyond subsistence levels to the stage of abundance was indeed fortunate. Without this base, the age of abundance might not yet have been attained. Within recent decades, the accumulation of savings by large groups of individuals through institutions like your local savings-and-loan associations have broadened the savings base even further, and permitted more widespread gains in economic growth and increased our potentials.

The men in the savings-and-loan business, I know (and others in the savings business, I feel sure) are dedicated to doing their part to encourage the American people to provide the savings that you men today and the business leaders of tomorrow will require to keep America growing.

Some writers have termed America "the people's capitalism." If by this we refer to the fact that the average man is putting up the capital to support our further growth and progress through his personal thrift, it is an appropriate term.

Problems Faced in Middle East

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, August 8, 1958

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Senator PROXMIRE before the Zionist Organization of America, in San Francisco, Calif., on February 13, 1958.

In discussing the problems faced in the Middle East, the Senator presented sound recommendations for bringing to that important area of the world an era of true peace, and a rising standard of living to its poverty stricken peoples.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS DELIVERED BY SENATOR PROXMIRE BEFORE THE ZIONIST ORGANIZATION OF AMERICA IN SAN FRANCISCO ON FEBRUARY 13, 1958

One year after the enunciation of the Eisenhower doctrine, the Middle East stands as the greatest challenge to American statesmanship in the world today. The Middle East challenges our ingenuity, our determination, and our democratic faith. Our security as a nation—indeed our very existence as a nation—depends on whether—and how—we meet that challenge.

It is not through indifference that we find ourselves thus challenged. We know that the maintenance of peace and security in the Middle East must be one of the major aims of United States foreign policy. We know the vital importance of the Middle East's oil to the economic and military strength of the free world; we understand the strategic significance of the trade routes which pass through the Middle East; we recognize the symbolic importance of the Middle East's religious and historic sites.

We have known, in short, that we ought to do something. But, somehow, despite the Eisenhower doctrine, despite the Baghdad Pact, despite our wooing of King Ibn Saud, despite our gifts of revolvers to Nasser, peace and stability today seem farther away than ever.

We have failed, I submit, to achieve our foreign policy objectives in the Middle East, because we have failed to understand the real nature of the problem we faced. The Middle East faces us today like a smoldering forest fire. At best our efforts to date have merely put on a sudden outburst of flame or halted momentarily a new outcropping of fire; at worst what we have done has actually fanned the embers. But never have we taken the steps necessary gradually to destroy permanently the sparks which some day could erupt in a world conflagration.

What are the realities of the Middle East today?

First, the Middle East is a region of vast poverty and, more important, of increasing

awareness by its impoverished population that there can be a better way of life. Israel, of course, stands as a shining exception to this melancholy picture of a downtrodden people, still enchained by the economic conditions and social patterns of a feudal past. The fantastic development of Israel by her people has been one of the major forces, I believe, in making clear to the people of the Arab lands that they too could live better. The fact that the great potential wealth of the Middle East has been tapped by a very few Arab billionaires serves to bring the urgent problem into sharper focus. In every Arab country—no matter who the leaders or what the form of government—this "revolution of rising expectations" is rapidly becoming the key political factor.

It is precisely because the rulers of many of these Arab nations have been unable, or unwilling, to meet this insistent popular demand for economic and social improvement that Arab nationalism has made such headway. Deliberately exploited in the age-old pattern of dictators, nationalism in the hands of men like Nasser offers an outlet for popular discontent.

The Soviet Union in turn has been waging an all-out campaign to win the allegiance of the Middle East Arab States, by appealing to the same emotions of discontent and nationalistic pride. It is not the likelihood of Soviet military invasion of the Middle East with which we must contend today. The Soviet technique is to win friends and influence people by providing the tools with which national ambitions for prestige, power, and economic development can be realized. Least among these techniques has been persistent Soviet propaganda exploitation of Arab enmity toward Israel.

A popular demand for a better way of life, a strident nationalism feeding in part on this popular demand, persistent Soviet penetration—as if these three conditions were not enough, there exists yet a fourth element of disruption: the million or so Palestinian refugees whose misery is a constantly festering open wound.

There is no doubt in my mind but that the United States is losing ground in the Middle East today. It seems to be little more than a matter of time before we are faced with an explosion which could place us on the brink of a tragic and pointless war. Can we reverse the trend?

I believe we can.

I propose that the following steps would greatly reduce the danger of further Soviet expansion and of a Middle East war between the Arab States and Israel which would soon engulf the entire world:

First, let me say categorically here that I believe that the United States can and must do all it can to support the legitimate needs of Israel. America has no better friends in the Middle East today than Israel. In part I suspect this is because Israel today in many ways resembles our own United States in its formative years. It is a new land and a refuge for the oppressed of many nations. It is firmly dedicated to the principles of democracy. It is a country of pioneers, carving out of a wilderness no less harsh—and often much harsher—than our own frontiers a productive economy of free peoples. It is a melting pot of men and women of many cultures and many backgrounds living together in unity and harmony. Perhaps most important, Israel is a nation which has vigorously attacked her many problems with positive and constructive plans for development.

In any efforts we make toward reducing the Middle Eastern tensions, we must make it unequivocally clear that we believe that Israel is here to stay, that her present boundaries are not subject to third party negotiations. We must guarantee and commit ourselves to defend Israel's right to existence. We must strive to get a commitment by the U. N. to take forceful action against any aggression on the State of Israel. We must recognize that she cannot be expected in some miraculous way to absorb hundreds of thousands of hostile Arabs in her already crowded and strained economy. The integrity of Israel cannot be a bargaining point.

Second. The present economic situation in the Middle East, with its explosive political implications, is a serious threat to the stability of the entire area. Starvation and poverty, against a backdrop of billion-dollar oil fields is the raw material for strife and bitterness. Without economic development to meet tide of rising and legitimate expectations, peace in the Middle East will remain as much out of the question as it is today. For this reason, we should move at once to create a Middle East Development Agency, similar to that suggested by Senator HUMPHREY. This agency must be adequately capitalized to do the regional development job so sorely needed. I am thinking of a multilateral agency in which the states of the Middle East would share equally with the more advanced nations of the West in the planning and execution of regional river development projects, regional malaria eradication projects and a host of other projects which would utilize the enormous untapped resources, both natural and human, of the area. Let me assert, however, that to expand the economy of a country, only to have the increased wealth go to fill the already bulging pockets of the rich will merely increase the explosiveness of the situation. The fruits of economic development must be broadly shared. An important corollary of this approach would be the greater use of America's surplus food and fiber to further economic and social progress.

Third. We must exert real leadership toward the solution of the outstanding differences between the Arab states and Israel. This is no easy assignment, but it seems to me absolutely essential that somebody move to break the stalemate. All the Middle Eastern states are spending abnormal resources on military defense. Think what even a little easing of the tension could mean in releasing energies and resources for constructive development.

Fourth, and equally important, I submit that we should do all we can to halt the arms race in the Middle East. In the poor lands of the Middle East, it is tragic to spend millions of dollars in sterile expenditures for armaments. Whether through direct negotiation with the Soviet Union or by use of the United Nations, we should stop the frantic building up of armed might. The Middle East today reminds us of the Balkans of 50 years ago—the same fierce passions of nationalism, the same increasing entanglement of the major powers, the same deadly growth of armaments. We think we are buying security with our arms, but actually we are laying the groundwork for conflict.

Fifth. To build security, we should invigorate the role of the United Nations in the Middle East. The Senate has already unanimously adopted a resolution urging the creation of a permanent Middle East United Nations Force to act as watchdog and firefighter. This U. N. force should be stationed on all of Israel's borders until such policing is no longer necessary. I would like to see President Eisenhower's "Open Skies" proposal given a try—thus providing a continuous inspection of sensitive areas and military preparations.

Sixth. We must take the lead in working for a permanent solution to the Arab refugee problem. The refugees live today in tragic surroundings and hopelessness largely on American bounty. Why can we not use that same bounty to move toward the resettlement of these thousands of homeless people in Arab lands? In a sense these men and women can provide replacements for the tens of thousands of Jews who have migrated to Israel from throughout the Arab world.

Would the proposals I have outlined stand any chance of acceptance by the Middle Eastern countries and by the Soviet Union? I believe they would.

For the nations of the Middle East there would be the opportunity for a real advance on the path of economic development. Without any sacrifice of national independence, there could be release from the crushing burden of mounting armaments. Given an opportunity such as the proposals I have put forward would present, I am convinced that a strong impetus would be given to the political growth of moderate constructive forces in the Arab nations. The new union of Egypt and Syria represents after all only the most extreme type of Arab leadership. Even they would be hardpressed, I believe, to reject a program such as I have suggested.

As for Russia, I would venture to suggest that an arms embargo to the Middle East might well meet acceptance. Indeed the Soviet Union has herself suggested such a course in the past. By such an embargo, the whole area would rapidly become demilitarized for all practical purposes. Today the growing possibility of an armed clash which could explode into world war III is ominous enough to give pause even to the men in the Kremlin. They could well have a genuine interest in making the Middle East a military no man's land in the cold war. Even they must turn over at night at the thought of a Nasser brandishing an atom bomb. Russia, too, could hardly afford to boycott a generously conceived and financed Middle East Development Fund. Undoubtedly she would seek to use it for her own ends, but that could hardly be easy and certainly it could hardly be worse than the present all-out aid program carried on by the Russians directly. Indeed, should Russia refuse to join with us in this effort this would be no loss. We then would appear, and rightly so, as the one great nation with a real interest in the progress and peace of the Middle East. Russia would be firmly identified as the power which is fostering poverty and disruption.

How about the United States? What would we gain?

I think the answer is obvious. Slowly we would end the nightmarish quality of our present policy where every crisis is superceded by yet another. We would be working towards harmony in the Middle East instead of keeping alive difference and tension. We would be looking forward to progress instead of backward to unresolved conflicts.

Pan American World Airways

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, August 8, 1958

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me and the article referred to in the statement, from the American Aviation Daily of July 31.

There being no objection, the statement and article were ordered to be printed in the RECORD, as follows:

We are sometimes asked about the activities of our private industry good will ambassadors abroad. The Communists wail long and loudly that American business is

imperialistic, that it exploits the country wherein it has an international branch.

In answer to those wails, I invite your attention to a page from American Aviation Daily of July 31.

This newsletter reports on the excellence of the service rendered to the State Department recently by Pan American World Airways, on the occasion of the evacuation of Americans from strife-torn Iraq.

With 27 hours after our State Department had requested Pan Am's cooperation in the evacuation, 4 planes were on the job. That the job was well done is manifested by the Aviation Daily article, which tells of the State Department's gratification with the "wonderful cooperation" from Pan Am.

[From Aviation Daily of July 31, 1958]

STATE DEPARTMENT USES COMMERCIAL AIRLIFT FOR EVACUEES FROM IRAQ

The State Department reported this week that it has received excellent help from Pan American World Airways in evacuating United States businessmen and tourists from Iraq since the recent revolt in that country, and that TWA would also have helped in the lift except for previous commitments which prevented them from responding instantly.

Pan American, after receiving assurances that certain en route navigational aids were still functioning, responded with 4 aircraft—1 DC–7C and 3 DC–6B's. The first plane arrived exactly 24 hours after Pan American World Airways officials accepted the commitment; the second an hour later; and the other two within hours after that. Staging for the evacuation took place in Ankara, Turkey, where Pan American delivered the planes. To date six flights have been operated, the most recent of which took place yesterday. Current schedule calls for 2 a week, 1 each on Monday and Wednesday. TWA had previous commitments which prevented them from making instant response to the request.

Planes were chartered by State and will be paid for out of a special emergency fund set up for the purpose; Pan American World Airways, where possible, is collecting its normal fare from the non-Government passengers. Because of the unusual conditions, the carrier is accepting promissory notes and personal checks as payment. Proceeds are being applied against the State Department bill for the service. In this way, receipts from the non-Government passengers are not allowed to be diverted into the Treasury Department's miscellaneous funds account, draining State's already limited emergency fund.

REBEL REGIME ALLOWS PLANES IN ON LIMITED BASIS

Evacuees, for the most part, are being picked up in Baghdad and flown directly to Rome. Some, however, have boarded at Basra to be taken to the Italian capital, and the attempt is now being made to make a pickup at Kirkuk, in northern Iraq. The Iraqi rebel regime has allowed these United States planes in, along with those of other countries, on a limited basis, according to State Department officials. The United States evacuees, waiting their turns with nationals of other foreign communities there, are all flying commercial. In cases of civil disturbances such as this, State emphasized, commercial—not military—airlift is essential. Our Government and the Iraqi's join in opposition to any possible kind of military implication into the situation. Policy, therefore, is to exhaust all commercial facilities first. But it is entirely up to the civil carrier whether or not it wishes to offer its services. The State Department said that it had received wonderful cooperation from Pan American, however, and indicated it was gratified with the quick response the airline made to the request.

Meanwhile, it has been reported that Middle East Airlines is supplying comparable lift to remove British subjects from the area. Viscounts are being used for the thrice-weekly flights. British were allowed three because of the lesser capacity of the Viscounts.

This incident, it was learned, may also have provided some needed stimulus to a cooperative program talk about for some years now between airlines and the State Department.

The program would cover similar situations throughout the world, and agreements with airlines serving areas which might be subject to Iraq-type disturbances would allow for greater cooperation. Seaboard & Western Airlines looked as if it were ready to sign an agreement this week. State has also invited Pan Ameircan, TWA, Northwest, Braniff and Panagra and intends to ask others to sign up. Defense Department coordination is also included in the program.

Alaskan Statehood

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Friday, August 8, 1958

Mr. MANSFIELD. Mr. President, on behalf of the senior Senator from Florida [Mr. HOLLAND], I ask unanimous consent that a statement by him be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HOLLAND

As a longtime advocate of statehood for Alaska I am not only happy that that objective has been achieved, but I am highly pleased with the almost universally favorable nationwide response with which that achievement has been acclaimed.

In the course of the debate preceding the vote on Alaskan statehood I had occasion to quote from, comment upon, and insert into the CONGRESSIONAL RECORD, some of the pro-statehood editorials taken from our Florida newspapers. And it is particularly gratifying that since statehood for Alaska was accomplished public opinion in our southernmost States—as indeed elsewhere—so warmly welcomes the admission of the northernmost State.

Those two States, Florida and Alaska, have much in common. Historically, both Florida and Alaska were acquired from a foreign power. Geographically, both States are peninsulas thrust away from the mainland. Before the admission of Alaska, Florida had the longest coastline of any State of the Union. Both have been largely populated by Americans coming from other States of the Union. The people of both are imbued with the pioneer spirit. Both are growing rapidly in population and destined to continue to do so, and both offer certain unique attractions not found elsewhere in our Union.

The winning of statehood for Alaska has been a long and arduous battle. It has been with us actively for all the 12 years of my service as a Senator from Florida. Throughout that considerable period it has been my privilege to see the devoted action of a man whom I know to be in large measure responsible for this victory.

I refer to Ernest Gruening, Governor of Alaska from 1939 to 1953, and "Tennessee Plan" United States Senator-elect from that territory, whom I have known well and favorably since our association at governor's conferences, while I was Governor of Florida and he was Governor of Alaska.

When I entered the Senate, he was midway through his long service in the governorship, during which he laid the foundation for statehood by getting the Territory financially prepared for it, and serving with great ability and dedication, as I learned from many Alaskans when I visited Alaska in the summer of 1953, several months after Ernest Gruening's retirement from the governorship. He was then engaged in writing a book, The State of Alaska, which, through its marshalling of facts, proved a powerful presentation in behalf of Alaskan statehood, and has helped me to a fuller understanding of Alaska's problems.

From the earliest days of my senatorship, Ernest Gruening sought to enlist my support. No one in the Senate has been unaware of his persistent and effective advocacy of statehood for Alaska. He battled for it in the antechambers of Congress. He carried his message back into the States. I know that he has appeared before representative audiences in Florida's centers of population, on the platform, over the air, and on television, and at the University of Florida at Gainesville, last winter, where he was honored by being asked to deliver the David Yulee Lectureship. The public opinion that he has helped mobilize in my State and throughout the Nation has been a powerful force in buttressing his personal appeals to Members of the Senate.

Many have contributed to bringing the 49th State into the Union, but, in my opinion, without Ernest Gruening's unremitting efforts through the years, statehood for Alaska would not now be a reality.

The People of the United States as I Know Them

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Friday, August 8, 1958

Mr. FULBRIGHT. Mr. President, I received in the mail recently a short statement written by Dr. R. Dwarkadas, who had a fellowship to the United States in 1955 under our Government program.

I think this is an excellent statement, and is further evidence of the value of the exchange programs which our Government fosters. I do hope my colleagues will read the statement and agree with me that this program should be expanded.

I ask unanimous consent to have the statement printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE PEOPLE OF THE UNITED STATES AS I KNOW THEM

(By Dr. R. Dwarkadas)

I shall not say here anything about the United States Government or their foreign policy. I like to say a few things about the people in the States—the common men as

they live, their outlook of the world and things, of their neighbors, of their hospitality to foreigners like us, of their preoccupations, their likes and dislikes, and mostly the things that have impressed me during my short stay of 10 months over there.

Couple of decades back the people had been basically isolationists—the very people who said "No" to President Wilson on the eve of League of Nations. Now the people are, of course, conscious of their role in international affairs, though not completely for they are rather shocked why they should be taken to task if something went wrong in Goa or in Cyprus. They are sensitive about Korea or Indochina or Israel because these problems have affected them rather intimately. On Asian affairs they have not had much knowledge though they earnestly and carefully listen to all points of views, especially the anticolonial point of view with great deal of interest and sympathy. On European affairs they seem to have a good deal of knowledge, a lot more than we on this side, mostly because of their ancestral connections and also because of the sound perception—peace loving as they are—that good many big wars arose from that end. They are, of course, shocked at the rate of expansionism of the Soviet bloc and in their bewilderment sometimes criticize even their own beloved President Roosevelt for having been "soft" with Stalin.

While the Constitution gives them a secular state, the people are intensely religious. They are religious not in the sense of being very dogmatic. They are questioning and speculative. I was impressed by the fact that they were lot more openminded than philistine and wanted to know about other religions, especially Hinduism, Buddhism, etc. Even a mild dose of Upanishadic thinking was a very stimulating experience. The most thrilling experience in their debating sessions was the regular cross-fertilization of ideas. To my mind, the advanced technological triumphs, instead of making the people by and large grossly materialistic have turned them more and more toward spiritual speculations—a phenomenon of incalculable significance to the success of Democratic way of life.

Their socials and coffee hours developed in a foreigner a surprising measure of a sense of homeliness. It is so nice to know that middle-class families go round to one another's places, inviting foreign boys and girls, during the after debate coffee hours, to keep the ball of informed discussion further rolling. It is thrilling to notice that brilliant ideas crop up more spontaneously than in the regular debating sessions. No aspect of life is too technical nor too profuse for these coffee hours. Invitees freely discuss a range of topics that varies from segregation to the state of Nation or delinquency to dating habits of American females. I had far deeper insights into the American dilemmas in these coffee hours than in handling the truckloads of literature available on the burning problems of American life. In one of these socials I was told how a student from New York gave the initiative to his friend from Wisconsin, in the job of attacking McCarthyism at Wisconsin. The initiative of the local man worked miracles, for the group began to see the other side of the coin and became critical of their own Senator. Again, I learned how the problem of segregation was not an easy one, and how there were many Souths and how progress was being made step by step and how progressive-minded people are genuinely interested in attacking this problem—a problem by no means of less magnitude and of less complexity than our own problem of untouchability.

The most striking thing I noticed about the common man in the United States is his capacity to plan his living in terms of future. It is amazing how a private enterpreneurial system works out segments of planning at lower levels. The consumer in States has a sense of planned values. He knows what kind of house he has to build in what span of time, what family planning, how much to invest on luxuries, how much on necessities so on and so forth. He often succeeds in cutting the coat according to the cloth. He has visions of a future. He has practical plans for the present. He knows when to relax and how to relax. Sometimes I wonder the reason why the Government could talk less of planning is basically because the people in their homes, factories, etc., know how to plan their living.

In most of the cases I know of, on the whole, the family life of the common people has been clear and honest, decent and natural. The parents do not have the inevitable problem of finding out suitable matches for their boys and girls. The latter, however, know how to take care of themselves. Girls and boys, when they are in love, are truthful to each other. If they are not, they are again truthful enough to tell each other that that is the case.

To my mind the continuing prosperity of the United States is largely due to the continuing vitality and dynamism of the common people. They are creative, prone to constructive criticism rather than destructive criticism. They not only believe in spinning new ideas and innovations in their way of practical living but also believe in finding ways of executing them. The practical genius of the people makes their inventiveness to descend below the purely speculative levels to useful channels. On the whole they are a very agreeable and friendly lot.

Delaware Volunteers

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, August 8, 1958

Mr. MARTIN of Pennsylvania. Mr. President, there are many historic military units in the United States. None has a greater record than the regiment in Delaware during the Revolution which was known as the Delaware Volunteers.

A very fine statement relative to that organization was published in the last edition of the National Guardsman. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE BLUE HEN'S CHICKS

"No regiment in the Army surpasses them in soldiership." (Gen. "Light Horse Harry Lee.)

Delaware's Volunteers, answering the Continental Congress' summons in 1776, took with them into camp champion fighting cocks descended from a legendary blue hen. In their first battle against the British, at Long Island, the fighting spirit of the outnumbered Delaware militiamen was likened to that of "The Blue Hen's Chicks," a nickname which guardsmen of Delaware's 198 antiaircraft artillery group still wear.

Poorly clothed, seldom paid, once reduced by casualties to only a single company, the regiment fought in every major battle of the Revolutionary War but one. When Gen. George Washintgon accepted Lord Cornwallis' sword at Yorktown, men of the Delaware regiment stood proudly with their commander in chief—they had earned the right to be there.

Hastily organized in 1655 to defend New Sweden, as Delaware was called, against encroaching Dutch, the militia already was more than a century old by the time their gallant stand at Long Island inspired the whimsical nickname.

Today their war honors read like a United States military history: French and Indian Wars, the Revolution, War of 1812, Civil War, Spanish-American War, Mexican Border; World War I, in France as the 59th Pioneer Infantry Regiment, predecessors to our modern combat engineers; World War II, fighting as beachhead antiaircraft artillery in the South Pacific; and Korean war service.

Scientific Discoveries Made at Linfield Research Institute in Oregon

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, August 8, 1958

Mr. NEUBERGER. Mr. President, because the Senate soon will consider the Federal college scholarship bill, with its emphasis on achievement in courses in science, I think it is well to call to the attention of my colleagues the outstanding strides which have been attained in this field at one of Oregon's fine private institutions of higher learning.

This is Linfield College, located in the city of McMinnville. At Linfield, research has promoted many significant and valuable scientific attainments. This has been particularly the product of the Linfield Research Institute, under the supervision of Dr. Walter P. Dyke, able director of the institute. In cooperation with Linfield's scholarly president, Dr. Harry L. Dillin, the Linfield Research Institute has developed many important inventions in such vital fields as electronics.

This program is thoroughly summarized in an article which appeared in the Oregonian of Portland of August 3, 1958, written by John L. Denny, business editor of the Oregonian. I ask unanimous consent that Mr. Denny's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LINFIELD RESEARCH BEHIND NEW X-RAY INDUSTRY

(By John L. Denny)

A compact but complicated system of "black boxes" that takes X-ray pictures so fast it can photograph the "insides" of an exploding bullet, will start coming off the production lines of a new McMinnville industrial plant this month.

This is the first Oregon industry to be incubated by the Linfield Research Institute, a basic research center which is growing almost unnoticed at Portland's doorstep into an institution of considerable stature in the scientific world.

MORE INDUSTRIES LOOM

The new enterprise, Field Emission Corp., may be only the beginning of industrial ap-

plications of the storehouse of basic research already accumulated at the institute.

There is more to come, for the institute itself will break ground this month for the first step of a planned million-dollar expansion program which will equip it to offer a complete research service for Pacific Northwest industry, buisness, and government.

Initial project in the expansion program is a 12,000-square-foot building, on which construction will start next week, in a recently acquired 36-acre tract adjoining the college campus on the south. The tract will be developed into a combination research-industrial park. Half of the area will be a research center, the rest sites for industry which manufactures products based on the results of research.

This concept of a research center becoming the nucleus for industry has proved notably successful at Stanford University, where the Stanford Industrial Park has become a major electronics center.

Start of the expansion program was made possible by a $150,000 loan to the institute by E. J. Linke, Carlton lumberman. Additional phases will be undertaken as the institute's workload increases and capital becomes available. Some of this may be provided by existing industrial firms, since industry rapidly is learning the value of having a handy source of research.

The expansion program is being handled by Research Development, Inc., a nonprofit holding company created to develop the property for the institute. Eugene Marsh, McMinnville attorney, is president.

ELECTRONIC WORK FEATURED

Since it was launched 12 years ago, first as a department of Linfield College and becoming a full-fledged research center in 1955, the institute has specialized in harnessing the principle of getting electrons out of a vacuum and putting them to use.

Conventional method of doing this is with a hot wire in a vacuum tube. At the institue, they have found how to do this by stirring up the electrons in a piece of metal with a high-voltage shot, then squirting them through a tiny field emitter needle, a tungsten sliver so fine it tapers to a single metallic crystal at the tip.

This has much the same effect as squirting water through a fire hose, compressing the electrons into a fine stream of extremely high density.

This concentrated stream from the field emitter has several advantages over conventional methods of generating electrons. "Machines" can be made much smaller, for one thing. And with the sharper definition of the fine, high-density stream, can do the job much faster and more efficiently. Then, too, getting rid of the heat necessary in the "hot wire" method does away with the need for space and other provisions for cooling.

MANY USES POSSIBLE

Possibilities of useful applications of these "cold" electron guns are many and varied, and some of them could lead to industrial developments of major magnitude in the area. Better TV picture tubes is one possibility. And little can be said about the possibilities in the field of high-frequency wave generation and radar, because of a Defense Department security cloak. Informed observers, however, have dropped a few hints that stagger even a space-age imagination.

Several outside firms have expressed an interest in manufacturing electronic devices developed at the institute. But these eastern companies wanted to send in their engineers to learn the techniques and processes, make the item elsewhere and leave Oregon holding the bag.

Aware of both the immediate and prospective possibilities that could create jobs and payrolls within the State, the institute folks decided to set up the Field Emission Corp. as a separate manufacturing arm to apply the research and develop products.

BIG ORDER ON HAND

The new company will start life with a sizable order for its first product. It has a Navy contract for the high-speed X-ray machine which takes X-ray pictures at two-tenths of a micro-second—a micro-second is one-millionth of a second.

The institute, meanwhile, is at work on a Government-financed research project which could result in the new company being swamped with orders. This study is to determine effect of the high-speed rays on living tissue, and whatever the outcome, the results will command considerable attention. If the super-fast X-rays are found to be less harmful than regular X-rays—and there has been a lot of recent national publicity on the danger of over-exposure—it would be reasonable to expect a bright medical future for the new X-ray tubes. If found to be more destructive of living tissue, cancer treatment possibilities would be opened up.

DR. DYKE PRESIDENT

President of Field Emission Corp. is Dr. Walter Dyke, director and guiding genius of Linfield Research Institute, who started the field emission studies in the college's physics department in 1946.

The institute has come a long way since Dr. Dyke started the first research work with a grant of $5,000. During the coming year it will have a budget of $800,000 and a staff of 70 people, including mathematicians, biologists, physicists, chemists, engineers and, for the first time, an economist.

Most of his growth has stemmed from Government-financed research projects, plus an occasional job for a private or State agency. Dr. Dyke is steering the institute toward a closer relationship with business and industry, in a firm belief—which is shared by many—that research will play an ever-increasing part in the economic development of Oregon and the Northwest.

The Federal Government Moving in on the Schools

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, August 8, 1958

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "Moving in on the Schools," from the Washington Daily News of August 7, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MOVING IN ON THE SCHOOLS

In both Houses of Congress, committee approval has been given liberal bills to solve our educational problems by plunging the deficit-ridden Federal Treasury deeper into this field. The House is expected to pass a bill tomorrow giving scholarships to bright students.

On top of the $1 billion or so the Government now feeds into public education via various routes, the bills before Congress propose to go directly into the production of scientists, scholars, and teachers.

Over the next several years, these bills propose to dole out up to $1.5 billion for scholarships, student loans, teacher training, etc.

Up to now, Congress has turned back the energetic effort to get the Government in the school-building business. But the scholarship bill is the opening. It heads the same way.

This all is based on the theories that too many gifted youngsters are not going to college simply because they lack the money, and that only the Government can remedy this—generalizations never substantiated.

There literally are thousands of scholarships which go begging every year. And the number of scholarships has been growing fast—the last survey indicated there were nearly 250,000. (The most liberal of the bills before Congress would provide an average of 23,000 a year.)

This is called a shot-in-the-arm program—a one-time deal designated merely to stimulate State, local, and private effort for better education. Such programs repress rather than stimulate because they tempt people to depend on others for things they can do better for themselves.

This simply is a part of the irresponsible push toward bigger Federal deficits; more power here in Washington and less for the States and the people themselves.

Marshal Carlton G. Beall Nominated for Another 4-Year Term

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Friday, August 8, 1958

Mr. BEALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news article under the headline "Our Own Marshal Beall Renamed for 4 Years More of Gun-Totin'," written by Morrey Dunie, staff reporter, and appearing in today's issue of the Washington Post and Times Herald.

United States Marshal Beall has done a good job and is deserving of the reappointment which he has just received from the President.

The news article by Reporter Dunie is well organized and is written in a humorous vein.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR OWN MARSHALL BEALL RENAMED FOR 4 YEARS MORE OF GUN TOTIN'

(By Morrey Dunie)

Yes, Johnny, there is a United States marshal for Washington.

He doesn't race a great white stallion down Pennsylvania Avenue in pursuit of cattle rustlers. And he rarely saves beautiful damsels in distress back at the ranch.

Our marshal, Carlton G. Beall, doesn't have a long-barrel six-shooter strapped low on his thigh, and it's pretty certain any one of your favorite marshals could outdraw him in a noontime showdown.

But, Marshal Beall does wear a .38 caliber revolver on his hip and has been known to arrest bad men around town. As a matter of fact our marshal and his 85 deputies made 10,724 arrests in fiscal 1957.

And just yesterday, President Eisenhower nominated Marshal Beall for another 4-year term. He became our marshal in 1954 after being a sheriff for 4 years out in the hinterland—Prince Georges County.

Of course, no one seems to be able to remember the last time our marshal or any of his deputies camped overnight on the Washington Monument grounds or on the Capitol lawn, sitting around a snapping campfire and eating beans from a bent tin plate.

But they certainly have camped on a lot of doorsteps, serving annually more than 400,000 separate civil documents on residents of Washington.

In some ways, it may be unfair to compare Marshal Beall to those TV marshals and their real-life predecessors of the Old West. Those men were marshals all right, but they were Territorial marshals where the only law was Federal law and they were the law-enforcement officers.

Marshal Beall's primary mission is to carry out the orders of the Federal courts. Basic law enforcement here is left to the Metropolitan Police. But, as Beall points out, Washington is still a Federal jurisdiction and so, in theory, at least, we have two police chiefs—Robert V. Murray of the Police Department and Marshal Beall.

Beall dresses in a neat business suit and bow tie, and works in a tastefully furnished air-conditioned office. One of the 94 Federal marshals in the United States and its Territories, Beall is 40 years old. Probably the most he really has in common with those TV fellows is that he's handsome enough to be one himself.

The Culture of a Community

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, August 8, 1958

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Northwest Arkansas Times, of Fayetteville, Ark., entitled "The Culture of a Community."

This editorial was written by a chaplain of the Veterans' Administration hospital in Fayetteville, and I think is an extremely fine statement.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Northwest Arkansas Times of August 2, 1958]

THE CULTURE OF A COMMUNITY

(By Chaplain B. D. Willetts, Veterans' Administration Hospital)

Most generally we are unaware of the culture of a community, but each one of us is adding to it daily. Culture is a word used to denote the summary of all influences of all people living together. We think mainly of culture when the community encourages people to grow in abilities and to live on a friendly basis with one another.

One would need to evaluate the musical activities, the theater, the movies, the social life, working conditions, the homelife, the schools and colleges, business establishments and the organizations active in a community to get a picture of its culture. Altogether they produce an atmosphere in which men and women accept and contribute values and standards of living which make up the culture. Each one of us by our support and interest in one or all of these fields helps to make a desirable or undesirable neighborhood. No one can be careless with his choice of activities for it makes up a part of the culture in which we all have to live.

What can most surely contribute to a real land-of-opportunity culture for our community? It will be the ideals by which we live. Where do we get our ideals? Do we pick them up on the street? Such might not be the best for all of us, for some people are selfish and have a limited interest. I believe that if one wants ideals that are dynamic and that make his life a strong influence for the finest culture, he will find them expressed and suggested in our churches and the Great Book which they use as the textbook of great living. If anyone is not acquainted with this influence and these ideals, he probably is not doing his part for a finer community. Each time we neglect to attend their worship services and study groups we are subtracting from the strength of the ideals that would make us contented and many others happy.

Everyone should be serious about the culture of the community. One does not need to be rich to be cultured. He does need to have ideals and to enjoy the good things of life. The cultured person has more resources of living and makes more opportunities for cultured living as your neighbor.

Bombings in the South

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, August 8, 1958

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution of the civil rights committee of the Grand Lodge of the Knights of Pythias of the State of New York supporting a resolution submitted in this body by me and in the other body by my colleague from New York, Representative KEATING, which seeks to deal with the very vexing problem of bombing schools, houses of worship, and other institutions, Negro or Jewish, in the South—and which, incidentally, could take place anywhere else. The resolutions have been submitted in an effort to provide the Federal Government with some area of jurisdiction, which is now in the twilight zone, so that the Federal Government may deal vigorously with these affronts to our national dignity, our national morality, as well as to the Constitution and the law.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF THE CIVIL RIGHTS COMMITTEE OF THE GRAND LODGE, KNIGHTS OF PYTHIAS

Whereas there have been recent and alarming occurrences of bombings of houses of worship, community buildings and homes in the South; and

Whereas a question has arisen as to Federal jurisdiction in such cases involving such bombing and violence; and

Whereas the terrorizing of minority groups is deplored by all decent people; and

Whereas bills have been introduced in Congress, sponsored by Senator JACOB K. JAVITS, and Representative KENNETH B. KEATING which would specifically authorize such Federal jurisdiction and permit Federal prosecution and investigation of racially inspired bombings: Now, therefore, be it

Resolved by the grand lodge, Knights of Pythias of the State of New York, That—

We urge Congress to adopt legislation that would close the gap, if any, in our Federal laws, and permit the Federal Bureau of Investigation to intervene whenever interstate conspiracies are found to exist, working to break State felony laws, resulting in such incidents noted above; and

We further urge that our order actively support the bills submitted by Senator JAVITS and Representative KEATING, and that a copy of this resolution be forwarded to Congress to indicate our position in this matter.

Respectfully submitted by the civil rights committee.

MAX CAPLAN,
Chairman.

Approved under section 56 of grand statutes.

MURRY LEVENE,
Grand Chancellor.
DAVID MOSS,
Grand Priest.

Ed Wimmer Answers Attacks on Fair Trade Bill

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, August 8, 1958

Mr. PROXMIRE. Mr. President, recently Mr. Frederick C. Othman, in his syndicated column, was critical of the national fair trade legislation which I have coauthored with the distinguished junior Senator from Minnesota [Mr. HUMPHREY]. A fine reply was made by Mr. Ed Wimmer, president of Forward America Publishing Guild, Inc., and vice president and public relations director of the National Federation of Independent Business, Inc.

Mr. President, I ask unanimous consent that Mr. Othman's two articles on fair trade, and Mr. Wimmer's reply to him, be printed in the Appendix of the RECORD.

There being no objection, the articles and the letter were ordered to be printed in the RECORD, as follows:

HILDA PREFERS CUT-RATE PRACTICE

(By Frederick C. Othman)

WASHINGTON.—My bride, I must let the so-called fair traders know, takes a dim view of 'em.

Particularly would she be pleased if they'd kindly quit worrying about her. She says they're doubtless fine gentlemen, every one, but that she can take care of herself buying an electric iron or a washing machine in any discount store in America.

What brought up this ladylike outburst was arrival here of an assortment of fair traders to appear before the Senate small-business committee, headed by Senator HUBERT HUMPHREY, JR., (Democrat, Minnesota) who used to run a fair-trade drug store, himself.

My Hilda wouldn't have done business with the Senator; she patronizes cut-rate druggists. Her theory is, why pay 44 cents for a large economy size when she can get the same thing down the street for 29 cents?

Senator HUMPHREY has up an assortment of bills which would tend to bring back prices at retail as fixed by the manufacturers

and I can only tell him that Mrs. O. wants no part of the deal.

What particularly roused her was the evidence of Joseph Fleishaker, who operates the six Will Sale Appliance stores in Louisville, Ky., and who is president of the National Appliance and Radio Dealers' Assn.

He said he wasn't attacking the discount house as such, because it was only a symptom of the ills besetting the appliance industry. The trouble, he said, was the manufacturers boosting their production capacity ahead of time to take care of the growing population. His members want Congress to pass a national fair-trade law allowing the manufacturers to franchise dealers and set retail prices.

"I'm not so much concerned about the dealers as I am about protecting the consumer," he continued. "Your wife has suffered. Everybody's wife has suffered."

Senator WILLIAM PROXMIRE, Democrat, of Wisconsin, couldn't understand exactly how his wife had been hurt.

"The service angle," said Fleishaker. "The discount houses have eliminated service. An electric iron can be sold by mail at a ridiculously low price, but if it goes bad, the customer must ship it back, say, to the factory at Dayton, Ohio, to have it repaired."

That's where Fleishaker stepped on the toes of my Hilda. She'd seen electric irons that shoot steam into the clothes advertised at $19.50. Down she went to her favorite man on 11th Street, who operates from a store that has nothing much on display except cardboard boxes full of merchandise. He sold her the identical iron for $11.38.

It came in a sealed carton containing the standard manufacturer's guaranty, which she promptly threw away. It's too much trouble mailing irons back to the factory when busted, she said.

Her iron, in any event, functioned perfectly and she said she was willing to gamble. She saved $8.12 by patronizing the man who didn't seem to care whether she bought anything and who refused to wrap her purchase. If the iron goes cold when it should be hot she calculated she could pay a repairman and still be ahead of the game. Senator PROXMIRE seemed to have the same idea.

"Why isn't it more logical to sell the article at the low price," he asked, "and then pay for the service as needed?"

"The other method is the historical way," replied Fleishaker. That's when my bride had a notion (happily suppressed) to take a swing at him with her reticule. She said she wasn't interested in history when buying an iron, particularly when it cost her $8 more.

WITNESS JOLTS THE FAIR TRADERS

(By Frederick C. Othman)

WASHINGTON.—American druggists, who are almost solidly behind a so-called fair trade bill making cut-rate prices illegal, got a horrid jolt today from Charles F. Fort, one of their own.

Pharmacist Fort told the Senate Commerce Committee that when the Louisiana fair trade law collapsed, he slashed prices 10 to 50 percent on everything in his Baton Rouge drugstore. Business boomed so that his eight clerks were run ragged.

Now he's got 52 clerks and 6 drugstores and he's doing a $2 million a year business. Very simple, said the youngish, plumpish Fort.

"There are millions of people in this country who wouldn't think of spending $26.95 for an electric mixer," he told the Senators. "But now there's many a man who'll drop into one of our stores (adv.) buy this same, identical mixer for $14.50 and take it home to his wife for a birthday present."

Fort said that his markup ranged from 5 to 30 percent and that he never sold an item below cost.

"We don't believe in giving our merchandise away," he continued, "but we do keep our costs low so we can give the people a fair price."

He bitterly denounced the bill which would allow manufacturers to set retail prices on trade-marked merchandise, as written by Senators WILLIAM PROXMIRE (Democrat, Wisconsin) and ex-druggist HUBERT HUMPHREY (Democrat, Minnesota.)

"If this bill is passed, you mean the consumer will have to pay more?" inquired Senator STROM THURMOND, Democrat, of South Carolina, who takes a dim view of the Federal Government passing laws taking controls away from the States.

"Yes, sir, unless he buys from us, because we'll go to court," replied Fort. He quickly apologized for that one; said he meant no contempt for Senators.

"What you're saying is you're against the bill," suggested Senator THURMOND, who didn't seem insulted.

"Yes, sir, I sure am," Fort said.

He looked around the tiny hearing room with the crystal chandelier and the cupids on the ceiling, then he said: "If the people knew what this bill meant, you wouldn't be able to hold these hearings in this little room."

The room was jampacked, incidentally, by fair-trade proponents; Fort was able to observe few mere customers. Senator ALAN BIBLE, Democrat, of Nevada, was interested in his profits at cutrate prices.

"Since slashing prices on everything in the store," said Fort, "we've been making money. In fact, the only time we have to borrow is when we pay taxes—and that's no reflection on the Senate."

Druggist Fort, I hasten to add, had a receptive audience in the two members of the subcommittee and my guess is that the so-called fair trade bill, after extensive hearings, will smother to death in one of those senatorial pigeonholes.

(This letter is submitted for the record of the public hearings on fair trade, beginning, July 21, 1958, Washington, D. C., before Special Subcommittee on Fair Trade of the Senate Interstate and Foreign Commerce Committee on the Humphrey-Proxmire bill, S. 3850, to establish Federal fair trade, by Ed Wimmer, president, Forward America Publishing Guild, Inc., 450 Commercial Square, Cincinnati, Ohio; vice president, public relations director, public relations division, National Federation of Independent Business, Inc.)

JULY 12, 1958.

Mr. FREDERICK C. OTHMAN,
Daily News Building,
Washington, D. C.

MY DEAR MR. OTHMAN: Several of our more than 100,000 members (many more of whom I am sure read your usually delightful commentaries) have complained bitterly over your most unfair attitude concernnig fair-trade legislation—designed to protect the very papers who are buying your commentaries.

In other words, Mr. Othman, you seem to go out of your way to ridicule and hold in contempt those who are testifying before Congress in behalf of fair trade principles while, on the other hand, you uphold, defend and eulogize the bait artist, chiseler, and discount-house operator who are little more than scavengers of the market place—preying upon the uninformed, among whom is your own little Hilda.

You say in your column that Hilda wishes the so-called fair traders would quit worrying about her, and would let her buy the things she wants at the discount house; that "Hilda would not have patronized Senator HUBERT HUMPHREY's fair trade drugstore"—because "Hilda believes in patronizing cutrate druggists." You referred to those testifying for fair trade as "an assortment of fair traders," which assortment included officials of such newspaper advertisers as Sunbeam Corp., Westinghouse, General Electric, Parke-Davis, Eli Lilly & Co., and many, many others, including representatives of the most respected organizations in the Nation.

In my own testimony during hearings on the Harris bill, before the Subcommittee on Commerce and Finance of the House Committee on Interstate and Foreign Commerce, I asked the committee if any young man would dare to open a retail store in any neighborhood in which the discount house or price-baiting chain was dominant, and if freedom of opportunity could long exist in any area of the economy if our American philosophy is to be based on survival of the fittest instead of survival of that which is fit to survive.

Another of my questions dealt with profits and taxes, my contention being that loss leaders were now running into the billions upon billions of dollars in sales, on which no income tax is paid. I asked the committee: "Why is it that price cutters always use the most advertised lines as baits, never offering a lesser known trademark of equal quality?"

The chiseler and bait artist you and Hilda patronize, and whom you so often defend, are living on the reputations of the advertisers who need profits to promote and build up those reputations through papers buying your column. These people have no reputation of their own—except price cutter, and were it not for the legitimate manufacturer, wholesaler, jobber, and retailer—who establish trademarked merchandise—where would your "discount dealer on 11th Street" be today?

Your column ridicules the statement of Joseph Fleishaker, president of the National Appliance & Radio Dealers' Association, for his statement that "housewives are harmed by the ills besetting the appliance industry," and again I ask you: "What young man would start an appliance store today?" And boys are sons of housewives, you know, who want them to make good. Why is it that 50 or more appliance makers went broke, merged or were liquidated since your glorified discount house came into being, and do you think that is good for you and your Hilda?

You say your "Hilda couldn't understand how she would be helped by fair trade," but if fair trade assists in keeping the trade channels of this Nation open to the 750,000 graduating newcomers now entering the market place each year; if fair trade enables manufacturers and merchants to sell reputable goods at fair prices so that fair wages can be paid out of fair profits—isn't that better for Hilda?

The small appliance store owner in your neighborhood may be your Sunday School teacher; a member of the Kiwanis, Rotary, Lions, or Optimist Club, and when he displays several refrigerators or television sets, and helps you decide which is best for your needs, and when he gives a service guaranty with what he sells: do you think you are being fair when you choose what you want through his efforts (or through advertising in the papers carrying your column), and then buy from the discounter?

Furthermore, Mr. Othman, the regular price and savings you mention are completely misleading in that discounters always quote the list price of the manufacturer, which, unless fair traded, never prevails. So, the savings you mention are entirely fictitious. I would also ask your Hilda (and all the other bargain-seeking Hildas)—Why not fight for

a further savings by asking manufacturers to sell their merchandise out of freight cars or trucks, since Hilda enjoys trading in a store where goods are piled up in boxes with no service, wrappings, or fixtures?

I am sure that automobile manufacturers could sell their cars direct from big warehouses, with no guaranties, service, or fancy showrooms, thus eliminating the thousands of dealers, employees, taxes, electric signs, rentals, advertising, etc., which the dealerships represent. After all, hasn't the discounting, price slashing, unethical list-price-shouting car dealer destroyed public trust in his business and the industry he serves? Hasn't the Congress viewed the bankruptcy of thousands of dealers and found evidence disastrous enough to warrant adopting a price-labeling act which is aimed at halting some of the lying advertising engendered by cutthroat competition? Do you think it is good for the economy when new car sales this year average a reported $46 loss per car?

No trade, my friend, is good trade if it isn't fair trade, and Senator HUMPHREY and an overwhelming number of the House and Senate Members have endorsed this philosophy in their previous votes establishing national fair-trade laws. So did the legislators of 45 States when they thought they were outlawing unfair trade, and how about the United States Supreme Court which ruled on several occasions that unfair trade practices—loss-leader selling—is detrimental to the national welfare?

Officials of Bissell Carpet Sweeper Co., for example, testified that Bissell laid off 20 percent of our employees, and our sales went down 35 percent due to cutthroat pricing practices.

Herman Van Meil, general counsel for Sunbeam, related that Sunbeam lost 74 percent of our dealers in Utah due to price wars, and he said that following price wars in St. Louis, his company ended up with 135 out of 1,200 dealers; that 4 percent of Sunbeam dealers in price-cutting areas control more than 80 percent of Sunbeam volume.

Consider the statement of General Electric that loss-leader selling ruins the manufacturer's reputation and decimates his distribution system. With this in mind, let me ask you why any salesman should bother to call on the Hildas of America, to interest them in buying new products when they know the Hildas will end up at a discount house? Isn't that what G. E. is saying when they charge decimation of distribution systems?

Dr. John Dargavel, National Association of Retail Druggists, has called upon the labor unions to face up to the fair-trade issue, reminding their leaders of the constant drive for bigger pay envelopes and more fringe benefits, and he has asked them where these increases and benefits are to come from if union workers continue to hunt for loss-leader sales, discount house bargains, catalog goods, trading stamps, and other free enterprise killing devices.

It has been said, and wisely, I believe, that the way a people spend their money determines the kind of society they create, and it has been most encouraging to me to note that more people are asking, "What kind of a life can I buy with my money"? And there is a growing hunger for knowledge which says that in the exchange of the gifts of earth, unless they be in kindly justice, many may someday go hungry.

Edwin Canham, of the Christian Science Monitor, made the statement that if ethics are not restored to the market place, free enterprise is doomed. Pope Pius XI spoke of American capitalism becoming so cruel and hard, that it no longer serves the spiritual needs of the average man.

In a resolution adopted by the Churches of Christ, they declared:

"Economic institutions should serve the whole man, body and spirit, and it is the church's duty to influence the development of economic institutions, policies, and practices that are favorable to the right relations between all the people."

Do you honestly believe, Mr. Othman, that the assortment of so-called fair traders to whom you referred, are asking for anything more when they seek a system of economic traffic lights to help keep the road hogs from running American free enterprise over the precipices of predatory competition and monopoly power? Aren't you willing to see, that economic gangsterism is no different than gangsterism in any other form?

Advertising Age (another member of the assortment of so-called fair traders) has stated that Congress cannot wait any longer to halt the jungle-type competition that is over-running enormous areas of our marketing system. Paul Fisher, of the Fisher Pen Co., who also testified during the hearings on the Harris bill, has said that "fair profits widely circulated through our economy, are essential to continued prosperity. Every citizen has a basic and fundamental right to fair and equal treatment."

Such publications as Advertising Age, and men of such reputation as those whom I have quoted, are not an assortment of so-called fair traders, and I can assure you that organizations such as the Bureau of Education on Fair Trade are not headed up by selfish, greedy individuals who are seeking new ways and means of picking the pocketbooks of women like your Hilda.

We hear so much today about the young people who have lost their boldness and sense of adventure; their zest for exploration and risk taking; their capacity for dedication, and we are told that a generation such as this is headed for the history books. We read that 33 percent of the girls and 25 percent of the boys in one poll, favored Government control of all basic industries, while another poll showed 50 percent favoring Government censorship of the press, radio, and television.

These kids are not communists and neither are their teachers, but you ask any assembly of boys and girls in our schools and colleges, how many want to venture into a business of their own, and the results will amaze you. There was a time every For Rent sign on an empty store was a challenge to our youth, and, yes, to men over 60—but not now.

If we had a market place governed by rules of fair play—the same kind of rules that keep baseball, football, and other sports alive, we could keep fair competition alive, and that is all Peter Sletterdahl, editor of the NARD Journal (National Association of Retail Druggists), has sought in his bitter denunciation of those who constantly use trademarked products as loss leaders or discount house items, to destroy legitimate competition.

Senator Humphrey and, other legislators supporting fair trade, can make themselves more popular with more people by beating the drums of those who are turning American free enterprise into a gigantic bargain basement, but they believe with Jonathan Swift, who wrote in Gulliver's Travels:

"Honesty has no fence against superior cunning, and since it is necessary that there should be a perpetual intercourse of buying and selling, and dealing with honesty, there must be a law to protect the honest dealer—else the knave gets all the advantages."

Abraham Lincoln must have been thinking along these lines, when he said that the wolf could complain that his freedom was being restricted when he was kept from the flock, but the restrictions enabled the flock to live. Bishop Fulton J. Sheen put it another way when he warned, that "freedom to do as you please is decadent liberalism, while the freedom to do what you ought to do is the roots of civilization."

Even the Hildas of America, who are caught in the present craze of something for nothing, should know that predatory competition is the pathway to monopoly, and that monopoly always leads to high prices and national disaster. They should also know that if lustful men had been allowed to continue their predatory course, there wouldn't be a live buffalo in America. The deer and pheasant would be gone. Many lakes would be emptied of their fish. Our great Redwood trees would have been cut down. The wild game reserves we now so jealously protect would not exist.

Ignorance is not bliss, my friend. It is oblivion, and oblivion it will be if the typical American housewife loses sight of the fact that her duty to her children is to give scope to their latent abilities, by giving scope to the economy which is to control their future standards of living.

During the past year, there have been more small business failures than at any similar period in history, but the giant chains and discount houses, with their something for nothing ballyhoo, are in a stronger position than ever. As a result of cut-throat competition, thousands of substantial businesses have merged or liquidated, and the president of a sizable supermarket chain that merged with a bigger chain, said recently, that "competition is such that only the biggest can survive, and that is why we are selling out."

Yes, Senator HUMPHREY owns a drug store, the operation of which must show a profit. The Senator is convinced that papers handling your column must make a profit in order for your syndicate to make a profit, so they can pay you a profit on your talent and time.

The Senator is also aware (as you should be) that profitable sale of the merchandise offered by reputable advertisers is the only thing that makes continued advertising possible, and pardon me for saying so, but he knows, and you know, that no newspaper can make any money selling papers full of columns and news.

And what a drab society we would have if all merchandise was sold in drab surrounding, with a "don't care if you buy attitude," which you say your Hilda prefers. Think for a moment what Washington or any other city would look like if the business community was made up of stores without fancy fixtures, clerks, or services. Isn't that the way it is in Russia? And isn't it the Communists who condemn our profit system?

No-profit operations cut the number of newspapers some 50 percent in the past decade, which cut the number of prospects for your column accordingly. If all the Hildas of America would seek out ways and means of buying everything at the lowest possible price, with nothing in mind but price, their pocketbooks would become an economic H-bomb.

In other words, the women of America have the fate of their families, and perhaps that of the Nation, in the purchasing power they now control, and if that power is understood and used wisely, the women of America can open up the greatest era of human progress and prosperity in the history of the world.

Man, I am sure, was never produced to become a mere belly for the products of his hands and machines. He was born with a personality and a soul, but if the economic environment is to become a contest of who can cut who's throat the quickest and deepest, is to prevail, then man a product will become.

I want my boy to have his chance in a market place where the rules of fair play are the same as those on the baseball diamond or in the fight ring; not to be struck

out in a jungle-type warfare brought forth by unrestrained competition.

Very truly yours,

ED WIMMER,
Vice President, Public Relations Director, National Federation of Independent Business, Inc., Public Relations Division, Cincinnati, Ohio.

Who Are They?

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. SCHERER. Mr. Speaker, Mr. Will McGrath, one of Cincinnati's leading citizens, has called my attention to the editorial in the August 1 issue of United States News & World Report, by David Lawrence, entitled "Welcome, Murderer."

This editorial says so well what the Committee on Un-American Activities has ben trying to convey to the Congress and the American people for many years; namely, that we hurt our cause with the people behind the Iron Curtain who are so violently opposed to their Communist masters, when we meet and deal with them at summit conferences.

WELCOME, MURDERER

(By David Lawrence)

Somehow, to carry on conferences at the United Nations with Sobolev or some other Ambassador from the Soviet Government seems tolerable to a degree as a formal mechanism of diplomacy, but to sit down and fraternize with the arch-conspirator—the man who ordered guns and tanks to shoot down and trample upon men, women, and children in Hungary just a few short months ago—that is something else again.

If summit meetings are to be held with rulers whose hands are soaked with the blood of thousands of human beings killed in eastern Europe, then indeed have we lost sight of fundamentals and succumbed to a passion for appeasement of the present-day Hitler.

Only 2 weeks ago, the United Nations, in a special report, was deploring the fact that the Soviet Union had disregarded the resolutions of the General Assembly which had demanded information about the trial and execution of the patriots in Hungary. Henry Cabot Lodge, Ambassador to the U. N., said on July 16:

"This new and revealing report shows that the United Nations has good reason to remain deeply concerned over the tragic situation in that country. The murders of Imre Nagy, General Maleter, and other Hungarian patriots will never be forgotten. The perpetrators of these acts have reverted from civilized behavior to the law of the jungle. These frightful acts are obviously not the acts of free Hungarians but of puppet rulers kept in power by Soviet military forces. In the name of simple humanity, these killings must stop."

And here is what the Government of the United States said about it in a special statement issued by the Department of State on July 17:

"The U. N. report makes it abundantly clear that the Hungarian regime, which was forcibly imposed by the Soviet Government in November 1956, and has since been supported by the presence of Soviet troops in Hungary, secretly tried and executed Imre Nagy and his associates in flagrant violation of assurances of safe conduct and of recognized conditions of immunity * * *.

"The Committee (of the U. N.) also calls attention to the fact that the Soviet and Hungarian Governments have continued to persist in their refusal to comply with resolutions of the United Nations General Assembly and to cooperate in any way with the Committee. * * *

"The United States Government is convinced that the nations of the world, feeling a deep sense of shock and revulsion at the events in Hungary, will not assume an attitude of indifference permitting the Soviet and Hungarian Governments to escape the full weight of the opprobrium that they must justly bear because of their actions."

The Committee reported also that it has evidence that 33 patriots have been sentenced to death and that more may shortly share their fate.

Who gives the command for these murders to be committed? Naturally, it's the man who holds the top post in the Kremlin—none other than Nikita Khrushchev.

This is the man we are asked to "welcome" at a "summit" conference.

What a strange delusion has swept the world, and particularly so many misguided persons in the parliaments of the free peoples, as they enthusiastically urge "summit" conferences. Is it that somehow, by sitting down uder the glare of the kleig lights and television, with cameras clicking and thousands of newsmen looking on, some sort of "deal" can be arranged which supposedly will—as Munich falsely promised—give us "peace in our times"? What nonsense.

Have we lost our perspective? Are we to forgive and forget the murders of innocent persons in Siberia? Are we to deprive the enslaved peoples in eastern Europe and in the Middle East of their hopes for emancipation?

What of the traditional ideals of the liberty-loving peoples of Britain, France, and America? Do we believe in them still? Or do we rush with open arms to welcome the man who has blasphemed us, the man who stirred up rebellion in the Middle East and sent weapons to Nasser to help him threaten and then annex, 1 by 1, the defenseless states adjacent to Egypt?

What principle of humanity beckons us to do aught but deal sternly with the murderer who is today the foremost enemy of peace in the world?

What principle of "diplomatic courtesy" requires us to remain silent when the man who has threatened to "bury us" comes to our shores supposedly to "negotiate" some vague agreement that will never be honored by him—if, indeed, one is ever signed?

We should, of course, assure the personal safety of Khrushchev, but we should din in his ears daily the case against murder and tyranny.

Let the kinsmen of the patriots of the captive states parade flag-draped coffins down the streets of New York City day after day during Khrushchev's visit so he may be reminded that in America, at least, we do not glorify murderers. Let the placards read: " 'Welcome,' Murderer."

Three Recessions

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. BETTS. Mr. Speaker, the following article from the August 4 issue of Time sheds light on some aspects of the recent recession which should be of significance to some current legislative proposals being considered by Congress and congressional committees. The facts which it reveals concerning the trend toward recovery should be a warning against passage of the many spending proposals which will be presented in the closing days of this session.

THREE RECESSIONS—SCORECARD SHOWS 1958'S WAS SHORTEST

How does the 1957–58 recession compare with the two other postwar business dips of 1948–49 and 1953–54? Last week the nonpolitical Committee for Economic Development brought out a remarkable set of graphs that for the first time put the recent downturn in clear focus—and incidentally laid to rest some cherished views about combating recessions. Starting at the first real dips, CED individually plotted such prime indicators as industrial production, gross national product, employment, inventory changes, plant expansion, month by month or quarter by quarter to show the relationship of each to the others. Conclusion: the current recession is the shortest and probably the mildest of the three. It is also the recession that proved it a fallacy to consider tax cuts and heavy Government public works pump priming, either together or separately, as the speediest and surest cure for any business lag.

Overall, the recession hit bottom in April 1958 in the jigtime of 9 months—2 months faster than the 1949 recession and a full 4 months sooner than in 1954. At times, particularly during February and March, the current slide was sharper than in the other two recessions. But so was the upturn. Gross national product has apparently turned around after dropping for two quarters, versus a year of backing and filling in 1949 and a year of decline in the 1954 business downturn. Industrial production recovered in 8 months, versus 11 months and 12 months before any steady rise took place in the other two postwar recessions; the percentage of workers unemployed turned down after 8 months, faster than before.

The CED charts seem to be more proof of the correctness of the administration's course in opposing loud congressional demands, and some by businessmen, for heavy tax cuts and a vast program of Government spending. According to CED's graphs, neither course would necessarily have accelerated the recovery. Despite 1954's tax cut, personal income took 14 months to regain and hold lost ground. This time personal income is almost back to prerecession levels in 10 months, without any reduction in taxes. At the start of the 1949 recession, Government spending was sharply increased, yet employment showed no improvement for 8 months. Without such help this time, the strong upturn came in 8 months. According to Keynesian theories of countercyclical government pump-priming, 1949's recovery should have come considerably faster than it did, while 1958's should be much slower.

Where does the United States economy go from here? On CED's charts a major booster out of the 1949 and 1954 recessions was the turnabout in inventories. In the 1949 recession businessmen continued to liquidate inventories for more than a year, in 1953–54 for 15 months, before any sizable upturn took place. This time the rate of inventory liquidation seems to be bottoming out after 2 quarters, though no one is willing to predict any heavy accumulation in the near future. Business outlays for new plant and equipment are a more worrisome problem. The 1958 slide in expansion expenditures has already gone on for 3 quarters and may continue for possibly

another year, thus holding the general economy down.

What might accelerate the recovery, regardless of what happens to inventories and plant expansions, is housing, which CED's chartists call the economy's ace in the hole. After dropping farther than in either of the two preceding recessions (13 percent versus 2½ percent in 1953, 3½ percent in 1948), the annual rate of new housing starts broke through prerecession levels in June, and the industry is expected to pump $1 billion into the market for men and materials this year.

Millions of Enslaved Europeans Watch With Anxiety Struggle Between Western Democracies and Soviet Russia

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorandum released by the Ministry of Foreign affairs of the Polish Government in Exile, with headquarters in London:

POLISH GOVERNMENT (IN EXILE),
MINISTRY OF FOREIGN AFFAIRS,
London, S. W. 1, July 28, 1958.

MEMORANDUM

About a hundred million human beings, enslaved by Russia in Europe alone, are with greater and greater anxiety noting every move of the western democracies in their struggle with international communism or rather, in plain language, with Soviet Russia. For the fate of these hundred million people and of their countries depends on the outcome of this struggle. Not only their future is ever more menaced; the democratic, great powers of the West are ultimately no less menaced. Realization of the undoubted community of interests within the whole civilized world, both the part in Russian bondage and that which is still free, impels the Polish Government now in exile to turn to the Western Powers with the appeal that the following considerations be seriously taken into account.

1. In these times of unparalleled speed in technological progress, Russia has undoubtedly very important achievements behind her. In some fields, her rate of progress outstrips that of the West chiefly due to successive dictatorships mercilessly exploiting the enormous reserves of enslaved populations forced to labor for the Soviet state to the limits of human endurance and in conditions of the direst poverty. It would be erroneous, however, to affirm that the spectacular attainments of Russia's technology in given fields provide a just measure of her power in general. The economic methods of communism, based on extreme exploitation of the population and marked by spasmodic, often impracticable planning, is the antithesis of all that goes to make up the power of a modern state, one based on universal freedom, with a steady growth in the general prosperity and happiness of the people. It will probably be no exaggeration to affirm that the present appraisal of Russian power by the West is largely the result of an assiduously self-inculcated belief in the existence of this power, a belief that is moreover enegretically propagated by the Western Powers themselves.

In reality, however, 20th-century Russia has never been able effectively to withstand any country without fundamental help from the West. Whether in tsarist or in Communist times, Russia invariably suffered defeat whenever this help was lacking, and gained victories only when in receipt of such aid. It will suffice to recall the Russo-Japanese War, the First World War, and the Polish-Russian War (of 1920) in which she was decisively defeated; even the Second World War was marked by striking German victories and an advance deep into Russia until the tide was turned by lavish help given her in the form of supplies, weapons, ammunition, military equipment of every kind, and even shipments of food.

Naturally, the above remarks are not meant to suggest the present war effort of Russia should be made light of; they are merely intended to point out that Russia's actual possibilities should not be over-estimated. Russia is unable to maintain an equal footing with the western democracies in critical times; the West should therefore adopt a more determined and categorical attitude towards Russia's expansion. Confirmation of the justice of this observation would seem to be provided by the decline in Russia's prestige after her relatively mild reaction at the outset of the Iraqi upheaval, when it appeared that the Western Powers would, after landing their troops in Lebanon and Jordan, continue a more determined line of political action.

2. Despite the vociferous propaganda of international communism regarding the alleged aggressive aims of the United States, the Polish Nation—and doubtlessly all the other captive peoples—has no illusions on the point of Russia's own intentions while harboring no doubts regarding the sincerity of the peaceful objectives of the United States and the other western democracies. The Poles, however, consider that these objectives can be attained only if based on a broader foundation than that afforded by acquiescence in lawlessness already committed, and by mere declaration that future lawless acts will be opposed. After all, the tactic of Soviet aggression is fully based on the conviction heretofore firmly held in Russia and in the rest of the world that she can be sure of impunity for all her more or less treacherous acts of aggression. Moreover, Russia's strategical policy is likewise based on this premise. Her latest achievement is the shifting of Iraq from the orbit of the Western Powers to that of the East, even if the new Iraqi regime for a time pretends neutrality. When this successive victory of Russia's is consolidated by her and accepted by a resigned West, she will again take the latter by surprise on some other sector, in the meantime playing for time by raising hopes of the most varied conferences calculated to maintain the illusion that durable peaceful relations between East and West can be arranged without Russia changing her present attitude and abandoning her final objectives.

The Polish Government returns to the suggestion made in several of its previous memoranda, viz, that the only effective means of interrupting the series of Russia's successes in the field of aggression is for the western powers, upon a broadly conceived international forum and in unequivocal determined and global fashion, to denounce all the Soviet acts of violence and lawlessness, beginning with the subjugation of the central-eastern European nations and ending with the Iraqui coup d'état, in which Russia has skillfully exploited Arab nationalism for her own political powers.

A. The passivity hithertofore maintained by the western powers with relation to Russia's violation of the freedom and independence of the captive nations is confirming the belief current in Russia and even in the free world that the western powers are convinced of the invincibility of her power, and that they fear it. It would seem indicated to make an effort to reverse this state of affairs, so that Russia should realize and actually believe the West is determined to restore order in world relations, to make good all the lawless acts committed by Russia, and to prevent the realization of any new ones planned by her. Only then will possibilities arise for the construction of lasting global peace and for the development of universal prosperity throughout the world. Only then would the danger of a new war, now ever closer, be removed.

4. Russia's declared intention of assuring her own security but by violently imposing so-called friendly governments in the weaker countries bordering with her is sheer hypocrisy and should no longer be tolerated. It is, after all, quite clear that these friendly governments are not national governments but the administrative organs of a Russian occupation. A Polish attack on Russia in 1939 was inconceivable. It was Russia that concluded an alliance with Germany in order to effect a new partition of Poland. With independence restored to Poland, any possibility of aggression on her part would be similarly unthinkable. It is quite clear that a foreign occupation evokes a psychological reaction that makes friendly feeling for the occupying power impossible. Russian statements that harmony and amity allegedly mark Polish-Soviet relations are nothing but cynical falsehoods unworthy of any credence.

Orthodox, and in time even amicable relations so necessary to assure the peace of the world between Russia on the one hand, and the nations now subjected by Russia on the other hand, can be attained only when the latter are liberated from foreign occupation with their full liberty and independence restored and assured against renewed aggression. This assurance can be provided primarily if the countries now subjected by Russia form a confederated and neutralized zone in central-eastern Europe, the integrity of which would be guaranteed by all the powers interested in maintaining peace in the world. Such a pacific setlement of European relations would facilitate a settlement likewise in other parts of the world if only as an outcome of the release of political tension in Europe.

5. The whole Polish nation, comprising Poles in the homeland and elsewhere, undoubtedly together with all the other nations subjugated by Russia, desires to cooperate with the western powers in this field insofar as this is possible at present.

What Union Members Have Been Writing Senator McClellan

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mrs. ST. GEORGE. Mr. Speaker, the following article, shortly to appear in the Reader's Digest, is a very sad and revealing one.

Mr. John Dos Passos, its author, is a sincere and honest writer who has been so impressed with the lack of freedom, fair play and Americanism prevailing in some labor unions that he has been compelled to write the truth as he found it.

The article seems to have the full endorsement of Senator JOHN L. MCCLELLAN, who permitted Mr. Dos Passos to go over the letters in the files of the Select Committee on Improper Activities

in Labor and Management Fields. The Senator writes as follows:

The letters that we have received have been not only a source of information for the committee, but a source of great encouragement and inspiration. As John Dos Passos points out, one cannot help but be impressed with the intelligence, stamina and fighting spirit of this cross section of America.

It is clear from this response that problems exist for union members that need attention and need it now. Not only are they denied the rights to which they are entitled, but in many cases their treatment has been utterly degrading. It is incumbent upon union officials, both local and international, to meet their responsibilities to their membership.

I trust that this article will help to reawaken the selfless idealism of trade unionism which has guided union officials for so many years in the past.

Mr. Speaker, We will now hear loud screams that this article is antilabor from the usual quarter. To this I can only reply, in the words of the two closing sentences:

They want action. They want legislation. They want protection. The want democracy. We pray to God that we will some day get some laws passed in this country that will help us working people rid ourselves of these dictators so that we can govern ourselves.

WHAT UNION MEMBERS HAVE BEEN WRITING SENATOR MCCLELLAN

(By John Dos Passos)

"I'm sorry I can't sign my name, as it may mean my life or my livelihood. We may as well admit we are living under a labor autocracy—graft, rackets, intimidation, goons, etc. For fear of being bumped off, ostracized, or deprived of making a living, I'm afraid to sign my name."

These sentences are from a letter by an American workingman, addressed to the Select Committee on Improper Activities in the Labor and Management Fields, popularly known as the McClellan committee.

Congressional committees are accustomed to an enormous mail, but the correspondence reaching the McClellan committee ever since its hearings started bids fair to set a record. Last February it was estimated that 100,000 letters had been filed away in the committee's offices. Hundreds more pour in every week.

They come from every State of the Union, from men and women in every trade and occupation; hod carriers and seamstresses, operators of draglines and makers of delicate dental equipment; from steelworkers, ditchdiggers, salesmen, miners, musicians, and machinists. Letter after letter is written in fear, fear of violence and loss of job. This reporter read thousands of them. It was an awakening experience. This is no organized campaign. These letters come from the heart of the American people, spontaneously. It took great courage and bitter experience to write them. How many hundreds of thousands more disillusioned people are represented by these letters?

The member who protests against the way his union is being run does so at his own risk. "I'd never have another job on the waterfront if they knew I'd written this," a stevedore warns. A number of men typed a petition asking the committee to investigate strong-arm methods used by their local business agent. "Can't sign names," they scrawled at the bottom of the sheet. "We'd be blacklisted." Some of them put it jokingly. "I'd sign my name, but I don't like my undertaker."

Not all the writers have let themselves be terrorized; many are ready to fight. "You are our last hope," writes a union member. "I don't like to live in fear for the rest of my life, but if I am asked to testify I shall." Here's a courageous house painter: "The goons got nine-tenths of the rank and file scared. That's the reason they don't come to meetings. I'll face any of 'em for you, Senator. I've lived 63 years now, how much longer can I live? But for God's sake give these young men a chance to raise their families."

Many write in anger. "Is this the United States of America or where are we?—when a man has to see his family in want because he didn't approve of what the union officials were doing and had nerve enough to say so." A veteran writes: "Is this what I fought for in World War II?"

These are not cranks addressing the Senate committee. None of them is opposed to unions as such. Many have devoted their lives to the labor movement. But they want labor leaders to be subject to the law like everybody else. Again and again they draw the distinction between the leaders and the rank and file. They feel that proper legislation, before it's too late, can save the labor movement.

"All labor will profit by these investigations," one man writes. "Your investigation has been rought on unions but all unions will be the better for it." "Clean up this mess," another pleads. "Make it so a man has a right to work and not have to bow down to them damn Hitlers."

Why, if there is so much discontent within the unions, don't we hear more of rank-and-file action? Senator MCCLELLAN himself asked that question in a speech which drew comment from union members.

"You state, Senator, that members can do a lot to clean up their unions by standing up for their rights," wrote a railroad worker. "We did just that, and there are 50 men in this little mountain city walking the streets for a job."

This reporter traveled to the little mountain city to meet that worker. For his protection, let's call him Jones—though having lost his job, he has little more to lose.

It is a rainy Sunday afternoon. Jones and his friends have called a meeting of most of the 50 men in the assembly room of their social club. Locomotive engineers, conductors, brakemen, switchmen, railway clerks—all so eager to tell about the raw deal they got that they keep interrupting one another.

"Don't have no respect for the rank and file. * * * All they care about's your money. * * * They've been in there too long."

It comes as a shock to an outsider because the railroad unions are among the oldest in America. "If you don't like the leadership, why can't you put them out and elect somebody else?" this reporter asks. The whole room breaks into a loud horselaugh.

"Mister, you don't understand," Jones says. "The only way you can get your ballot counted is by voting the way the boys upstairs want you to. They had it their own way so long they think we're a bunch of suckers."

An elderly railroad employee tells this story: Many years ago a union management made some bad investments of union funds. In 1927 the union faced bankruptcy. The management appealed to the members to bail them out by buying loyalty certificates, which resembled bonds. When these didn't sell fast enough the members were given a choice between a $100 assessment and a $100 loyalty certificate. Six million dollars was raised in this way.

These loyalty certificates were supposed to pay 4-percent interest. But they had a lot of small print, to the effect that they would be payable "at the discretion of the trustees when funds became available." They never became available.

When a new industrial union for all operating railroad crafts was formed, these 50 workers decided to go along with it. They liked its constitution, which called for direct election of officers, limitation of salaries, the referendum and recall, local self-government, and public accounting of funds. But they had reckoned without the union-shop contracts approved by the Railway Labor Act. When they joined the new union they were cited by their old unions. The men put up a long fight with the National Railway Adjustment Board and in the courts, but in the end they were fired.

The fight has gone on year after year. The rank and file of their old locals petitioned to have these men reinstated, but the leadership said no. "We've been under pressure for 5 years," one of the ousted men wrote the McClellan committee. "You never knew which knock on the door would mean violence, or which phone call would be a threat. Don't sound like we lived in America, does it?"

A hundred thousand letters. A hundred thousand stories, each lighting up some dark corner of American labor life. The over-all story that emerges is that the leaders have taken over the labor movement. No place for the independents. No place for the idealist who organizes for the benefit of his fellow workers. The letters are desperately urgent. Send your investigators now—tomorrow will be too late.

The writers of these letters are terribly earnest men, as their reporter can testify from long talks with many of them. Here's the story of a man who has just lost a battle for honest unionism inside one of the best internationals in the country. Let's call him Murphy because he's an Irishman, a husky bull-necked young fellow who was a paratrooper in World War II.

Five years ago Murphy was working in a plant in an eastern city. Many foreign-born workers there spoke little English and were getting a raw deal. It was dirty, dangerous work. Safety regulations were often neglected. The foreman contemptuously spoke of the men as donkeys. The independent union in the plant seemed to be company-dominated. So young Murphy found himself trying to stiffen the men's spines. He set up a class in English for them after work. He got an organizer from a great CIO industrial union, and threw himself into organizing the plant. They lost one election, petitioned the NLRB for another and won it.

Murphy was elected shop steward and chairman of the safety committee. His local sent him as a delegate to union conventions. A career was opening up for him as a labor leader. Still he wasn't satisfied with the way safety regulations were enforced at the plant and felt that some men were being discriminated against in the wage scale. He began to quarrel with the president of his local, a man we will call Joe Cermak, whom he had helped elect.

Cermak's brother was the industrial union's field representative. These two had become labor professionals. Cermak did no more work in the plant though he was paid full time. He sat in his office smoking cigars and drinking whiskey. He was building himself a $30,000 home and playing the stock market. Murphy was still sticking up for the rank and file, but Cermak was backed by his powerful brother. They intimated to Murphy that if he went along with them he could have a fine career—president of the local maybe, money and soft living. Let the donkeys do the heavy work.

It was a hard decision to make. Murphy wanted a nice life for his two small daughters. Yet he chose to fight. His wife began getting anonymous phone calls hinting that he had better keep his nose clean. But the men in the plant believed in Murphy. He had enough votes lined up to take the presidency of the local away from the professionals at the next election.

The Cermaks decided to get rid of Murphy. They got help from management, which didn't like his harping on improved working conditions. When Murphy got into a dispute over safety regulations with his foreman, he was fired on charges of using abusive language. Murphy took the case to the State labor arbitration board. The union and management put their heads together to pick the arbitrator. Murphy lost his case and that was the end of one man's fight for the rights of his fellow workers. Fortunately he was able to take up a new career in a different type of work.

How can such a thing happen in a union whose leadership is reputed to be honest and intelligent? "Bigness," answers Murphy. The international president cannot keep an eye on the smaller locals. He must trust his field representatives. If a field representative keeps up his per capita on dues colected he's asked no questions and can build a little satrapy of his own. The men who lead unions for the money hate a troublemaker as much as management does.

"They just don't have time to pay attention to little guys like me," says Murphy. "We've got to have proper legislation because the United States is made up of little guys like me."

Not all the battles are lost, of course. Sometimes a courageous union member wins a round. Some of the committee's letters tel of men risking their lives right now for what they consider their rights as Americans.

Here's one who drives a taxi in a teeming industry city. Let's call him Bronski. When he came home from several years in the armed services he went to work for a new small cab company we'll call the Blue Cabs. But a larger company, the Red Cabs, had established a monopoly in the city and worked hand-in-glove with a powerful union. Both were entrenched at city hall. Their union moved in to organize the Blue Cab drivers.

Although he had always been a union man, Bronski didn't like the deal. He suspected that the professional labor leader who ran their local, whom we'll call Mr. Marino, was being paid by the Red Cabs to drive Blue Cabs off the street. So Bronski and some friends invited an organizer from another big out-of-town union to form a local for the Blue Cab drivers. They are only 200 men. They don't need to be protected from the management; the aggressive young fellow who owns the company gives his drivers a square deal. But they've got to protect themselves from Marino.

The fight is on. Marino calls a strike of Blue Cab drivers. A few Blue Cab drivers go out, but most of the men decide to cross the picket lines. The usual pattern of violence develops. Drivers are slugged, cabs are burned, passengers are intimidated; gasoline supplies are siphoned off, tires slashed. At the same time the Red Cab Co. is harassing the Blue Cab's management through the State public utilities commission and the State labor board.

Needless to say, there's no police protection for the Blue Cab drivers. When an out-of-town wholesaler sends in two tank trucks of gas for them in the middle of the night, a policeman is seen copying down the license numbers and turning them over to the Red Cab pickets. Meanwhile Marino lets it be known that the man who runs the Blue Cabs had better look out for lead poisoning.

At the height of the battle the Blue Cab drivers hold an election. They manage to keep Marino and his musclemen—all equipped with red armbands so that they won't slug each other—at bay at one gate of the compound while their men sneak out one by one through a back door to the voting machines. The vote is 10 to 1 in favor of the Blue Cab's own local.

Nevertheless, acts of violence kepe up after the election, until the Blue Cab drivers decide one night that they are tired of going about their business in fear of their lives. They would show that two can play the game of terror. A mysterious fire destroys a couple of taxis belonging to the Red Cab Co. Suddenly everything is quiet. No more bricks are thrown, no more drivers are beaten up. Marino is even heard to announce that the Blue Cab's manager needn't be afraid to walk out on the street.

This young man never did let them scare him: that's the moral of the tale. A stranger from another city, he bought into this company without knowing he was buying into a hornet's nest. Once in, he decided to stay. Now, saving the Blue Cab company has become a crusade with him and his drivers. He feels he's risking his life for American principles.

The doors leading to this man's office have stout locks. He never stirs without a gun. He knows he has a long fight ahead, but he knows what he's fighting for. His Blue Cabs are still on the street.

There are plenty of brave men in American business and honest men in the labor movement. But many of them are beginning to feel that the odds against them are too great. In view of the testimony of Senator McCLELLAN's mail pile it's no wonder they are discouraged.

Here's an elderly man in a Midwestern city, a member of a union in the entertainment industry, who's been collecting evidence for 30 years against the racketeers who control his trade. His best friend was shot dead for trying to get some of the crooks into court on that same evidence. Here's a team of machinery movers. Their business is going to pot because the union makes them hire stumblebums who can't do the work. Here are two brothers who have paid dues to the carpenter's union for 30 years. They can't work at their trade because they had a squabble with a business agent 5 years ago. Here's a skilled lathe operator who's working as a janitor because the union's got him blackballed. Here are a hundred thousand stories of grief and frustration.

But there is hope among them, too. These men believe in unionism and they believe in America. They aren't writing to the McClellan committee just to air their grievances. The great majority of them are offering constructive programs.

As you read their letteres, you can't help feeling pride in your fellow citizens. The letters are level-headed, reasonable; the suggestions offered are practical and carefully thought out. The committee's chief counsel, Robert F. Kennedy, who has had experience with the correspondence of other committees, estimates that at least 30 percent of the suggestions for legislation deserve consideration in the drafting of new labor laws. He rates this percentage unusally high. Ten percent of usable suggestions, he says, is about average.

What do the writers of these letters want?

The want unions, but not the checkoff or the union shop. They want union membership to be voluntary instead of compulsory. Some ask for right-to-work laws with teeth in them.

They want unions to be financially responsible under the law like banks and insurance companies.

They want the right to present grievances, without danger of reprisals, before the courts or the NLRB or the Department of Labor or some new Federal agency.

They want self-government in the unions, freedom of speech and the right for all union members to elect their officers by secret ballot.

They want action. The want legislation. They want protection. They want democracy.

"We pray to God that we will some day get some laws passed in this country that will help us working people rid ourselves of these dictators so that we can govern ourselves."

Fourteenth Anniversary of the Battle of Mortain

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. REECE of Tennessee. Mr. Speaker, I take great pride in reminding the Congress that August 7 marks the 14th anniversary of the battle of Mortain. This strategic engagement blunted the German counterattack in France designed to save its field armies in that country and prevent the surrender of France, loss of the channel coast missile bases and a disastrous withdrawal to Germany. Owing entirely to the unforgettable heroism of the 30th Infantry Division, the Germans were repelled at Mortain, thus assuring the liberation of France and materially enhancing the prospects of allied victory. In honor of this valiant division and this landmark in the history of American gallantry, I wish to introduce into the RECORD an article from the July issue of Army magazine on the Mortain engagement entitled "Heroism Is Never Out of Date."

I have, in recent weeks, been privileged to assist in successfully procuring from the Government of France the award of the Croix de Guerre with Palm to the 30th Infantry Division. The justification for such an award is apparent from the Army magazine article which states:

Taken by surprise and manning unfamiliar positions, the 30th Division stood its ground and fought as hard as any unit was to fight in the European theater.

I had long felt that the 30th Division merited more recognition than it received for its operations in World War II. The man to whom I turned for help in securing the French award of the Croix de Guerre with Palm was the French Ambassador to the United States, His Excellency, Herve Alphand. My trust was well placed for no one in the Government of France was more helpful than Ambassador Alphand.

In order to express congressional appreciation for the assistance of Ambassador Alphand, I arranged a luncheon in his honor. This luncheon was held last week in the Capitol and was attended by the congressional delegations of Tennessee, Georgia, North and South Carolina, from which States the 30th Infantry Division drew its members.

The Ambassador spoke eloquently of the courage of the men of the 30th Division and of his country's continuing appreciation for their efforts in liberating France. I have been asked to con-

vey to the veterans of the 30th Division and to the people of Tennessee the eternal gratitude of France and the French people for the heroic deeds of these fighting men.

In his remarks, the Ambassador alluded to the traditional and historic friendship between France and the United States. He told us further that under the leadership of General de Gaulle, France will once again become a stable force in world politics, world economy and international cooperation. America can expect that the de Gaulle program, carried out within the strict limits of democratic process, will restore to France her rightful position as a leader of the free world and a force for justice and liberty. France, by virtue of her rich natural endowments and the creative genius of her citizens will, under de Gaulle, become a full partner of the United States in combating communism and protecting the security of the free world.

In responce to Ambassador Alphand, I restated my long held conviction that the miseries that plagued France could be remedied only by the strong proscriptions of Premier de Gaulle. I told the Ambassador that we, in Tennessee, welcomed the return to office of our great comrade in arms of World War II. Furthermore, that we looked to General de Gaulle for leadership of the kind of France America so desperately needs as a partner.

In thanking Ambassador Alphand for his help in honoring the 30th Division, I told him that the interest of the American Army in General de Gaulle predates our World War II cooperation. With great pleasure I related the story recently told to me by General MacArthur. In the early thirities when General MacArthur, then Chief of Staff, was wrestling with the problems of mechanizing the Army, he traveled to France to study the mechanization program of the French Army.

In order to brief General MacArthur, the French high command chose a young, erect, 6-foot 4-inch lieutenant colonel. This young officer so impressed General MacArthur that the young colonel was asked by MacArthur to join him in a lengthy private discussion of these problems. That young lieutenant colonel, Charles de Gaulle, is today premier of France, a fact which might have been foretold by the impression he made upon our magnificent general, Douglas MacArthur.

This story was greatly appreciated by Ambassador Alphand and seemed to reassure him of the high respect in which his government is held. In conclusion, I assured the Ambassador of our gratitude for his diligent work and that the 30th Division and the people of Tennessee will not soon forget the strong bonds which were forged between our peoples in the common fight against oppression which we shared on the soil of France.

Heroism Is Never Out of Date—The Mortain Counterattack: Future Portent?

(By Capt. Martin Blumenson)

In this age of atomic weapons and missiles, World War II seems so remote as to belong to a distant epoch, and many soldiers appear to have relegated that experience to oblivion. What can we learn, they say, from outmoded forms of warfare?

The answer is simple. Heroism is never out of date.

In repelling at Mortain the first large-scale German counterattack launched after the Allied invasion of Normandy, two months to the day, brave men, though outnumbered, stood and outfought an enemy who had surrounded part of them, who threatened to isolate the rest of them, and who almost destroyed them all.

Confused fighting at close range, infiltration and counter-infiltration, action by small, dispersed groups operating in a battle area rather than along established front lines, the story is not unlike the combat envisioned for the future.

How the American commanders reacted is a story of courage, of the unabashed assumption of risks, and of confidence in the ability of the American fighting man—in short, an inspiring example of command.

And for those who are curious about "the other side of the hill," it may be of interest to learn of an attack that in its essentials was the prototype of the Ardennes counter-offensive launched by Hitler's forces 4 months later.

The German situation on 1 August 1944 was desperate. General Bradley had parlayed his American troops from a limited breakthrough operation into a wide-open, fast-moving end run that outflanked the German defensive lines in Normandy for a distance of 30 miles. From Avranches, Patton's Third Army swung south and west into Brittany while First Army (Lt. Gen. C. H. Hodges) pivoted eastward on the first stage of a projected advance toward the Seine.

Two days later the disintegration of the German left was so apparent that Brittany was dismissed as worth only a minimum of forces, and part of Patton's army joined Hodges in the swing toward the Seine. By sweeping to the Seine River, where all the bridges (except at Paris) had been destroyed by air bombardment, the Americans, British, and Canadians hoped to push the Germans back against the lower reaches of the river and destroy them.

As General Montgomery, the Allied ground force commander, judged the situation, the only hope the Germans had of saving their two field armies in Normandy was by making a staged withdrawal to the Seine. On this basis, he saw his mission as the need to transform their retreat into a rout. These were his orders. But while Patton's forces raced through lightly defended territory in the German rear, First Army and the British and Canadians fought enemy troops who had no intention of abandoning their defenses.

Part of the German determination came from an analysis of their alternatives that differed from Montgomery's.

Withdrawal from France

The American breakthrough meant that the Germans might have to withdraw from France. There were no prepared positions in France in the rear, and the Siegfried Line or Westwall on the western approaches to the Rhine River had been neglected for 4 years. With France no longer a buffer, the Germans would have to fight on their own soil.

Though Hitler ordered work begun on defensive lines and the Westwall rehabilitated, and though he quickened preparations for raising a reserve force within Germany—and thereby admitted the possible necessity of withdrawal from Normandy and France—he was reluctant to withdraw because it meant the inevitable loss of a great part of his combat-trained forces. Troops in withdrawal always abandoned equipment and straggled, and, what was worse, the Germans lacked not only the mobility of the Allied mechanized armies but also control of the air. To surrender France, to lose the missile bases along the channel coast, to withdraw to the homeland might signify the beginning of the end, defeat and disaster.

The alternative was to restore the conditions that had made possible the static warfare of June and much of July. If a continuous defensive line could be reestablished in Normany, the shortest conceivable line in western Europe, the Germans might yet hold. To attain this goal, the Germans had to close the breach on their left. They had to recapture Avranches. A counterattack was in order, a thrust toward Avranches through Mortain.

The German field commander, Field Marshal Kluge, began to assemble an armored force east of Mortain for this purpose. XLVII Panzer Corps, directing the 2d SS, 2d and 116th Panzer Divisions in an initial effort and the 1st SS Panzer Division in exploitation, was to attack to the west after dark on August 6 without artillery preparation and seize and secure Avranches.

Into the path of this scheduled effort and on the very day the attack was to start came the United States 30th Infantry Division (Maj. Gen. L. S. Hobbs).

A few days of rest

The 30th Division had been in the line for a month. It had fought in the hedgerows, made possible the capture of St. Lô, participated in the breakthrough operation, and fought a particularly hard battle at Tessy-sur-Vire. To give the division a few days rest, General Hodges moved it to a place he thought would be relatively quiet—Mortain.

Three days earlier, the 1st Infantry Division (Maj. Gen. C. R. Huebner) had taken Mortain, a village at the foot of a rocky hill just to the east, Hill 314 (or 317). From this height in a region of convulsed and broken wooded highland, an observer has a magnificent view of flat tableland to the south and west. Avranches, 20 miles to the west, is visible on a clear day. When the VII Corps commander (Maj. Gen. J. Lawton Collins) inspected the 1st Division positions around Mortain, he pointed to the high ground east of the town and said, "Ralph, be sure to get Hill 314." "Joe," General Huebner replied, "I already have it."

As the 30th Division came into Mortain on August 6, the 1st displaced to the south to prepare for the projected move eastward toward the Seine.

The 30th, having fought under XIX Corps at Tessy and scheduled to come under V Corps control, was, because of its abrupt shift to Mortain in the VII Corps zone, unable to complete proper reconnaissance. With little knowledge of the terrain and of neighboring unit locations and with practically no information of enemy dispositions, the 30th hastily took over the positions established by the 1st Division. Shallow foxholes and field artillery emplacements far forward in offensive formation were hardly suitable for an outfit soon to be fighting for its life in a defensive situation.

No maps, no communications

Maps were not available; for the most part, troops used the crumpled maps Big Redmen had pulled out of their pockets and off their map boards and passed along before departing. The telephone wire nets left in place were unfamiliar. The 30th had no time to tie its positions together before the Germans struck.

Nor was the division at full strength. Almost 800 replacements who had joined a few days earlier did not completely fill the thinned ranks; they were not yet fully assimilated into the depleted units. Two infantry battalions were absent, one attached to an armored division, another dispatched to Barenton, where it was soon to be isolated for a day.

Tired because of the preceding month of combat, fatigued by the road march from Tessy to Mortain that day, manning unfamiliar positions in unfamiliar terrain, the 30th Division troops were hardly in the best condition to meet the German counterattack.

General Hobbs assumed responsibility for the Mortain area at 2000 on August 6, four hours before the German attack began.

Though well conceived, the German attack was faulty. Kluge had misgivings, and as late as the day of attack he was tinkering with the plans. He tried in vain to find additional units for commitment. He wondered whether his attack front ought to be broadened. He talked of changing the axis of advance.

He had reason to be apprehensive, for American pressure on the German line north and northeast of Mortain and American mobile forces slashing deeply into his left flank and rear were coming close to nullifying the conditions necessary for the attack. American occupation of Mortain was a serious setback threatening assembly areas. American capture of Laval on August 6 endangered important supply bases near Alencon and Le Mans. And American advances toward high ground northeast of Mortain menaced lines of departure for the attack.

In order to regain operational initiative before additional developments further complicated the jump-off, Kluge had to launch his attack on schedule. But on that day, just a few hours before the attack, Hitler interfered.

Hitler made available to Kluge sixty Panther tanks still held in reserve east of Paris, and released eighty Mark IV tanks of a Panzer division moving toward Normandy from southern France. He also wanted Eberbach, commander of Fifth Panzer Army (in Normandy), to lead the attack instead of Funck, commander of XLVII Panzer Corps.

It became obvious that Hitler and Kluge were not thinking of the same kind of operation. While Kluge hoped only to regain Avranches and restore the defensive line, Hitler was thinking of a big offensive to be launched by several corps under Eberbach, a defensive blow that would sever the Allied front, throw the Allied armies into confusion, and eventually push them back into the sea.

To cater to Hitler's grandiose delusion meant postponing the attack and awaiting the arrival of the armored reinforcements. Uncertain that the German defenses on the left flank could hold much longer and fearing that the Allies would capture his assemblies or bomb them out of existence, Kluge persuaded Hitler to let the attack go as planned.

COMPOSITION OF THE ATTACK

There was a good possibility of success. The first wave of the attack was to be composed of 3 armored divisions in 6 columns, and a fourth armored division was to be ready to exploit initial success and capture Avranches. Between 120 and 190 German tanks were to operate in a zone where only the 30th Division and an armored division's combat command (the latter assembled between Mortain and Avranches) were located.

But German assembly had been made in great haste, at night, and with great difficulty due to almost constant pressure by American forces. In some instances German units had to fight their way to assembly points while in danger of being encircled. No distinct line of departure was possible. Many units had taken heavy losses before the attack started.

Two hours before midnight, when the attack was supposed to begin, Funck telephoned to request a 24-hour delay. He had two reasons:

First, the 1st SS Panzer Division (the exploiting force) was not going to be able to reach its assigned position in time; nor would it be able to detach an armored battalion to the 2d Panzer Division in time, because its relief from the 5th Panzer Army front had been slower than expected, traffic congestion and Allied air attacks had harassed the approach march, and an Allied fighter-bomber had crashed on the lead tank of the heavy-tank battalion while it was moving through a defile in close formation and had thereby blocked the entire column.

PANZER COMMANDER BALKS

Second, the 116th Panzer Division had not detached a tank battalion to the 2d Panzer Division as directed, through sheer perversity on the part of the division commander. This was not the first (nor would it be the last) time he had failed to comply with orders.

The only concession to Funck's request was postponement of the jumpoff until midnight.

Shortly thereafter, the 2d SS Panzer Division (on the left) attacked in two columns, encircled Mortain, overran and captured the village, and advanced toward high ground west of Mortain and to the southwest toward St. Hilaire. There was no significant American opposition, and by noon of August 7, German troops seemed on the way to St. Hilaire where they could threaten Avranches directly. One thing interfered: A battalion of 30th Division infantrymen, surrounded but still holding out on Hill 314, called such devastating artillery fire down on the panzer division that the Germans were unable to advance after daylight.

The 2d Panzer Division, making the main effort in the center, got off only one column. Without the tank battalion of the 116th, the troops moved off, achieved surprise, and rolled through the 30th Division line for 6 miles. The refusal of American troops to panic and the effect of American artillery fire on their flanks (particularly from the 4th Infantry Division under Maj. Gen. Raymond O. Barton) brought the Germans to a halt at dawn.

By this time, the other column, after having waited for the Panzer battalion of the 1st SS to join, jumped off and made a similar advance until similarly stopped.

In midmorning, Funck committed part of the 1st SS Panzer Division through the 2d Panzer Division. A restricted roadnet, limited maneuver room, and American resistance on the ground and in the air balked progress. With German tank losses skyrocketing, Funck halted the attack and ordered the troops to dig in. They had already done so.

As for the 116th Panzer Division, it did not attack at all. The division commander felt he had enough to do to prevent encirclement by troops of First Army, so he continued to fight a defensive battle. He was relieved during the afternoon of August 7. The division launched a half-hearted attack that evening and got nowhere.

Instead of a coordinated massed attack, only 3 of 6 assault columns had jumped off on time; 1 additional column and the exploiting force joined later. The Germans achieved surprise and made a sizable penetration through the American line. Yet it was obvious to Kluge and to other commanders that the attack had failed. Withdrawal seemed in order.

Hitler gave no choice. He commanded that the attack be prosecuted daringly and recklessly to the sea.

Under this mandate, Kluge pulled two armored divisions out of the Falaise sector and moved them toward Mortain for an additional effort toward Avranches. Until they assembled and were ready to attack (actually they never did), the committed elements at Mortain had to hold the positions reached by the forward elements. To assist them in an effort that had suddenly changed from offense to defense, Kluge on the evening of August 7 sent the remainder of the 1st Panzer Division into the line.

A HARD ROW FOR THE 30TH

The result pitted the 30th Division against 3 armored divisions (the 116th was not in the 30th's sector), 2 of them SS divisions. Five battalions of German infantry, 4 of artillery, and 2 or 3 of tanks were behind the lines occupied by the 30th on the previous day.

Not only was the 30th threatened with destruction, but the Germans were threatening to cut the narrow Avranches corridor through which flowed American troops, equipment, and supplies to nourish the drives westward into Brittany and eastward toward the Seine. German success would separate First and Third Armies and perhaps make the latter vulnerable to defeat in detail.

American commanders recovered quickly from the initial shock and reacted with an offensive intention rather than a defensive attitude. General Bradley made available only one infantry division, the 35th (Maj. Gen. Paul W. Baade), to reinforce the troops around Mortain, meanwhile continuing the drive toward the Seine. By the following day, August 8, he was convinced that the troops at Mortain would hold and at that time he proposed to General Montgomery a daring maneuver to trap the Germans who had put their heads into a noose, the maneuver that was to squeeze the Germans at Argentan and Falaise.

General Hodges kept the First Army exerting pressure on the Germans, while General Collins, localizing the counterattack within the confines of his VII Corps sector, set out to eradicate the German threat by an attack of his own. He sent the 35th Division into the breach southwest of Mortain, committed the 2d Armored Division (Maj. Gen. E. H. Brooks), less a combat command, at Barenton for a spear-like thrust deep into the German left flank (and incidentally to relieve the isolated troops at Barenton), attached the 39th Infantry of the 9th Infantry Division (Maj. Gen. Manton S. Eddy)—caught in the wake of the German attack—to the 4th Division, which had been in reserve and remained so, alert for commitment (which turned out to be unnecessary). He also attached to the 30th Division the combat command of the 3d Armored Division (Maj. Gen. Leroy H. Watson) assembled several miles west of Mortain and a regiment of the 4th Division, and instructed General Hobbs to clean up the German penetration. While all the units of VII Corps contributed to the eventual defeat of the Germans, the main job rested on the shoulders of the 30th.

Hobbs had three problems: eliminating the penetration northwest of Mortain, blocking the thrust southwest of Mortain, and recapturing Mortain itself to reestablish contact with the surrounded battalion on Hill 314.

FIERCE, CLOSE-RANGE FIGHTING

It took 5 days to do the job. During that period the action was small-unit combat, fierce close-range fighting by splinter groups maneuvering to outflank and in turn being outflanked, "a seesawing activity consisting of minor penetrations by both sides," operations characterized by ambush and surprise and fought on the level of the individual soldier.

"What does it look like down there?" the division G3 asked a regimental officer.

"Looks like hell," came the reply. "We are just mingled in one big mess, our CP is getting all kinds of fire, enemy tanks within 500 yards of us."

Disorganization and isolation of small units were the most serious factors. Communication throughout the division area was precarious; wires had been cut or shot out, and infiltrating Germans and raiding

parties menaced messengers and command posts. Several infantry battalion command posts and one regimental headquarters were surrounded. More than a few battalions were isolated. Several companies were overrun.

The reaction to this situation? The troops fought.

Threatened by German tanks 400 yards away, the regimental commander of the 117th Infantry decided that moving his headquarters might have an adverse effect on morale; he stayed put and directed the battle although virtually encircled.

A five-man patrol checking outpost defenses suddenly and unexpectedly confronted about fifty Germans. While T. Sgt. Harold V. Sterling engaged the enemy, his four companions maneuvered to positions of safety. Then all five conducted a fire fight for an hour until reinforcements arrived and dispersed the Germans.

PHONE OPERATOR "DOUBLES IN BRASS"

When two German tanks worked their way to within 250 yards of the regimental CP of the 120th Infantry, Pfc. Joe O. Shipley, telephone switchboard operator, slipped away from his duties long enough to knock out one tank with a bazooka and drive the other away.

The 823d Tank Destroyer Battalion, attached to the 30th, lost 11 three-inch guns and prime movers, had 13 wounded, 3 killed, and 91 missing in the first day of the counterattack; but it destroyed 14 enemy tanks, 2 trucks, 3 tracked vehicles, a half-track, 2 motorcycles, a staff car, and a machinegun crew.

A company roadblock eliminated very early in the attack by tanks moved back several hedgerows and set up another block even though its antitank guns had been lost. Bazookas proved effective.

A battalion overrun and pushed out of its defensive line established another line several hundred yards to the rear, and, though tanks were swarming over the area, defended along a sunken road, clerks, cooks, and messengers fighting alongside the riflemen.

Troops manning 81 millimeter mortars refused to move from their original positions and fired at ranges as close as 175 yards. An artillelry battalion started firing at a range of 5,000 yards and was soon firing at targets only a 1,000 yards away, but the crews remained and continued to put out the shells.

This was the pattern of the battle. A typical message: "Very fatigued, supply problems not solved, defensive sector penetrated, however key terrain feature still held."

While the infantryman stood his ground, American artillery operated on the premise that it was better to waste shells than miss a target. The weather was clear, and while observation planes pinpointed German formations for the artillery, fighter-bombers roamed the area and destroyed enemy materiel and morale. Much of the reason why artillery and air were so effective came from the fact that the soldier on the ground had immobilized the German striking force and turned them into sitting ducks.

Of the 70 enemy tanks estimated in the original penetration, only 30 were judged in operation at the close of the first day. By the morning of August 8, the estimate had dropped to 25.

As Americans around Mortain were proving their courage and stamina, other Americans in battalion strength on top of Hill 314 were demonstrating the meaning of heroism in one of the outstanding small-unit achievements of the European campaign.

The battalion command post had been in the village of Mortain, and when the German attack surged through the town, the command group set out on foot to try to join their troops marooned on the hill. The group was captured soon after daybreak.

GERMAN MOVEMENT PARALYZED

On the height east of the village, Capt. Reynold C. Erichson assumed command of the surrounded force: the 2d Battalion, 120th Infantry, reinforced by a rifle company and a few antitank guns, and two forward observers of the 230th Field Artillery Battalion (1st Lt. Charles A. Bartz and 2d Lt. Robert L. Weiss).

The battalion had split a rifle company three ways to establish roadblocks augmented by antitank guns. Two roadblocks were overrun at once. The third remained in place and in action and eventually accounted for the impressive score of more than 40 of the enemy's vehicles and tanks.

Occupying the most important piece of terrain in the Mortain area, the battalion held the crest of the hill for 5 days and denied the Germans possession of the ground that would have given them observation over the major part of the VII Corps sector. The Germans knew this, and the regiment-size 17th SS Panzer Grenadier Division, which had the mission of taking the hill, attacked almost constantly. American troops not only retained their positions but called down fire on all German units within observation. Like Erichson, the company commanders (Capt. Delmont K. Byrn and 1st Lts. Ralph A. Kerley, Joseph C. Reaser, and Ronal E. Woody, Jr.) refused to consider surrender.

Their isolation did not panic the troops. "Not worried about situation as long as [friendly] artillery fire continues," they reported. It was their stocks of supply that bothered them. And even this problem was partially solved. A light artillery plane tried to drop supplies by parachute, but German fire drove it away. Army Air Forces cargo planes did better and dropped food and ammunition.

The 230th Field Artillery Battalion also brightened the supply picture by firing smoke-shell cases, normally employed for propaganda leaflets, filled with bandages, adhesive tape, morphine, and other medical supplies. Eventually, the 743d Tank Battalion and the 113th Field Artillery Battalion joined in this supply shoot.

Nearly 700 men held out. By August 12, 300 had been killed or wounded, but more than 300 walked off the hill unharmed. During the battle of Mortain, they had been, the Germans later said, "a thorn in the flesh" that had paralyzed all German movement in the Mortain area.

Not until August 11 did Hitler acknowledge defeat at Mortain, and that evening the Germans began to withdraw their salient. They had never pushed beyond the positions they had reached on August 7 by virtue of the initial momentum achieved mainly by surprise.

During the 6-day battle, the 30th Division lost nearly 2,000 men. German losses were worse. One regiment of the 2d Panzer Division was annihilated, the 1st and 2d SS Panzer Divisions were seriously depleted. Nearly a hundred German tanks lay abandoned around Mortain at the close of the battle.

The main effect of the counterattack was that it temporarily halted the VII Corps advance. It had prompted some readjustment of forces in the Mortain-Avranches area, but of no more than local significance. What the counterattack might have accomplished seemed in retrospect to have been its only merit.

MEN FIGHT NO BETTER THAN LEADERS

"It was precarious for a while," General Hobbs reported to General Collins. "We are holding and are getting in better shape all the time."

Collins was not surprised. He had gone along on the assumption that no position is untenable when it is defended by men of courage and determination.

Taken by surprise and manning unfamiliar positions, the 30th Division stood its ground and fought as hard as any unit was to fight in the European theater. "It isn't very easy," a staff officer wrote, "to tell the men in the front lines that the battle is going well when he's still up against that old combination of machineguns, burp guns, mortars, 88's, artillery, tanks—and terrain. * * * But the battle is going well; and it's worth saying."

The battle had indeed gone well. By blunting Hitler's Avranches counterattack and holding a considerable force tied down at Mortain, American troops made it possible for the Allies in Normandy not only to fashion the Argentan-Falaise pocket, where two German field armies were soon to be destroyed, but also to drive to the Seine. But more, the German withdrawal from Mortain was the start of a retrograde movement that was to end a month later at the West-wall fortifications along the German border, more than 300 miles away.

Portent of the future? Small units, disorganized, separated, and isolated by surprise attack, can fight and can win against superior numbers despite precarious communications and supply and despite the absence of a well-defined frontline. The key factor is superior leadership, for men fight no better than their leaders. The determining factor in the final analysis—plain old-fashioned guts.

A Fine Job Performed by the Employees of the Bureau of Engraving and Printing

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. BROYHILL. Mr. Speaker, I have been so much impressed by the wonderful work done by the employees of the Bureau of Engraving and Printing, as explained in Mr. Summerfield's news release of August 5, that I would like to place this in the RECORD. This is another illustration of the tremendous efforts which Federal employees as a whole often give in service to their country and for which they so seldom receive due credit. I am very happy to see that credit is given where credit is due in this instance.

The Bureau of Engraving and Printing employees, most of whom worked a full month of uninterrupted 12-hour days on a strictly voluntary basis to complete the job, certainly deserve such a tribute.

The news release follows:

Postmaster General Arthur E. Summerfield noted today the Bureau of Engraving and Printing of the Treasury Department turned out the greatest stamp printing job in its history to help the Post Office Department make an efficient changeover to new postage rates at 12:01 a. m. last Friday (August 1, 1958).

Great credit is due the Bureau of Engraving and Printing of the Treasury Department, Mr. Summerfield said. The Bureau has met the unprecedented demand for new stamps with record production schedules

since the new postal rate law was signed on May 27, 1958, Mr. Summerfield explained.

"This is such an excellent example of two units of Government cooperating in meeting a large single problem," Mr. Summerfield explained, "that I inquired of Bureau of Engraving and Printing Director Henry J. Holtzclaw about details of the job that was done by the Bureau to help the Post Office Department meet the need for new stamps in such a relatively short time.

"I am informed," Mr. Summerfield continued, "that, on May 27, 1958, when the increased postal rate bill became law the Bureau's high-speed rotary stamp presses of the Plate Printing Division were placed in production on three shifts to print 4-cent book, sheet, and coil stamps, as well as the new 7- and 5-cent airmail stamps for the August 1 start of new rates.

"As an example of how well this was done, figures show that since the law was signed to meet the changeover, the Bureau has turned out 6,237,004,794 stamps. This was far above normal production schedules."

The breakdown on production of stamps in the new denominations alone (not counting production of other stamps in other denominations) is as follows:

	Number	Total stamps
Sheet stamps:		
4-cent ordinary postage		2,334,250,000
5-cent airmail		19,150,000
7-cent airmail		257,850,800
Books of stamps:		
4-cent ordinary books	20,311,000	487,464,000
7-cent airmail books	8,181,500	98,178,000
Coils of stamps:		
4-cent coils of 100	2,630,200	263,020,000
4-cent coils of 500	2,423,393	1,211,696,500
4-cent coils of 3,000	29,837	89,511,000
7-cent coils (airmail) of 500	103,950	51,975,000
7-cent coils (airmail) of 3,000	1,344	4,032,000
Grand total		4,817,127,300

"All of the stamps printed were processed through the Bureau's examining, perforating, collating, coiling, stitching, quartering, wrapping, and cartoning operations necessary to manufacture finished coils, books, and sheets for delivery to post offices," Mr. Summerfield noted.

"In addition to 2 full shifts in the sheet section, book and coil sections of the Post age Stamp Division worked around the clock on two 12-hour shifts 7 days a week to process the largest quantity of stamps in the history of the Bureau of Engraving and Printing during any comparable period of time.

"In a 2-day typical period, the Bureau's packing and shipping section delivered 750,000 coils—an amount equivalent to a full month's delivery in the calendar year 1956. The majority of the group of more than 500 employees who participated in this record production effort worked through a full month of uninterrupted 12-hour days on a strictly voluntary basis."

TVA Should Be Financed by Appropriations

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. ROBISON of New York. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following statement of Glenn D. Owens, associate research analyst, Citizens Public Expenditure Survey, Inc., of New York State, speaking for the Citizens Public Expenditure Survey and the National Taxpayers Conference to the Public Works Committee, United States House of Representatives, July 29, 1958. Mr. Owens was testifying on S. 1869, which would permit the Tennessee Valley Authority to issue its own revenue bonds.

I think Mr. Owens correctly and succinctly sets out the position of most residents of New York State in regard to this proposed legislation.

STATEMENT OF GLENN D. OWENS, ASSOCIATE RESEARCH ANALYST, CITIZENS PUBLIC EXPENDITURE SURVEY, INC., OF NEW YORK STATE, SPEAKING FOR THE CITIZENS PUBLIC EXPENDITURE SURVEY AND THE NATIONAL TAXPAYERS CONFERENCE TO THE PUBLIC WORKS COMMITTEE, UNITED STATES HOUSE OF REPRESENTATIVES, JULY 29, 1958

In the interest of taxpaying citizens of New York State who are represented by the Citizens Public Expenditure Survey, it is strongly urged that this committee reject S. 1869. This bill would further extend a Government enterprise (the TVA) at the expense of the taxpayer. And it would do so in direct violation of traditional congressional and executive fiscal controls.

The TVA was established 25 years ago to provide flood control and navigation for the Tennessee Valley. Generation of power was only to be incidental to its operation. In the intervening years, the production of cheap power has become the TVA's main function, apparently, as a high percentage of the power it produces a steam generated.

Now it is proposed that TVA be allowed to issue its own revenue bonds in an amount not to exceed $750 million to assist in financing its own power program.

As a representative of taxpaying citizens, it is the judgment of the CPES that if a need for more power facilities exists in the Tennessee Valley, that need should be filled by taxpaying, private industry. Enlarging private industry's investment in the States affected would give the economy in those States a real shot in the arm.

The States affected by the TVA are among that group of States constantly cited as needy when new Federal grant-in-aid programs are proposed. They never seem to have enough taxpaying ability to help them pay their own way.

Here is legislation which openly proposes to keep taxpaying industry out of the Tennessee Valley—to perpetuate the inability of the States in that area to solve their own governmental problems. It is apparently a deliberate move to prevent the States affected from ever being able to support essential government services themselves. Such a move can have no other effect than to force have States like New York to pick up the tab through Federal taxes for governmental services for those States indefinitely.

The Citizens Public Expenditure Survey is not in favor of taking anything away from anyone. But, proposals of this sort generally cost the taxpayers of the Nation (and in particular, New York State) plenty. And, our only interest in the bill is that of the taxpayer.

On the next point, I have been authorized to speak also for the National Taxpayers Conference by its chairman. The conference is an organization made up of the heads of taxpayer organizations in 37 States and Hawaii.

Besides being costly to the taxpayers, S. 1869 would establish a dangerous precedent by removing traditional congressional control over appropriation and expenditure of funds and executive control over the issuance of bonds by a Government corporation, as established by the Government Corporation Control Act of 1945. With Federal Government expenditures soaring to new record peacetime levels each year, prudence dictates a tightening, not lessening, of controls over spending by all Government agencies—including Government corporations. Furthermore, if one agency is exempted from such controls, what is to prevent all others from seeking and gaining like treatment?

The Citizens Public Expenditure Survey and the National Taxpayers Conference support the position taken yesterday by the representative of the General Accounting Office in testimony before this committee when he stated:

"In our opinion, the financing of Government activities of this character should be by appropriations. If, to obtain needed funds, borrowing from the public is necessary, the Secretary of the Treasury should perform this function."

It is respectfully urged that S. 1869 be rejected by this committee.

Conditions for Mr. Eibel's Admission Into the United States for Permanent Residence

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. WALTER. Mr. Speaker, General Swing, Commissioner of Immigration and Naturalization, has directed that Mr. Eibel be offered a seaman's conditional landing permit by the local immigration officers which will allow him to remain in the United States for a period not to exceed 29 days. This type of permit is issued under a provision of the Immigration and Nationality Act regularly applied in the case of any alien crewman who is able and willing to reship from the United States on a vessel other than the one on which he arrived. This procedure relieves Mr. Eibel from the necessity of sailing on the *Frederick Chopin* to Poland, but his status as a seaman is still preserved. It will be left to him to comply with the usual requirements of the law as to obtaining a visa for migration to the United States which are applicable to all other persons seeking entry for permanent residence here.

Mr. Eibel's ability to depart as a seaman is established by an offer of a representative of the Scandinavian Shipping Association to provide him a berth on one of their vessels within the 29-day period of the landing permit. That berth carries with it the assurance that the vessel on which he sails will land him in some non-Communist country. On his arrival abroad, Mr. Eibel will be in a position to apply to an American consul for one of the special nonquota visas authorized by Congress in the act of September 11, 1957. Under that law, as well as under the basic immigration law, procurement of an immigrant visa from a consul is the first step in gaining admission to the United States for permanent residence.

It remains for Mr. Eibel to indicate his willingness to accept this offer.

Foreign Aid and the Kruse Plan

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. CUNNINGHAM of Nebraska. Mr. Speaker, under leave to extend my remarks I wish to include a most interesting editorial from the Blair (Nebr.) Pilot-Tribune of August 4, 1958, written by Associate Editor Rufus Olson.

Mr. Olson tells an interesting story about an American serviceman who is stationed in Germany, and how the Kruse plan is creating friendship for America that foreign-aid money cannot buy. I commend this editorial to the attention of my colleagues and to others in Government who are interested in this subject:

Private and Mrs. Bud Kruse, who are stationed in Germany, live off the Army post there and have become acquainted with a number of German families.

While a student at Dana College, Bud participated in athletics, and this summer has devoted considerable time to coaching the German youngsters near his home the fundamentals of baseball.

Recently the Kruses attended a public function in a stadium in Germany. Present were the parents of the youngsters Kruse had assisted in teaching the great American game of baseball.

The parents of these youngsters greeted the Kruses with a round of applause and a hearty handshake and expressed their deep appreciation for the time spent in the interest of their youngsters.

Yes; Kruse is also popular with those youngsters who have been learning to play baseball and attendance at practice is punctual—and the young lads have revealed a devoted interest in the game, a willingness to cooperate and a determination to play the game just as efficiently as American youngsters play the game of baseball.

We are not acquainted with the attitude of the German people relative to Kruses connection with the Armed Forces, but here is an American serviceman who has shown an interest in the youngsters of another nation—and who, undoubtedly, is building up better relations between the people of America and Germany by acts beyond the call of duty, than by performing his assigned duties.

It is doubtful if money could purchase the respect, the appreciation, and the devoted friendship which these young German lads and their parents have for an American serviceman who has taken the time to teach these lads the game of baseball.

Doesn't this prove that there are other methods besides the use of the American dollar to build friendship between this Nation and other nations?

Wouldn't Uncle Sam find it more beneficial and less costly if the—let's call it the Kruse plan—was adopted to replace the give-away-money plan that, in the opinion of many Americans, has not only been costly but has done little to bring about the friendly attitude toward America that is desired?

Undoubtedly a million dollars devoted to the Kruse plan would be far more beneficial than many millions of dollars spent trying to buy a friendly attitude toward this great Nation of ours.

We compliment young Kruse on his excellent work, his efforts beyond the call of duty and he is deserving of far greater recognition than he will receive by the writing of this article—but it is doubtful if he will receive the credit that he deserves.

Mrs. Kruse is the former Sandra Lamb, daughter of Mr. and Mrs. Everett Lamb, of Blair.

All Sense Is Not Yet Lost

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. BYRNE of Illinois. Mr. Speaker, I commend the Chicago Tribune for their vote of thanks to House Members who voted against expansion of the communities facilities loan program under the Community Facilities Administration of the Housing and Home Finance Agency.

ALL SENSE IS NOT YET LOST

Much to everyone's surprise, the House last Friday voted down a $2 billion Federal loan program to finance public works in municipalities. The surprise was occasioned not because there was any merit in the bill—there wasn't—but because Congress has shown no great disposition to avoid spending in the present session. The same bill, scaled down to $1 billion, had already passed the Senate.

This legislation was concocted by the Democratic leadership as part of its clamor to play up the recession, which appears now to be on the wane. The Democrats wanted to strike a pose before the voters suggesting that if the Eisenhower administration wasn't going to run around and scream and shout, they were. The bill was unneeded and was what the Republicans called it—an encouragement to boondoggling.

An equal number of Democrats and Republicans—151 in each party—were ranged for and against the bill. Oddly enough, Democrats supplied the margin to defeat it, for 36 of them put fiscal prudence above partisan considerations and voted against the legislation, while 22 Republicans defected to the spending side. These Democrats, notably Representative HOWARD SMITH, chairman of the Rules Committee, deserve the gratitude of the taxpayers. SMITH put the matter well when he suggested that Congress adjourn without more spending and go home to let the taxpayers "catch up with what we've done to them already."

What Congress has done to them is plenty.

We congratulate the Illinois Republican delegation on resisting the additional waste represented by this bill. All Members, with one exception, whose position was not recorded, were against the bill.

The editorial is inserted as it appeared in the Tribune of Tuesday, August 5.

There was a record vote on this bill and the result as 187 nays to 173 yeas. I was not the one member of the Illinois Republican delegation who failed to register opinion one way or the other.

Yesterday I expressed myself at considerable length on my beliefs about public works spending. Needless spending in public works must be curtailed.

I commend my colleague from Illinois, Mr. ALLEN, for his pertinent remarks pertaining to the aspects of this bill which are not consonant with the Constitution of our great State of Illinois.

I recall recently debate in this chamber on another bill which dealt with the Federal laws superceding State laws. I declared myself on this legislation and voted for the bill—H. R. 3—beecause I believe we need to reassure the people at home that there are some of us who still believe in safeguarding the rights guaranteed us under our State Constitution since the Constitution of the United States made it clear that our State Rights would not be ignored.

Had the House passed S. 3497, it would have been another debt our children and grandchildren would have to pay in the years to come. Instead of adding to their burden we should be endeavoring to reduce it by economies wherever and whenever possible. The security of the young men and women not only in the Third District but throughout the entire United States is more important to me than any political consideration.

When I started out in my profession as a lawyer, the other responsibilies of family life came. At that time I did not have near the number of built-in-taxes that the young men of today must pay though they have had no voice in incurring them.

A View of the Supreme Court

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an article by Mr. John Temple Graves which appeared in the Roanoke Times, of Roanoke, Va., on August 6, 1958:

"Do they sleep well of nights—the NEITOUS nine who held hands and jumped?"

Before Little Rock, Ark., was something of a border State as regards integration. The landslide for Faubus reflects more than anti-integration and more than the South, it seems to me. It is part of the national revolt against destruction of our form of government and our American ideal.

C. Herman Pritchett, professor of political science at the University of Chicago, justifies the increasingly questioned desegregation decision on grounds that the Court is not the only interpreter of the Constitution but "keeper of the American conscience." Can it really be that the nine who propose to take over America mean to take Heaven, too, not only to usurp legislative executive and State functions here below but to fudge on infinity?

Under what halo do Hugo Black and Earl Warren qualify as conscience-keepers? It is easier to contemplate the couple as sociological agent of Gunnar Myrdal than as moral agent of God Almighty.

One simple resolution, suggests the Birmingham Post-Herald, might solve the Constitution crisis, a resolution of Congress so affirmative and so acclaimed by the public that the Court would feel bound to subscribe or would be committed in spite of itself.

The resolution would be a simple assertion that the Court "does not exist to, and of right, should not—do good."

Little did I guess how meaningful some words of Hugo Black's were to be when I

asked him shortly after his appointment to the Court what he deemed his mission to be. We were resting between sets of a tennis game at High Park Club in Birmingham. His answer was unhesitating.

His mission, my fellow townsman said, was human advancement within the limits of constitutional interpretation. Or words to that effect.

It seemed a noble thing but millions know now it is an ignoble thing. It has meant straining, twisting, warping, and bleeding the Constitution and the American ideal, all to serve 1 man's (or 9 men's) contested notion of advance. And this may be without mandate from the people or the Constitution, egotistically and arrogantly committed by a handful elected to nothing, responsible to nobody, immune to time and tide.

It seems so uncivilized, medieval, that this situation, involving the very foundations of the Republic, should exist in a vacuum with the nine going their ways and saying nothing.

You would think they would take judicial notice of the American people.

You would think they would wish either to dispute or to justify this gathered picture of the court as imposing both a new form and a new ideology on America.

You would think they might be eager to explain what the need is—and why they are nominated when we have a Congress for such things, and political parties, and national elections.

There is no law against the court's explaining itself.

Congress might ask it politely please to make a statement as this crisis deepens.

American Legion Posts in Luzerne County (Pa.) Again Win First Prize in Americanism Programs

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story which appeared in the Wilkes-Barre Record of August 6, 1958, which relates that district 12 of the American Legion again was awarded first prize in Americanism programs:

DISTRICT 12 AMERICAN LEGION AGAIN WINS FIRST PRIZE IN AMERICANISM

District 12 of the American Legion, comprising all of American Legion posts in Luzerne County, was awarded for the second straight year, first prize in Americanism. The presentation was made at the recent Department Convention held in Philadelphia.

Department Commander, John Collins, in making the presentation, cited the many programs conducted by Luzerne County group and stated it not only conducts such Americanism programs, but it talks and promotes such activities.

Accepting the award for the district was district Americanism chairman for the last 2 years, Nello S. Corozzoni, Jr., a member of Miners Mills American Legion Post 741 of Wilkes-Barre. In accepting the award, Corozzoni praised the Legion posts in the county for the many Americanism programs and activities during the last two administrations. He stated it was a pleasure and an honor to work with the different committees and posts under his chairmanship.

Louis J. Greco, District 12 commander and one of the leaders in Americanism in the department, commended his chairman and the 40 American Legion posts under his command, for the many Americanism programs and bringing honor to the district. "We will strive harder to promote and conduct stronger Americanism programs in the future in order that we may preserve the lights of freedom," he stated.

The district was further honored by having Richard Sterling, Kingston, receive an award for the best essay in the department. Sterling, a senior at Kingston High School, was applauded for his essay given at the convention. The essay contest, part of the Americanism program, was headed by John Gallagher, newly elected district commander and a member of Freeland American Legion Post.

Commissioner August W. Heckman, of Jersey City, Appointed Chief Counsel of New Jersey League of Weekly Newspapers, Inc.

EXTENSION OF REMARKS
OF
HON. VINCENT J. DELLAY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. DELLAY. Mr. Speaker, Mr. Martin Turpanjian, president of the New Jersey League of Weekly Newspapers, Inc., has called my attention to the fact that City Commissioner August W. Heckman was appointed as chief counsel for the league and that on June 17, 1958, a meeting was held to celebrate the occasion. I want to take this opportunity of congratulating Commissioner Heckman on the honor bestowed upon him, and as Mr. Turpanjian suggested, am offering for insertion in the RECORD a clipping from the Hudson Gazette relating to the event:

A giant scrapbook containing more than 400 newspaper and magazine clippings in English, Armenian, French, German, Hungarian, Polish, Italian, Chinese, Japanese, Russian, Hebrew, and Arabic languages was presented to August W. Heckman recently for his archives as token of deep appreciation and gratitude of the league members—newspapers serving in all the 567 communities of New Jersey as messengers of goodwill.

Chief Counsel Heckman is an authority on constitutional and international laws and is an outstanding citizen in New Jersey as doer of things. He is a towering figure in civic, fraternal, social, and governmental circles and is constantly in demand as an after-dinner speaker and orator.

Everywhere Chief Counsel Heckman's name, his fame, his high integrity, his intellectual assets of moral and political philosophy, have met the true apprisal and logical evaluation.

In the local press, in the foreign press, and in the national and international newspapers and magazines we can say without any sense of adulation that Chief Counsel Heckman is highly respected everywhere.

In this age of sham and camouflage, when we find the unhappy paradox of un-Christian Christians, unsocial Socialists, it is indeed refreshing to find a real exponent of truth and justice radiating from the personality of this modern exponent of fair play and Chief Counsel Heckman has translated his ideals not in a strident ballyhoo of empty promises but in the literal living reality of the deeds of his service to more than 500 weekly newspapers of the State of New Jersey. His philosophy has not been mechanical repetition of trite platitudes and copybook epigrams; it is embodied, inherently, in the rare consistency of his character.

The Heckman family is unique in the world, for all his five children were born on Sundays, and he has been proclaimed as the Father of the Year.

"How many think of all the thinking few,
And many never think who think they do;
Our Jersey thinkers are not quite so crass,
We're thinkers in August W. Heckman class."

Hon. William S. Hill

SPEECH
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. ROGERS of Colorado. Mr. Speaker, I am indeed sorry that our distinguished colleague the Honorable WILLIAM S. HILL, who has so ably represented the Second Congressional District of Colorado for 18 years, has decided voluntarily to retire from the House of Representatives.

It was my great pleasure to become well acquainted with BILL HILL many years before he or I were elected to the House of Representatives. BILL HILL had rendered distinguished service to the State of Colorado prior to his election to Congress in 1940. He was a member of the General Assembly in the State of Colorado and was secretary to the late Governor, the Honorable Ralph Carr. It was while he was serving in this capacity that I learned to know him best during the time it was my pleasure to be the attorney general of Colorado. At that time and on many occasions BILL HILL assisted me in carrying out my duties.

The good people of the second congressional district recognized his capacity and understanding of governmental affairs and entrusted to him the responsibility of representing them in the House of Representatives in 1940.

Since this congressional district is principally devoted to Agriculture, BILL HILL was assigned to the Agriculture Committee and throughout his service has devoted himself to the interest of his constituents and particularly as it related to the agricultural problems. He has been instrumental in placing many statutes on the book during that time and credit should be given to BILL HILL for his activity in the extension of the Sugar and Wool Act.

BILL HILL is admired and respected for his hard and diligent work. He has been congenial and willing at all times to cooperate and has made himself available to his constituents and colleagues and we, of the Colorado delega-

tion, regret the decision of our amiable and friendly colleague to remove himself from active public service.

We will miss him and extend to Mr. and Mrs. Hill my best wishes and hope they will enjoy their retirement in the great State of Colorado.

Note of Thanks and Appreciation to 85th Congress From Osceola County Barracks No. 402, Veterans of World War I, for Action on Their Charter Bill

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter from Arthur H. Carr, publicity chairman for Osceola County Barracks No. 402, World War I Veterans, Evart, Mich., and the statement of appreciation from the members for favorable action by the Congress on H. R. 11077, the charter bill for Veterans of World War I of the United States of America, Inc.:

REED CITY, MICH., *August 5, 1958.*

Hon. THOMAS J. LANE,
Representative, Congress of the United States,
Washington, D. C.

DEAR CONGRESSMAN LANE: By way of introduction, I must let it be known that I am publicity chairman for Osceola County Barracks, No. 402, Veterans of World War I of the U. S. A., Inc., of Evart, Mich., and the legislative chairman of this barracks is buddy George E. Mills, of Evart, Mich.

The following words showing and expressing of our thanks, gratitude and appreciation for a piece of work well done by you and the greater part of your congressional body are truly those coming from the heart of every member of above-stated barracks and now to be made manifest by said barracks' publicity chairman and legislative chairman. We trust you will accept this document in the spirit given and will take full charge in seeing this gets entered in CONGRESSIONAL RECORD:

ARTHUR H. CARR,
Publicity Chairman, Osceola County Barracks, No. 402, Veterans of World War I of the U. S. A., Inc., of Evart, Mich.

NOTE OF THANKS AND APPRECIATION FOR OUR MEMBERS OF THE 85TH CONGRESS

Osceola County Barracks No. 402, Veterans of World War I of the U. S. A., Inc. (chartered at Evart, Mich.) does on this date, August 5, 1958, send their many thanks, gratitude, and commendation to all our Members of Congress (House and Senate) for the generous services they rendered our organization, during the 85th sessions of Congress; with special emphasis being placed or brought to bear on the work of the members of the Committees on the Judiciary of both House and Senate in their services there and in reporting our Federal charter bill of incorporation No. 11077 out for action by both House and Senate, also, we do express special thanks to all Members of the House who so ably spoke in behalf of this bill at the hearing held on it as it was about to be voted on by the full House on June 25, 1958, and for the thoroughness in the way this bill was taken into consideration, and the way it was handled throughout this session of Congress.

Our deepest expression of thanks and gratitude also goes to all members of this 85th Congress, who, even a remote way lent a hand in making it a reality the having H. R. 11077 become Public Law 85-530. At this time we also extend special thanks to President Eisenhower for his placing his signature of approval to this legislation on July 18, 1958.

If any have been left out of being recognized as having taken a noble stand on this legislation, it is implied that this document must and does cover such.

It is the wishes of our Osceola County Barracks, No. 402, Veterans of World War I of the U. S. A., Inc., under charter at Evart, Mich. [that if it so be at the pleasure of the Members of this 85th Congress and our President] that this document be placed in the CONGRESSIONAL RECORD on the date received by one of this congressional body, this to be Congressman, Hon. THOMAS J. LANE, author of this bill, held as such reference to action taken by this barracks.

ARTHUR H. CARR,
Publicity Chairman for Osceola County Barracks No. 402 of Evart, Mich., acting in said capacity and on behalf of said barracks.

Attest:

ARTHUR H. CARR,
Publicity Chairman,
GEORGE E. MILLS,
Legislative Chairman.

It's a Long Lane

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. DAGUE. Mr. Speaker, we all remember the summer of 1948, when the Republicans had it won and our Democrat colleagues were knee deep in gloom. And we also remember that November when the GOP literally snatched defeat from victory with President Truman in the White House for another 4 years and the Democrat Party in control in this House.

Looking back 10 years, it occurs to us that a similar situation might develop, with the result that the Republican ship which you recently described as already sunk might float along for a few more years.

And why this restrained optimism? Well, it appears that most of the issues that our Democrat friends have been counting on have more or less faded away.

Take sputniks, for instance. Having already launched four satellites, and having successfully fired an intercontinental ballistic missile, we seem to be holding our own in that field.

And then there was that depression that was to rival that of the thirties. Well it just has not panned out and it seems that we are headed back up toward a better day. And the farm revolt has simply petered out in the face of a 20-percent rise in agricultural income.

And take the Goldfine-Adams furore. Well, it has not turned out that Mr. Adams did anything illegal while there is evidence that Mr. Goldfine reserved some of his more lavish gifts for the Democrats.

And finally, there is this Middle East mess about which previous Democrat administrations did little to correct until it came to a head a few weeks ago. And the matter is not yet resolved although happily, as is our custom, politics has stopped at the water's edge and we are united as a people in our determination to work out a solution. But the important thing to remember is that there was no vacillation or quibbling when it became imperative to land marines in Lebanon. And our President displayed those qualities of leadership which were expected by our people and which cannot help but reflect favorably on Republican chances this fall.

All of this, of course, has been said so much better by Mr. Gould Lincoln in his column in yesterday's Evening Star which is included with these remarks:

THE POLITICAL MILL

(By Gould Lincoln)

OUTLOOKS SHIFTS FOR BOTH PARTIES

HYANNIS, MASS.—Political leaders and strategists of both Democratic and Republican Parties are taking a new look at the situation and the issues. Election day, November 4, is still almost 3 months away and much can happen in that period—just as it has since the beginning of the year.

Earlier the Democrats were riding high, wide, and handsome. The big issues which they counted on to make big gains in both Houses of Congress and to elect Democratic governors of States have somewhat faded. First there was an uproar over the Russian sputniks. The Democrats claimed the Republican administration had permitted the United States to fall far behind the Soviet Government in the matter of scientific discovery and accomplishment; that this country was in imminent danger of becoming a second-rate power militarily.

But now we have successfully launched four earth satellites of our own. In addition, and most important from a national-defense point of view, we have just had remarkable success with an intercontinental missile, designed to hurl a tremendously destructive hydrogen warhead more than 5,000 miles.

RECESSION MEASURES

Second, according to Democratic prophets earlier, this country was on its way to a depression that would rival that of the early 1930's. All kinds of panaceas, costing billions of dollars, were proposed in Congress.

President Eisenhower and his advisers, however, refused to be stampeded into these huge spending programs. The administration went to work on a saner course. It declined to recommend a reduction in taxes which some of the Democratic economists demanded, too. The economy has taken a distinct turn for the better. And most unexpectedly from the Democratic standpoint, American farm income has gone up and up, until in the first half of this year the net income of agriculture has increased about $3 billion. The Democrats may have to make a new estimate of their party's pulling power in the agricultural States of the Midwest, the East, and South.

Also, earlier in the year, and, indeed, more recently, President Eisenhower's foreign policy was under heavy fire from the Democrats.

They charged that the President was exerting no leadership; that things were at sixes and sevens, and that we had lost both prestige and all our friends, if we had ever had any, abroad. The sudden further development of the Middle East crisis, however, brought prompt and immediate action by President Eisenhower, who ordered the marines into Lebanon. Even after he had taken this necessary step, he was harshly criticized for imprudence which might hurl the world into a third world war. But that, too, has now changed. The Communist nations have taken no steps toward armed conflict, although Khrushchev ordered military maneuvers on the borders of Iran and Turkey, in a further effort to frighten the nations of Europe and the United States. It did not work. The British sent their troops into Jordan.

U. N. SITUATION CHANGES

Now there is strong likelihood of a special meeting of the United Nations General Assembly on the Middle East issue, possibly attended by heads of governments. Should such a meeting be attended by a measure of success in settling the Middle East problem, and the world can breathe easier, much of the credit will go to President Eisenhower. And another Democratic issue for the closing campaign will have faded into insignificance.

Since this country became immersed in the Middle East situation, the Sherman Adams-Bernard Goldfine incident, rated by the Democrats as a first-class issue against the Eisenhower administration and the GOP, has assumed more correct proportions. The House Investigating Committee has tried desperately to tar Mr. Adams, the President's first assistant at the White House. But it has failed to show any corrupt action, or attempted action by Mr. Adams.

Mr. Goldfine, the Boston industrialist and the giver of many presents to many men, Democrats as well as Republicans, is still under strong attack. However, Mr. Goldfine has testified that he contributed even more liberally to Democratic campaign funds than to Republican.

So far, the Democratic attempt to prove there is a mess in the Eisenhower administration has not progressed. Undoubtedly the House committee will keep at it. Up to date, what it has disclosed is a pale picture as compared to the mess in Washington during the last Democratic administration, when even the head man in the Internal Revenue Bureau was found to have transgressed.

The Republicans, who were down in the dumps—far down—a few months ago have plucked up courage. Democrats are wondering if everything is as rosy as they had believed. Early in 1948 and far into the summer the Democrats seemed in for a terrific defeat at the polls. Things changed in the last few weeks of that campaign. It could happen again.

Improved Mail Service Announcement Gratifies Public

EXTENSION OF REMARKS

OF

HON. JACKSON E. BETTS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1958

Mr. BETTS. Mr. Speaker, recent announcements by Postmaster General Summerfield directed to improved mail service will be received with overwhelming gratification by the American public. Among these is a relaxing of the rule with respect to rural delivery. When the present administration took office, a Department regulation required four patrons to the mile, including retrace, for the extension of any rural route. Under Mr. Summerfield the rule was changed to 3 per mile. Now it is being further relaxed to 2 patrons per mile.

Rural patrons of mail service have long felt that with improved highways each family was entitled to delivery to its own mailbox. The new ruling will, in most cases, make this a reality. As the Postmaster General says, this change will benefit an estimated 300,000 families.

Rural boxholders will hail Mr. Summerfield's announcement as one of the outstanding achievements of this administration. I am sure they join me in expressing their gratitude and appreciation.

Address by G. G. Beard, President, United Engineering & Foundry Co., Before the Pittsburgh Society of Financial Analysts

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1958

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. G. G. Beard, president, United Engineering & Foundry Co., before the Pittsburgh Society of Financial Analysts, March 19, 1958:

Gentlemen, it is an extreme pleasure to have this opportunity to present a brief story of United Engineering & Foundry Co., together with some observations on its foreign operations. Inasmuch as this is the first time the company has had this privilege, let me give you a very short résumé of its background. The part of its story which will be of greater interest to you, as it is to all of us at United, is what are its current activities?

The company was founded in 1901 under the leadership of Isaac W. Frank, a copartner in the Frank-Kneeland Machine Co., a Pittsburgh manufacturer of rolling mill machinery. As a consequence of what Mr. Frank envisioned to be the future of this industry, he negotiated a merger involving the Frank-Kneeland Machine Co., Lincoln Foundry Co. of Pittsburgh, McGill & Co., of Pittsburgh, and Lloyd-Booth Co., of Youngstown, who collectively but not necessarily individually were manufacturers of rolls, castings, and rolling mill machinery. With a charter which stated, "Said corporation is formed for the purpose of manufacture of iron or steel, or both, or of any other metal, or article of commerce from metal or wood or both." United Engineering & Foundry Co. was in business.

Between this time and 1916 the company acquired the Chilled Roll Foundry Co., Inc., Vandergrift, Pa.; Mahoning Foundry & Machine Co., Youngstown, Ohio; American Roll & Foundry Co., Canton, Ohio; William Tod Co., Youngstown, Ohio.

From these beginnings, the company grew and prospered. The name, "United," became synonymous with the dynamics of the growth of steel. The company early established itself as a world leader in the development, design and manufacture of machinery and rolls for the steel and nonferrous industries.

Prior to World War II, the company was exclusively identified with the industries to which I have just referred.

Also, United's experience prior to World War II pointed up the cyclical character of its business. Relative to many other industries, for example, the steel industry and other capital goods producers, its experience from a cyclical standpoint is no worse. As with business in general, the company is affected by the overall conditions of our national economy. United would anticipate that its business will fluctuate accordingly, but unfortunately its particular industry, because of its historical sensitivity to certain economic fluctuations, is occasionally referred to as a feast-or-famine industry. We think it is time to lay the ghost in this regard, so far as United is concerned.

The company has been geared to the activities of the steel industry. The steel industry is and will continue for the foreseeable future to be its largest single customer, but it is now serving other industries extensively and in ever increasing volume.

In 1944 United acquired the Adamson Machine Co., of Akron, Ohio, one of the largest and oldest makers of machinery for the rubber industry. In 1949 the company purchased the business and assets of the hundred-odd-year-old Stedman Foundry & Machine Co., of Aurora, Ind., having an iron foundry serving the diversified market of the Cincinnati area and manufacturing various types of crushing and pulverizing equipment. In this same year the company acquired part of the business and assets of the Lobdell Co., of Wilmington, Del., manufacturers of iron rolls and equipment for the paper industry, together with a specialized line of machine tools. United is diversified. Since the acquisition of these latter facilities, the volume of their outputs has been increased several times.

Many of the machines and processes which have revolutionized the heating, treating and shaping of metals in the past half century have been notable United firsts. To mention just a few, there are such well known landmarks as the Gary Rail Mill; the Lukens 206 Inch Plate Mill, built in 1918 but still the largest in the United States of America; the Nation's first electric powered reversing mill; the first halogen continuous electrolytic tinning line; and the first continuous aluminum heat treating line, a process in stage of further development which may well revolutionize the production of aluminum strip and plate.

Others have rightfully been credited with the development of the process of continuous rolling of flat metal products, but this process was made practically possible by United's development and introduction of the now famous four-high mill. No single development in the machinery field so far has contributed so much to the economical mass production of flat metal products. We appreciated your mention of this in your notice to your members of today's meeting.

The first continuous hot strip mill was built for the Columbia Steel Co., now the Butler, Pa., plant of Armco Steel. This mill was put in operation in 1926. Since that time 63 mills of this type, rolling steel over 42 inches wide, have been built, of which 35 have been installed in the United States of America and 28 in other free countries of the world. United has built 33 of these mills.

Currently, the company is developing new designs which will further advance this art, providing better and cheaper materials than heretofore and with an eye on the requirements to meet the challenge of modern science and all its implications.

United has always been noted for tackling the big jobs. The 35,000-ton die forging press recently built for the United States Air Force, while not absolutely the largest in the country, is the first to use automatic level control, television to enable the operator to determine the position of the center of loading relative to the center of the press and automatic recording of stresses in the main components during operation.

Typifying the large machines the company builds is the 16-million-pound capacity stretcher for stretching aluminum plate 6 inches thick by 138 inches wide. Four of the castings in this machine weigh 230,000 pounds each and are the product of our own steel foundry.

By far the largest number of slabbing and blooming mills installed in the United States recently are United Mills. This is the mill that gets the first crack at rolling steel after the steel has been cast in ingot form. This was the result of intensive development and the introduction of radical innovations. The methods applied with so much success to this particular product are now being applied to the company's other lines of manufacture.

Other recent installations and machinery now in process of manufacture are of interest. Three Rendleman rod mills, 2 are being installed in the United States and 1 in Europe, employ new principles in rolling steel rods for higher quality and greater precision product. Other existing mills have been revamped to embody these new ideas.

The world's fastest tinplate mill, 7,000 feet per minute, at Weirton Steel Co., division of National Steel Corp., is a United product. It is understood the company has competition in this claim, the proof of which is in the actual speed at which quality tinplate is successfully rolled, and we believe United has it.

Currently, the company is manufacturing a 120-inch wide continuous hot aluminum strip mill. To date, this is the largest aluminum strip mill in the world and the 170-inch-wide roughing mill which will feed the strip mill will be the largest mill of this kind in existence.

Time does not permit a full description of all the company's products. Briefly, the parent company builds mills for rolling all kinds of metal from huge steel ingots to paper thin aluminum foil, from heavy structural beams to wire rod. It makes iron and steel rolls for every application in rolling of metals, rubber, plastics, and paper; cars for transporting metals, shears for cutting metals, reels to wind metals in coil form, steam-hydraulic and hydraulic forging presses, gears, gear drives, and specialized power transmission units, processing equipment such as picklers, tinning and heat treating lines, material handling equipment, lubricating systems, roll lathes, heavy weldments, iron, nodular iron and steel castings.

The Adamson United Co., which is operated as a wholly owned subsidiary, has pioneered such basic rubber manufacturing machines as tubers, strainers, mills, mixers, and calenders. Those huge tires you see on earth-moving equipment, tractors and large trucks could have been molded in an Adamson tire mold. Your plastic shower and window curtains, your plastic raincoat, and the film in your camera could have been processed on Adamson calendering equipment. Most plastic film produced on these calenders up to 72 inches wide is generally three to four thousandths thick and sometimes less with a permissible tolerance of plus or minus 5 percent. This imposes difficult standards which have been met by Adamson design and workmanship.

Adamson has been highly successful in the development and sale of tire, brake and wheel testing equipment which simulates the performance of similar equipment on automobiles and aircraft under operating conditions. With the trend to higher speeds in all forms of transportation, the contribution of this type of equipment to our safety can be appreciated.

Special machinery for the production of building materials, hydraulic presses, multiplaten presses for plywood and belt curing presses are among Adamson's other products.

The Stedman Foundry & Machine Co., located at Aurora, Ind., is also a wholly owned subsidiary and manufactures crushing, grinding, pulverizing, mixing, and screening equipment. These products are used in the meatpacking, rendering, fertilizer, chemical, sand and gravel, crushed stone, and other industries. The company specializes in engineering and building complete fertilizer plant machinery for the production of chemical fertilizer. A foundry division produces grey iron and semisteel castings for the local machine tool, valve, canning, printing, and other manufacturing industries.

RESEARCH

Together with its subsidiaries, United places emphasis on research and development as an important means of assuring future growth. Total expenditures for research and development expressed as a percentage of sales is difficult to assess inasmuch as a high percentage of the company's machinery is tailor made. Consequently, much of its development costs are absorbed in job costs. In its Pittsburgh office there is a product research and development staff and an office for the correlation of research activities in our foundry metallurgical laboratories. The company believes that the efficiency of its metallurgical research in the development of certain specialized rolls for rolling metals has been responsible for its increasing share in the markets for these products. Recognizing the coming demand for superaccurate, thin and flat, high temperature alloy steels and other metals for jet aircraft, rockets, and guided missiles, United is concentrating research in this field and has already produced results. In research, the company looks beyond the industries it traditionally serves and currently has under development new machinery for the manufacture of new products.

FOREIGN OPERATIONS

As a result of a vigorous foreign-sales policy, United is widely recognized. Its rolling mills, forging presses, and machinery, including the products of its subsidiaries, can be found all over the world. The greatest foreign activity has occurred in recent years, much of which was due to the great reconstruction required abroad as a result of war devastation and stagnation. Now we are entering a new era of foreign trade, one which presents an even greater challenge to American exporters. Most of the war-torn countries of the world are now back on their feet—at least by their standards, and in certain countries by ours, too. Many of the countries abroad, however, no longer have sufficient dollars with which to purchase our goods, but they are in a position to trade with one another if not with us. Recognizing this eventuality and preparing to continue to share in foreign markets to the fullest extent possible, United has entered into and continued technical know-how contracts with a number of manufacturers in England, France, Germany, Australia, Belgium, and Japan whereunder the company licenses these manufacturers to use its know-how for the manufacture of its products. While as a result the company is in direct competition with these foreign manufacturers, it nevertheless continues to enjoy very substantial foreign business in certain specialized lines where it is recognized as a world leader and in countries where their manufacturing capacity is inadequate and also where dollar exchange is available.

FINANCIAL

United's reported financial statements are on a consolidated basis. As of December 31, 1957, current assets amounted to $36,181,874 and current liabilities to $15,683,515, leaving net working capital amounting to $20,498,359. The ratio of current assets to current liabilities was 2.3 to 1. Inventories and receivables are at high levels, reflecting in our business an increased volume of production at all of the company's plants. Except for the item of store supplies, amounting to approximately 8.5 percent of its total inventories, the company's inventories apply to contracted work in process of manufacture, and are not, therefore, subject to the possibility of serious loss in the event of a reduction in market prices.

The highest sales volume in the history of the company was reached in 1957, aggregating $100,456,237, approximately double its sales 10 years ago.

United's gross income before taxes established a new high, but because of a higher effective tax take in 1957, its net earnings are just short of the per share earnings record for the period of 1948 to 1950. Net earnings from 1957 operations were $5,069,960, equal to $2.02 per common share after preferred dividends. During 1957 the company paid total dividends of 90 cents on each share of common stock. United's unbroken dividend payment record has continued through its 57 years of operation, and though varying in amount from time to time has been consistent with available earnings and with due regard to the company's economic growth and changing needs for fixed and working capital.

Other highlights of its financial position are available to you in the company's annual report, so I will not burden you with additional figures at this time.

United maintains a continuous program of plant repair and maintenance and studies of replacement opportunities are conducted to maintain its physical plant in proper operating condition. Expenditures in this regard are generally within the company's normal depreciation allowances.

The consolidated backlog of business carried forward in 1958 amounted to approximately $88,592,000 as compared to $114,200,000 a year ago. As it stands, the current backlog, while lower than that of a year ago, is still substantial and 1958 should produce a good year for the company.

Key to Beating Inflation

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1958

Mr. WHARTON. Mr. Speaker, I should like to insert at this point in the RECORD a thought-provoking editorial from a recent issue of the Poughkeepsie New Yorker entitled "Key to Beating Inflation":

One of the great questions of this century is whether the free economies of the world can grow and prosper without continuing inflation.

On the record, it has not been generally managed so far. Ever since World War II ended, the great expansion in America and Europe has been matched almost step by step by strong inflationary pressures.

The matter is one that governments deal delicately with. They want to control infla-

tion, and will in nearly every instance make some moves toward that goal. But they also fear deflation and depression, and hence hesitate to clamp the anti-inflation screws too tight.

It seems to be agreed that expansion of the economy takes money. If funds are pumped into the country's bloodstream by government borrowing and unbalanced budgets, the results will be inflationary. If the money comes from wage boosts that far outrun gains in productivity and from prices higher than reasonable costs dictate, the outcome is the same.

Is there any way to escape the spiral and still give the economy powerful propulsion?

Wage gains which simply match advances in efficiency do not seem to have a big enough impact, for in many fields there is no room for such advances on a significant scale. What can a locomotive engineer do to improve his output?

In a London dispatch, John Allan May, of the Christian Science Monitor, suggests, however, that expansion and stability might yet work out as traveling companions.

He points out that for most of the period since 1951 West Germany has managed expansion while avoiding the inflation pitfalls.

The explanation seems to involve complex relationships. Investment in new plants, must, of course, be high. But the German experience indicates this investment capital must be drawn heavily from accumulated individual savings if the currency and hence the economy are to be kept stable.

The Germans have had no special magic. When they have not held savings and investment in balance, or have let wages far outstrip efficiency gains, inflation has hit them, too. But their good results when the balance is kept suggest the problem may have an answer.

The key to it, as May intimates, is perhaps the individual. If we assume he really wants stability, he must know how he may get it.

He must understand that a large share of savings must go into investment for expansion. This means denying himself their use for other purposes. But if this reservoir can not be drawn upon, there will either be no great expansion or it will be brought off by strongly inflationary measures.

Hon. William S. Hill

SPEECH
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. McGREGOR. Mr. Speaker, when my good friend and colleague BILL HILL retires this year, the farmers of America will be losing a man who has been their friend in Congress for 18 years, one who has worked constantly in their behalf.

Born on a farm in Kansas, educated in some of the finest agricultural colleges in the country, BILL HILL came to Congress in 1940 to champion the cause of the men who form the backbone of our Nation—the American farmer. He brought to the House of Representatives for 9 consecutive terms not only the desire to better farm life but a vast store of knowledge and experience on how to accomplish his goal. BILL has been a personal counselor to me on farm problems, and we will sorely miss his leadership and sage advice on the problems that face so important a segment of our population.

To me, however, BILL HILL has not been just a fellow legislator, but a warm personal friend with whom I have been privileged to share many wonderful hours ever since we first started our political careers in Washington back in 1940. Our families have enjoyed the hospitality of each others homes many times, and I will always be extremely proud to number BILL among my closest friends. He and his lovely and gracious wife, Rachel, will be missed by all in Washington, but I hope that they will come back to visit with us often. I want to wish them the very best of everything possible as they begin a much deserved rest and a long and happy retirement with their fine children and grandchildren. Rachel and BILL, our prayers and best wishes are with you always.

How To Go Broke

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. DAGUE. Mr. Speaker, our esteemed colleague, the distinguished chairman of the House Ways and Means Committee, sounded a doleful warning the other day when he reminded us that an ever-increasing national debt is the pathway to national insolvency and the primrose path to national suicide.

And it seems quite proper to emphasize today, as we consider adding another billion to the impending deficit by passing a Federal-aid-to-education bill, that this erosion of our financial structure is something that we, the Members of Congress, and we alone, are responsible for.

Admitting that national defense takes 50 pereent of all of our tax income, the fact remains that we are at war—a cold one at the moment, but, nonetheless, destructive financially—and the injunction to tighten our belts, to postpone a lot of these spending schemes, is here. We are fighting a ruthless enemy, and thank God we are fighting him overseas. But that is all the more reason why we should tighten our belts and forego the butter in favor of the guns and missiles our arsenal so sorely needs.

Only the blind will fail to see that we can stop Khrushchev on all fronts and lose to him here at home by destroying our financial and economic structure through profligate spending. Let us not go the way of Athens and Carthage and Rome with our financial excesses. Instead, let us start living within our means and from here on barricade the Federal Treasury against this unnecessary and wasteful spending. The gentleman from Arkansas has sounded the tocsin. His words deserve attention.

Yesterday's Evening Star carried a fine editorial on this subject, which I am pleased to include with these remarks:

How To Go Broke

In voting to increase the statutory limit of the national debt to $288 billion—a jump of $13 billion—the House has acted in keeping with necessity. But it has done so in an unusually somber spirit generated by ever-multiplying signs that our country is heading fast into a period of immense inflationary danger.

This danger, as Chairman MILLS, of the Ways and Means Committee, has warned, is inherent in the prospect of huge Federal deficits for years to come. The situation is attributable not merely to essential military and foreign outlays, but also to heavy domestic spending that is not truly essential—spending of a kind that could be markedly reduced, if only the executive branch, Congress, and the American people as a whole would make up their minds to put an end to the profligacy and substitute reasonable frugality for a budgetary policy that seems to be based largely on partisan politicking and a what's-in-it-for-me philosophy.

Mr. MILLS, however, does not expect any such reform in our national fiscal thinking. And so, quite gloomily, he has predicted that Federal spending over the next 5 years will amount to about $80 billion annually, with virtually no chance that enough revenues will be raised to pay for the outlays. Thus, as he sees the future, we are in for a long period of deficit financing that can hardly fail to militate against the idea of tax relief for either corporations or the general public. More than that, in Mr. MILLS' words, "it will loose inflationary pressures here that in turn will be emulated by industry and labor. The result may well be, in the next several years, that we will see rises in prices such as we have not seen before in peacetime."

Warnings of the same sort have been voiced repeatedly in the past, notably by Senator BYRD, and they need to be heeded now more than ever. For the new debt limit approved by the House is symptomatic of a continuing inflationary trend that could cause another great shrinkage in the dollar's acutely shrunken purchasing power. Beyond that, unless it is checked and reversed, the trend could ultimately shatter public confidence in Federal securities and wreck the Nation's credit at home and abroad. These are not imaginary perils. On the contrary, as emphasized by Mr. MILLS and other close students of the subject, they are real perils, and they can readily materialize if nothing is done to head them off.

This matter, with all its astronomical figures, may seem to be dull to most of us Americans. But it is important for us to keep in mind that our present national debt is about seven times greater than it was in 1940, and the interest we must pay on it each year is roughly as much an an entire Federal budget in the early 1930's. Clearly, if we keep on spending as we are, without balancing income and outgo, we will be in danger of waking up one day to find our country quite disastrously broke.

Puerto Rico, Uncommon Commonwealth

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, August 8, 1958

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article on Puerto Rico.

This article furnishes further evidence of the great progress made in that state under the enlightened and forceful leadership of Gov. Luis Muñoz-Marín. All Americans can be proud of the achievements of our associate in the Caribbean.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNCOMMON COMMONWEALTH

(By Wyatt Jones)

People keep asking, "Who owns Puerto Rico?" The answer, of course, is "the Puerto Ricans." The island is a free, associated state of United States citizens, not a territory or a possession. As an autonomous state, it adopted its own constitution, elects its officials, appoints its courts, and has complete local self-government. It is independent in everything except economics, defense, and foreign relations. Puerto Ricans have no voting representatives in Congress and cannot vote for the President and Vice President—they therefore pay no Federal taxes. However, with a few specific exceptions, all Federal laws, including the draft, apply to the island.

Even before the Spanish-American War there was a strong independence movement in Puerto Rico. Under Luis Muñoz Rivera, father of the present Governor, the island had been granted provincial autonomy by Spain. When the United States took over, in 1898, a military government was established, which was superseded, in 1900, by a colonial-type administration dominated by mainlanders. In 1917, the islanders were made citizens of the United States and given an all-Puerto Rican legislature over which the United States Congress retained its veto power. In 1941, Rexford Guy Tugwell was appointed Governor and the Popular Democratic party took over the legislature under the dynamic leadership of Senator Luis Muñoz-Marín, the present Governor. In 1946, President Truman appointed the island's first native governor, who served until a popular election in 1948 was won overwhelmingly by Muñoz-Marín.

COMMONWEALTH STATUS

By this time, the Governor was convinced that Puerto Rico could not live economically outside the United States political system. Turning from a strong supporter of independence, he became the architect and advocate of the unique commonwealth status. The Commonwealth of Puerto Rico came into being on July 25, 1952, by an act of Congress granting full autonomy under a commonwealth constitution, ratified by the people of Puerto Rico in a popular referendum.

Governor Muñoz-Marín has twice been reelected, the last time in 1956 with 62.5 percent of the vote. Political experts consider the Governor, his cabinet, and other Puerto Rican officials among the ablest, sincerest, and most dedicated men ever to rise in public life. This able and honest government, with widespread popular support, has been able to perform miracles in the island's economic and political life. The Puerto Ricans are working hard and constructively at the task of solving their problems and achieving their own economic salvation. The name "Operation Bootstrap" has been applied to this self-help development program. In a world beset with problems of colonialism and dependent people, the Puerto Ricans can take justifiable pride in the remarkable success they have achieved. The United States, on the other hand, can be equally proud of its role in providing the conditions that have made possible this unique experiment in self-government.

The tremendous progress Puerto Rico has made since 1950 in living standards, industrial production, employment, public health, housing, overseas trade, public utilities services, and efficient farming has caught the attention of the entire free world. Over 5,000 trained observers have come to Puerto Rico in the past few years to study, at first hand, the Commonwealth's phenomenal economic and social advances. These visitors have come from more than a hundred countries of Europe, Asia, and Africa, from 20 Latin American Republics, and even included a delegation of American Indians.

SHOWCASE OF DEMOCRACY

At a recent point 4 conference in San Juan, Governor Muñoz suggested that Puerto Rico become a yardstick for United States policy toward less-developed areas: "What our friends who come from so many different countries and cultures discover in our island is a spirit of self-confidence, a creative energy dedicated to a challenging and worthwhile task, a sense of urgency in the face of difficult obstacles, and the conviction that only in an atmosphere of freedom can the main goal finally be achieved. And they see that the goal is being reached with the encouragement and support of the United States, without any conditions save those born of mutual respect and trust. Here can be seen the true attitude of the United States toward colonialism and economic imperialism and toward the enormous problem of how to deal with peoples of different cultures who are struggling to free themselves from inadequate agrarian economies. Thus, Puerto Rico is a showcase of the intentions of the United States. The success or failure of our experiment is a measure of the success or failure of United States policy toward the countless millions who dwell in less-developed areas."

PROGRESS REPORT

The indicators of economic and social development in Puerto Rico are a revelation. Between 1940 and 1958, the population increased by almost 50 percent, to a record 2.3 million—672 persons per square mile, as compared with 51 for the United States. This makes the island one of the most densely populated areas in the world. In 18 years, the death rate dropped from 18.4 per thousand population to 6.9—2 points below that in the United States. In the same period, the birth rate dropped from 38.5 per thousand to 32.6, and the life expectancy increased from 46 to 68 years. School enrollment tripled, whil the percentage of literacy advanced from 68 to 83. Net income from manufactures increased tenfold, while the gross national product and personal consumption expenditures increased almost fivefold. During the last 18 years, annual per capita income has risen from $121 to $443—a figure exceeded in Latin America only by oil- and ore-rich Venezuela.

Such phenomenal progress can be credited only to hard work, skillful management, imaginative planning, and resolute application of limited resources to a well-conceived goal. For, in truth, the wealth of the Commonwealth is embarrassing—in a special sense. In natural resources, raw materials, and sources of power, Puerto Rico is embarrassingly poor. In manpower potential, geographical location, and climate, however, the island is embarrassingly rich. The idea back of Puerto Rico's Economic Development Administration—better known as fomento, the Spanish word for development—was to use these very real assets to overcome the equally real and pressing liabilities. Fomento's wizard administrator, Teodoro Moscoso, Jr., realized that rapid industrialization under private enterprise was the only possible method. To this end, fomento offered tax exemption, high profits, and expert services to mainland industries willing to open plants in Puerto Rico. During the past 8 years, more than 600 plants, employing more than a half million workers, have been started with EDA assistance. The new goal, set this year, is 13 plants per month. Before 1950, the saying went, "If it isn't sugar or pineapple, it's imported." Today the textiles, electrical appliances, clothing, paper, rugs, rubber goods, drugs, or what-have-you sold in New York or San Juan is just as likely to have been made in Puerto Rico.

PRIVATE INVESTMENT

The second leg of Puerto Rico's economic stool was private investment. Last year, the annual rate of investment in capital goods rose to $250 million, an increase of almost $50 million over that of the previous year. About half of this came from Puerto Rican sources, the remainder mostly from the United States. To achieve this rate of investment, Puerto Rico promises—and delivers—up to 60 percent return on high-risk capital. Among the many opportunities for safe investment of United States capital are the well-secured, tax-exempt bonds of Puerto Rico and its various revenue authorities, offered by the Government Development Bank for Puerto Rico.

Noteworthy examples of American capital at work in Puerto Rico are the projects of the International Basic Economy Corporation, an investment financing company founded by Nelson Rockefeller. With a view to providing the most basic necessities for all the people, IBEC has concentrated on low-cost housing, building attractive complexes of modern, one-family units to replace the festering slums of the cities. These new neighborhoods take into account the Puerto Ricans' desire to "conmingle"—what might be thought of overcrowding in a Westchester suburb is just company in Isla Verde. With an eye to lowering food costs and improving the food distribution patterns, IBEC has also sponsored a series of modern supermarkets, among the first in Puerto Rico's history. In both of these operations, utility has been enhanced by beauty, and function has been informed by Puerto Rican culture and traditions.

The serious shortage of hydroelectric power and fuels makes Puerto Rico a natural for the exploitation of atomic energy. A bill now before the United States Congress would authorize the Atomic Energy Commission to build a pilot reactor at the University of Puerto Rico—largely for teaching and demonstration purposes for Latin American scientists. The future power needs of the island are such that this is only a good beginning, and public or private financing should be forthcoming for commercial production of electricity from atomic power.

American tourists, businessmen, and investors are very much in the position of the Three Princes of Serendip in the Arabian Nights story, who, searching the world over for their fortunes, discovered them by chance along the way. For such unsought for and unexpected advantages. Hugh Walpole coined the rather outlandish word, serendipity. Puerto Rico has proved to be the place for such serendipity, not only for investors and businessmen, but also, and especially, for American tourists.

The island's geographical position places it literally at America's doorstep. Pan American clippers make the flight from New York to San Juan, nonstop, in 5½ hours. The record-breaking Puerto Rican air traffic is such that Pan American offers three classes of service—first, tourist, and thrift—on frequent daily schedules. Round-trip passengers may elect to come or go by way of Miami, less than 4 hours' flying time from San Juan. Eastern Airlines and Trans Caribbean offer similar schedules, Delta Airlines flies from southern cities, and several foreign carriers include Puerto Rico in their Caribbean services. Caribair flies regularly among the islands.

The superlative climate of Puerto Rico is possibly its greatest attraction for tourists. Travelers who have suffered disappointment

in the weather at other resorts are certain to be pleased with nature's performance here. There is no extreme of heat or cold—the year-round temperature ranges from a low of 70° to a high of 85°, with an average of 78°. There is no rainy season—only flash tropical showers that seem to come from clear skies, leaving the land green and sparkling—and San Juan boasts of 355 sunny days a year.

This semitropical island offers a wealth of scenic beauty. Luquillo Beach, stretching for miles along the northeast coast, is one of the world's finest expanses of palm-fringed sand. The nearby tropical rain forest, El Yunque, is a spectacular jungle of orchid-festooned bamboo, palms, and ferns—all to be viewed from a paved highway—not an hour's drive from San Juan. Coconuts and bananas grow everywhere, coffee plantations dot the central highlands, sugarcane fields share the northwest landscape with pineapple and citrus groves.

This year, a quarter of a million American tourists will enjoy Puerto Rico's hospitality. The building boom in hotels is such that a monthly magazine can hardly keep up with hotel openings. Among the new luxury-class establishments are the Caribe Hilton, bellwether of this now-famous chain; the San Juan Intercontinental, another jewel in the Pan American World Airlines group (a second Intercontinental for Puerto Rico will open in Ponce, on the southern coast, early next year); the Condado Beach Hotel, recently enlarged and renovated, with its country cousin in the mountains at Barranquitas; and the small but exquisite La Rada, on the Condado Lagoon, in San Juan. The choice among these fine hotels is largely one of convenience and location: the Caribe Hilton is on the island of old San Juan, built partly on the foundations of El Moro, a historic Caribbean fort; the Condado hotels are in Santurce, the modern section of San Juan, on the mainland. Besides air-conditioned rooms and suites overlooking the swimming pool and lagoon, the La Rada offers studio penthouses with kitchens. This in spite of the fact that the hotel's restaurant is under the management of New York's Copain and serves superlative food. The taste and elegance of the furnishings attest to the fact that the owner, José E. Alegría, is also Puerto Rico's best known interior designer.

Among the new hotels to be opened later this year are the ultramodern La Concha—luxury on the halfshell—just down the beach from the Condado; an exclusive club in the El Escambron section of San Juan, to be created by Maxim's of Paris, with 50 guest suites and 2 restaurants; and the Dorado Beach Hotel, another of the Rockefeller projects, about 20 miles west of San Juan.

The latter, on a 1,200-acre oceanfront site just beyond the town of Dorado, on the north central coast, will be one of the most elaborate resort centers in the world. The first unit, an 18-hole championship golf course laid out by Robert Trent Jones, was opened last May. A Spanish-style plantation mansion has been converted into a luxurious clubhouse, and already the club's membership list reads like a Who's Who of business and sport. Later this year, the second unit will be opened—a hotel with lounge and dining rooms overlooking the sea and a total of 136 guest rooms in separate beach houses and cabanas, each with an ocean-front terrace and direct access to the beach. Facilities for beach and swimming, tennis, sailing, and fishing are already available. Designed as a major contribution to the island's expanding tourist program, this project is being developed personally by Laurence S. Rockefeller in conjunction with Puerto Rico's Economic Development Administration.

As the third stage in this project areas of tropical forests and citrus groves have been set aside for future residential development. The building sites have views north to the Atlantic Ocean and south across the coastal plain and sugarcane fields to the mountains. Driving time from the city to the resort area is about 40 minutes; flying time from the San Juan International Airport to the Dorado Beach private airfield is 10 minutes. Flying golfers now are as commonplace in San Juan as they are in Washington.

If this sounds like all business and commerce, it's because the writer is a norteamericano. No puertorriquen would ever describe his pais in these terms. Governor Muñoz-Marin is a practicing poet and lay philosopher. He is horrified at the thought that Puerto Rico's material success and prosperity may come at the cost of his country's spiritual and artistic values. To allay these fears, the Governor has counterpoised Operation Bootstrap with Operation Serenity, "an attempt to give to economic efforts objectives that commend themselves to the spirit."

Under this charter, a burgeoning institute of culture presents exhibitions of art treasures, workshops in poetry, and lectures in philosophy. Under government sponsorship, historic houses, churches, and monuments are restored; a rare book museum has been installed in a colonial house on Calle del Christo; folklore is collected and old music is recorded. The Ballet San Juan features Puerto Rican choreographers and composers. In one 2-week period last June, three 1-act plays in English were presented by the Little Theatre, including a concert reading of Sartre's No Exit, and a company augmented by Metropolitan Opera stars sang 8 grand operas in as many nights.

Perhaps the high point of Puerto Rico's cultural season is the annual Festival Casals has held each year, in May. Here, cellist Pablo Casals (now a Puerto Rican resident), the Budapest String Quartet, and a dozen distinguished guest artists have presented a series of 12 concerts.

The Department of Tourism gets into the act by sponsoring such projects as local and international sports events: golf and tennis tournaments, the annual International Invitational Game Fish Tournament in September, and a variety of cultural programs both in San Juan and out on the island. This summer, for another example of the cultural influence, the floor show at the chic Club Flamboyan was an authentic Spanish ballet featuring the young dancer Roberto Iglesias. There is a lively ferment of the arts, especially painting, all over the country. The lobbies of all the major hotels have been turned into art galleries—the pictures are priced and sold off the walls. A new supper club near the airport is exactly what its name implies—the Little Gallery.

Throughout both of these "Operations," Puerto Rico has sought to maintain and foster the best of its cultural traditions—Latin and American, Spanish and English, Old World and New. Governor Muñoz doesn't like to think of Puerto Rico as a bridge between North and South America—bridges are to be passed over too quickly—but rather as a meeting place, where the two worlds can mingle and even live happily together.

Mr. Dulles Defines Defeatism

EXTENSION OF REMARKS

OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1958

Mr. DAGUE. Mr. Speaker, as so often happens of late I have had to depend on my favorite columnist, David Lawrence, to underscore a forthright statement by Secretary of State Dulles, which I think deserves emphasis. Quoting from Mr. Lawrence in yesterday's Evening Star we have these words which the Secretary delivered the other day in Brazil:

"The international situation is critical. Atheistic, materialistic, and aggressive forces that would dominate all the world, talk boldly; they suggest that efforts to halt them will mean nuclear war.

"We do not in fact believe they want war or would invoke war. No sane people want war. War would be for all an inexpressible disaster.

"The question is whether their threats will cause us to weaken and give in and thus sacrifice the genuine independence of nation after nation. That is not the path to peace. It is the road to war."

In the same able article and supplementing this ringing statement of Mr. Dulles', Mr. Lawrence goes on to point out:

America's record is untarnished. Though engaged victoriously in two World Wars to defend its interests, it has not annexed a single foot of territory. When it has landed Marines anywhere, the reason always has been to protect the lives and property of its own citizens. The United States sent military forces to the Middle East last month to accomplish two purposes—to protect American lives there and to help preserve the political independence of a small nation, thus demonstrating to the Communists and their allies that the people and Government of this country are not pacifistic but ready to fight in the future as in the past for a just cause.

The full-length article by Mr. Lawrence entitled "Appeasement Leads To Defeat" is included with these remarks and commended to your perusal:

APPEASEMENT LEADS TO DEFEAT—DULLES' WARNING AGAINST LETTING SOVIET THREATS WEAKEN US CITED

(By David Lawrence)

Sometimes in a few sentences in a public utterance there is epitomized the whole background of a crisis in the world. Secretary of State Dulles, speaking in Brazil this week, said:

"The international situation is critical. Atheistic, materialistic, and aggressive forces that would dominate all the world, talk boldly; they suggest that efforts to halt them will mean nuclear war.

"We do not in fact believe they want war or would invoke war. No sane people want war. War would be for all an inexpressible disaster.

"The question is whether their threats will cause us to weaken and give in and thus sacrifice the genuine independence of nation after nation. That is not the path to peace. It is the road to war."

The foregoing is an eloquent answer to those critics here and abroad who frivolously exclaim that "America has no foreign policy."

It is a courageous answer to those who keep on giving the impression that the American people are terrorized and that there is only one thing to do—to make concession after concession to the Soviets and the Red Chinese as well as to their stooges in the Middle East.

Many a so-called plan has been proposed by panicky-minded persons who seem to feel that the alternative to war is just plain surrender. They cloak their proposals in fancy phrases; indeed, they bring out the old clichés about neutralization of certain regions and talk glibly about bold and imagi-

native ideas for revising American policy. But paths of appeasement lead only to the same goal—defeatism.

For there are only two ways to try to maintain peace in the world. One of them involves military force, and this not always, but sometimes, means war. The other involves moral force, and this—when backed by a unified country and a willingness to use military force if every other effort fails—could succeed in keeping peace.

Some of the critics have derisively called this brinkmanship. They use the term because Secretary of Dulles once endeavored to express the need for courage in foreign policy and said that sometimes it is necessary to go to the "brink of war" in order to avoid war. He did not mean that he would merely resort to bluff. What he did mean is that, while it is imperative to exhaust every means of making a settlement, no nation which believes in the justness of its cause can avoid going to the very brink of war, itself, if that is necessary to impress its adversary that it is deeply in earnest.

There is a great advantage in applying moral force to the limit. If, for instance, war does come, it is then recognized by the people as the only choice left. Moral force means public discussion, good propaganda, debate in the forum of the United Nations General Assembly or in the press of the world or over the air waves. The theory is that people will control the hand of a government that threatens war. This is logical up to the point where censorship and suppression of ideas by a totalitarian government build an insurmountable barrier to communication between peoples.

Just now America has the most convincing case a nation ever had in the international arena. The United States stands for maintenance of the territorial integrity and political independence of all nations and is willing to supply military might, if necessary, to uphold that principle. For this is the key to peace in the Middle East and in every other area. To condone aggression, direct or indirect, is eventually to invite a world war.

America's record is untarnished. Though engaged victoriously in two world wars to defend its interests, it has not annexed a single foot of territory. When it has landed marines anywhere, the reason always has been to protect the lives and property of its own citizens. The United States sent military forces to the Middle East last month to accomplish two purposes—to protect American lives there and to help preserve the political independence of a small nation, thus demonstrating to the Communists and their allies that the people and Government of this country are not pacifistic but ready to fight in the future as in the past for a just cause.

The fact that America, itself, may be in military danger unless such a determined stand is taken now is not perhaps generally appreciated. It wasn't widely understood either during the 1930's when it was being said that in the battle between the democracies and fascism the "frontiers" in the defense of America may be in the Middle East.

The United States has drawn a line in the Far East beyond which it has said the Communist forces must not advance. In an analogous fashion—through the Truman and Eisenhower doctrines—notification has been given that communistic infiltration of free countries in Europe and the Middle East can reach a point where, if necessary, it will be challenged by arms. The hope is that peoples everywhere will perceive the real issue and restrain any dictatorship governments from taking chances in a delicate situation that could break down the peace of the world.

Selected Recent Plant Closings, July 1958

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an interesting compilation by the Area Employment Expansion Committee in New York on the recent plant closings, for July 1958, as submitted to me by John W. Edelman, Washington representative of the Textile Workers Union of America:

TEXTILE WORKERS UNION OF AMERICA,
Washington, D. C., August 7, 1958.

The Honorable THOMAS J. LANE,
House of Representatives,
Washington, D. C.

DEAR MR. CONGRESSMAN: This rather terrifying list of recent plant closings—with numbers of employees who will lose jobs—should be of interest in connection with the imminent debate on S. 3683, area redevelopment bill.

We make no claim that this is a complete list—these are merely cases that have come to our attention during 1958. Obviously, however, there is under way a sharp and dangerous contraction in the number of industrial establishments, with a consequent loss of employment, in almost all sections of the country. You will note that almost all types of manufacture are included in the obituary notice.

Very truly yours,

JOHN W. EDELMAN,
Washington Representative.

Hon. John A. Burns of Hawaii

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1958

Mr. RHODES of Pennsylvania. Mr. Speaker, I join my colleagues in paying tribute to the outstanding service of Delegate JOHN A. BURNS of Hawaii in the 85th Congress.

JOHN BURNS has brought to the Congress a remarkable talent for explaining clearly and concisely the case for Hawaiian statehood and has skillfully advanced this noble cause in which he believes so devoutly. Working tirelessly with supporters of statehood in Congress, JOHN BURNS has broken the persistent bottleneck which, for many years, prevented statehood legislation from clearing Congress.

The approval of Alaskan statehood this year has paved the way for the admission of Hawaii to the Union, almost certainly in the 86th Congress. The people of Hawaii are to be congratulated for their judgment in sending JOHN BURNS to Washington to represent them. In the 20 months since his arrival on the congressional scene he has done more to advance Hawaiian statehood than decades of service by his predecessors.

Despite his prodigious efforts for statehood, he has always found the time and energy to attend to the day-to-day needs of his constituency. As Hawaii's spokesman on the Agriculture, Armed Services, and Interior and Insular Affairs Committees, and on the floor of the House, JOHN BURNS has been diligent in serving the best interests of the people of Hawaii.

Mr. Speaker, as a longtime advocate of statehood for both Alaska and Hawaii, it is an honor to pay tribute to the Delegate from Hawaii. JOHN A. BURNS is a dedicated man of unquestioned honor, sincerity, integrity, and ability who is admired and respected by his congressional colleagues on both sides of the aisle.

The Free Press: A Reflection of Democracy

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by the Honorable Lester B. Pearson, winner of the Nobel Peace Prize and leader of the Liberal Party in Canada. Mr. Pearson spoke at the annual May 15 Prelude to Independence ceremonies in Williamsburg. His remarks cover the timely topics of East-West relations and Canadian-American affairs in addition to the question of responsibility of the press:

THE FREE PRESS: A REFLECTION OF DEMOCRACY

(An address by the Honorable Lester B. Pearson on the occasion of the celebration of the Prelude to Independence, May 15, 1958, Colonial Williamsburg, Williamsburg, Va.)

(Preface)

CELEBRATION OF THE PRELUDE TO INDEPENDENCE, WILLIAMSBURG, MAY 15, 1958

Each year in order to remind men of our basic American concepts of liberty and individual rights, Colonial Williamsburg commemorates the Prelude to Independence Period—May 15 through July 4, 1776. This year May 15, celebrated as Prelude to Independence Day, was devoted to the commemoration of the concept of a free press as expressed in the Virginia Declaration of Rights. This declaration, adopted by the Virginia Convention of Delegates on June 12, 1776, was the precursor to the Bill of Rights of the United States Constitution.

The Honorable Lester B. Pearson, winner of the Nobel Peace Prize, and leader of the Liberal Party of Canada, delivered the key address in a program that included the opening of the printing office, reconstructed on the original foundations of the shop of William Parks, who in 1736 founded the first newspaper in the Virginia Colony—the Virginia Gazette. The printing office, which also served as postal headquarters in colonial days, was officially opened by the Postmaster General of the United States, Arthur E. Summerfield, who paid tribute to the allied traditions of a free press and an uncensored postal system. In honor of the occasion Mr. Robert Carroll, television and film star, read the Virginia Declaration of Rights, and the Colonial Williamsburg Militia Company and the Lancraft Fife and Drum Corps of New Haven, Conn., mustered and marched in the 18th-century manner.

Special guests included representatives of the International Allied Printing Trades Association, the American Newspaper Guild, the American Society of Newspaper Editors, the International Printing Pressmen and Assistants' Union, the American Institute of Graphic Arts, the National Editorial Association, the Virginia Press Association, the Virginia State Printers Association, the Virginia Gazette, and the mayor and the postmaster of Williamsburg.

The purpose of Colonial Williamsburg, and hence the reason for this celebration, is "to re-create accurately the environment of the men and women of 18th century Williamsburg and to bring about such an understanding of their lives and times that present and future generations may more vividly appreciate the contribution of these early Americans to the ideals and culture of our country."

(Address)

THE FREE PRESS: A REFLECTION OF DEMOCRACY

It is an honor as well as a pleasure for me to address the 1958 celebration of the Prelude to Independence in this city so steeped in American history and which has played such a vital role in that history, especially in those stirring and memorable events which led up to independence.

I realize that I am following some very distinguished predecessors in this series whose words—and I have read them—did greater justice to the occasion than mine will be able to do.

You may indeed think it a shade surprising that a Canadian, proud to be a subject of a lovely and gracious descendant of George III, has been asked, and is happy to have been asked, to speak on this occasion, when we praise those men who fought for freedom from the British Crown, and recall with gratitude the nobility of their ideals and the greatness of their deeds.

I feel, myself, no trace of embarrassment in this role; though uneasy about my ability to do justice to it.

Those who fought for independence here did so because there were those in the Great Britain of that time who refused to recognize that a British subject carried his freedom with him across the ocean. The colonists were determined to secure in America the same rights and freedoms of British subjects in the homeland. They asked for nothing more and they were resolved to have nothing less. The effect of their success extended far beyond the borders of their new State, and the triumph of the ideals that inspired the great Virginians and other patriots of that time helped to advance social and political democracy in the motherland of those same men.

In Canada we, too, have secured our independence; but in a different and more peaceful way. We are very glad that we have been able to work out our own national destiny from dependent colony to sovereign state while fighting, not against, but side by side with our mother country.

That we were able to do this by peaceful evolution rather than by angry revolution was due in large part to the success of the American colonists in their War of Independence. Your victory was, in a very real sense, a victory for democratic progress in Great Britain itself. So when, many years later, the Canadian colonies reached a point where they wished to form a self-governing federation, that was encouraged, not opposed, by a Britain which had learned a great lesson in imperial policy. Later when our Canadian federation desired to become a full-fledged international unit the change was made without drama or drum beating but with the hearty approval of the mother country. So the fathers of our country are not generals with drawn swords, but gentlemen in frock coats. Conferences, not campaigns, are the signposts to our independence. Though not as spectacular, our method has been quite as effective as yours.

So today not only Canada but other former colonies of the British Empire—in all continents and climes and of all races and creeds—have become independent states, with freedom as complete as is possible in this interdependent age. They direct every aspect of their own policy—domestic and foreign. It is in this sense that the defeat of the British imperial system of the 18th century—a defeat begun perhaps here in Williamsburg—made possible the British Commonwealth of free nations of the 20th.

There are many in Canada, however, who worry today lest we should have ceased to be a colony of the United Kingdom only to become an economic dependency of the United States. With some historical justification it is felt that this would be a prelude to political and cultural absorption. That worry is increased rather than decreased by the realization of the inevitability, as well as the strength of the friendly ties, economic, social, cultural, and political, that bring us together. These ties have converted neighborhood, which is a state of location, into neighborliness, which is a state of heart and mind.

Their strength is the greater because of the dangers to our free existence which we face together and which we can only overcome together. We have learned—or should have learned—in the last 25 years that independence is not enough, for security or prosperity; that it must at times make concessions to the requirements of interdependence. A smaller state in a coalition is apt to have that lesson driven in on it more forcefully than a great power; through pressures not only from its potential foes but also from its powerful friends.

The relations between our two countries are a good illustration of what I mean. We have good reason to appreciate the fact that without the power and leadership of the United States in our collective security arrangements under NATO we would be isolated and insecure in the face of great and menacing forces that we have cause to fear and which are centered in Moscow. It is true that it is not easy to be powerful and to be loved. Indeed, the big and the powerful must expect rocks to be occasionally thrown at them by the malicious and the excitable. But, as the British learned in their days of imperial power, perhaps it is more important to be respected than to be loved. Even the Yankees in the American League are envied and disliked by some merely because they win so many pennants.

In Canada, however, we do appreciate the value and importance of American power. But we are uneasy—and this is natural—in the consciousness that powerful decisions can be taken in Washington with inescapable and far-reaching consequences for us which we might have little to say about.

We know also that our trade with the United States is essential to our prosperity, indeed to our economic stability; that the pace and pattern of our amazing development in recent years has been made possible by United States investments, which, incidentally, have been very profitable to the investors also. But we become understandably annoyed when your Congress raises or threatens to raise barriers against our exports to you which are now annually more than a billion dollars less than the value of the goods we buy from you. And we become worried when your investments—which serve to save us from the effect of this deficit—seem to dominate some segments of our industrial life.

These irritations are increased when we are told, and rightly, that strategically, for defense purposes, the continent must be considered as a unit; while for trade and production purposes the old rules of national interest and trade protection must apply.

Whether it is a cause or a result of the tendencies I have mentioned, the fact is that we are combining at the present time in Canada an acceptance of the requirements of interdependence through loyal and, I hope, effective participation in international activity, with a vigorous and vibrant national feeling of national pride and a sense of national destiny.

We are determined to do what we can to preserve and strengthen to the maximum possible extent our distinct national identity: Politically, economically, and culturally. We do not wish to—and we will not—be overwhelmed even by the most friendly neighborly pressures. This is a fact of which our friends in Washington, especially in Congress, should be aware. Its complete acceptance is the only sound foundation for good neighborhood and friendly cooperation between our two countries.

That cooperation, not only between our two countries, but between all free countries, is more important today than ever before. One principal purpose of this cooperation is to become so united and so strong and so confident in ourselves that we will be able to bring about an easing of tension generally, through a solution of some of the international problems that divide the world. This will make possible, we hope, cooperation with those with whom we now merely coexist in fear and suspicion.

There is not much evidence, I admit, to suggest that this fear and suspicion is lessening. There is evidence, however, that we are becoming more aware of the consequences of allowing it to degenerate or slide into armed conflict. Nuclear missiles of intercontinental range and satellites in outer space have made it clear that war means common and complete destruction. Deterrence based on a balance of terror which comes from the possession of hideous power on both sides is at the moment the best foundation—and it is sad to have to say this—that we have for security against this tragedy. But we must find something better or the result will eventually be catastrophe.

For that purpose the work of negotiation, patiently and persistently, must go on—without sacrifice on our side of unity or strength or principle. In the pursuit of that work it is hard these days to see much constructive purpose or progress in some of the maneuverings and propaganda manipulations that now pass for diplomacy in accordance with the rules which Moscow has managed to get established.

Instead of the quiet and confidential operation of the diplomatic machinery of the bad old days, we have sensational weekly—or even daily—installments in press, radio, and television, of such things as the Pilgrim's Progress to the summit, with a good deal of doubt in recent weeks as to who is leading whom through or around mines and roadblocks.

In this diplomatic maneuvering, we of the West work under certain handicaps, and I am not now thinking of the moral restraints and obligations which we attribute to ourselves. We work as a group, as a coalition of free countries, each government of which is sensitive, in foreign as in domestic policies, to a public opinion at which is aimed daily a bewildering barrage of information, misinformation, and opinion. This comes from all the mediums of comunication which have made it possible now to know at once everything that is going on everywhere, but make it more difficult at times to plan quietly and dispassionately what we should do about anything.

The fact that we work as a group of countries, each sensitive to public and legislative opinion and influence, inevitably imposes delays on diplomatic action and often necessitates compromise and adjustment of viewpoints.

This is one reason why Moscow, operating within a single and central control of policy and opinion, has so often been able to take the diplomatic initiative. Fortunately, this has been less evident in recent weeks. We are, I think, beginning to adjust ourselves to the new rules of this diplomatic game. We are also acquiring more steadiness in the face of Soviet moves, a refusal to be pushed off balance by every new letter from Mr. Khrushchev. This, if we can maintain it, will serve us in good stead in the future. Steadiness, imagination, and initiative should be the watchwords of our policy.

It seems to me, however, that our reactions to many Soviet developments, largely because of the difficulties I have mentioned, have often been too slow and uncertain. They have also on occasion been too transparently negative. It is surely not wise to shout "wrong number" every time the Kremlin calls up, even before Mr. Khrushchev begins to speak, and even if we know what he is going to say, and have already given him our reply. This has a bad effect on those countries with their hundreds of millions of people who are not as suspicious about Russia and communism as we are and who from their own experience—and perhaps this is the only way you can learn—have not yet learned the necessity of reading the small print, and even between the lines of small print, in Moscow's words.

It would surely be sensible for us to say, whenever we possibly can, in replying to Russion proposals, "Yes, providing" rather than "No, unless." There is a distinction.

While, however, we can improve our tactics and our reactions, it would be even better if we could ourselves act more—so we will have to react less. In other words, if we would take more diplomatic initiatives ourselves, always providing they are genuine and honest ones, with proposals in which we believe.

For this purpose, we will have to centralize the making of coalition policy far more than has previously been the case; and in a body with power and authority to concert and agree on what should be done. The obvious place for this is the NATO Council. Then, having come to decisions in that body which are acceptable to the group, we should not be afraid to choose one member—and in most cases it would have to be the United States—to act as our spokesman with the other side when that seems advisable. This, among other things, would do away with such unseemly wrangling as whether Mr. Gromyko will see western ambassadors singly or together when they have the same thing to tell him.

All of this kind of diplomatic pirouetting seems very childish when we are confronted with a situation that involves the possibility of nothing less than human extermination.

I know how difficult it will be to make effective progress toward centralized formulation of coalition policy on the one hand and the delegation of its execution on the other. However, I am afraid that if we cannot do something along these lines we will find it increasingly difficult not to be pushed and kept on the defensive; or, indeed, to keep the coalition together at all.

Public opinion, especially in Europe, is becoming more and more restive at what seems to be—even when it isn't—the negative and trench warfare character of our diplomacy. That is one reason why there is such a demand for a summit conference, even though, in the terms in which Moscow conceives and has pushed it, such a conference can accomplish little that will be beneficial and might do much that would be harmful by arousing expectations that cannot be fulfilled, with the inevitable hardening of attitudes and cynical disillusionment that would follow.

The best kind of summit meeting that I can visualize in present circumstances—and it would be no formal conference at all—would be a meeting of the heads of the American and Russian Governments for a couple of days, without agenda, files, or crowds of experts, to exchange views informally and frankly; to try to get to understand each other and in the process perhaps to remove some misconceptions and even some fears. Then, the work of negotiation and diplomacy on a wider basis and dealing with concrete problems—the long, hard pull—could follow in perhaps a better atmosphere.

The worst kind of summit conference I can imagine is a meeting of the heads of a dozen or more governments, more or less evenly divided between Communists, anti-Communists, and uncommitted, each with a staff of a hundred or so, and all surrounded by 4,000 journalists, photographers, radio and television commentators, crouching on any ledge they can find, however uncomfortable, providing it is on or near the summit. In this melange, there will be only one man who knows exactly what he wants to do—Mr. Khrushchev. He will submit ten or a dozen propositions at once to the conference, full of such words as peace, coexistence, disarmament, abolition, and ask that they be agreed to at once as being entirely consistent with the Sermon on the Mount and the United Nations Charter. He will have a wonderful time and the Asians, Africans, and Arabs—and some others—will blame everything on Mr. Dulles.

In my somewhat random observations I have already mentioned the press and other mediums of communication which have enlightened but also complicated our free society, and which are so important to its proper functioning.

It is obvious that the free press is a vital factor in the effort we are making—based, as it must be, on public opinion—to secure peace, preserve freedom, and further international cooperation.

In the American struggle for independence, the press of that day, so different in form, organization, control, and even spirit, from the huge business enterprises of today, played a defiant and an important part. In doing so, it indulged in a vigor of language and a picturesque violence of expression that makes the editorial of today seem a very tame thing indeed.

Today we are especially conscious of the part played by the revolutionary press through the fact that we are opening the

reconstructed printing office of one of the most influential of the papers of colonial America, the Virginia Gazette.

The press had its responsibilities then. It has them today. Indeed, no agency has a greater responsibility in democratic society; and how it is discharged will largely determine whether our form of democracy—a relatively new growth in man's history—will survive.

A Canadian who has thought much on these matters wrote the other day that democracy as presently conceived and dedicated cannot long endure. He came to this gloomy conclusion because he felt that the mass of the people on whom democratic government now rested did not have enough sense of responsibility to make it work.

It is true that the greatest threat to democracy and freedom comes from within itself. That applies also to the free press as a reflection of democracy.

Too often today in democratic government the courage to lead, to decide, to discharge a responsibility in an effective way has been replaced by a desire merely to reflect, to adapt, and to follow. Perhaps the same charge can be leveled at the press; that instead of informing, enlightening, and leading, it seems at times more concerned with the competitive requirements of attracting, enticing, and exciting; of "gettin' there fustest even with the leastest."

This danger may be exaggerated but it exists. And only the press itself can remove it; unless freedom goes and newspapers become, as in the Soviet Union, merely an instrument of government.

There is indeed a threat from those who would destroy the freedom of the press by direct action. But there is also this other threat, which comes from irresponsibility appears and grows in the press itself. Indeed, such irresponsibility in any one newspaper eventually weakens belief in the integrity, fairness, and reliability of all newspapers. The resulting loss of public confidence and support inevitably makes it much harder for the press to stand up to those other forces which would destroy its freedom.

These two things—freedom and responsibility—are, as we are so often reminded, inseparable. If one goes, they both go, in government as well as in journalism.

The fathers of your nation, the men who gathered here in Williamsburg in an age which seems a 175 centuries ago, so vastly has our world changed since then, those men knew how important it was to reconcile in action and not only in thought or word, those two things—freedom and responsibility. Perhaps no group of men in history was ever more successful in that endeavor.

I trust that we today—in 1958—beset by problems of a terrifying and baffling complexity, may show some of their wisdom and their greatness. The stakes are far higher than they were then; and if we fail the penalty will be far greater.

Comments Concerning Needed Labor Legislation

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to include another series of comments concerning needed labor legislation. These comments were received in reply to my questionnaire. These statements by rank and file union men clearly show the need for stronger control of our Nation's unions:

Concerning labor legislation:

I am familiar only with the workings of the UAW, but think Reuther is a power-crazed dictator. The most fearful aspect of the union is the things you never hear about because people don't dare speak up against union bully tactics.

Anyone at a union meeting who says "no" when he is supposed to say "yes" has to be afraid for his very life. Reuther's goons are active in every local. I think if the Senate investigators would promise protection for witnesses, they would discover facts that would make Russia's KMVD look like a bunch of Boy Scouts. Reuther takes care of dissenters like Russia "took care of" Hungary and why not. It was in Moscow where he learned the methods.

What I have said is pure truth but it will be hard to prove because everyone is afraid to admit it. I certainly would never say this in public. I will not even sign my name to this.

Question 7 (D), right to work laws:

I do not agree to ban union shops as the union is the workers' protection in a number of ways, but again the union is getting too big, too greedy, and all for itself (for the white collar representatives, I mean). The working individual hasn't got much to say anymore. I'd like to see the union's funds checked into to see where all our union dues are going and for what purpose. I'm a machine operator myself.

In plain words, the union representatives do not do as they should to each common laborer. They're looking out for themselves more or less.

In regards to No. 7 (A): Now the statement as to public inspection to me is somewhat confusing. I am for legal inspection by law of any and all institutions that handle money under the system now used by unions, churches, etc., because there is no way to protect the purpose that this money is being given for. It was necessary to have a depression in order to establish such a protective law in the banking system. I affirm that this is true. Banks had in those times absolute control of the money. The banks were in a position to rob the Nation. The banks in infancy had not that power. The unions today do not have that power. The religious institutions today do not have that power but they are fast growing to the day that they may have it because of the money growth. Laws to safeguard money are needed today. I am for such a law over the unions. I am a union man; a good union is an upbuilding to any industry. A dirty union is like a dirty cop. A dirty cop is like a traitor in the military service. Unions that are dirty today are that way because there has been no enforcement of law over them to the extent that such conditions could have been checked or brought to light in the infant stage.

As for labor legislation, we are long overdue on laws which should bring unions in line with others. I for one do not want anybody spending my dues for political purposes as I think I should have the right to make up my personal mind.

I think a man's right to work is and should always be his American privilege as granted in the Constitution. (Farming and shopworker.)

Our unions have done a lot of good for our country and they should by no means be straitjacketed. Yet they should be responsible organizations. Sure there is some corruption, but there is also corruption in business, government, or practically anything one can mention. So don't kill the cow to kill the lice. (Factory worker and farmer.)

Concerning labor unions: I belong to the UAW and I don't like it. I have a choice of belonging or losing my job. I don't feel this is very free or democratic. As for present UAW demands, I feel they serve neither the interest of the rank and file nor are they very concerned with the inflationary effect they may have on the economy. (Toolmaker.)

I believe unions should be required to show financial statements the same as corporations or companies in order that we may know what is done with our money. (Machine operator.)

No. 7: As a dues-paying member of the CIO, it is a shame the way the workingman is being misled today. I've seen its rise to power and in turn become a big racket. (General Motors Corp. employee.)

In regard to No. 7 (D), I believe that those that want union representation should have it and those that don't want it, be not forced to join them because there are good employers without unions, especially in the small shops and small jobbing shops. But in the larger shops or employments of 100 people and more, I believe unions are needed but have gone too far in some instances. (Machinist.)

The Adams Case

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. WATTS. Mr. Speaker, under leave to extend, I wish to incorporate in the RECORD two editorials which appeared in the Lexington Herald, Lexington, Ky., relating to the Sherman Adams case:

[From the Lexington (Ky.) Herald of June 18, 1958]

NICE WAY TO TREAT A FRIEND

Sherman Adams, testifying before a House committee about his gifts from Industrialist Bernard Goldfine, said that the material in the vicuna coat cost the mill only about $69. Newspaper reports earlier placed the value of the coat at $700 to $800. Could it have been one of the coats that somehow got the wrong label sewed into the collar and started all this mess?

A NAME TO BE REMEMBERED

The White House yesterday admitted that Industrialist Bernard Goldfine once gave President Eisenhower a supply of expensive vicuna cloth. The President gave it to a friend and now does not remember the name of the friend, Press Secretary Jim Hagerty reported. But it will be a long time before the President will forget the name Goldfine.

[From the Lexington (Ky.) Herald of June 19, 1958]

MORE THAN A LACK OF PRUDENCE

There is an old saying that "give a man enough rope and he'll hang himself." But few expected that to be the case in the incidents involving Sherman Adams, Presi-

dential assistant and outspoken critic of past administrations where gifts were reported to have brought preferential treatment from governmental agencies. Mr. Adams appears to have furnished most of the rope himself.

Mr. Adams' longtime friend, Bernard Goldfine, gave the Presidential assistant a vicuna coat, paid some $2,500 in hotel bills for him, lent him a $2,500 oriental rug, according to the "assistant President's" statement before a House investigating committee. Mr. Adams gave Mr. Goldfine a gold watch, a silver dish and a painting by his wife. The items were not reduced to dollars and cents. He also contacted Federal agencies on behalf of Mr. Goldfine. On some occasions, where "contacts" were made in behalf of his old friend, Mr. Goldfine definitely was not in the good graces of the agencies.

Mr. Adams posed two questions in connection with his intervention with Federal agencies in behalf of his friend:

"Did Bernard Goldfine benefit in any way in his relations with any branch of the Federal Government because he was the friend of Sherman Adams?

"Did Sherman Adams seek to secure any favors or benefits for Bernard Goldfine because of this friendship?

"My answer to both questions is: 'No.'"

But "No" is not the answer that comes readily to mind when these same questions are propounded to others. We believe most persons will agree that Bernard Goldfine did benefit because of his relations with Sherman Adams. So far as we have been able to learn from the testimony and news reports, Mr. Goldfine apparently succeeded in accomplishing what he set out to accomplish in each appearance. There is no record that he ever lost a decision when he went before a Federal agency. If Sherman Adams didn't want these Federal agencies to feel the weight of his name and position, then why did he intercede personally in these matters? He knew perfectly well that his voice on the telephone was supercharged with influence, and we doubt that anyone on the other end of the line ever said: "Thanks for calling; we'll pass this along to the proper officials," and then sent Mr. Adams form letter No. 4 in reply to his inquiry. Mr. Adams himself admitted that his contacts lacked prudence, which is putting it mildly.

Furthermore, Robert Lishman, subcommittee counsel, said he is convinced the inquiries Mr. Adams made, or had others make at FTC and SEC, resulted in Mr. Goldfine getting information in violation of laws and regulations covering confidentiality. Mr. Adams also told the committee that implications and inferences could be drawn with some justification that his actions were open to question.

In his appearance before the committee, Mr. Adams adopted the Nixon technique: he spoke in hurt tones as did the Vice President—the misunderstood victim of friends who gave him $18,000 to supplement his salary after he had been elected to the United States Senate as he sobbed out his story to Mr. Eisenhower in that famous "Go west, young man" episode of the 1952 presidential campaign. But did Mr. Adams tell all? Surely there could have been letters or memos sent to departments of government relating to the matters in question, or even letters sent to Mr. Goldfine, that would have been of interest in clearing up some phases of the inquiry.

Mr. Adams made a great to-do about the fact that every Senator and Representative receives calls from constituents to pave the way for them to see Federal agencies or high governmental officials. But do these constituents—and many of them are old, old friends of the Senators—generally pass out $2,500 hotel bills, $700 vicuna coats, or lend them $2,500 oriental rugs before or after packing their suitcases for Washington?

If Mr. Goldfine had been asking for help for the entire woolen industry, for some amalgamated union of workers, for something that would have been beneficial to his section of the country, there could have been no complaint because Mr. Adams arranged meetings or made contacts. But in every instance it was a question of getting Mr. Goldfine personally "off the hook," to use an expression that most seekers after governmental favors understand.

President Eisenhower has not raised his standing by insisting that Mr. Adams remain in government. Mr. Adams is guilty in the eyes of the Nation of the very things he previously condemned so bitterly in others. He should tender his resignation to the President, and Mr. Eisenhower should accept it.

Summit Meeting Should Not Require American Sacrifices

EXTENSION OF REMARKS
OF
HON. JOE HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. HOLT. Mr. Speaker, I should like to call the attention of my colleagues to the editorial below. It is very good advice:

SUMMIT MEETING SHOULD NOT REQUIRE AMERICAN SACRIFICES

The trouble with too many high-level conferences to which we have been a party in the past, including the last summit conference held in Geneva, is that somehow the United States always seems to wind up in the unenviable position of feeling that it has to give something away—must make concessions, even though unilateral ones sometimes, in the interest of "lessening the tensions" of the world brought on by the Communist cold war now being waged against the western allies—and we may usually be considered fairly lucky if we don't lose our shirt into the bargain. This has been going on with monotonous regularity since the days of Potsdam, Teheran, and Yalta.

It's time we put an end to this one-way street of traffic for Americans. What kind of nonsense demands that the people of the United States must give away their substance and security without proper quid pro quo? What sort of insane counsel have some of our leaders listened to in the past when we have been advised to make concession after concession in order to prove to the world our sincerity and good intentions—while at the same time these whisperers of the foolish word had little or nothing constructive to suggest what the Red Bolshevik leaders housed in the Kremlin might do simultaneously to prove their much more to be desired demonstrations of good intentions toward us?

Certainly, we want universal peace—but the proper way to obtain it is not on the self-serving terms of the hateful Bolshevik leaders. They have only provided the peace of the grave to their opponents whom they caught napping in the past. That we stand next on their list is no longer to be doubted. Old Nikita Khrushchev has already said so, stating that he will "push us to our graves."

When he said it he was angry and it was an ample threat—although the Soviet propaganda machine tries to downplay this item today. It seems to have let the cat out of the bag.

Now what steps should we take to shore up our defenses against a cruel type of leadership which is amoral, murderous to its own people and has selected us as its No. 1 enemy which it has repeatedly said it plans to liquidate?

Are we to keep on repeating the senseless and entirely unrealistic formula which comes from the superliberal left that it is up to America alone to allay "the suspicions of the world" and particularly those of the dread Bolshevik cotillion of Marxist warlords housed in Moscow?

Let's be frank and at the same time completely sane and reasonable about this matter. Anyone who thinks that America is a threat to world peace, viz-a-viz the Bolshevik conspiracy to forcibly set up an international world government which will dominate us and other freedom-loving nations of the earth, should quietly examine both his senses and his conscience. Such a concept is not only unrealistic, but it is also dishonest. And all normal persons who do not yield to cunning Red propaganda are already well enough aware of this fact

Therefore, it is time to stop being weak and allowing ourselves to be continuously placed on the moral defensive—or any other kind—before the bar of world opinion. We have conquered no oppressed people as the Reds have done in modern Central Europe and China. We have murdered no 50 million of our own citizens over the past 40 years as the Bolshevik leadership may have accomplished in its own homeland. We have not fomented upheaval and strife in every corner of the planet we live upon for our own selfish aggrandizement and political gain. Can as much be said about the paranoiac leaders of the Soviet Union today?

The correct answer to the last question, of course, is a resounding "No." And thereby hangs a tale. In spite of its incredible history over the past 4 decades against the moral health of the world, in which it has never exploited very much of anything except evil and wickedness, there are still some soft Americans and other members of the Western Alliance who plead with us constantly to "trust the Soviet Union" again and again and again—and continue to indicate to us, even quite fiercely at times, that it is really up to us to convince the rest of the world of our honesty and good intentions.

To this sort of tommy-rot one may say "Nuts," just like Maj. Gen. Anthony McAuliffe of the 102d Airborne Division told the Nazis who had his men encircled at Bastogne some 14 years ago. It's time for us to choose our stands on the proper moral ground henceforth and then refuse to budge from what we know to be right thereafter. Let's trust in God and keep our powder dry.

Gen. George Catlett Marshall

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. PRICE. Mr. Speaker—

I have seen a great many soldiers in my lifetime, and you, sir, are the finest soldier I have ever known.

Thus spoke Secretary of War Henry Stimson in acknowledging the Nation's debt to Gen. George Catlett Marshall at the end of World War II.

But General Marshall was more than a soldier. History will record, along with his military achievements, his greater accomplishments as a statesman. In a fine NBC radio network program on Thursday, July 3, 1958, David Brinkley narrated a sound portrait of this great military and political leader—one of the truly great men of the past quarter century.

By unanimous consent of my colleagues in the House, I present herewith this interesting NBC program:

BIOGRAPHIES IN SOUND: GEN. GEORGE CATLETT MARSHALL

Mr. O'KEEFE. This is Nightline, your tieline to the world, and I am Walter O'Keefe.

During the next 55 minutes, Nightline will bring you a sound portrait of one of the great military and political leaders of the past quarter century. This is another in NBC's award-winning series, Biographies in Sound. Your narrator, David Brinkley.

Mr. BRINKLEY. Now we have had 25 years of the age of the common man, but we still find there is never a day when we don't need uncommon men of special and uncommon ability. Sometimes we get them; sometimes we do not.

We are to hear now about a time when we needed a man like this and got him. In spite of a stubborn and reactionary system that might easily have lost him.

Gen. CHARLES LANHAM. Remember in these dark days in the late twenties, the early thirties, until the Hitler stage began to build up, that the Army numbered about 120,000 people. It was nothing. We were scattered about this country, walled up in little isolated, forgotten Indian posts, battalion posts. When you turned out a company for training, if you got 10 or 12 men you were lucky. There was no future that anyone could see.

Mr. BRINKLEY. There were no promotions until somebody retired, resigned, or died, and then promotions were by seniority. In the twenties and thirties the Army had an officer named George Catlett Marshall whom it knew was brilliant and who eventually had to be Chief of Staff, but if this preposterous seniority system did not work faster, he would be out of the Army and retired as a colonel—a casualty of the system.

BROMLEY SMITH. The thesis may be valid. It is a little frightening to think we are going to have to play our luck this hard, but there is no question in my mind that General Marshall served a specific function at a particular time in American history that could not have been served by anyone else.

Dr. FORREST C. POGUE. It was perhaps the emergency which knocked aside seniority and brought him into a position which a great number of people felt he was fitted for 10 years before, you see. So I think it is in that way that the emergency brought the man forward. It was not that it suddenly turned him into this great leader. He had the potentiality all along. It was the emergency that gave the opportunity for those people who had been talking to members of the Cabinet, had been talking to the President about this man, that gave him a chance to push him forward.

Pershing had mentioned Marshall's name more than once as a potential Chief of Staff.

Mr. BRINKLEY. It is frightening then to think we have to play our luck this hard and though it is thought to be accidental, that these people just happened, the fact is that they have all been men who spent their lives preparing for missions that sooner or later would come.

It might also be added that when these missions do come, they call for uncommon men who are prepared in the three necessary ways, prepared first to see and understand the problem; second, to know or to find a solution; and third to have the power to put the solution in effect.

Well, many men have one of these abilities, some have two of them, and very few have all three. Our history and our lives today are filled with examples of missions that came and found we had men so prepared and other missions that failed because we did not.

Well, here from the beginning is how it happened that when this mission, the Second World War, when this mission came, Gen. George Marshall was prepared in the three necessary ways. His biographer, William Frye.

Mr. FRYE. I get again the picture of a boy who is always sure of himself and of what he wanted, always courteous, full of fun, but reserved, even as a boy. He liked to hunt; he liked to fish; he was not a very good scholar, that is, he didn't make good grades in school, but he never had any difficulty learning what he wanted to know.

And he never had any difficulty making good use of it. And he had a widely curious mind. His playmates liked him. Older people liked him. He could always get other people to do things, but he was always willing to do things himself, too. The Marshall family had been going to VMI since Uncle Tom had moved to Vicksburg, Miss., before the Civil War and sent his boy to VMI, and all the Marshalls had gone to VMI after that. And really it was while Marshall was at VMI, according to his own story, that he decided to become a soldier. When just after the Spanish War, while he was still a cadet at VMI, he stood on Main Street in Uniontown and watched the 10th Pennsylvania Regiment, back from the Spanish War, parade down Main Street, the pavement of which had been painted red, white and blue for the occasion, and while he watched the regiment parade and heard all the cheering and listened to the band, he decided that at last he was going to be a soldier.

Marshall went to VMI and was a member of the class of 1901 at VMI.

Mr. BANKS HUDSON. In 1897 when George Marshall and I both matriculated at VMI in Lexington—of course you realize that VMI in 1897 was quite different from any college or university now. We had no holidays, no overnight holidays, we had no spring vacation. Christmas Day we were absent from the school from 8 o'clock in the morning until 5 that afternoon, and that is all the holidays we had during the school year. He was right around 6 feet—maybe a little over—broad shouldered, heavy features, a splendid figure and an amazingly great voice. That was one of the characteristics that you had to have to get these military honors at VMI. You had to have the figure, you had to look like a soldier, and your voice had to be so that you could give commands in a manner that could be heard all over the parade ground.

He was always cordial to us, called us by our last names, usually.

Mr. BRINKLEY. That was Banks Hudson. He entered VMI at the same time Marshall did and recalls that military schools were run then as they are not run now.

With a VMI diploma, and a new pair of gold plated second lieutenant's bars, Marshall entered the Army in 1902 and they sent him to the Philippines. Here for the first time you could see the kind of soldier he was going to be. These words from Captain—and later General—William T. Sexton.

General SEXTON. In 1939 a book that I had written on the Philippine insurrection was published. It was entitled "Soldiers in the Sun," and General Marshall, as it turned out, was very much interested in history, and particularly in the history of the Philippine insurrection. He had served there twice on two tours, one in 1902 and one in 1913, and on both of these tours he had become very much interested in operations and had made quite a study of the Philippine insurrection himself. He read my book and liked it very much and wrote me a very nice letter about it.

"DEAR CAPTAIN SEXTON: At Randolph Field Colonel Brooks presented me with a copy of Soldiers in the Sun. I occupied a great deal of my spare time during the 3 years in going completely through War Department records covering the military events in the field and in the Government between the arrival of the first expeditionary force in 1898 and the campaign in Mindanao in 1904. During this period I arranged to visit as many of the scenes of action as possible and tried to take with me officers who had been actual participants in the events. I would like to congratulate you on a remarkable piece of research and writing.

"Faithfully yours,

"G. C. MARSHALL,
Chief of Staff."

Mr. BRINKLEY. There is our first glimpse of how Marshall felt a man should prepare himself. On being assigned to the Philippines he read everything in the Army's records about the islands' military history, he talked to people who had done the fighting, he visited the scenes of battle and studied them, he learned all he could and had another insurrection begun then, he would have been prepared to lead an army to put it down. His military career had begun.

In this tiny and hidebound Army 16 years later when we entered World War I, Marshall was still a 1st lieutenant. Three months after the war started he made captain. We will hear his story from that war told by Mark Watson, later a foreign correspondent for the Baltimore Sun.

Mr. WATSON. My first encounter with General Marshall was when he was a junior officer, and I was a very junior officer and not a professional soldier at all. This was at Chaumont, in France, which was General Pershing's general headquarters. He had a small office and only one man could get into the doorway at a time.

He had the door arranged so that it didn't open very wide, and nobody could squeeze past his desk. He had there all the information that he wanted and he was going to keep it there.

Marshall's largest feat there was in the preparation for the great battle of St. Mihiel, which was the first large-scale operation under strictly American command. His preparation for it involved bringing divisions of troops from away up in the north where they had been under British command, from the middle of the line and from the eastern line and from reserve sections where troops were still in training, to bring nearly 600,000 men and all the supplies that he needed over the roads and highways of France, which at that time were in pitiful shape, was a most extraordinary feat. It was because he had done this and was at the same time working on the larger movement for the Meuse-Argonne Battle which followed almost immediately that he became widely known to the professionals at Chaumont and throughout the Army and indeed throughout the Allied armies, because this was an extraordinary job that he had performed.

He didn't, I would say, come to any public attention at all. In fact, he shunned it, although he was very warmly spoken of for the job which he had done.

I don't think many of them saw him, but those who talked with Pershing about the organization—Foch, for example—did go out of their way to say that that logistics feat of Marshall's at St. Mihiel, and repeated on a grander scale at Meuse-Argonne, was a very great job.

Pershing himself was outspoken in his admiration for Marshall. I remember his mentioning him at a hearing in Congress as

the best young officer in the United States Army.

Mr. BRINKLEY. The best young officer in the United States Army, in Gen. Black Jack Pershing's judgment, but Marshall's fame then was confined almost entirely to the professional military and to the public he was unknown, as staff officers usually are.

The headlines go to the commanders in the field who gain ground and win battles, not to the men who pored over the maps and made the plans that led to the victories. The headlines went to the field commanders, and so did the promotions. Dr. Forest Pogue saw how this happened.

Dr. POGUE. Now he tried throughout World War I to get a field command because a fellow colonel, for example, who got a regiment, ended up in a short time as a major general, while Marshall stayed a colonel. Actually in the closing days of the war he was promised a command and was put in for promotion to brigadier. The war ended before that was acted on back here and all promotions were suspended.

Now, friends of his, and men of the same age, who had their one star, either kept them or at least didn't go back as far as he did, whereas he had to go back to his permanent rank, which was that of captain. However, he was brought on shortly afterward.

You've got to remember that the peacetime Army, though, was very strict on the matter of seniority.

Mr. BRINKLEY. It was so strict it took him another 15 years to reach the permanent rank of colonel. Well, while he waited he was rotated around in the usual Army routine. There was another stop for Marshall as he, in a somewhat machinelike way, went about preparing himself for command of the United States Army, even though by now—this was in 1927—he was still a lieutenant colonel.

Gen. LAWTON COLLINS. General Marshall was the assistant commandant of the Infantry School from about 1928 to 1931, during which period I was an instructor there, in the Tactical Department.

Mr. BRINKLEY. Gen. Lawton Collins.

Gen. LAWTON COLLINS. Incidentally, he had at that time assembled at Benning a remarkably able group of people. For example, General Bradley was in the Tactical Department. General Hodges, who commanded the First Army in Europe. Many of them were relatively young men, like Gen. Charles Bolté and myself. And the thing that we all admired very greatly about General Marshall was that he was constantly seeking new ways of doing things. He never accepted something that had been done in the past at its face value.

The new infantry drill was devised. I had something to do with that. When tested out by the Army, the bulk of the people in the Army were in favor of it. The people who were against it were the old codgers who just simply couldn't see anything new, and it was only after General Marshall became Chief of Staff that that drill system was put into effect.

That was the sort of thing that went on constantly at Benning.

Mr. BRINKLEY. With this kind of preparation and this kind of record as a junior officer, even those bound up in the archaic promotion system began to see if Marshall didn't get promoted faster he would be lost to the Army because he would reach retirement age still a colonel. But it happened otherwise because it had to, because an emergency was developing in Europe and, while President Roosevelt talked peace and neutrality, he knew there was going to be a war.

So here is what happened as recalled by Gen. Charles D. Herron.

General HERRON. When, due to the seniority and the fortunes of war, I came to Chicago as commanding general out there, Marshall was then a colonel under my command. I, with other people, urged it on the War Department that he must be promoted before he reached that critical birth age.

It so happened that Mr. Dern came out there, the then Secretary of War, and I gave him a luncheon and got Marshall there early, and Dern there early and introduced him to Marshall and told him that this was the Colonel Marshall that he had undoubtedly heard a good deal of. And it wasn't but a few days after Dern got back to Washington that Marshall was promoted.

Dr. FORREST C. POGUE. It was perhaps the emergency which knocked aside seniority and brought him into a position which a great number of people felt he was fitted for, you see. Pershing had brought up Marshall's name more than once as an excellent Chief of Staff or a very outstanding person. But as long as you had a number of people of greater seniority and as long as the tendency was to pick the oldest man in point of service who had still 4 years to serve for Chief of Staff, it was difficult for even Pershing or men of that type to persuade the President to set them aside. For General Marshall became Chief of Staff the very day Hitler invaded Poland.

Mr. BRINKLEY. Marshall became Chief of Staff at the time when it was clear to all Americans who were willing to believe the ugly facts that a war was on the way, but not all were willing. A comment on this troubled time from the Speaker of the House, SAM RAYBURN.

Speaker RAYBURN. Well, of course, there were a lot of people who never were for selective service. They didn't think there was any danger in the world, they said, that nobody was going to fight us, and they asked who was going to fight us in the world. And that was the argument made up and down on the floor of the House for hours—a day or two—and then we finally came to the vote. I tried to convince everybody that the world was in turmoil and that there was a world war going on, and I have always, since World War I, believed that when there is a big disturbance in any quarter of the world, that that disturbance might spread to the remainder of the world, and I thought that we should not be at that time taking down our Army, which would have been done, if we had not renewed the Selective Service Act, and we finally convinced enough people that we passed the extension by a vote of 203 to 202, which I think is a most fortunate thing because it was only a few months before we were hit at Pearl Harbor and that answered the people who said nobody is going to fight, nobody is going to fight us, we have done nothing to anybody.

Mr. BRINKLEY. The new head of the Army had to get along with the Army, with Congress, the Secretary of War, and with the President.

Mrs. Eleanor Roosevelt recalls how he got along with the President.

Mrs. ROOSEVELT. My husband had the greatest respect for General Marshall. Of course his contact with him was in a military position, as head of the Armed Forces, and I don't think—he not only respected his military ability, but he respected his judgment and his integrity in all questions that came up. And I remember very well having my husband sometimes after a meeting say how extraordinarily patient General Marshall was in gathering his information and in following what was happening and how very wise he felt his judgments usually were.

Gen. W. T. SEXTON. He had a great feeling of parental responsibility toward his soldiers and when the expansion program was going on he insisted at all of these camps that there be ample chapels built and he organized this USO for morale, and his theory was that these soldiers should not only have all the opportunities to go to religious devotions but that they should have ample, proven, wholesome entertainment, preferably on the camp. The idea was to keep them off the streets in these towns that fringe the average Army post.

And he was also very interested in letters that he would get from parents and he was very insistent that they be answered and be investigated, particularly when a complaint of any nature came in. I recall this letter that came in from a mother who apparently heard from her son that the Army food was no good, that he was starving to death. He called me in and gave me the letter and said "I want you to run this down. You get in touch with that camp and you find out what the unit is and we are going to get that"—if this is true—"we are going to get that straightened out.

Well, I did that and what we found out was that this soldier who had written the letter to his mother had been in the Army about 3 months and he had gained 25 pounds.

Mr. BRINKLEY. Another new thing Marshall had to learn was the difficulty of dealing with Russia.

Here is Gen. John E. Hull.

General HULL. General Marshall felt that there was only one leader in Russia who had to make the decisions and that was Stalin.

During the negotiations, General Marshall, and the other of our Chiefs of Staff were negotiating with a view to trying to reach agreement with the Russians which would be satisfactory from our standpoint and acceptable to them, realizing that in anything of this nature there has to be some give and take, but we found the Russians a little bit difficult to get to agree to some of our proposals.

For instance, we wanted air bases in Eastern Siberia from which we could fly our bombers against Japan. Although agreeing that it would be a good thing, we never were able to get the Russians to come to a satisfactory agreement on that problem which would permit us to base our bombers there.

Mr. BRINKLEY. Also there were problems of a different kind in dealing with allies. Britain's Lord Allen Brook.

Lord ALLEN BROOK. There came occasions when a lot of the matters were settled quite easily, matters on the agenda, but occasionally amongst the more difficult ones, we argued up to a certain point where it became very clear that we were going to have difficulties in arriving at an agreement. And by being able to take our hair down, then, and really thresh out the matter, and we knew we had to arrive at an agreement, it was no good going up and meeting the President and the Prime Minister and telling them that we failed to agree. We had to arrive at an agreement. Well, by a process then of a rather more intimate discussion, and that is the time which I think General Marshall always shone. He was always perfectly ready to discuss, to put all his cards on the table, we put our cards on the table and we shuffled them around until we got some pattern out of it. I though always in those discussions there, how fortunate we were to have a man of Marshall's temperament, integrity, and outlook generally, to arrive at these decisions and how difficult it might have been had we had somebody else in the chair. We were bound to have differences and we had many differences during the war, but we were always able, even after the most heated discussions in conference, to walk out arm and arm and go to lunch together still exactly the same friends.

Mr. BRINKLEY. As Chief of Staff, Marshall's behavior was not merely correct but punctilious. So much so many people thought he was cold, but there were exceptions to this among those who knew him best. His military secretary, Brig. Gen. Frank McCarthy.

General MCCARTHY. Certainly he was a great admirer of General Eisenhower, of General Bradley, and General Patton. By no

means to the exclusion of all others. However, he found in General Eisenhower the one man whom I think he felt from the beginning could unite the points of view which were not always initially in agreement, of the allied leaders and allied powers.

General Bradley, I think he admired for his very firm command in high positions. And General Patton he considered a very fine close-in battlefield commander. He always felt the Germans considered General Patton perhaps their greatest threat as a single individual.

For some reason General Marshall singled General Patton out for a special accolade that I never knew him to give any other senior officer of the Army and only a few junior officers. General MacArthur was always called MacArthur. The President was always called Mr. President. General Eisenhower was always called General Eisenhower. General Bradley was Bradley, but for some reason which I never fathomed, General Patton was always "Georgie."

Mr. BRINKLEY. Not "Patton," not even "George," but "Georgie."

A few years after SAM RAYBURN and the other leaders of Congress put up on faith about $2 million for the secret project, he got a report on what happened to the money. RAYBURN recalls that day.

Speaker RAYBURN. We got the $800 million for him and then about 15 months after that they came back and said "Now this is a success. It is 99½ percent complete, and we'd like for you to go down to Oak Ridge and see it."

I said, "No; I wouldn't know anything about it. I would see a lot of buildings and pots and pans and jars that nobody could explain to me, but if you say you got it, it is all right."

Mr. BRINKLEY. It worked, and it ended the war, and that ended Marshall's service as Chief of Staff. It was time for him to retire from the Army, his job done.

The President who gave him the job had not lived to see it finished, and the new President was Harry Truman.

The new President was Harry Truman. His opinion was that Marshall was the greatest living American. Truman called others in high office "Jack," and "Tom," and "Bill." Marshall he called General. As RAYBURN said it, "I would no more call General Marshall 'George,' than I would call Gen. Robert E. Lee 'Bob.' "

That is how they felt about him, as Truman said.

Mr. TRUMAN. In a way unparalleled in magnitude and horror, millions of Americans gave their country outstanding service. General of the Army George C. Marshall gave it victory. Statesman and soldier, he had courage, fortitude, and vision, and best of all, a rare self-effacement. He has been a tower of strength under two Commanders in Chief. His standards of character, conduct and efficiency inspire the entire Army, the Nation, and the world. To him, as much as to any individual, the United States owes its future. He takes his place at the head of the great commanders of history.

Mr. BRINKLEY. Biographer William Frye in retrospect recalls another of what he regards as Marshall's great works.

Mr. FRYE. I think a lot of people have forgotten the directive he issued and too little attention has been paid to it incidentally, to the postwar planning group of the Army Special Staff, in 1944, which told them that the postwar Army of the United States should be composed of the smallest possible professional army augmented by adequate citizen reserves, because "the largest professional standing Army has no place among the institutions of a modern democratic state."

I think that is one of the finest things that any American soldier or any other soldier has ever said.

Mr. BRINKLEY. Marshall had earned his retirement, but he was a long time getting it. Gen. Marshall Carter——

General CARTER. General Marshall had served with tremendous capacity as Chief of Staff of the United States Army and had earned his retirement in 1945. Certainly he had nothing else in his mind at that time than to enjoy the rest of his life with Mrs. Marshall.

It was not long after, however, that President Truman telephoned him and asked him to go to China as his special representative.

It never occurred to General Marshall to say "No," or "Why," or "What's in it for me." It never occurred to General Marshall to question the assignment.

Mr. BRINKLEY. Here, for a man whose whole life was success, here was failure. Drab, ugly failure. His job was to arrange some kind of agreement between Chiang Kai-shek and the Chinese Communists. Maybe success was impossible for anyone, but in any case not even Marshall's best friend, with the kindest intentions and the softest language, could call it anything but a failure. Col. J. Hart Coy.

Colonel COY. I do think that I could say I detected a decided enthusiasm with which he was intent on approaching his new and tremendous task. He was anxious to undertake it and I believe he had a great deal of confidence that he was going to be able to bring some sort of order out of the chaotic conditions. General Marshall always felt, and I think most westerners do, too—or did, too, that there was a great deal of corruption in the Chinese Government. At least we westerners referred to it as corruption, but in a certain sense this was sort of a way of life in the Chinese system.

But this was of such a character as to cause disloyalties within the general Chinese governmental command channels. His reaction to the failure was one of deep disappointment and one in which he felt a great agony, I suppose, for the Chinese people.

Mr. BRINKLEY. During his China mission, working for Marshall at the other end of the transpacific cable was Dean Acheson, Under Secretary of State.

Mr. ACHESON. He came back from China for the second time in January of 1947 and at that time it was announced that Secretary Byrnes had resigned, to retire to private life, and General Marshall was going to take his place. I remember very well the day on which he took the oath of office.

I had been sitting at my desk for a few moments when the door opened a short way and General Marshall's head appeared around the corner. He asked me if he could interrupt me and came in. He said "Will you stay on?"

I said, "Yes, sir; I shall do whatever I can to be of service to you and if you wish me to stay on, I will stay on. Not indefinitely, but we can work that out later."

I then said, "What do you expect from me here?"

And he said, "Two things. I expect you to run this place."

I said, "General, it will be the first time that anyone has run the State Department for 175 years."

"Well," he said, "we will take care of that."

And indeed he did. I said, "Is that all?"

He said, "No; not all. I expect from you the most unvarnished truth at all times, particularly about myself."

I said, "General, do you really mean that? Sometimes that is rather difficult."

And he said, "Don't worry about my feelings. I have none, except those which I reserve exclusively for Mrs. Marshall."

Mr. BRINKLEY. If, as Acheson said, no one had run the Department of State in 175 years, Marshall gave it a good try, and the people in the Department knew they had a Secretary, as the Army had known it had an officer.

Here is how he worked, recalled by Bromley Smith.

Mr. SMITH. An Assistant Secretary of State received an important message from a capital abroad and went into Secretary Marshall's office, handed him the telegram, gave him time to read it, and then said, "Mr. Secretary, what should we do?"

General Marshall looked him straight in the eye and he said, "Never ask me such a question. You tell me what I am supposed to do. That is what you are paid for. I am paid to decide whether I will do what you tell me to do, or find someone else to tell me otherwise."

From that moment on, Assistant Secretaries and others learned that their task was to use their best judgment and make recommendations to the Secretary, rather than to run with a message to the Secretary, wring their hands and say, "What do we do now?"

On the peg I think the entire structure of the Department of State was changed and it made it much easier for some in the Department who wanted to make it a more orderly place to do business, it made it easier for them to establish what is now accepted routinely as staff work.

Mr. BRINKLEY. Marshall as Secretary of State did one thing that will be remembered, and remembered by his name as long as American history is written. Paul Hoffman tells how this came about.

Mr. HOFFMAN. You may recall that in the spring of 1947 there was a meeting of foreign ministers in Moscow. The General had attended meeting after meeting after meeting with Mr. Stalin and Mr. Molotov and other foreign ministers. He finally concluded and came to me and told me something of a flash, that if the reconstruction of Europe was to proceed, it could not proceed on such a meeting, it would have to come from the offering of some rather dramatic program for the reconstruction of Europe. So in a sense it was the Kremlin, you see, or at least the meeting in the Kremlin which gave him this inspiration.

I think our memories are short and we may have forgotten the very desperate strait Europe was in in the spring of 1947. Industry was practically at a standstill. Transportation was only sporadic and most important of all there was great defeatism all through Europe. There was a feeling of "what can we do about it?"

This was a feeling, by the way, that the Kremlin helped promote because they could see in chaos and in defeatism their opportunity to take over and dominate Western Europe, which was very much, of course, a part of their program.

Mr. BRINKLEY. Many statements and speeches are called historic. Here is one that was. Marshall's speech at Harvard University offering a plan to revive Europe from its own wreckage.

General MARSHALL. The truth of the matter is that Europe's requirements in the next 3 or 4 years for farm food and other essential products principally from America, are so much greater than her present ability to pay that she must have substantial additional help or face economic, social and political deterioration of a very grave character. The remedy seems to lie in breaking the vicious circle and restoring the confidence of the people of Europe in the economic future of their own countries, and of Europe as a whole. Such assistance I am convinced must not be on a piecemeal basis as various crises develop. Any assistance that this Government may render in the future should provide a cure rather than a palliative. It would be neither fitting nor efficacious for our Government to undertake to draw unilaterally a program designed to put Europe on its feet economically. This is the business of the Europeans.

The initiative, I think, must come from Europe. The role of this country should consist of friendly aid in the drafting of a European program and later support of such a program so far as it may be practical for us to do so.

The program should be a joint one agreed to by a number if not all European nations.

Mr. BRINKLEY. The Marshall plan. Perhaps the only time in the history of the world that a nation and a people taxed and strapped themselves for years to perform a simple, uncomplicated act of generosity. To help other countries unable to help themselves, and to ask in return for this, no territory, no concessions, no special treatment, no favors, nothing.

This was the United States at its best, and the idea was George Marshall's.

Even after that he was not allowed to retire to his apple trees. President Truman asked him to take on still another job. Gen. Lawton Collins——

General COLLINS. After having served as Secretary of State, when the President asked him to come over and serve as the Secretary of Defense, I am sure General Marshall would probably have preferred to have retired for a second or third time and taken things easy, but here, great guy that he was, he was willing again to assume terrific responsibilities in an area of very great difficulties.

Mr. BRINKLEY. He agreed to serve as Secretary of Defense. His prestige at this point was enormous, comparable to Wellington's after Waterloo. But when he appeared before a Senate committee at an open hearing on his appointment, this prestige did not save him from rough questioning. Here are the questions and here are his answers:

"Question. General Marshall, the next question I have before me reads as follows: Why did you join in the suppression of the Wedemeyer report on China?

"General MARSHALL. I did not join in the suppression of the report. I personally suppressed it. This was a report of a man I had sent to find out something for me and not for a public speech. It seemed unwise but it became, I guess frankly, a political issue, almost, at the time.

"Question. Will you assure the American people unequivocably that as Secretary of Defense you will not be dominated by, or carry out the policies of the Secretary of State, Dean Acheson—who will not turn his back on Alger Hiss?

"General MARSHALL. I will not answer that question."

Mr. BRINKLEY. And he didn't. Not only did his prestige not save him from rough questions, it did not prevent his failure in China from rising again to haunt him.

Ray Scherer of NBC News was there the day it happened.

Mr. SCHERER. By September 1950, President Harry Truman had come to the end of the line with Secretary of Defense Louis Johnson. The Korean war was nearing its worst stage. Mr. Truman wanted a Secretary of Defense who could command public confidence. George Marshall at the time was living quietly as president of the Red Cross. The same day Louis Johnson got word from Mr. Truman that he wanted him to resign, the President called Leesburg, Va., got Mr. Marshall on the phone and asked him if he would take the Pentagon job.

General Marshall accepted immediately, but existing law had to be waived to permit General Marshall, a military man, to become the civilian Secretary of Defense. This caused a brief flareup on Capitol Hill. During this debate in the Senate, Senator WILLIAM E. JENNER, of Indiana, rose from his seat, got the floor and launched into a 1-hour speech. It was one of the most astounding speeches ever made in the Senate. Amid stony silence, JENNER went back to Pearl Harbor, reviewed the whole war, mentioned every major decision General Marshall was involved in, called Marshall "the living symbol of the swindle in which we are caught." Said "the appointment of General Marshall at this particular juncture in our destiny is a last desperate attempt of this administration to swallow up the treachery of the past in a new treachery they are planning for the future."

JENNER said, "General Marshall is not only willing, he is eager to play the role of a frontman for traitors." Then JENNER thundered off the charge which shocked the Senate. He said, "the truth is, this is no new role for him, for Gen. George Marshall is a living lie."

As soon as JENNER had finished, Scott Lucas, Senator from Illinois, Democratic leader—his face white with anger—said he considered it "the most venomous, the most diabolical, the most reprehensible, the most unfortunate and irresponsible speech I have ever heard made on the floor of the Senate or of the House of Representatives."

Moments later the Senate voted on whether to waive the law. The vote was 47 to 21 for General Marshall.

Mr. BRINKLEY. The first reporter to call Marshall after this got him on the phone at home and said "General, I am sorry to tell you this, but Senator JENNER of Indiana, in a speech in the Senate, has called you a frontman for traitors."

Marshall said, "What did you say that name was?"

The reporter said, "Senator JENNER, of Indiana."

Marshall answered, "I don't believe I know him."

That is all he said then, or ever said. Later Senator McCarthy, of Wisconsin, joined in this attack. By now President Eisenhower was in office and at a news conference he was asked what he thought of the attack and he answered:

President EISENHOWER. I happen to be one of those Army officers that did not meet General Marshall except in the most cautious way until the war started. But I would like to say, and I have been saying this ever since I first knew him well, that he, to me, has typified all that we look for in what we call an American patriot. I saw many things he did that proved to me at least his selflessness. I am certain he did not want to sit in Washington and be Chief of Staff. I am sure he wanted a field command. But he wouldn't even let his Chief know what he wanted because he said "I am here to serve and not to satisfy personal ambitions."

I think it is a sorry reward, at the end of that long term, to say that he is not a loyal, fine American, and that he served only in order to advance his own personal ambitions. I can't imagine anyone that I have known in my career of whom this is less so than it is in his case.

Mr. BRINKLEY. While Marshall was Secretary of Defense, Dean Acheson was Secretary of State.

Mr. ACHESON. As a colleague, the general could not have been more perfect. He gave the most complete cooperation to the Department of State. He had his punctilious regard for rank which led him to insist always that as the senior Cabinet officer, I should precede him at all times, I should speak first on any matter, and I should be treated by him as though our actual positions were quite reverse, as though my prestige were as great as his.

In these years, the relations between the two branches of the Government dealing with foreign affairs, the military branch and the diplomatic branch, were as they should be.

Mr. Lovett, General Marshall, and I were so close to one another that all barriers between the departments were broken down, and our more junior colleagues, both in the State Department and in the Defense Department, worked together in complete cooperation.

It would have been impossible to have carried on the development of NATO, the conduct of the Korean war, the rearmament of the United States, as it was done, without this very close arrangement.

Mr. BRINKLEY. Another recollection from the Defense Department with Marshall as Secretary, from Anna Rosenberg.

Mrs. ROSENBERG. I saw him as a strict military man, with men in the service. And then I saw him—oh, take for instance with myself, who came into the Defense Department pretty green. I was very much on the spot because, as you recall, no woman had ever served in that capacity before.

I went through a very difficult time when I was being confirmed—charges against me—and the general felt it very strongly because he told me when I came to the Defense Department that the people who are against him are going to take it out on me.

The day the Senate was voting, we were all rather tense, though we knew which way it would go. He kept on coming in and out of my office—"Have you heard yet? Have you heard yet?"

I told him I hadn't. He said, "The second you hear, come in. I am going to have a meeting of the Joint Chiefs, and we have to go over to the White House; but I do want to hear the moment you hear; and, if you don't hear it before, call me at the White House."

So they telephoned me the very good news and I flew into the general's office, and all the Joint Chiefs were standing there with white gloves on, ready to leave for the White House and the President, and General Marshall, all in hat and coat, and I flew in and I said "General," and I told him what it was.

And he came over and put his arms around me and kissed me and said, "Anna, that's fine," and he was quite choked up, and the others sort of embarrassed, came over to congratulate me.

And I think he felt it was a little too sentimental, though he started it, and suddenly he looked at me and said, "Now get out of here and get a facial; you look like hell."

Mr. BRINKLEY. Less than a year after he gave these instructions to Anna Rosenberg, Marshall and the Truman administration retired together, he to Leesburg, Va., named, incidentally, for another general whom Marshall believes to have been among the greatest we have had.

He has remained there quietly, obscurely, and peacefully in a retirement he earned a long time before he got it.

Again, how and why did we get a man like this at a time when we needed him so much, at a time when the mission came and called for a man prepared in the three necessary ways to carry it out? We have heard how we got him. No one can tell us why.

A final word from the man who was his superior during the war, Secretary of War Henry Stimson. One day he told Marshall what he thought of him. That scene, recalled by Robert I. Lovett.

Mr. LOVETT. One of the most moving occasions that I recall involved both of these fine men, General Marshall and Secretary Stimson. It took place after V–J Day, after the war was over, when the wonderful old Secretary of War, then well over 70, in his very large room in the Pentagon, sent for all of the leaders of the military services then available in Washington.

Before this distinguished group which had gathered in a semicircle facing the Secretary's desk, Colonel Stimson stood up, asked General Marshall to join him, and facing this crowded semicircle, he said to his audience these words, which were immediately

set down by one of his young assistants afterward:

"I want to acknowledge my great personal debt to you, sir, in common with the whole country. No one who is thinking of himself can rise to true heights. You have never thought of yourself. Seldom can a man put aside such a thing as being the commanding general of the greatest field army in our history. This decision was made by you for wholly unselfish reasons. But you have made your position as Chief of Staff a greater one. I have never seen a task of such magnitude performed by a man. It is rarely in life you make new friends. At my age it is a slow process. But there is no one for whom I have such deep respect, and I think greater affection.

"I have seen a great many soldiers in my lifetime, and you, sir, are the finest soldier I have ever known."

The ANNOUNCER. General George C. Marshall, Architect of Victory. Another in the NBC award-winning series, Biographies in Sound. Your narrator was David Brinkley.

Pittsburgh's Bicentennial

EXTENSION OF REMARKS
OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1958

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following program of Pittsburgh's 200th anniversary celebration:

IT'S EVERYBODY'S BICENTENNIAL—HERE'S HOW YOU CAN HELP TO MAKE PITTSBURGH'S 200TH ANNIVERSARY CELEBRATION WORTHY OF THE REGION THAT IS AMERICA'S GATEWAY TO THE FUTURE

YES, IT'S EVERYBODY'S BICENTENNIAL

You are a part of it. So is every other man, woman, and child who lives, works, or does business in the Pittsburgh region. As a celebration it will trace the growth of a world-famed and historically significant area during 200 eventful years with emphasis on the phenomenal progress of the past 12 years.

It is not planned as a sentimental journey into the past. Rather, its program will express our civic pride and confidence in the community's future through events of interest and entertainment to those who live here and for many thousands of visitors.

Officially the bicentennial year starting Thanksgiving Day, November 27, 1958, celebrates the beginning of the city of Pittsburgh. This was the date on which Gen. John Forbes, who had taken a smoldering Fort Duquesne from the French 2 days before, wrote his famous letter to William Pitt announcing that he had renamed the strategic location Fort Pitt.

FROM FORBES TO FISSION

From the events which established control by the English-speaking peoples to the events of the bicentennial year which will be lighted by atomic power, the history of the world has been pivoted again and again on the destinies of Pittsburgh, its political fortunes and its productive capacity. In these happenings, their causes and effects, together with the names of the men and women who brought them about, we commemorate the rugged integrity and pioneering spirit of our area. Today, this same determination which civilized a frontier has become world-renowned as the Pittsburgh attitude.

POINT PROMENADE

In this brochure you will find a schedule of the highlights of the year's celebration which will take place at many locations throughout Pittsburgh and Allegheny County and with some regional events beyond the county limits.

Focal point of the bicentennial will be in Point State Park at the tip of the Golden Triangle in Pittsburgh. Opening May 16th with the Armed Forces Day Parade, a 4-month festival will welcome visitors amid colorful gardens, lights, music, flags of our early history, displays, and events on the rivers and the land. This Gateway to the West of our early history will become the scene of the proposed Gateway Festival as imaginatively envisioned by artist Nat Youngblood on our back cover.

Once again, from May 16 through September 15, 1959, the people of the Pittsburgh region will make history through united action and with boundless hospitality.

HIGHLIGHTS OF BICENTENNIAL CELEBRATION, 1958–59

November 27, 1958, 9 a. m.: Ringing of church bells will begin the year-long celebration; Thanksgiving Day religious services; 10 a. m., 200th anniversary ceremonies at Block House of Fort Pitt; Highland Pipers; 1:30 p. m., Pitt-Penn State Bicentennial Football Game, Pitt Stadium; bicentennial film premiere.

November 29: Carnegie Museum special exhibits, Civic Center.

December 5: Opening of Bicentennial International Art Exhibition (through February 1959).

December 6: Bicentennial ball, Penn-Sheraton Hotel, with expected attendance of the President of the United States, Ambassadors of Canada, Great Britain, and France, and National and State Officials.

December 7–14: Pageant "Christmas Around the World," Carnegie Music Hall.

December 11–12: Steel Bowl basketball, Pitt Field House.

December 13: Pittsburgh Steelers bicentennial football game, Pitt Stadium.

January 1, 1959: International Bicentennial Art Exhibition (through January).

January 24: Robert Burns bicentennial dinner, Penn-Sheraton Hotel.

National Open Squash Tournament, Pittsburgh Golf Club (date to be announced).

February 1, 1959: International Bicentennial Art Exhibition (through February 8, 1959); Western Pennsylvania Scholastic Art Exhibit (through March).

January 15: Tri-State Golden Gloves, Pitt Field House (tentative date).

January 22: Mass naturalization ceremonies, Soldiers' and Sailors' Memorial Hall or Syria Mosque.

March 1, 1959: Western Pennsylvania Scholastic Art Exhibit (through March), Kaufmann's Auditorium.

March 7–8: Eastern collegiate gymnastic championships, Pitt Field House.

March 11–13: Regional meeting of the American Bar Association.

March 14: Pennsylvania Catholic High School basketball championships.

March 22: Phipps Conservatory begins "City of Flowers" bicentennial observance.

March 26: State basketball championships.

World Affairs Forum for Youth, University of Pittsburgh (date to be announced).

April 12, 1959: Tamburitzans of Duquesne University, festival, Syria Mosque.

April 13: School Science Fair (through May 8, 1959), Buhl Planetarium.

April 18: Scots Ceilidh.

One-day science meeting, What Science Holds for the Future, Penn-Sheraton Hotel (date to be announced).

Western Pennsylvania branch of Pennsylvania Federation of Junior Historians (date to be announced).

May 1, 1959: School Science Fair (through May 8), Buhl Planetarium.

May 2: Institute on Better Family Living Through Home Economics Education.

May 2 or 9: Festival of bands, Pitt Stadium.

May 8: Junior high schools' decathlon.

May 10 or 17: Schools choral festival, Pitt Stadium.

May 12: Joint convocation, all Pittsburgh colleges and universities.

May 14: Major Tactical Air Force maneuver.

May 16: Armed Forces Day parade in Golden Triangle; Physical Fitness for Youth, Allegheny County Fairgrounds in South Park; Gateway Festival opens in Point State Park.

May 18: Duquesne University's Folk Festival, Syria Mosque.

Ford Industrial Arts Fair—Kaufmann's Auditorium (date to be announced).

School Safety Patrol Picnic—Kennywood Park (date to be announced).

June 5, 1959: Daughters of the American Revolution awards; Stephen Foster memorial.

June 6: Inter-Club Golf Day (tentative date).

June 7, 14, 21, 28: Sunday vespers in Point Amphitheater (June through August).

June 14: Bicentennial Parade in Golden Triangle; Sons of the American Revolution awards, Block House and Point Park.

June 20: National Women's Open Golf Championships, Churchill Valley (tentative date).

Bicentennial exhibits at Greater Pittsburgh Airport (date to be announced).

National Student Council Meeting—Schenley High School (date to be announced).

July 1, 1959: Bicentennial musical drama at amphitheater in Point State Park (through August).

July 4: Water events on rivers of Pittsburgh.

July 5, 12, 19, 26: Sunday vespers in Point Amphitheater (through August).

July 7: All-star baseball, Forbes Field (tentative date).

July 25: Western Open Golf Championship, Pittsburgh Field Club (tentative date).

Military displays (date to be announced).

August 1, 1959: Bicentennial drama (continues) at amphitheater in Point State Park (through August).

August 2, 9, 16, 23, 30: Sunday vespers in Point Amphitheater.

August 14–15: Prep World Series, West Field, Munhall.

August 22: National Public Park Tennis, Frick Park.

Military displays (date to be announced).

September 11–12, 1959: Tri-State Pipe Band.

First or second week: School Safety Patrol captain's training.

Camp, Pittsburgh YMCA in Zelienople; bicentennial events.

September 3–7: Bicentennial county fair at South Park.

October 1959: Pennsylvania State Industrial Arts Convention (date to be announced).

Safety Patrol Sponsors' Workshop, Penn-Sheraton Hotel (date to be announced).

November 7, 1959: WPIAL high school football championships, Pitt Stadium.

November 27: St. Andrew's Day Tartan Ball.

December 6–13, 1959: Pageant, "Christmas Around the World," Carnegie Music Hall.

Opening bicentennial hockey game (date to be announced).

Christmas basketball tournament (date to be announced).

OTHER EVENTS IN 1959

Aviation: History of aviation.

Education: Conferences, conventions, and publications.

LAW: Regional meeting, American Bar Association; symposium re newspapers, radio, trials; symposium re administration of criminal justice; Judicial Conference of Third Federal Judicial Circuit.

History: Meeting of American Association of Museums (spring); highlights of Pittsburgh's history to renaissance; museum exhibits; exhibit of history.

Religion: Interfaith conference (interracial problems), TV and radio; special listings of churches and synagogues more than 100 years old; essay contests for students; Symbolic Light at High Point.

Music: Jazz festival (winter); Stephen Foster Song Festival (summer); memorial recording; composition contest for bicentennial march; concert artists, South American tour (summer); Mendelssohn Choir, exchange performances with foreign choirs.

Science: Meetings of national scientific societies; educational TV programs.

GUIDE TO YOUR BICENTENNIAL PARTICIPATION

For information telephone, visit, or write Pittsburgh Bicentennial Association, 776 Building No. 1, Gateway Center, Pittsburgh 22, Pa., EXpress 1-3230 or 1-3231. Please note list of chairmen of bicentennial events at left. You may wish to address the chairman of a special phase of the celebration in which you are interested.

Special events: To get help in planning or to report the details of a proposed activity for the bicentennial, write as above, addressing Special Events.

Displays: in Gateway Festival. For full information contact bicentennial office.

Decorations: Approved designs and recommended decorators through bicentennial office.

Parade entries: Made through bicentennial office. Floats must meet adopted standards for participation in bicentennial parade.

Merchandise: The bicentennial seal is protected by copyright and trademark registration. For use on souvenirs, products, or packaging contact the bicentennial office. In all noncommercial areas the use of the seal is welcomed to help spread the Pittsburgh story in the bicentennial year.

Address by the Honorable Wilber M. Brucker, Secretary of the Army, at the 12th Annual Convention of the 30th Infantry Division Association, Washington, D. C., July 11, 1958

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1958

Mr. REECE of Tennessee. Mr. Speaker, I would like to introduce into the RECORD a recent speech delivered by the Secretary of the Army, the Honorable Wilber M. Brucker. This address was made before the 12th annual convention of the 30th Infantry Division held in Washington, D. C., for the first time since the conclusion of World War II. Secretary Brucker pays fitting tribute to this magnificent division which, more than any other American unit, was responsible for the liberation of France. I was pleased to see that the Army remains justly proud of the "Old Hickory" Division, whose successor of today, the 30th Armored Division, is the State Guard of Tennessee. The Army's continuing appreciation of the work of this great division was beautifully expressed in the presence and words of the Secretary of the Army.

I am constrained to insert this entire statement in the RECORD because it is more than a tribute to an historical fact, but is rather a very forthright and encouraging statement on the preparedness and capability of the modern American Army.

Secretary Brucker has demonstrated an uncanny insight into the problems and needs of a nuclear Army and has been one of the truly great champions of the Army's welfare and a guardian of its traditions and historic roles.

I wish to commend Secretary Brucker for his dedicated service to the Army dating from the days when he was a decorated infantry officer with the Rainbow Division in World War I, to his present position. He is a man possessed not only of foresight, but of genuine heartfelt devotion to a strong and effective Army.

The speech follows:

ADDRESS BY THE HONORABLE WILBER M. BRUCKER, SECRETARY OF THE ARMY, 12TH ANNUAL CONVENTION, 30TH INFANTRY DIVISION ASSOCIATION, WASHINGTON, D. C., JULY 11, 1958.

It is an inspiration to be with you as you assemble for the reunion of the famous 30th "Old Hickory" Division. As a former infantryman with the 42d "Rainbow" Division throughout the First World War, I fully appreciate the value of the comradeship which stems from sharing the dangers and hardships of ground combat. There are no human experiences that create the same bond beween men.

You have every right to be proud of the distinguished fighting record of the "Old Hickory" Division in two great world wars. The Nation will never forget the notable achievements of the 30th Division in World War I, when it played a strong part in cracking the vaunted Hindenburg line. Then in World War II, the 30th earned enduring honor in a long series of hard-fought battles on the soil of France, Belgium, Holland, and Germany. From the Vire et Taute Canal and St. Lo, where it spearheaded the historic breakthrough, to the Mortain Counterattack (a splendid account of which appears in the July issue of Army Magazine), and the reduction of Magdeburg, in the closing hours of the war, it once again splendidly epitomized the superb valor and relentless combat drive which have ever been the glory of the United States Army.

I know that all of you share with me an abiding interest in the welfare of our country. You all know that the Communist conspiracy has by no means slackened its attack upon the Free World, nor abandoned its ambition to conquer all mankind. Take the most recent Communist atrocity in Hungary, for example, the shocking execution, the brutal murder, of Imre Nagy and other Hungarian patriot leaders involved in the ill-starred revolution of October 1956, again underscores in blood the elemental barbarism of the Soviet Communist character, and brings into new and sharper focus our clear and present danger.

At this point let me say that the United States Army is indeed proud of the exemplary standard of conduct maintained by the 9 members of this service presently being held in East Germany. It is obvious to all of us that each of these men is quite familiar with the Armed Forces code of conduct. They have and continue to exert that admirable degree of courage and self-discipline which befits a member of the American Armed Forces. I am sure their families share our pride in these young Americans.

It would appear from the results of the July 2 press conference, held at Dresden, in East Germany, that these 9 men—2 crew members and 7 passengers of the United States Army helicopter which inadvertently crossed the border in the Soviet Zone of Germany on June 7—are regarded as political hostages. This line of reasoning is incompatible with existing international agreements applicable to the area.

For well over a month the Soviet authorities have refused to recognize the responsibilities they assumed under the Huebner-Malinin agreement of April 5, 1947. This agreement insured the Soviet and United States military missions the right to protect the interests of their respective nationals in the zones of Germany. The East German authorities have also blocked all attempts to arrange for the release of these nine Americans on the grounds that the East German Communist regime constitutes a sovereign government and is not party to the Huebner-Malinin agreement.

The direct participation by Soviet authorities was revealed by Maj. George E. Kemper in response to questions by the American press. The attempt by East Germany to assume jurisdiction over the American nationals was made quite clear during the press conference by the men being held. The record of this conference makes it quite apparent that the ultimate responsibility for the release of these Americans rests in Soviet hands. The American people can rest assured that the United States Government is continuing its efforts and hopes to have the men free soon.

We have every reason to know what we can expect if we let down our guard for even a moment. For this reason it behooves all of us, and especially the members of organizations like this, to keep America aware of the continuing need to be strong.

Your experience in ground combat gives you a unique understanding of the indispensable and timeless role of the ground soldier. You have met the enemy face to face. You have seen it borne out time and time again when the chips were down in actual combat that man is the only ultimate weapon. You who have fought in the front lines have good reason to know that no final decision can be obtained by remote control. Ultimate victory is dependent upon the courage, devotion, and capability of the trained soldier who achieves superiority on the ground.

As the ranks of those who have learned this lesson through bitter experience thin out, the theory that machines can be substituted for men is apt to be accepted by those who lack your background. That tendency can be observed today, and would be dangerous to our national security if it were not for the clear thinking of seasoned veterans like yourself. More than ever before, it is the obligation of those who know the truth to make the truth known.

Because of the growth of atomic stockpiles, general nuclear war, fought to its inevitable conclusion; could, I believe, result in nothing short of disaster for all participants. In the present situation, with an abundance of mighty retaliatory weapons on both sides of the line, it is illogical to believe that the Soviet Communists would irrationally abandon all hope of profit, and invite the almost certain destruction of their own country, by intentionally launching a suicidal nuclear conflict. Therefore, we must regard limited aggression, with a succession of limited, attainable objectives, as the more likely form in which the Soviets might some day employ their military power to carry forward their ruthless program of conquest.

Local wars, fomented civil strife, military intimidation, and similar forms of limited

operations, coupled with vigorous efforts along every line to divide, confuse, and weaken the free world, are all down in the Soviet book as very practical methods by which they might achieve their ultimate purpose without ever challenging our nuclear retaliatory power. The Soviets have been employing this strategy for well over a decade, during which they and their allies engaged in eight local wars and military actions for Communist aggrandizement. These ranged in size and scope from the Korean war to guerrilla conflicts such as that waged in Greece.

It is imperative that we be prepared for every eventuality—for a "big" war or a local war, for an atomic war, or one in which atomic weapons are not used, for a war fought by Soviet troops against the main bastions of freedom, or a war fought by puppet "volunteers" in an effort to nibble away the fringes of the free world. It does us little good in the long run to be able to deter an enemy from one kind of aggressive action, if we leave him free to pursue with comparative impunity another course by which he might attain the same result. We must not forget that if we were unprepared for limited war, we would be helpless to deal with any attempt at piecemeal conquest except by precipitating the suicidal nuclear holocaust we are striving by every means to prevent.

It is the combined strength and versatility of our Armed Forces, our Army, Navy, Marine Corps, and Air Force, integrated in a great defense team forming the keystone of a worldwide system of collective defense linking the United States and 45 other nations, which deters the Soviets from unleashing their military might in an effort to achieve their goal of world domination.

Soviet leaders have attempted to use the threat of nuclear violence against many nations allied with us in collective defense in a determined effort to precipitate a flight into frightened neutralism which would very seriously impair the collective ability of the free world to resist Communist aggression. They are attempting in particular to "soften up" and destroy the North Atlantic Treaty Organization because they know that they cannot seize and profitably exploit the rich prize of Western Europe—stepping stone to the conquest of America—as long as the nations of the Atlantic Community maintain their interlocking military strength and their moral cohesion.

Nearly half of the United States Army is deployed overseas at this moment, standing shoulder to shoulder with the troops of our partners in the defense of freedom. The presence of our soldiers stimulates the morale and stiffens the resistance of our allies. It constantly reminds them—not in mere words but in the solid substance of American men and American armaments right there with them—that we are in this crusade for peace together, and that we intend to see it through together. It also has a very discouraging effect upon any plans the Communists might have to extend by force the bounds of their "empire of fear." It is noteworthy that they have so far attempted armed encroachment only where resistance was feeble or nonexistent. Defensive strength, coupled with determination, has effectively dampened Soviet enthusiasm for military excursions. No Soviet aggression has yet been launched within range of American guns.

Advanced weapons systems, strategic missiles, and bombers—although absolutely essential to the effectiveness of our combined forces, and thus to the deterrence of aggression—will never be able to win any war alone. No final decision can be obtained by remote control. The control of the land, which is the ultimate objective of every military operation, can finally be achieved only on the ground. Ever since the first crude machines of war were contrived to extend the capabilities of men, all down through the years to the age of nuclear weapons and guided missiles, there have always been those who have needed to be shown again and again that it is the fighting man on the ground who is the fundamental element of warfare—the only "ultimate weapon." In this nuclear era, strong and effective Army forces, able to cope with any aggressor, any time, any place, and on any terms, as part of a unified land, sea, and air command, are more essential than ever before to our national security and the preservation of the peace of the world.

The United States Army of today is characterized by balance and versatility. It is built to fit the pattern of the space-atomic age. It is prepared to meet the requirements of the entire spectrum of war from an all-out nuclear conflict throughout the whole wide range of lesser enemy operations, which are possible, and which would pose a grave and direct threat, not only to the security of the United States but to the very existence of civilization as we know it today. Our Army has a one-two punch—the ability to fight effectively with either atomic or nonatomic weapons—which is the key factor of our national power to apply military pressure with precise discrimination in order to deter aggression on the spot, anywhere in the world. Moreover, in any kind of war which might be thrust upon us—large or small—that one-two punch would be indispensable to ultimate victory.

The ability to make prompt and decisive response to any situation is essential to the prevention of war or the winning of a victory in this modern age in the event that war was ever thrust upon the United States. The United States Army's Strategic Army Corps—consisting of 2 airborne and 2 infantry divisions, armed with atomic weapons as may be appropriate to any situation which might arise—is ready to move by intercontinental airlift at a moment's notice. "STRAC" it is called—S-T-R-A-C—and its slogan is based on those letters: "Skilled, Tough, Ready Around the Clock." The capability of STRAC as a ready force was dramatically demonstrated a few weeks ago when 2 companies of the 101st Airborne Division stationed at Fort Campbell, Ky., one of its component organizations, with no prior warning were alerted for transoceanic air movement at 3:55 one afternoon. At 8:35 a. m. the following morning—only 16 hours and 40 minutes later—the 2 companies, comprising about 500 men, together with all their necessary vehicles, weapons, ammunition, and rations, had been set down—"ready to go"—1,740 miles distant from Fort Campbell. That is our modern Army in action.

The Army has kept fully abreast of all the tremendous advances of science and technology, and is putting them to practical use in every field to enhance its power and flexibility. Its years of experience in rocketry are paying handsome dividends in the development of guided missiles and rockets for military purposes, and in helping America to push back the frontiers of space. Including its mighty weapons for our air defense, the Army's arsenal contains more than 10 types of missiles and rockets precisely adapted to the accomplishment of its varied tasks. Tactical surface-to-surface missiles range in size from the mighty Redstone, which can deliver a nuclear warhead more than 200 miles to the relatively tiny Dart, which is capable of destroying the heaviest tank.

An outstanding example of the achievement of the Army's excellent military-civilian team of missile scientists, engineers, and technologists is the great 1,500-mile intermediate range ballistic missile, Jupiter—which is now in production and will soon take its place in the line of America's defense. It was an Army Jupiter-C missile—so-called because similar vehicles were used to test components of the Jupiter during the course of its development at the Army Ballistic Missile Agency at Huntsville, Ala.—which lifted the United States into the space age on January 31 of this year when it hurled Explorer I, America's first earth satellite, into orbit. Less than 2 months later, the Army orbited another satellite—Explorer III—which provided immensely valuable information on flight conditions from 1,740 miles in space, down to the outer reaches of the earth's atmosphere. Explorer III was uniquely important as an instrument for the advancement of our scientific knowledge, and contributed immeasurably to our Nation's participation in the International Geophysical Year.

On May 22 of this year, a letter addressed to me by the director of the Missile Firing Laboratory at Cape Canaveral, Fla., was delivered to me in the Pentagon. It was a very unusual and significant letter because it had been carried in the tactical warhead of an Army Jupiter missile over 1,000 miles through space, and dramatically demonstrated the Army's completely successful solution of the problem of protecting a missile nose cone and its contents against the intense heat generated when it reenters the earth's atmosphere at supersonic speed. The solution of that problem was basic to the development of a successful Intermediate Range Ballistic Missile. That letter is evidence of a first for America which we have every reason to believe has not yet been matched by any other nation.

All-in-all—counting our experience with the Jupiter-A, the modified Redstone which preceded Jupiter-C as a test vehicle; the Jupiter-C, and the Jupiter itself—the Army has attempted 39 launchings of the big missiles in its Jupiter program. Thirty were successful—completely successful—shots. They accomplished everything planned. Seven were partially successful—they all had successful launchings, but then, for various reasons, did not entirely meet the scientific requirements which had been set up. Only two—both early test vehicles—did not score at all. Americans have every right to be tremendously proud of this splendid record. It is a solid and convincing answer to vicious propaganda by which the Communists have sought to prove that America is no match for the Soviet Union in scientific achievement, and that therefore Soviet ascendancy is inevitable. It has demonstrated to any doubters there may be that our great Nation is not a land of boasting, but, rather, a country which has the know-how to get things done, and the will to carry them through.

We realize that our security is not to be found in armaments alone, but rather in the willingness of all of our people to sacrifice to a common cause—in the toughness of our moral fiber and the steel-hardness of our spirit—in the quality of our self-discipline—in our readiness to shoulder responsibility manfully, and to put our hands to the plow with no thought of turning back.

If we are to defend our freedom successfully we must continue to pay whatever price in sacrifice and service is necessary to maintain military forces which compel the respect of any would-be aggressor. It has been well said that if a nation values anything more than freedom, it will lose its freedom; and if it is comfort or money which it values more, it will lose that, too.

We must remember, however, that military strength is not an end in itself. The most powerful armaments will not produce the substance of true peace—all they can ever do is to provide us with the priceless opportunity to work for peace. Our Armed Forces constitute the stout shield behind which we must put forth every effort to bring about world conditions enabling men and nations to work out their human destiny without resort to strife and violence. Unless we are

able to accomplish this great purpose, we will face the tragic prospect of living from hour to hour under the shadow of war until our world, divided against itself, collapses in chaos.

The truth is America's mightiest weapon for peace. The Soviet Union maintains its tyranny over the minds and bodies of millions of Russians and satellite peoples only because it has the power to withhold from them the truth—the truth about America in particular—and to obscure the principles and values which are the foundations of the American way of life and the hope of mankind.

For more than 12 long years, the Soviets have maintained the Iron Curtain, a barrier as real and solid as if it were made of bricks and mortar. Why do the leaders of the Communist conspiracy compel their people to depend upon a servile and controlled press filled with vicious and ugly distortions of fact? Why do they jam the radio broadcasts of "The Voice of America" and other free world transmitters?

They are taking no chances that the rank and file of their people might come into contact with the truth, because they know full well that the truth will make men free and rob the Communist conspiracy of all hope for world domination. Before there can be any real peace in the world, the Iron Curtain must go. The Iron Curtain must be breached by radio, by the printed word, by expanded cultural exchange, by every method free men can devise to let the Russian people know the facts their leaders have so long and carefully kept from them. Only the light of truth can dispel the fears which make abject slaves of so many millions in the world today.

If even a tiny ray of the light of truth were allowed to penertate behind the Iron Curtain, the Soviet perpetrated myth that Americans are "aggressive, war-mongering imperialists" who advocate preventive war for their own gain would be shown up for the self-serving propaganda it is. If all the Russian people were allowed to read the record as it stands, how great a difference it might make.

They would recognize that our constitutional form of government, with its built-in guaranties against the sudden initiation of war, our long history of moral idealism, and the ingrained habits of thought which underlie the American character furnish compelling evidence that we could never resort to aggression—that we stand resolutely for peace and the peaceful triumph of the highest principles of our enlightened civilization. They would know that when the United States possessed an absolute monopoly in the field of atomic weapons we did not attempt to use them to advance any national ambition—that, on the contrary, we proclaimed our willingness to forego our monopoly in the interests of world peace and stability.

It is not enough for us to affirm our belief in liberty, justice, decency, and the dignity of man, we must leave nothing undone to make sure that the true image of America is clearly visible to all the peoples of the world. Consider the manner in which we have put our principles into practice in our international relationships:

At the conclusion of World War I and World War II, both of which were thrust upon us, we strove to rehabilitate our conquered adversaries as rapidly as possible, and to help them reassert their sovereignty without any strings attached. Witness our efforts in Germany, Japan, and Italy.

The United States has constantly and zealously striven to bring about worldwide renunciation of war as an instrument of national policy.

The United States has vigorously and continuously advocated an effective system of international military inspection which would prevent surprise attack by any aggressor, and a comprehensive program for the limitation and control of armaments.

The United States initiated the concept of atoms for peace, and was the prime mover in the establishment of an international atomic energy organization which now embraces 66 member nations.

The United States has taken the lead working toward the dedication of outer space to peaceful purposes.

The United States has likewise been the leader in advocating international action to assure the development of the great new continent of Antarctica exclusively along peaceful lines, and the reservation of the Arctic regions to the service of peace and not of war.

The United States has not coerced, dominated, or sought to control any peaceful, independent nation, but has scrupulously respected the integrity of all, and sought to uphold it.

The United States has never refused to sit down and talk over any world problem with any nation, and explore in all sincerity every pathway to peace.

If these facts were made clear to the people behind the Iron Curtain, how could any malicious Communist sophistry twist them to picture Americans as an imperialistic people who seek to plunge the world into war?

The Communist conspiracy has sought to enhance its influence among the uncommitted peoples of the world, by the brazen falsehood that the Communists are on the side of the underdog, while the United States seeks only to advance the interests of the rich and prosperous.

But the record is clear for all to read.

What nation has ever worked with more zeal and sincerity than the United States to raise to unprecedented heights the living standards of all its people? What nation has had greater success in achieving that purpose?

Has there ever been a calamity or time of affliction since the founding of this Republic which did not call forth from the heart of America unselfish help for those in distress? Famine in China, an earthquake in Japan, destitution in the Near East, starvation in Belgium, to such human crises as these America has always responded without counting the cost.

Has there ever been a nation which has welcomed so many unhappy people seeking sanctuary from want or tyranny? An example very much to the point is the manner in which America recently threw open her gates to many thousands of Hungarians fleeing the terror imposed by the very nation which seeks to deride our character.

What nation has ever done more to help struggling, underdeveloped countries build up their economies in an effort to minimize privation and suffering? Under our mutual security programs, American technicians have been working for years shoulder to shoulder with the peoples of Asia, Africa, and the Near East to develop new skills, and introduce new agricultural and industrial techniques which will create the conditions of a better life, not for the rich and prosperous, but for the poor and underprivileged.

What nation has ever shown more heartfelt consideration for all people in need? For example, wherever the United States Army is on duty, our soldiers ardently support movements which contribute to the health, education, and welfare of children. Left in the wake of war are a host of tragic war orphans. They live in a large measure without purpose or hope, sometimes dying of exposure, malnutrition, or outright starvation. Countless soldiers have freely shared their own food and money to help some child to live. In South Korea, which was ravaged by 3 years of brutal war, American soldiers contributed more than $2½ million from their own pockets to aid the orphans, the needy, and the homeless. The Armed Forces assistance to Korea program contributed over $20 million for materials and technical assistance in the construction of orphanages, hospitals, and churches, and the volunteer work of our soldiers more than tripled this amount in actual benefits to the Korean people. Of the 200,000 orphans in Korea, the majority have been settled in Army-sponsored orphanages. In Europe, tens of thousands of orphans and refugee children yearly receive tons of good clothing, athletic equipment, and toys freely donated by American troops and Army organizations.

This is the truth about America, the truth which no Soviet propaganda can ever disarm.

As we look out upon the world today we recognize that we must be strong. Organized and armed iniquity can be held in check only by organized and armed morality. Throughout the span of the ages, nations which have lacked the protection of a righteous sword have been compelled to accept a conqueror's peace at the price of honor and integrity and the debasement of the human soul. However, in the final analysis, it is the sword of truth which will cut down those who seek to conquer through tyranny and aggression. The truth is mighty and will prevail. Despite all our military armaments, Communist ideology, and Communist propaganda, like vicious weeds, will choke out the good growth unless we are zealous in helping to cultivate in every way the best that is in mankind. We must make sure that in all our dealings we bear true witness to the principles and ideals upon which this Nation was founded. We must take full advantage of every opportunity to create behind the Iron and Bamboo Curtains, and in every corner of the earth, an understanding of America, and the concepts to which we adhere. Only by so doing can we ever achieve our goal of lasting peace with honor and justice.

Expression of Sympathy to the People of Hungary

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. DINGELL. Mr. Speaker, the department of Michigan of the American Legion recently passed two resolutions which I feel to be of considerable interest to Members of Congress and to readers of the CONGRESSIONAL RECORD.

For this reason, and because of the importance of the subject matter, I am inserting them into the CONGRESSIONAL RECORD at this point:

RESOLUTION

Whereas the shocking news of the murder of Premier Nagy and three of his colleagues by the Soviet Communists has recently been announced; and

Whereas the United States Senate by a unanimous vote of 91 to nothing demanded that our President protest officially to the Soviet Union for the murders perpetrated; and

Whereas the actions of the Soviet Union in the death of these four Hungarian patriots contravene the universal declaration of human rights as set forth by the United Nations; and

Whereas the secret trial and execution of Premier Nagy and his three colleagues is an affront to all members of the United Nations and to the conscience of the world; and

Whereas the conscience of decent mankind has been shocked by the brutal political reprisals upon the Hungarian leaders for their part in defense of the native country: Therefore, be it

Resolved by the American Legion, Department of Michigan, in convention assembled in Detroit, Mich., this 27th day of July 1958, Express its deep sense of indignation for the murders committed and express the Legion's sympathy for the oppressed people of Hungary during their ordeal of political oppression and terror; and be it further

Resolved, That a copy of this resolution be sent to all Representatives from Michigan and to United States Senators POTTER and MCNAMARA.

RESOLUTION

Whereas section 17 (c) of the Universal Military Training and Service Act (62 Stat. 625), as amended, provides that no person shall be inducted into the Armed Forces under that act after July 1, 1959, with the exception of persons whose deferments under section 6 of such act have ceased to exist; and

Whereas selective service is based on the accepted principle of the universal obligation and privilege of all citizens to defend this Nation; and

Whereas the impending termination of induction authority under the aforesaid act will leave our Nation without an effective obligation for every young man to serve his country in a military capacity; and

Whereas the continuance of authority to induct all persons liable therefor under the aforesaid act is essential to insure the maintenance of the required strength of the Armed Forces since voluntary enlistments in such forces and their reserve components are greatly stimulated and influenced by the mere existence of that induction authority; and

Whereas the existence of full induction authority enables the Selective Service System (1) to insure that the required strength of the active Armed Forces be maintained both directly by inductions and indirectly by stimulating enlistments, (2) to assist in maintaining the required strength of the Reserve Forces by deferring inductions of members who serve satisfactorily, and (3) by classifications deferring induction, to channel men possessing critical skills or the requisite ability to acquire them into essential activities and occupations including engineering, scientific and technical pursuits and teaching, and the study and preparation for such fields; and

Whereas the Selective Service System maintains through registration an inventory of all men of military age including the only inventory of veterans no longer in the Armed Forces who in an emergency might be needed quickly for augmentation of those forces, and keeps current the availability for order to active duty in time of emergency of over a million members of the Standby Reserve; and

Whereas Selective Service has become an integral part of the Nation's defense and the Selective Service System, by its decentralized system of operation through over 4,000 local and appeal boards in every community made up of local citizens has earned and enjoys the confidence of the overwhelming majority of the American people; and

Whereas the local boards of the Selective Service System in every community of this Nation would render invaluable service in the event of an all-out emergency because of their ability to furnish manpower at local levels to an agency authorized to requisition men for specific duties; and

Whereas some 40,000 of the 46,000 full and part-time officers and employees of the Selective Service System have volunteered their services to the Government and receive no compensation; and

Whereas the annual cost of operating the Selective Service System is only about 16 cents for every man, woman, and child in this Nation: Therefore, be it

Resolved, by the American Legion, Department of Michigan, in annual convention assembled in Detroit, Mich., this 27th day of July 1958, That section 17 (c) of the Universal Military Training and Service Act (62 Stat. 625) as amended, be further amended so that all the authority to induct persons into the Armed Forces now provided by that act will be extended until July 1, 1963, and that copies of this resolution be mailed to the Governor and to all Members of Congress from the State of Michigan, and that the American Legion use all of its efforts and influence to this end.

Nick of Time

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1958

Mr. BYRD. Mr. Speaker, adequate fuel resources are a basic essential for American defense and prosperity. Our dependency upon fuel in this 20th century industrial economy is self-evident. We must have supplies in readiness in quantities that will fill our own needs as well as supply deficiencies to our allies in the event their sources from the Middle East are curtailed at any time.

In this connection, I recently called upon the Office of Defense and Civilian Mobilization to advise me of what progress it is making toward the development of an emergency fuel program, with special emphasis on coal, our basic fuel resource. I have been informed by Defense Mobilization Administrator Leo A. Hoegh that such an emergency program is being devised but that the details of it are largely classified.

More recently I have called upon the Eisenhower administration to lend every possible encouragement to a program looking to the development of oil from coal and shale. Every indication points to the possibility of vast untapped oil reserves from those two sources.

In connection with the possibilities of tapping the Nation's shale resources for oil, I am pleased to bring to the attention of the House a timely and informative article from the Nicholas Republican, Nicholas County, W. Va., entitled "Nick of Time." I commend the editorial to the attention of my colleagues. The editorial follows:

[From the Nicholas Republican of Richwood, W. Va.]

NICK OF TIME

Nothing is more irresistible, it has been said, than an idea whose time has come. And today, with the world crisis centered in the oil-rich Near East—with American Marines and British paratroopers established in Lebanon and Jordan and reinforcements building up in nearby staging areas—comes the technological break-through that could free the West from dependence on the Arab world's petroleum.

For more than half a century geologists and engineers have dreamed and studied and worked to find an economical way of releasing oil from our vast reserves of shale. And only now, at the precise moment in the world's history when oil—or the lack of it—could determine the free world's destiny, comes word that liquid fuel can now be recovered from oil shale at costs that make it competitive with domestic petroleum.

The announcement comes from Shirley A. Johnson, Jr., director of the Denver Research Institute of the University of Denver, and Dr. Charles H. Prien, head of the Institute's chemistry and chemical engineering division and a recognized authority on oil shales. For the past 2 years Dr. Prien has been conducting research and development work at the Institute on this earth-shaking new process for The Oil Shale Corp. of Carson City, Nev., owners of process and patents. For some 9 months, the institute has been operating a 24-ton-a-day pilot plant.

Under this new process, Mr. Johnson reports, shale oil extracted in Colorado can be delivered on the Pacific coast at a cost of $1.42 to $1.92 a barrel (exclusive of profit), whereas California crude oil is presently quoted at around $3.00 to $3.25 a barrel.

Mr. Johnson forsees a shale oil industry in the order of a million barrels a day by 1970. And while he points out this would not of itself take care of domestic fuel requirements, there would seem to be no reason why shale reduction plants could not be expanded as rapidly as demand might require.

The full significance of this long-sought development is only apparent when we realize the extent of our shale resources. Deposits in northwestern Colorado, alone, from which shale was mined for the Institute studies, have been estimated by the United States Geological Survey to contain some 1.5 trillion barrels of oil. This is about 50 times as much as the Nation's proven crude reserves, and more than 7 times as much oil as is known to exist in the entire world. And, if this should not be enough, there are other large shale deposits in Wyoming and Utah with lesser amounts in a couple of dozen other States, including Alaska.

Oil is one major defense item, it would appear, that we can strike off the worry-list if needs be. The Mediterranean trade route, east and west, however, must be kept open. That is a military necessity and has been for ages.

Department of Defense Appropriation Bill, 1959

SPEECH

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1958

Mr. DONOHUE. Mr. Speaker, as I stated here a couple of weeks ago, the hour is desperate for the continuing life of small business in the dynamic economy that has developed in this country through the past decade.

The small businesses in this Nation are in grave danger of disintegration and disappearance because, at this moment, they have no way of obtaining equity capital and long-term credit which they vitally need for any hope of survival. Although many words of sympathetic encouragement have been spoken here in the Congresses of recent history, legislative response and recognition of small business has been too long delayed.

It is and has been obvious, for a long time, from committee hearings, independent reports, and the persevering pleas of small business throughout the country, that their fundamental requirements cannot be extended by commercial banks or the Small Business Administration, as presently constituted.

I am not going to repeat the provisions of the bill, which have already been explained at length. It is in substance a good bill and an earnest attempt to grant material help in an emergency situation, although it does not go as far as a great many of us would like.

I earnestly believe it is practically the unanimous intention of the Congress to preserve the traditions of small business in the economic life and history of this country; this is an opportunity to do so.

The financial problems of small businesses all over the United States are very, very serious and this legislation is essential for their cure. I urge you to adopt this conference report so that life-preserving help may be granted to a basic segment of our economy at the earliest possible minute.

M. L. Benedum

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. FULTON. Mr. Speaker, we in Pittsburgh and western Pennsylvania as well as West Virginia are proud of our distinguished citizens, among the top of whom I rate my good friend and civic worker, M. L. Benedum, known to his friends as Mike Benedum. Gilbert Love wrote an excellent article for the Pittsburgh Press of Friday, May 23, 1958, which should be preserved for posterity to know what a fine and devoted citizen Mike Benedum really is:

HARKING BACK
(By Gilbert Love)

What does a person think about toward the end of a long and active career?

If he's like M. L. Benedum, the great wildcatter of the oil industry, he harks back to his early years.

"I am now standing on the most sacred spot on earth to me," Mr. Benedum said at the dedication of the Benedum Civic Center in Bridgeport, W. Va., the small town that he left at the end of his teens to win fame and fortune.

"It was on this spot that I first saw the light of day," he added. "It was here that my angel parents taught me the simple virtues I have tried to follow. It was here that I filled the treasure chest of memory, from which I draw strength and courage in my sunset years."

"This is home. It is where the foundation was laid for all that I am or ever hope to be. Here is the anchor to which I have been moored for 87 years. No matter how far away I have gone, I have always been securely fastened to that anchor by the chains of faith and sentiment."

Mr. Benedum's feeling about his boyhood home is no recent thing. Back in 1939 he undertook a big improvement project at the historic Bridgeport Cemetery. A bronze plaque there says:

"Presented to the Bridgeport Cemetery by Michael Late Benedum in loving memory of his father, mother, brothers, sisters, and boyhood friends, and in thanksgiving for the precious years he lived among them in the beautiful hills of West Virginia."

Although Mr. Benedum's home and headquarters have been in Pittsburgh for a great many years, he has placed some of his dearest possessions in Bridgeport. Portraits of himself and his wife, painted by world-famous Douglas Chandor, face each other across the beautifully furnished parlor of the Bridgeport Methodist Church.

In the junior chapel of the church is a large oil painting of the couple's only son, Claude, who died while in service in World War I.

Most of the Benedum gifts to Bridgeport are for the benefit of boys and girls who are growing up where he spent his boyhood. Remembering how he used to swim in Simpson Creek, he built the new generation a fine swimming pool. He wandered across meadows where the Benedum Airport now serves a large part of central West Virginia, but he has replaced that recreational facility with a summer and winter skating rink, a library, and meeting rooms.

More than 62,000 persons were counted in the various parts of the Benedum Civic Center last year. That included repeaters, because Bridgeport has less than 4,000 residents, but it's significant.

After Girl Scouts started to meet in their well-equipped lodge at the center, their membership rose from 35 to 200. After the library opened, sales of paperback books in a nearby store fell to almost nothing.

"I have noticed a difference in the youngsters in the year this place has been open," said Mayor Richard L. Cutlip, nodding toward the busy civic center. "They're more poised," he added. "They have discovered that they can do things that they weren't sure of before. They will be better and stronger adults because of the interest that Mr. Benedum has taken in this town."

The Best Allies of Communism

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. PORTER. Mr. Speaker, Latin American dictatorships, far from being effective allies against international communism, are in reality doing more to promote communism in the Western Hemisphere than any other single force. For readers who wish to know more about this, I refer them to Robert J. Alexander's recent book, Communism in Latin America. For others I commend their attention to the following editorial from Americas Daily for August 5, 1958, which is included here under a previous consent to extend my remarks:

LATIN AMERICAN DICTATORSHIPS AND COMMUNISM

Russia is highly interested in exercising political influence in the Latin American countries. Constantly, statesmen of the Kremlin are on the alert regarding every political movement in the Western Hemisphere, with the purpose of taking advantage of it, whether it is for direct benefit in favor of communism, or for indirect benefit, channeling it against the United States of America.

The hierarchs of Moscow know that they cannot impose within the zone of influence of the United States a completely Communist government, with origin in the type of revolutions that Russia has promoted in central Europe, in the Middle East, and in the Far East. Before this reality, that is to say, before the inability to impose satellite governments in America, Russia is engaged in discrediting Latin American democracy, because from that discredit a climate propitious for the malignant growth of communism always results.

The democratic governments existing in the Americas are, without doubt, harmful to Russian designs, because the people who are governed by them get used to respect and to love the authentic values of republicanism, and are always ready to defend, with all possible energy, the institutions which guarantee their individual rights, social well-being and political freedom. On the other hand, peoples who are subjugated, those who see the government making a constant mockery, in the most irritating manner, of democracy, are in great danger of becoming skeptical, of losing their faith in democracy almost completely, and perhaps avoiding any effort to defend it, because they do not enjoy it.

The four dictatorial regimes which still remain in America are, for these and other reasons, direct or indirect contributors, but always effective contributors, with their antidemocratic attitudes, to the political distrust which is planted in public opinion, and they play the game of Communist imperialism, and put out deeper roots where democracy is practiced the least, where the people are less disposed to defend it because they do not know what it means, or, if they do know, are not able to enjoy it. In democratic governments Russia has enemies. In the dictatorships she has allies.

The Need for Farm Legislation Prior to Adjournment

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. CURTIS of Missouri. Mr. Speaker, the following editorial appeared in today's Washington Post. It makes sense. I insert it in the RECORD for review by my colleagues:

NOSE CUTTING

Why should the House leaders give up on the farm bill because they failed to muster a two-thirds vote to pass it under a suspension of the rules? The vote of 210 to 186 for suspension of the rules indicates that a substantial majority favors the bill even in its present form, and a still larger majority could be expected if some of the defects could be eliminated by amendment. In these circumstances it would be very shortsighted to let pique over Secretary Benson's opposition to the bill prevent the enactment of any farm legislation.

The defeat of the move to suspend the rules closed only one door. Chairman COOLEY of the Agriculture Committee is now entirely free to seek a rule under which the bill could be debated and passed by only a majority vote. Indeed, this is the normal course. Speaker RAYBURN and Mr. COOLEY have said that they will not ask for such a rule. But they spoke in anger. Their irritation can be understood, but to leave cotton and rice

farmers with overly rigid quotas next year would hurt the farmers rather than the Secretary of Agriculture.

The constructive and forward-looking course for Messrs. RAYBURN and COOLEY is to move ahead on the course that is still wide open. Let them ask for a rule; let the bill be debated and amended in accord with the will of the House. It would certainly pass in some form and could then be reconciled with the Senate version in conference. The House leaders will stand on very spongy ground if they insist on shelving the farm bill, with the votes to pass it already in sight, because the House would not permit it to be railroaded through with inadequate debate and without amendment.

Mansfield Sprague Leaves a Job Well Done

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 7, 1958

Mr. MORANO. Mr. Speaker, on August 6, the President accepted the resignation of Mansfield D. Sprague, who has served with the Department of Defense for 3 years, first as General Counsel and later as Assistant Secretary of Defense for International Security Affairs.

With permission of the Speaker, I would like to include in the RECORD Mr. Sprague's letter of resignation and the President's reply:

WASHINGTON, D. C., *July 10, 1958.*

THE PRESIDENT,
The White House.

DEAR MR. PRESIDENT: There is no pleasure for me in writing this letter to submit my resignation as Assistant Secretary of Defense, effective at a mutually convenient time. When I was appointed General Counsel of the Department of Defense I undertook a 2-year commitment which has stretched to almost 3 years. The sole reason for this action is purely personal, involving family and financial considerations. I earnestly hope I may again someday return to Government service.

Mr. President, words are totally inadequate to express my deep appreciation for the opportunity you have afforded me to serve in your administration. In submitting my resignation, I would like to make one comment relating to the mutual-security program, the military-assistance portion of which has been administered in the Defense Department by the Office of International Security Affairs, for which I have been the Assistant Secretary for the last year and one-half.

Echoing what you have so often and so effectively stated—I want to express my personal conviction that no program is more vital to the immediate and long-range security of the United States and the free world. To argue whether military or economic assistance is more important is immaterial since they are both complementary and indispensable. The central question is whether the United States should make a substantially greater total mutual-security effort in the years ahead. I firmly believe the answer is in the affirmative. I pray that the American people have the determination, the willingness to sacrifice, and the imagination to stay the course upon which we are embarked. Only thus can the free world remain free and peace which is the major objective of the United States be achieved.

I close with best wishes for your continued good health and with the most profound admiration for your magnificent leadership in these troubled days.

Respectfully,

MANSFIELD D. SPRAGUE,
Assistant Secretary of Defense.

THE WHITE HOUSE,
Washington, August 6, 1958.

The Honorable MANSFIELD D. SPRAGUE,
Assistant Secretary of Defense for International Security Affairs, Department of Defense, Washington, D. C.

DEAR MR. SPRAGUE: It is with real regret that I accept your resignation as Assistant Secretary of Defense, to be effective on a date mutually agreeable between you and the Secretary of Defense.

I greatly appreciate your many contributions to the defense effort in your nearly 3 years of service in the Department of Defense. Your problems, both as General Counsel and as Assistant Secretary for International Security Affairs, were not easy ones, and you have my warm thanks for a job well done. Through the military-assistance programs under your supervision, the strength of allied nations has continued to increase, augmenting substantially the security of our own and other nations. I trust you will long derive particular satisfaction from the knowledge of your contribution to this part of our mutual-security program. Most properly do you characterize that program as vital to peace and freedom in the world.

I wish you continued success and happiness in the years ahead.

Sincerely,

DWIGHT D. EISENHOWER.

This, fellow Members, is a fitting tribute to a man who, in my opinion, has done outstanding service for his country in two of the most difficult assignments in the Federal Government.

Born and raised in Connecticut, a resident of New Canaan, he saw active duty with the United States Navy in World War II, practiced law in Bridgeport, Conn., served as speaker of the State assembly, and later as deputy attorney general of his home State.

Through all this, we in Connecticut knew him to be a man of exceptional ability and integrity. We were proud when he was nominated for his important assignments here in Washington, and this pride has been justified, for, in my experience, his service to the United States has been consistently of the highest order and deserves the thanks and praise of his State and country.

Commonsense and Survival

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. PORTER. Mr. Speaker, world peace through world law is not just an idle idealistic dream. It is hard commonsense which we must soon adopt if we are to survive.

Under leave to extend my remarks I include a letter, which is full of commonsense, written by the president of the United World Federalists, Donald Harrington, to President Eisenhower, July 30, 1958:

UNITED WORLD FEDERALISTS, INC.,
New York, N. Y., July 30, 1958.

President DWIGHT D. EISENHOWER,
The White House, Washington, D. C.

DEAR PRESIDENT EISENHOWER: Once again we stand on the edge of the abyss. The Middle East crisis highlights once again the tragic consequences of the lack of law and order in the modern world. It must now be plain that there should be no further delay in implementing your basic principle, enunciated at the time of the Suez crisis, that "there can be no peace without law."

It is time, and passed time, to give the United Nations institutions to enforce law on recalcitrant nations and individuals who threaten the peace, to give it the power to enforce universal disarmament, to give the United Nations effective U. N. police and courts capable of protecting large and small nations alike.

Until these things are done, similar crises, of increasing gravity, must be expected. This, then, is the objective. Present policies should be guided by this aim, measures taken now should be steps toward this end.

We hope that a summit meeting will be held promptly under the direction of the Security Council; we approve the proposal made by Lester Pearson that the Security Council set up a special subcommittee composed of Great Britain, France, the United States, the U. S. S. R., and, by special invitation, Prime Minister Nehru of India, with the U. N. Secretary General presiding.

Any agreements reached should be submitted to the Security Council and the U. N. General Assembly for approval.

Should it be impossible to hold a summit meeting, the United States should press its proposal for an emergency session of the U. N. General Assembly.

In whatever U. N. body the negotiations are carried on, we believe the United States should support the following policies:

1. Increasing the numbers and the authority of the U. N. Observer Corps, to protect the borders of both Lebanon and Jordan, and make possible the immediate withdrawal of the United States and British forces now in those countries.

2. Creation of a permanent U. N. force, to be continuously available to the U. N. for dealing with future threats to the peace, wherever they may occur. So that this force may be at the direct and immediate disposal of the U. N., and be suitable to any situation in any area, it should be compose of individuals recruited by the U. N. from the smaller nations.

3. Agreement by the major powers and by the nations in the area to a U. N.-inspected and policed arms embargo in the Middle East, coupled with U. N. protection against armed attack or infiltration across any of the national borders in the area.

4. Creation of a U. N. Good Offices Commission to facilitate peaceful and just settlement of the outstanding disputes in the area.

5. Creation of a U. N. Development Corporation for the area, with pledges from the major powers of adequate funds for economic development on a long-term basis.

6. The United States should not oppose the legitimate national aims of any country, and should accept nationalism which does not threaten the political, economic, or social life of any other State. It should recognize the legitimacy, and even the value, of political neutrality on the part of any nation wishing to take such a position.

We applaud the United States insistence that efforts to deal with the problems be carried out under the auspices of the United Nations, which alone is capable of finding equitable solutions and securing their acceptance from all concerned.

The United States should not fear, but should welcome, the opportunity to negotiate with the Soviet Union and other nations on the basis of such a positive, immediate program, directed toward the essential objective of world peace through world law.

Respectfully yours,

DONALD HARRINGTON,
President.

National Insolvency

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. NEAL. Mr. Speaker, wading over the shall shelf with its thrill of engaging deeper waters has taken the life of many venturesome but unsuspecting individuals when suddenly engulfed in dangerous depths beyond the shelf of safety.

Recent actions of the 85th Congress, tempting the people of the Nation by Federal handouts, leading them unconsciously toward the deep levels of economic insolvency, will stand out in future history as the last big splash that will make return to responsible Government impossible.

The following editorial "How To Go Broke," from the August 7 edition of the Evening Star, is timely:

HOW TO GO BROKE

In voting to increase the statutory limit of the national debt to $288 billion—a jump of $13 billion—the House has acted in keeping with necessity. But it has done so in an unusually somber spirit generated by ever-multiplying signs that our country is heading fast into a period of immense inflationary danger.

This danger, as Chairman MILLS of the Ways and Means Committee has warned, is inherent in the prospect of huge Federal deficits for years to come. The situation is attributable not merely to essential military and foreign outlays, but also to heavy domestic spending that is not truly essential—spending of a kind that could be markedly reduced if only the executive branch, Congress and the American people as a whole would make up their minds to put an end to the profligacy and substitute reasonable frugality for a budgetary policy that seems to be based largely on partisan politicking and a what's-in-it-for-me philosophy.

Mr. MILLS, however, does not expect any such reform in our national fiscal thinking. And so, quite gloomily, he has predicted that Federal spending over the next 5 years will amount to about $80 billion annually, with virtually no chance that enough revenues will be raised to pay for the outlays. Thus, as he sees the future, we are in for a long period of deficit financing that can hardly fail to militate against the idea of tax relief for either corporations or the general public. More than that, in Mr. MILLS' words, "it will loose inflationary pressures here that in turn will be emulated by industry and labor. The result may well be, in the next several years, that we will see rises in prices such as we have not seen before in peacetime."

Warnings of the same sort have been voiced repeatedly in the past, notably by Senator BYRD, and they need to be heeded now more than ever. For the new debt limit approved by the House is symptomatic of a continuing inflationary trend that could cause another great shrinkage in the dollar's acutely shrunken purchasing power. Beyond that, unless it is checked and reversed, the trend could ultimately shatter public confidence in Federal securities and wreck the Nation's credit at home and abroad. These are not imaginary perils. On the contrary, as emphasized by Mr. MILLS and other close students of the subject, they are real perils, and they can readily materialize if nothing is done to head them off.'

This matter, with all its astronomical figures, may seem to be dull to most of us Americans. But it is important for us to keep in mind that our present national debt is about seven times greater than it was in 1940, and the interest we must pay on it each year is roughly as much as an entire Federal budget in the early 1930's. Clearly, if we keep on spending as we are, without balancing income and outgo, we will be in danger of waking up one day to find our country quite disastrously broke.

Boosts Candidacy of Former Postmaster General James A. Farley

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter to the editor of the New York Times and an editorial from the New York Mirror concerning the Honorable James A. Farley, former Postmaster General of the United States:

[From the New York Times of July 25, 1958]

FARLEY FOR SENATE PROPOSED—HE IS DECLARED BEST QUALIFIED FOR DEMOCRATIC POST

To the EDITOR OF THE NEW YORK TIMES:

As a former Massachusetts citizen, now a citizen of New York State, I should like to discuss the candidacy of James A. Farley for the United States Senate.

In 1928 I sponsored the raising of funds to carry Massachusetts for Alfred E. Smith. In 1930, as Democratic candidate for Lieutenant Governor of Massachusetts, I qualified as one of the leaders of the Democratic Party in that State. In 1932 I was the first so-called Democratic leader from any State to break the logjam and declared for Franklin D. Roosevelt.

During these years I learned to know James A Farley intimately. Without exception I never knew a more loyal Democrat and hard worker for the party than Mr. Farley. Today James A. Farley is an outstanding citizen of the world, Nation, and New York State. He has experience and knowledge unequaled by any other person.

If Governor Harriman wishes to obtain the Democratic nomination for President in 1960, James A. Farley as the New York Democratic Senator can lay the groundwork for Governor Harriman in Washington for the next 2 years. Why Governor Harriman does not recognize this potential aid and declare for Farley for Senator in a loud voice, is beyond my comprehension.

Secretary of State De Sapio with his keen political foresight knows the importance of a Democratic State victory this year and a national victory in 1960. Why De Sapio even gives a second thought to any lesser known candidate for the Senate is puzzling to me.

James A. Farley will be supported by hundreds of thousands of Republican and Independent voters and everybody concedes will receive the greatest vote ever given to any candidate in New York State. James A. Farley should be nominated by acclamation at the Democratic State convention.

James A. Farley has earned this honor by past services to the Democratic Party. He is best qualified. He is in excellent health and can outwork any man 20 years younger. He will represent New York State in the United States Senate with great credit.

STRABO V. CLAGGETT.

NEW YORK, *July 18, 1958.*

[From the New York Mirror of August 7, 1958]

WAGNER BOWS OUT

New Yorkers will be happy that Mayor Robert Wagner is not a candidate for the United States Senate. Not that we begrudge the mayor a membership in the "Greatest Gentleman's Club in the World," which the Senate used to be called. It is understandable that the mayor would like to follow in his father's footsteps and wear the senatorial toga.

But we New Yorkers like Bob and prefer that he stay right here. On the whole, he has given the city a pretty good administration and he has represented the city with dignity.

Left in the Democratic field are three candidates for the senatorial nomination:

James A. Farley, who has widespread support, particularly upstate and who is putting on an old-fashioned, fully in the open campaign;

Frank Hogan, New York County's veteran and outstanding district attorney; and

Thomas K. Finletter, noted lawyer and former Secretary of the Air Force.

The one who seems best qualified as of the present moment is James A. Farley, but politics is a queer game and nobody can tell what deals are being made. Thus far, the only objection to Farley is the contention that the Liberal Party will not accept him. This is not substantiated by inquiries. The Liberal Party leaders apparently are still open-minded. On the other hand, the Farley supporters say that the ex-Postmaster General could get enough Republican votes to make up for any Liberal Party defections.

It seems to be a hot campaign in both parties, both for the governorship and the Senate. But we say, the hotter, the better for the citizens. When the politicians have to work hard for public office, they usually let the people in on the wrongs that have been done.

Fifty-Dollar Fare to Europe

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. MACDONALD. Mr. Speaker, on July 1, 1958, the House Committee on Merchant Marine and Fisheries, of which I am privileged to be a member, held hearings on my bill, H. R. 13174, and other similar bills introduced by our distinguished majority leader, JOHN W. MCCORMACK, Congressman JOHN H. RAY, of New York, and others. This legislation authorizes the Secretary of Commerce to contract for the construction of two transatlantic superliner passenger vessels, of approximately 90,000 deadweight tons, capable of carrying

approximately 6,000 passengers, with a sustained speed of 34 knots. It would also authorize the appropriation of such sums of money as would be necessary to construct, outfit, and equip such superliners. Concurrently, the Federal Maritime Board would be authorized to contract for the sale of said vessels, upon their completion, to the Sea Coach Transatlantic Lines, Inc., for the fixed price of $70 million per vessel.

If this legislation is enacted into law it will permit an individual to travel to Europe for $50. It seems to me that would be a wonderful opportunity for young people to have this chance to go to Europe at such a reasonable rate in a truly people-to-people program. There is nothing like personal contact between our citizens and that of foreign countries to aid in mutual understanding. Likewise, the construction of these new ships would unquestionably improve our national defense. In order that my colleagues may have a more complete picture of this important proposal I, under unanimous consent, insert a statement made by Harry E. O'Reilly, executive secretary-treasurer of the maritime trades department of the AFL–CIO before the House Committee on Merchant Marine and Fisheries on July 1, 1958:

My name is Harry E. O'Reilly. I am executive secretary treasurer of the maritime trades department of the American Federation of Labor and Congress of Industrial Organizations.

The president of the department is Paul Hall, who is also the president of the Seafarers' International Union of North America, and secretary-treasurer of the Atlantic and Gulf district of that union.

Attached to this statement is a list of the affiliates of the maritime trades department. Briefly, the affiliates comprise organized workers in the maritime industry, including the licensed and unlicensed personnel who sail the ships, the longshoremen who load and unload them, the warehousemen who receive and store cargoes, shoreside workers whose employment contributes to martime operations, ship builders, and other employees performing duties essential to the maritime industry.

More specifically, I speak here today for the Seafarers' International Union, the Masters, Mates, and Pilots, the Marine Engineers' Beneficial Association, the International Brotherhood of Longshoremen, and the Shipbuilders.

The legislation I am endorsing would also benefit other union members, such as the skilled mechanics of the International Association of Machinists.

All of these unions and their members earnestly recommend that your committee report favorably the bill introduced by the distinguished majority leader of the House of Representatives, H. R. 10692, or the bill H. R. 10638, introduced by Representative RAY of New York, which are identical, and which would authorize the construction of two low-fare trans-Atlantic passenger superliners.

We believe it is impossible to overstate the importance of building up and preserving the American merchant marine. Its existence is not only vital to maritime employees, but indispensible to the prosperity and safety of this country. Experts from the Department of Defense have repeatedly stated that the safety of this country depends upon the existence of an efficient merchant marine operating under the American flag, capable of carrying a minimum of 50 percent of our foreign commerce. Unfortunately, today American-flag ships are carrying only about 25 percent of our exports and imports. This figure, which is about one-half of what the experts estimate as the safe minimum, is the measure of our national danger. If total war came upon us, we would be unable to deliver, in any foreign area, either the men or the material which would be necessary to wage that war. We know that this committee is aware of these alarming facts and is doing what it can to overcome this frightening deficiency. Unfortunately, it appears that neither the Congress nor the administration is aware of, or in any event has taken steps to correct, our maritime deficiency and to place our merchant fleet in a position of readiness.

Of all segments of our maritime industry, probably the one which is least adequate is our passenger fleet. In the post-Korean era, only one new American passenger company has come into existence, the American Banner Line, which at present is operating only one passenger ship on Trade Route 8. As I speak, that ship is sailing on her second voyage. But, as I say, notwithstanding the great increase in passenger traffic between this country and Europe, notwithstanding the fact that brandnew highly efficient, and thoroughly modern foreign ships are swarming in our harbors, grabbing an ever-increasing share of our foreign commerce, and by substandard wages and working conditions driving the American Merchant Marine from the seas, the American Banner Line is the only new American shipping company to commence operations in the last decade.

The pending legislation, in our opinion, embodies a tremendous idea, which, if encouraged and sustained, would enable American initiative to capture its fair and adequate share of our foreign commerce. In spite of all the progress of recent years, it remains true that an ocean voyage to Europe is a luxury enjoyed only by the rich. This is a stupid and dangerous situation. American ideas, principles, inventions, and cultural creations are now germinating throughout the world. But the degree to which American culture could be carried to the nations of the Old World would be vastly increased if we made it possible for the average American worker, American businessman, and American student to visit foreign countries. This would produce an intellectual and economic cross-fertilization which would accelerate the development of a peaceful society bountiful beyond our wildest dreams.

And it is an economic paradox that only the rich can afford ocean travel. By train, bus, plane, and boat, we have woven tightly together the farflung empire which is the United States. In our economy, travel has become a daily necessity, instead of a rare luxury. I strongly believe that the travel tradition of Americans, the resolution of our people to see our country for themselves, to become acquainted with how other Americans think and live, has been our strongest economic stimulant. It is within our financial and industrial power to make a sea voyage to foreign lands an inexpensive commonplace. Indeed, it is surprising that with the material and facilities available in this country, no one has yet undertaken it. That is why the affiliates of this department salute the imagination and energy of Mr. H. B. Cantor, the creator of the idea embodied in the pending legislation.

Mr. Cantor has planned two superliners, each of which would carry 6,000 passengers and 1,300 crewmen. His plans would bring the round-trip fare to Europe within the reach of almost every American. While preserving the highest standards of comfort and sanitation, he would open the vast Atlantic seaway to the worker and the student, to the poor and humble, to the middle class, to the rank and file. And by the creation of mass ocean carriage, he would make it possible for the common people in our allied nations to visit this country. Ocean travel, like land travel in this country, would become a daily necessity instead of a rare and costly luxury.

If Mr. Cantor's idea is allowed to materialize, we will have the beginning of a great and growing passenger fleet which will be capable not only of carrying peaceful voyagers, but in time of national emergency could transport fighting men and materiel to every region of the earth.

We think this is a superb idea. We think it is in the tradition of American industrial genius. We think it is worthy of the support of Congress, the administration, and the people at large. As workers in the long neglected maritime industry, we endorse this legislation and recommend that it be passed speedily.

In behalf of the affiliates of the maritime trades department, I thank you for this opportunity to appear before you in the interests of the maritime industry.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

Jobs-After-40 Program of Fraternal Order of Eagles

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, August 11, 1958

Mr. NEUBERGER. Mr. President, one of the most socially enlightened and useful organizations in the country is the Fraternal Order of Eagles. This is the organization which campaigned so persistently for the great Social Security and Old-Age Survivors Act, which the Senate may amend this week to provide expanded annuity benefits.

Today, in this present era, the Eagles are crusading for jobs after 40, in order to protect the economic security of older workers who have many skills, but who are the victims of unfair discrimination.

I have introduced proposed legislation to protect the jobs of older workers in defense industries and in other avenues of Government supply. This bill is S. 3188, and a somewhat similar measure has been offered by the distinguished junior Senator from New York [Mr. JAVITS]. We have a wide group of able cosponsors of both major political parties who share our opposition to discrimination because of age.

At the 60th international convention of the Fraternal Order of Eagles, held in Chicago from August 6 to 9, it was my privilege to be one of the speakers. Other participants included such citizens as our illustrious ex-President of the United States, Harry S. Truman; Secretary of Labor James P. Mitchell; the columnist and author, Drew Pearson; and William F. Schnitzler, secretary-treasurer of the AFL–CIO.

My topic on the program which concluded the convention, on August 9 at Hotel Sherman in Chicago, was Jobs After 40, and I emphasized to my fellow members of the Eagles that our cold-war rivalry with the Soviet Union will not allow us to waste the skills, talents, and energies of older workers in our great democratic Nation.

Mr. President, I am convinced that we cannot waste either our human resources or our natural resources. The Soviet Union is using both to the utmost. For example, I understand Russia is training four times as many new doctors annually as we do, and one reason may be not only Russia's less-thorough training, but also its widespread encouragement of women to enter the medical profession. This fits in with my firm belief that we shall be sacrificing the welfare of the United States if we let indifference and cruel discrimination drive skilled and experienced older workers out of our national labor force.

That is why I believe so strongly in the jobs-after-40 crusade of the Eagles, and that is why I traveled to Chicago over the last weekend to advance it. I spoke under the auspices of Judge Robert W. Hansen, of Milwaukee, national chairman of the jobs-after-40 project.

I ask unanimous consent, Mr. President, to include in the Appendix of the CONGRESSIONAL RECORD a summary of my August 9 address at the 60th international convention of the Fraternal Order of Eagles, where, I am happy to report, an outstanding delegation of Eagles from my home State of Oregon was in attendance.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SENATOR NEUBERGER PLEADS WITH EAGLES TO SAFEGUARD JOBS AND SKILLS OF OLDER WORKERS

Senator RICHARD L. NEUBERGER told the Fraternal Order of Eagles national convention tonight that the fierce competition of the space age should warn the United States against wasting either its human or natural resources. NEUBERGER spoke in favor of legislation which he has introduced in the Senate to safeguard the jobs of older workers.

The legislation is endorsed by the Eagles as part of their jobs-after-40 campaign.

"Older workers in our Nation possess priceless skills and talents," NEUBERGER said. "It makes no sense to lose this reservoir of national strength because of cruel or anachronistic employment policies. We should start at once by forbidding discrimination because of age in all plants or factories which supply the Government. In this era of $40 billion defense budgets, that would be most of the great manufacturing establishments in America."

NEUBERGER lauded work of the Eagles in focusing nationwide attention on employment practices which discriminate against older workers. He recalled that officials of the fraternal organization presented Members of Congress on March 11 with petitions signed by 671,328 persons on behalf of legislation to ban discrimination because of age in hiring of persons by Government contractors.

Under the pressures of so-called competitive coexistence with the Soviet Union, he added, America cannot afford tragic wastage of manpower in the American economy. The Oregon Senator said that a key factor in outcome of the free world's struggle against communism is "whether we have the foresight and wisdom to establish policies which fully utilize all our human and natural resources effectively."

NEUBERGER said that the Soviet Union was constructing 44 waterways projects, and that 4 of these will be greater in hydroelectric production than Grand Coulee on the Columbia River, until this time the largest ever built. "By contrast," the 45-year-old Oregon Democrat added, "the present national administration has not recommended one new start on a dam in the Columbia River Basin, where over 40 percent of our own country's water-power potential is concentrated."

In documenting his thesis, NEUBERGER listed Grand Coulee's maximum output as 1,900,000 kilowatts while these will be the capacities of the 4 principal dams being erected within the borders of the Soviet Union: Stalingrad and Kuibishev on the Volga River, 2,350,000 and 2,100,000 kilowatts, respectively; Bratsk on the Angara, 3,200,000 kilowatts; Krasnoyarsk on the Yenisei, 4,004,000 kilowatts.

"Surely this means that today is an unwise time in which to abandon river-development programs in America which were begun some 25 years ago," said NEUBERGER. "Energy may be a key factor in the world production race which Khrushchev has foreseen. No energy is more reliable than hydroelectric energy, because it is eternal. It uses up no oil, natural gas, coal, uranium, or any other exhaustible fuel which may be in short or limited supply."

"Few sterner tasks confront us than that of continuing our national strength and prosperity without, at the same time, exhausting the resources which have made these possible. The emergence of Soviet technology backed by vast natural resources adds emphasis to our own need for public officials dedicated to preserving wildlife, land, water, and forest resources."

Faced with threats of greatly increased economic competition by Soviet Russia, United States policies for use of natural resources "may decide the rivalry of the future between free and slave worlds in the realm of industrial production," NEUBERGER added.

"Throughout this cold war decade, we have been conscious of the great military might of Soviet Russia. But until very recently, Americans did not regard Russia as a serious competitor in economic and other peacetime fields of endeavor. Any remaining illusions of Russia as a country of backward serfs being driven reluctantly onward by terror and despotism has now been rudely shattered by sputniks. We shall be better off for no longer underestimating the competition we face."

The Passage Under the Polar Ice Cap of the "Nautilus"

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, August 11, 1958

Mr. JACKSON. Mr. President, in connection with the epic voyage of the *Nautilus* crossing the North Pole, I ask unanimous consent to have printed in Appendix of the RECORD a statement which I made on Friday, August 8, 1958, and an editorial from the New York Times on Sunday, August 10, 1958.

There being no objection, the statement and the editorial were ordered to be printed in the RECORD, as follows:

AUGUST 8, 1958 STATEMENT BY SENATOR JACKSON, CHAIRMAN OF THE MILITARY APPLICATIONS SUBCOMMITTEE OF THE JOINT COMMITTEE ON ATOMIC ENERGY, ON THE OCCASION OF THE SUCCESSFUL SUBARCTIC VOYAGE OF THE NUCLEAR-POWERED SUBMARINE, THE "NAUTILUS"

I commend the Navy and Captain Anderson and his crew. And, particularly, I feel we must not forget Admiral Rickover, the father of nuclear seapower. The Navy and the Nation owe Admiral Rickover a great debt of gratitude.

The Military Applications Subcommittee of the Joint Committee on Atomic Energy, of which I am chairman, long has advocated the subarctic voyage now completed so successfully. Both the military and peaceful implications of this voyage are enormous.

The military implications require little elaboration. The nuclear submarine is proven a true underwater satellite. It is virtually impossible to detect a nuclear submarine deep beneath the sea—the difficulty is compounded when it is both deep beneath the sea and ice.

This voyage removes any doubt as to the ability of nuclear-powered submarines to get anywhere in the world under the most adverse conditions. It opens up for the first time a whole new ocean which will become a theater of great naval importance, vital to the security of our Nation, in future years. It opens up waters adjacent to all of the land mass of Asia, Europe, and North America.

In terms of peaceful application, this voyage heralds the unlocking of the great mysteries of Arctic waters that have intrigued scientists for years—such as the depth of the ice cap, the depth of the oceans beneath it, the large discrepancies of temperature in the Arctic which result in great open areas amidst the ice.

The entire science of oceanography will be advanced, and it is my hope that it will not be too long before we have a nuclear submarine equipped with an underwater oceanography laboratory. In addition, there is untold wealth under the seas. But all we know of it today is surmise and speculation. Underwater exploration in nuclear submarines will translate our guesses and hopes into knowledge and use for mankind. Still further, this voyage blazes a new path for underwater commerce and transportation.

[From the New York Times of August 10, 1958]

UNDER THE POLAR ICE

For months to come scientists, strategists, and men of politics will be studying and debating the implications of the passage under the polar ice cap of the atom-powered submarine *Nautilus*. Manifestly, another step forward in the conquest of our physical world has been made. Much good can come from it so long as the knowledge that we have gained can be put to the best use in both military defense and the development of new international trade routes.

In this case there is something so eerie, so other-worldly, about the idea of crossing the North Pole under the ice that it is hard to bring the mind back from the world of fantasy into that of reality. In a few weeks or months, perhaps, the evaluation of the exploit—and its probable repetition—may make it seem commonplace. There will be other crossings. At the moment it is hard to get even a primary focus on the significance of what has been done.

One thing, however, we know. This transit of the Arctic was not the product of accident. It did not take place in a dream world. It came about through days and nights, weeks and months, and years in the laboratory, on the testing ground, in the training camps. If it was the product of vision, it was also the product of hard work. The combination of the two, as Leonardo once said, adds up to genius.

It is for that reason that Americans pay tribute, now, both to the gallant commander and crew of the *Nautilus*, and to the man whose vision and indefatigable energy made its exploits possible, Rear Adm. Hyman G. Rickover. Commander Anderson's graceful gesture in making an immediate call upon him evokes a warm response all over the country. His vision was the driving force in making this exploit possible.

Another thing we know. The horizons of achievement continue to widen. No frontiers for accomplishment can be fixed. The cruise of the *Nautilus* should teach us, once more, that we live in an age of immense, even explosive, expansion. We cannot go back. We will not stand still. New worlds, in the Arctic and elsewhere, are still to be conquered and there will be the conquerors.

Accomplishments of the House Committee on Armed Services During the 85th Congress

---

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 11, 1958

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a letter from the gentleman from Georgia [Mr. VINSON], chairman of the Committee on Armed Services, making a report on the accomplishments of his committee during the 2d session of the 85th Congress, a splendid record, a constructive record of accomplishments.

This Congress is a historic one. In the accomplishments of this historic Congress the House Committee on Armed Services has played a most important part.

The letter follows:

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES,
Washington, D.C., August 5, 1958.

Hon. JOHN W. McCORMACK,
Majority Leader, House of Representatives, Washington, D.C.

DEAR MR. McCORMACK: In response to your letter of August 4, I am pleased to take this opportunity to give you a résumé of the activities of the House Committee on Armed Services during the 85th Congress.

Inasmuch as the report on the committee's activities was filed for the first session, the following résumé will include the activities of the second session, followed by a consolidated summary of both sessions.

The activities of the committee during the 2d session of the 85th Congress were perhaps the most unusual of any session since the committee's formation in January of 1947. This was due to the number, complexity, and importance of a variety of problems and legislative matters before the committee.

As early as December 4, 1957, it was concluded that the committee should conduct an inquiry into the status of our military missile program, in order to determine our degree of progress, or lack thereof, and the legislative actions which the committee might take to support and improve the program.

The committee's executive hearings on the subject of missiles began on January 13 and were concluded on February 25. On February 18, Subcommittee No. 2 began hearings on the bill to revise and improve the military pay system, which hearings extended through March 7. During the same period, February 4 through March 3, Subcommittee No. 1 conducted hearings relating to the proposed reduction in the strength of the Army National Guard, the United States Army Reserves, and the active duty establishment. Also, during this same period of time preparatory work was being accomplished for the conduct of the hearings on the legislation to reorganize the Department of Defense, which hearings began on April 22 and extended through May 21. On the next day, May 22, the full committee began hearings on the fiscal 1959 military construction bill, which hearings were not concluded until June 24.

From the foregoing, the importance and complexity of the committee's work is obvious. This becomes even more obvious when it is realized that there were more full committee meetings (84) during the 2d session than the combined total of subcommittee hearings (65). This is the first time in the 12-year existence of the committee that this has occurred.

To summarize the activities during the 2d session of the 85th Congress, the full committee held 84 meetings, and the subcommittees held 65 meetings, exclusive of the meetings held by the 6 special subcommittees investigating various aspects of national defense, for a total of 149 meetings on legislative matters. The committee and its subcommittees considered in excess of 75 bills, of which 46 were reported to the House.

The committee completed an investigation of our military missile program; revised and improved our military pay system through the passage of appropriate legislation; reported resolutions and supported legislative actions to maintain the Army National Guard at a strength of 400,000, the United States Army Reserve at a strength of 300,000, and the active duty Army Establishment at a strength of 900,000, all for fiscal 1959; approved legislation reorganizing the Department of Defense; approved a military construction bill in the approximate amount of $1.7 billion for fiscal 1959; and acted on a variety of other legislative matters.

The Real Estate and Construction Subcommittee has considered and approved the following projects: 151 real-estate projects, 1 of which covered 37 installations; 32 Capehart housing projects, involving 10,207 units; 56 housing projects involving 1,643 units to be constructed by appropriated funds; 10 Wherry acquisition projects, including 15,330 units; 6 surplus commodity housing projects including 1,784 units.

The Subcommittee for Special Investigations has conducted 8 public hearings and 10 executive hearings, and has processed 70 inquiries from congressional offices.

In summary, from January 15, 1957, until this date there have been 140 meetings of the full committee, 151 meetings of the subcommittees, and 74 meetings of the Subcommittee for Special Investigations, for a total of 365 meetings on legislative and investigative activities of the committee. More than 175 bills and resolutions were considered during this Congress. The committee reported 109 bills and resolutions, and 106 of these have passed the House. Thus far, legislation emanating from this committee has resulted in 58 public laws and 7 private laws. These totals will be substantially increased as the result of completed legislative action now pending the President's signature and a number of other bills which will undoubtedly pass the Senate in the immediate future.

In addition to these legislative and investigative actions of the committee, the Subcommittee on Real Estate and Construction has considered and approved the following military transactions:

Real estate; 273 projects.

Capehart housing: 60 projects, 21,827 units.

Appropriated fund housing: 61 projects, 1,897 units.

Wherry acquisition: 50 projects, 25,844 units.

Surplus commodity housing: 9 projects, 5,784 units.

There have been 96 printed committee hearings, containing in excess of 8,200 pages of testimony.

I am sure you will agree that the work of the committee during the 85th Congress has been most constructive in the field of national defense. I assure you that this record is most rewarding to those of us who have had the responsibility and the honor to participate in these accomplishments.

With kindest regards, I am

Sincerely yours,

CARL VINSON,
Chairman.

Gen. George Catlett Marshall

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, August 11, 1958

Mr. STENNIS. Mr. President, with the passage of 100 years since the War Between the States, the names of at least 2 men have survived for their true greatness: Lee and Lincoln. Even now, there is one from World War II who is certain to be remembered centuries later as truly great: Gen. George Catlett Marshall.

In this connection, I ask unanimous consent to have printed in the RECORD at this point an editorial from the Army-Navy-Air Force Register of August 9, 1958, entitled "The Mark of a Man."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MARK OF A MAN

A small news item of recent date stated that Gen. George Catlett Marshall had been tendered a round million dollars for his memoirs, and had instantly rejected the offer.

"The Government of the United States has already paid me for all of my services," said the magnificent soldier who directed America's military efforts in World War II.

To those who know General Marshall, this action came as no surprise. In fact, it was very characteristic of the old Virginian. He has turned down equally flattering offers several times before. He was equally blunt in 1948 when he was told he could have the presidential nomination on a political platter. With a few quiet, but unmistakable words, he took himself out of all consideration, then or in the future, for the highest office in America.

So far as we know nobody ever broached that subject to General Marshall again.

In these days when congressional investigations swirl around men in high places suspected of having been influenced by paltry jimcracks, it is heartening to reflect on the fact that we do produce men as big as General Marshall. Maybe there are only a few that big, but at least a few.

While we would not presume to guess what goes on in General Marshall's mind, it is not unlikely that he recalled Gen. R. E. Lee's reply when a somewhat similar windfall was offered to the Confederate chief.

The Civil War was over. The Gray leader was making a skimpy living as president of a small, run-down Washington College at Lexington, Va. His salary was $1,500 per year.

Lee had lost everything he owned in the war, every acre of ground, his fine home called Arlington, his cattle and sheep had been slaughtered to feed the Union soldiers and his horses and mules commandeered to pull Union guns.

One day in 1867 a group of men from New York came to Lee's house on the college campus and tendered the Gray warrior more money than he could possibly make for the remainder of his life. Their wish was straight and simply stated; the use of the name R. E. Lee for an insurance company they were forming.

General Lee heard the New Yorker's proposition in polite silence. When they had finished outlining what they must have though was an irresistible offer, the old soldier said: "Sirs, my name is not for sale."

Though Lee lived out the few years left to him in ill health and near poverty, there is not the slightest evidence that he ever regretted turning down the bonanza in return for his good name.

It has been said many times that General Marshall adopted Robert E. Lee's code of personal honor and ethics when Marshall was still a cadet at Virginia Military Institute. He has lived by that almost-spartan code all his active military life. Now that he is old and in retirement it would be completely unlike George Catlett Marshall to even consider breaking that high-minded code in the twilight of his years.

Obviously, we do not imply, in comparing General Marshall to General Lee, that Marshall is living in near poverty. The Government of the United States will pay General Marshall his full salary as a 5-star general officer as long as he lives. That is little enough for the man who directed, from beginning to end, the greatest war we have ever fought, generally conceded the ablest Chief of Staff we have ever had, and who, later served as Secretary of State and the first Secretary of Defense.

Ex-President Harry S. Truman once said, "General Marshall is the greatest living American." Many people, perhaps most people, agreed with the Missourian. Those who did not failed to come forward with any contenders for that title.

We pray that he will be with us, as an inspiration to lesser men, for many more years.

Why the National Debt Is Giving Treasury Secretary Lots of Worry

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1958

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks in the RECORD I include herewith an article from U. S. News & World Report of August 8, 1958, titled, "Why the National Debt Is Giving Treasury Secretary Lots Of Worry":

WHY THE NATIONAL DEBT IS GIVING TREASURY SECRETARY LOTS OF WORRY

Troubles in the management of this Nation's huge debt are harassing Secretary of the Treasury Robert B. Anderson.

Treasury bonds have been losing favor with investors. Result: a plunge in market prices of these bonds, despite strenuous efforts of the Treasury and the Federal Reserve System to prop up prices by massive purchases of Treasury securities.

At the close of market trading on July 30, the 2⅝ percent bonds maturing in 1965 were down almost to 97—a $970 price for a bond with face value of $1,000. These bonds have been issued in June at par. The 3¼ percent bonds of 1985, issued in June at 100½, were at 96. The 3½ percent bonds of 1990 were at 99, down from nearly 107 in April.

Seldom in modern times have Treasury bonds taken such a beating.

SWITCH IN MONEY POLICY

Only a few months earlier, these securities had enjoyed a record rise in price as the Reserve System switched to a policy of cheap and easy money.

Now, signs of a business upturn and threats of war have generated a new inflation psychology in this country. Investors expect that, before very long, a shift back to tighter credit will mean rising interest rates. So investors are not willing to pay recent prices for bonds, which offer fixed interest rates.

Mr. Anderson's problems are further complicated by a recent unsuccessful financing. To pay off $16.3 billion in maturing I O U's, Mr. Anderson had offered a 1-year certificate.

Here's what happened: Some $9.1 billion worth of the maturing I O U's were held by the public, the remaining $7.2 billion by Reserve banks. The Reserve System, besides exchanging its I O U's, purchased $1.1 billion of the new certificates for delivery when issued. This, in effect, left only $8 billion of the maturing securities to be exchanged by the public. Yet holders of $2.8 billion dollars' worth spurned the offer and demanded cash.

This meant a 35 percent failure in the offer. Bond dealers described the financing as a real lemon.

AHEAD: MORE BORROWING

Mr. Anderson's troubles are far from ended. With much of the $276 billion debt in short-term I O U's that come due frequently, he must refinance an average of $4.6 billion worth of debt each month in the year that began July 1.

Even that is not all. The Budget Bureau has just predicted that the Government's deficit in the year which started July 1 will be $12 billion. So, in addition to his refinancing, Mr. Anderson must borrow heavily to fill the gap between current income and outgo.

In this task, the Secretary faces formidable problems. These are related to the size and frequency of his borrowings. A single borrowing may amount to more than all the bonds issued by all the corporations and all the States and localities in the country in a year. In setting the interest rate and maturity on a security issue, Mr. Anderson can, if he slips, thus demoralize the money market on which all borrowers depend.

Suppose the Secretary sets too high an interest rate on an issue. Then other Treasury securities, and corporation bonds as well, look unattractive by comparison. That can drive down the prices of all bonds. Yet too low a rate of interest means failure of an offer.

If speculators are permitted to take large amounts of an offering, then dump them on the market if a price drop occurs, as they did in the recent offering, then Mr. Anderson's issue is unsuccessful.

Mr. Anderson's job will require rare judgment in months ahead. Whatever he does, the frequency of his trips to the money market may keep that market in a continual state of uncertainty.

Mr. Speaker, I have often said in the past that as an individual I would know when I was approaching the limit of the money I could borrow, but that there would be no similar indication when the United States was fast approaching the limit of its credit.

The dilemma set forth above is one which I had predicted and is just another good reason why I have consistently opposed the spending bills. Opposition to the free-wheeling spending spree of the Congress has brought me more brickbats than bouquets. The easy course, and the one which is most popular in Congress at the moment, is to vote for all of the spending programs and a half-hour later tell the people that you are working night and day for a tax cut.

When this Congress adjourns, the Nation is going to suffer a terrible hangover for a good long time. Already there are signs among the people indicating they are beginning to wonder if the spree is worth the hangover.

The Mallory Quagmire

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, August 11, 1958

Mr. WILEY. Mr. President, one of the bills to come before the Senate is the so-called Mallory bill. In this morning's Washington Post and Times Herald appeared an editorial entitled "The Mallory Quagmire." I think this particular editorial makes a very fine suggestion. Among other things, it suggests that the bill go back to the committee, and gives the reasons for that suggestion.

I ask unanimous consent that the editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MALLORY QUAGMIRE

The congressional effort to upset the Supreme Court's ruling in the Mallory case has turned almost a full circle. Legislators in the House decided to intervene because, they said, the Supreme Court had confused the meaning of rule 5 (a) of the Federal Rules of Criminal Procedure. But the Senate Judiciary Committee concluded that the House, in its efforts to override the Court, would weaken the basic safeguard to personal liberty that Congress had erected in rule 5 (a). So the committee modified the House version by the insertion of a new word "reasonable," and now it is a question of whether anyone knows the meaning of this measure to end the confusion from the Mallory ruling.

Rule 5 (a) says that "an officer making an arrest * * * shall take the arrested person without unnecessary delay before the nearest available commissioner * * *." The Supreme Court interpreted this to mean that a confession obtained by the police as a result of extensive questioning of the accused before arraignment was invalid. In the so-called corrective bills neither House attempts to change rule 5 (a). The House said in effect that no delay in arraignment should invalidate an otherwise valid confession, and the Senate committee says that no reasonable delay should have that effect. Apparently this would take away the implied license of the House bill to hold an arrested person indefinitely without arraignment. But what is reasonable delay? How does the reasonable delay that would be permitted by the committee differ from the unnecessary delay forbidden by rule 5 (a)?

It can be argued with a good deal of force that no delay in arraigning an arrested person and informing him of his rights is reasonable. But "reason" is an elastic word that could easily lead the courts, the police, and prosecutors into a deeper semantic quagmire. The only proper solution in our opinion is to discard the bill entirely and to call for a new study of rule 5 (a) and the problems to which it has given rise by a Supreme Court advisory committee similar to that which prepared the present rules.

CBS News Broadcasts Inform the Public on the Middle East

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, August 8, 1958

Mr. SMITH of New Jersey. Mr. President, under our democratic system, a government must have the full support and understanding of its citizens in order to function effectively. This support and understanding can only be won by making facts and issues available freely to the public. In times of crisis, speed as well as thoroughness becomes of paramount importance in this flow of information. In the present Middle East situation, the cause of democracy has been well served by America's radio and television networks. Reaching instantaneously into virtually every home, these electronic pathways have carried a clear picture of the fast-moving events, and of the issues involved, to Americans everywhere.

In this connection, I should like to mention the valuable services performed by such programs as Meet the Press, Face the Nation, Youth Wants To Know, College Press Conference, The Leading Question, and many others. Recently the Columbia Broadcasting System has been broadcasting a series of special programs dealing with the basic issues behind the crisis. These programs have been presented in the evening, in place of scheduled commercial programs, in order that they might reach the widest possible audience. Taken together, these CBS news radio and television broadcasts have contributed toward public understanding of America's stake in the conflict.

One of these programs, The Ruble War, has already been noted on the floor of the House, and its text printed in the CONGRESSIONAL RECORD.

Following up, CBS news presented two other unique broadcasts—again on both radio and television. One was Kuwait: Middle East Oil Price, which focuses attention on the most valuable stake in the contest. The other was Prologue to the Summit: The Arab Tide, which exposed the impact of Arab nationalism on the current dilemma.

Mr. President, while the insertion of these two broadcasts is estimated to make approximately 2¼ pages of the CONGRESSIONAL RECORD at a cost of $182.25, I ask unanimous consent because of the importance of these broadcasts to the present world situation that they be inserted in the Appendix of the RECORD.

There being no objection, the scripts were ordered to be printed in the RECORD, as follows:

KUWAIT: MIDDLE EAST OIL PRIZE

(As broadcast over the CBS Television Network, Wednesday, July 23, 1958. Introduction by Howard K. Smith, CBS News Washington correspondent. Narration by Winston Burdett, CBS News Rome correspondent and a reporter of the Mediterranean and Middle East countries, who recently visited Kuwait, Saudi Arabia, Syria, Lebanon, Egypt. Produced by CBS News, New York.)

Announcer. The CBS Television Network presents Kuwait: Middle East Oil Prize. Here is Howard K. Smith.

Mr. Smith. Good evening. It is the standing policy of CBS News to bring you today's news today, but tonight we are going to do something different. We want to bring you tomorrow's news today.

Iraq has gone over to the Arab nationalists. Soon or late, in one way or another, the world's richest single piece of real estate, the little desert sheikdom of Kuwait, is bound to be drawn into the rushing mainstream of Middle Eastern events.

Kuwait is a patch of desert floating on the most prodigious sea of oil known to man. Its reserves of that precious fuel are called almost limitless by geologists. Texas is almost a secondary source by comparison.

Kuwait is wedged in between Iraq, lately turned nationalist, and Saudi Arabia, the least advanced nation in the Arab world.

It is situated at the head of the Persian Gulf, that small perimeter that supplies most of the free world's industries from Britain across Europe and South Asia to Japan with the fuel those industries must have to operate.

The dominant force in Kuwait right now is Great Britain. But Kuwait's most recent mention in the news came when a few days ago Kuwait's ruler Sheikh Abdulla conferred with Nasser in Damascus.

The topic of the conference between the ruler of the West's most important oil sources and the Arab world's leading nationalist is not known. But since then Kuwait has halted the issue of visas to western reporters and has denied cable permission to those already there.

CBS News correspondent Winston Burdett was in Kuwait before that shutdown. Here now is Burdett's report.

Mr. BURDETT. This is Kuwait, at the head of the Persian Gulf, 900 miles east of Suez: just a few years ago a fishing and trading village, but today the surging capital of a desert sheikhdom that has become the biggest oil producer in the Middle East. Population of the country, about 210,000. Area, about the size of New Jersey. Annual income from oil: more than $300 million. No place in this part of the world has seen such an extraordinary boom and such a turmoil of change in recent years. Along the Kuwait waterfront, you can still find the trade and traffic of the ancient Arab town. The shipbuilders are still making their famous dhows, the fast, high-pooped ships that Arab traders have been using for the past 3,000 years. The dhows still traffic up and down the gulf coast; they still carry their dates to Bombay and Zanzibar, and bring home African timber and Indian spices

and teak. They still smuggle gold from here to India, and at night, from across the gulf, they smuggle in illegal immigrant laborers from Iran.

The streets of the bazaar are still crammed with life; and you can still lose your way in the jostling markets under their tattered tin roofs, in the populous maze of shops and coffee houses in dusty alleys that twist between mud walls.

But all of this will be gone 10 years from now. The town has already burst its old mud walls; the walls themselves have been knocked down by an army of bulldozers; and much of Kuwait today looks like a bombed-out city, with houses and mosques alike slashed in two by new thoroughfares. And every day, more houses and more walls cave in and crumble in the bulldozers' path, to make way for new roads and new boulevards and new fleets of Cadillacs. In 10 years, the old town will probably have vanished completely.

This is the new city. The ruler of Kuwait, His Higness Sheikh Sir Abdullah Al Salim Al Sabah, has spent millions from his oil revenues on the building of highways, hospitals, and schools. Ten years ago, no public schools existed in the sheikhdom. Today, there are 70 schools like this one; they are certainly the most lavishly equipped schools in the world, with movie halls and restaurants, living quarters for the teachers, courtyards and gymnasiums and playing fields, and huge swimming pools in blue or pink or chartreuse. Teaching techniques are progressive, and there is a wealth of visual aids for the children. Even the kids in kindergarten have their own theater and their ballet classes; learning Hawaiian dancing or European ballet, and putting on a year-end pageant for their parents.

There's a severe shortage of Kuwaiti teachers, so most of the teachers are either Palestinians or Egyptians who are provided directly by the Egyptian Government. The Egyptians obey instructions from Cairo and they are the guiding force in the educational systems.. The students eat at school; they get their food free, as well as their clothes; and from this central kitchen, which the Kuwaitis say is the world's biggest, 30 thousand school meals are distributed in thermal vans each day. There is also a special technical college for engineers, but there has been trouble finding enough students for it, and it is still partially empty. Kuwait's greatest architectural monument is a high school, on a splendid campus by the sea. There is a vast central building, a magnificent library, a handsome mosque, a stadium, fine dormitories for the 800 students, and a seaside club with a swimming pool 150 feet long. Some day the Kuwaitis hope to make this an international university for the Arab world.

The Kuwait Oil Co., which has the sole concession for the almost limitless oil beneath the sands of this little country, is a 50-50 Anglo-American partnership, half owned by the British and half by American interests. The foreman at this rig is an American; the men who are working under him come from all parts of the Arab world and beyond: there are Bedouin nomads from the nearby desert, Syrians and Sudanese, Arabs from Muscat and Oman and Aden, workers from Iran, India, and Goa—a cross-section of the great influx of peoples that oil has brought to Kuwait. Today this country is the Middle East's leading oil producer, outstripping even Saudi Arabia; and right now her 3 fields are producing at a record rate of 6 million tons a month, more than 70 millions tons a year.

They represent the West's greatest single stake in the world's richest oil area.

The name of this particular field is Burgan. It is rated the world's biggest on the basis of current production, now more than a million barrels a day. There are 260 wells like this one, scattered around the desert, and their productivity makes even the most prolific well in Texas seem puny by comparison: in the United States, the daily average yield per well is 100 barrels; here, the average is 6,000. When a new well is ready to produce, tractors haul the rigs away and all that you see is this: a clean and polished wellhead, made of superhardened steel that can withstand tremendous pressures of up to 2,000 pounds per square inch. From the wellheads, the oil flows under natural pressure to the gathering centers, where oil and gas are separated in giant cylinders or separation chambers. Then it is pumped onto a huge tank farm, on a ridge overlooking the sea, 34 tanks with a storage capacity of 5 million barrels; and from the farm, it descends, by gravity, to the sea, across the coastal plain, and out along the mile-long pier, and then, still by gravity, into the holds of the waiting tankers.

An average of 8 tankers load up here each day; and the oil that leaves this pier goes to France, Holland, Italy, Australia, Japan, and Texas; but the greatest portion of it goes to Britain, where it supplies more than 50 percent of Britain's oil needs. This pier can handle 86,000-ton supertankers; but already, a couple of miles up the coast, they are building a new and greater pier that will take tankers of 100,000 tons. Indeed, the company is expanding all along the line.

Recently they have more than doubled their refining capacity, with two new refineries to produce gasoline, diesel oil, and tanker fuel. Expansion goes on also in the field; and up north, in another corner of the Kuwait desert, they are busy prospecting and drilling a new field that will probably go into production sometime next spring.

The one thing that you don't see in this whole operation is oil. But you do see plenty of signs and warnings to remind you that it's there. The port, the refineries, the gathering centers, every installation has its own fire-fighting equipment, and its entire personnel is trained to use it; each installation is inside a fenced compound, guarded by company watchmen and Kuwaiti police who relieve you of your matches, your lighters when you go in. Fire is the ever-present danger, and fire is never very far away. Day and night, the desert is ablaze with the flames from the burning of the excess gas. This gas is not being wasted; there is simply much more of it than can now be used. It supplies all the power needs both of the company and the Kuwait Government; and what is left, is burned. Scientists are now working on a way to make this gas commercial for export, that is, to pack it and transport it in bulk; and some day no doubt a way will be found.

They have a special training school here for Bedouin boys, a school run by the company. None of the boys can read or write. Their first class is in arithmetic. They go on from there to become electricians and welders, fitters and auto mechanics.

A boy who a few years ago was destined to spend his life tending goats in the desert is now learning how to use machine tools and how to bore a cylinder. It's a revolution in Bedouin life, for traditionally the men in the Bedouin camps shun manual labor. The men merely look after the camels and brew the coffee; and the women do all the rest. Now their sons—who come from a dozen desert tribes—are learning how to use an acetylene torch, and how to strip a diesel engine down to nuts and bolts and put it together again, and how to take a wrecked truck off the road and repair it and give it another 40,000 miles of life, all this before they can sign their own names. Even the life of their fathers is changing slowly. The tribes are now veering away from their traditional migration routes; and every afternoon, toward sunset, in slow caravan across the desert, they come in with their herds of camels to use one of the new water wells drilled for them by the oil company. They cannot write a single letter of the Arab alphabet, but they know the wavelength of radio Cairo, and they follow what Naasser says about Arab aspirations and the politics of the outside world.

You see a far greater change in the new oil town of 15,000 persons that has sprung up here, Ahmadi, the headquarters town of the oil company. This is a very cosmopolitan place, where Moslems, Christians, Hindus, and Buddhists live, work, and worship side by side. Of the company's 8,000 employees, more than a thousand are from India and Goa, another thousand from Pakistan; there are more than 2,000 Arab immigrants from half a dozen countries and, on top of this, about 900 Britishers and 73 Americans. Most of the Americans are drillers, geologists, and engineers. The neat brick and stucco houses in which they live have electricity and air-conditioning, gas-stove kitchens, bath and plumbing, and ample space for gardens. Only one rule is strictly enforced; the Kuwaiti employees, so as not to disturb their neighbors, are allowed to keep only 2 goats, 2 sheep, and 6 chickens. Because of that, many of the Kuwaitis have turned down the offer of modern, comfortable housing, and prefer to go on living, instead, in their own tent encampments outside the town.

Under the terms of the oil concession, exactly half of the oil profits here go into the private coffer of the ruler of Kuwait. This year, his revenues may reach a record-breaking sum of $375 million. Such wealth over the past few years has made the city of Kuwait the metropolis of the Persian Gulf.

Before oil was found here, Kuwait's only natural resource was brackish water that was unfit to drink. Water came by dhow from Iraq, was sold in goatskin bags and delivered on the backs of donkeys and camels.

Now the Sheik has built the largest water distillation plant in the world, drawing salt water from the sea and producing 4 million gallons of fresh water daily.

Right next to the water factory, an American firm is busy dredging a modern harbor, a $23 million job. Then years ago, there were fewer than 10 automobiles in the entire sheikdom: Today, there are about 25,000; the number is growing, and the traffic jams are getting worse every day. When the cars are run down, they are just driven off the road or into the desert, and abandoned. Five years ago, movies were still forbidden, and movie houses unknown. Today, a million-dollar movie palace looms at the edge of the city and there are 2 theaters inside, 1 for American and European films, the other for the latest films from Egypt, in Arabic.

Many new mosques have sprung up about the city; and at night their pointing minarets are garlanded with electric lights, and glitter like jewels as the worshipers arrive in limousines. And elsewhere, an entirely new market center is being built, and eventually the old congested bazaar of Kuwait will be wholly transplanted into clean, fresh, airy quarters like these. The bazaar of the goldsmiths and coppersmiths will be the first to move.

With more money than it knows how to spend, Kuwait has become the world's most spectacular welfare state. Everyone, Kuwait citizen or foreigner, is treated free of charge in the wards and clinics and operating theaters of the sheikdom's modern hospitals. He is cared for by European doctors and by trained nurses from Egypt, Syria, and India. Every Kuwait citizen is assured a job by his Government. He is assured a home in one of the new housing developments, where his rent may be as little as $4 a month, and even that goes toward eventual payment for the house. He gets a transportation allowance, and if he needs a loan

to buy a car, he can get that, too, with the Government paying the interest. New housing has not kept pace with the demolitions, but if a man's house is condemned and demolished, he gets fantastic compensation for it, as much as thirty to forty thousand dollars for a mud hut in the middle of town; and with the money, he can buy a refrigerator, an air conditioner, and a car. This method of compensation has been one of the more spectacular ways that the sheikdom has found to share the wealth and put cash in the pockets of the population.

Technically, Kuwait is an independent sheikdom. Its government is the personal instrument of His Highness Sheik Abdullah, and his family. The Government's income is his income; its revenues go into his private purse, and he himself keeps the strings of it. Euch Government department is headed by a sheik of the ruling family. Thus, a brother of His Highness is Minister of Health and Public Works; another brother is chief of the town police; a cousin is Minister of Education; and an uncle, Sheik Abdullah Mubarak, is both deputy ruler and commander in chief of the army and armed forces. Each of the ruling sheiks lives in a sheikly manner, with a retinue of servants and bodyguards, an armada of shiny limousines, and a palace or palaces where he holds court.

The tables at a Sheikly banquet are laden with mountains of rice and chicken and a score of whole sheep. You will meet at the sheik's receptions the American and British oil executives who run the country's oil industry; the American consul, who, aside from the British, is the only foreign diplomat here; and a British diplomat who is known as the political agent. This Britisher is a very important person. He is, in effect, the foreign minister of the country. For nearly 60 years, by special treaty terms, Kuwait has been under the protection of the British crown. The British political agent handles the sheikdom's foreign affairs, and Britain is responsible for the defense of the country.

They say that the oil reserves here are around 60 billion barrels. But in fact the reserves of Kuwait are so great that they are beyond calculation. On the oil of the Persian Gulf, the entire free world in this hemisphere, from Britain to Japan, depends for its industrial future.

For how long will it all last? Certainly, no end to the great boom here is in sight. There is money for everybody, and there is every prospect that Kuwait's huge oil revenues will go on getting huger. And yet even here, there is the rustle of political discontent. You can feel it in the bazaar, where blaring radios bring the message of Arab nationalism from Cairo; where streamers and posters proclaim the slogans of the Arab cause; and where Gama Abdel Nasser is the hero of the coffeeshops. Nasser's picture is everywhere, on the rugs that you buy in the market place, even on lighters and rings and keyrings, on handkerchiefs and coffee cups.

There is a small but vocal nationalist movement that follows the Nasser line. There is a new generation that is learning to read and write and to think politically; and which looks to Egypt as the progressive force and vanguard of the Arab world. There has been an unprecedented influx of foreigners, of Arabs from other countries, including Egyptian and Palestinian technicians and experts who are hired to help administer this sheikhdom. They are the carriers of ferment and change.

It so happens that the oil sheikhdoms along this gulf are the last area in the Middle East where the British still hold paramount power. It happens also that Arab control of Arab oil is one of the major objectives of Arab nationalism.

Finally, there is an archaic government to which the tremendous western stake in this little land is tied, a government made up of tribal sheikhs who rule autocratically, who are already quarreling among themselves about the succession, who spend their money as they will, who make their own law and their own rough justice. And so, even here in rich Kuwait, there is a rising cry for reform, for some representative government, for press freedom, and for rule by law. Even here is the prospect, sooner or later, of radical political change. The great challenge to the West in this vital spot is how to go to meet that change before it is too late, before the riptide of Arab nationalism crashes on this distant shore of the Persian Gulf.

Mr. SMITH. Since his trip to Kuwait, Winston Burdett has returned on a brief visit to New York, and is here in the studio with us now to help answer some of the questions that are in everyone's mind. Winston, would you dare a prediction about Kuwait's future?

Mr. BURDETT. Well, Howard, in the 6 weeks since I visited Kuwait, the tide of nationalism that I spoke of has swept right up to its borders, and I can't see how Kuwait can resist for very long. This is a completely artificial and archaic state. An accident of history has made Kuwait a British protectorate; an accident of geology made it the site of the biggest known concentration of oil reserves in the world. Geography placed it on the borders of Iraq, and the Iraqis regard Kuwait as their natural outlet on the Persian Gulf. Even before the Iraqi revolution, the Iraqi Government invited the ruler of Kuwait to Baghdad and urged him to merge his little state with the new defunct Iraqi-Jordanian Union; ironically, only 3 weeks ago, the British also were publicly urging him to do this, largely in order to save Kuwait from the subversive appeal and enormous power of attraction of Nasser's Arab Union.

Obviously, Kuwait has no future as an Arab nation, because it is not a nation. Its ruling family cannot be the focus of political loyalty—not in an era of dynamic nationalism. Its newly educated class can find no place in its medieval political structure.

You cannot teach people to read and write and think, and still expect them to accept the fact that they can be arrested and flogged in public because they have the impudence to overtake and pass on the road the limousine of one of the ruling sheikhs. The hundreds who are pouring out of the schools of Kuwait will soon be thousands; and in a country where the press and the right of assembly are practically abolished, this new literate generation will demand a daily newspaper to read. That will be a revolutionary demand, because of course they will want to write in the newspaper and express their political opinions. The ideas they express will be Nasserist ideas, for Nasser, beyond the borders of Egypt, through his missionaries, his teachers, his technicians, and his propaganda, has succeeded in identifying himself with modernism, progress, and social reform. Even in the desert of the Arabian peninsula, Nasser is the great name and great myth, the symbol of Arab revolt, of independent nationalism, and of the utilization of Arab resources by the Arabs themselves. It's a very explosive mixture of ideas.

Mr. SMITH. Well, Winston, what's the outlook for the oil in Kuwait?

Mr. BURDETT. Well, Howard, as in Kuwait, so in the entire Arab world today because of oil and because of nationalism you get a sense now of great and unpredictable changes ahead. On the one hand, there are the have-countries, the oil-countries, like Iraq and Saudi Arabia; on the other, there are the have-nots, the countries without oil, like Jordan or with very little oil like Egypt.

At one extreme, you have the pleasure-loving Cadillac and palace set; and at the other extreme, you have nearly a million destitute Palestinian refugees and the impoverished peasants of the Nile Valley. In Arab eyes, this does not make sense, and neither does Kuwait make sense, a tiny city-state staggering under the impact of sudden wealth, with more money than it can spend on even the most expensive social improvements. The ruler of Kuwait spends about a third of his money on these improvements and roughly another third goes to current expenses and the upkeep of the sheikhly establishment; and the last third is either banked or invested in gilt-edged securities in London. None of it is invested in the needy Arab lands around Kuwait. So the Arabs say that Kuwait's revenues, or anyway a good portion of them, should be redistributed for the benefit of other Arab countries, the poorhouse of Jordan or the even vaster poorhouse of Egypt. This is the irresistible argument of pan-Arab nationalism.

Sooner or later, I think, the march of events around Kuwait will be irresistible also. British troops could land there—they have a treaty right to do so—but it is hard to see how even they could reverse the tide for very long.

A merger or federation of Kuwait with a larger Arab union would mean first a redistribution of oil revenues among the Arab States; later, inevitably, it would mean increasing Arab pressure for a greater share of the revenues; and finally, it would mean increasing nationalist demands for an Arab share in the ownership and management of oil operations from the time that the crude oil is produced in the field to its final delivery and sale as gasoline at a gas station in Tokyo or London. Nasser's immediate objective is a share of the oil revenues, and if the Arabian Peninsula is the prize of his Arab union, then Kuwait is the greatest Middle East oil prize of all.

PROLOGUE TO THE SUMMIT: THE ARAB TIDE

(As broadcast over the CBS Television Network Wednesday, July 30, 1958. With Howard K. Smith, CBS News Washington correspondent; Winston Burdett, CBS News Rome correspondent and reporter on the Mediterranean and Middle East countries; and Daniel Schorr, CBS News Moscow correspondent 1955–57, assigned to Washington, D. C. Produced by CBS News, New York)

Mr. SMITH. Good evening. I am Howard K. Smith. Under one set of auspices or another, the chief executives of the most important nations in the world will probably meet soon, possibly in this city, New York. The force pushing them together, in some cases against their wills, constitutes one of the most interesting revivals in history.

In the Middle Ages, when our ancestors were rising from barbarism, the Arabs were far the mightiest force on earth. Now, after a thousand years of stagnation, Arab nationalism makes a new imprint on history, asserting itself in angry demonstrations against the West, in rebellion that has sent government troops into action in the streets of Beirut, in adulation of the hero who has welded Arab nationalism into a potent force.

The CBS Television Network presents Prologue to the Summit: The Arab Tide.

Mr. BURDETT. My name is Winston Burdett. I have just returned from the Middle East.

In his own country, Egypt, the power of Gamal Abdel Nasser rests, above all, on his control of the army, and is maintained by his police and his propaganda. But outside his own country, in the rest of the Arab world, Nasser's power is based on something more solid than personal dictatorship; it rests on a basic political condition, the rise of the Arab nationalist movement. Nationalism is the ruling force in the Arab world today, stronger than kings and governments, stronger than princes and politicians. No Arab government can ignore it and survive.

It is not a Communist or even a pro-Communist force; and the Arab nationalist states are not satellite states. It is an independent movement. Nasser, by his deeds, by his daring, and his propaganda, has identified himself with this force, and has become its leader.

We think of the Arab States as forever quarreling among themselves, but the ideal of a greater Arab union has tremendous power and political appeal: a power that is often stronger than the old traditional quarrels, and it is very easy to see why. These borders that divide the Syrian desert into several Arab States were not drawn by the Arabs; they were drawn by Western statesmen sitting in London and Paris. A country like Jordan is not even an independent nation by any of the standards which the West applies: it has neither the natural borders, nor the internal unity, nor the resources of an independent nation. And here is a country, Syria—which is the real home and center of Arab national feeling—where the ideal of pan-Arab union is so strong that the Syrians have surrendered their national identity and taken second place to the Egyptians in order to become part of a greater union, the United Arab Republic, whose president is Nasser.

If Nasser is the leader, then Cario is the capital of the nationalist movement: And in this role it has no rival. To this city of nearly 3 million, come students and travelers from all parts of the Middle East, from all the feudal desert lands east of Suez. They have been coming here for more than 10 centuries, to Al Azhar University, which is the seat of Moslem culture. Cairo has behind it the prestige of history, and Al Azhar University is the 500-year-old symbol of that tradition. Today, Cairo has the added glamour of a political Mecca; and the students come here to discover the excitements of big city life and learn the gospel of modern nationalism. They see its monuments all around them, especially on days of national victory, triumphal arches celebrating the departure of the last British soldier from the Suez Canal Zone, and giant cartoons of Egyptain commandos, 5 stories high, bestriding the traffic of the capital. Cairo is a unique metropolis with its new buildings reared in the mudbanks of the Nile, its wide boulevards replacing the old slums with (indistinct) and its smart apartment houses and its movie palaces built or owned by Saudi Arabian princes. For this is where the shieks of Arabia invest much of their oil wealth, and this is where the talent is, where Cairo produces the movies, writes the songs and publishes the magazines of the Arab Middle East. This is the source of new ideas and new lines of propaganda attacks, which are sent out daily from swank, expensive newspaper offices, and broadcast to the entire Arab world, from Morocco to the Persian Gulf, over radio Cairo's powerful transmitters.

To Western ears, the propaganda of Cairo has a shrill and vengeful tone. Its message has a high emotional content, keyed to the four great themes of Arab nationalism. There is the underlying impulse toward Arab union; there is the hatred of kings and of feudal power; there is the drive toward radical reform, the yearning for modernization; and finally, there is the anti-Western element, born of the revolt against the colonial powers. Arab nationalism is anti-Western, both in spirit and immediate aims. Politically, it is a fight for total independence. Emotionally, it is a quest for national dignity, something the Arabs lost under Western rule.

A decisive event for Arab nationalism was a humiliating defeat, and it was this same event that propelled Nasser to power: The defeat of five Arab States by the forces of Israel in 1948. The rout of King Farouk's Egyptian army disclosed a scandal of corruption and incompetence, and fired the military revolt that ended the monarchy and sent Farouk into exile. It was a revolt to reassert national pride.

Where other Arab leaders merely talked, Nasser also acted; and each time that he humiliated the West, his stature grew in Arab eyes. Unable to get Western arms to rebuild his army against Israel, he turned to Moscow, got his arms, and became a hero. Armies are the final measure of prestige and status in the Arab world, and it was a day of triumph for Nasser when he was able to show off, on parade, before the astonished princes and officers and diplomats of all the Arab nations, his new army of tanks and guns from the Soviet bloc. Nasser is also the man who proved that by guerrilla warfare he could make life unbearable for foreign troops on Arab soil. He set in motion forces which compelled British garrisons to withdraw from the Suez Canal Zone, and he himself raised the flag of Egypt at Port Said. His greatest defiance of the West was still to come: The nationalization of the Suez Canal, which then remained blocked to world shipping for 5 months after the Anglo-French invasion. By that act of nationalization, Nasser became the champion of a new idea, the idea of Arab ownership of Arab resources; and he gave to Arab nationalism a new weapon which it has not yet fully exploited, the weapon of economic reprisal.

In that same year, 1956, Egypt's army was beaten again by the Israelis in a brief campaign that left a trail of ravaged roads and ruined equipment in the Sinai Desert. Israel is the Arabs' greatest antiwestern grievance, and, to the humiliation of defeat, you must add the bitterness of the dispossessed, of the 950,000 Palestinian refugees, who have lost their lands and their homes, and are still caught between Israel's refusal to take them back, and the Arabs' refusal to resettle them on Arab soil for fear of losing this political and moral issue. For the Arabs, Israel is a western creation, a reintrusion of western imperialism in a new guise, and the Arab refugees in their camps are fully aware that the Israelis, in their first 10 years as a nation, have received $500 million in Government aid from the United States, nearly 3 times as much as all the Arab States combined.

But misery extends far beyond the camps of the refugees, and the Nationalists everywhere aspire to rebuild their backward societies in the modern image of the industrial West. Their nationalism is a radical social movement. Once again, in their eyes, Egypt stands in the vanguard as the country that has a 5-year industrialization plan to make herself a modern nation; and Nasser, the dictator, stands for modernism, for social services, health and education, radical land and tax reform, technology, progress. Nasser has sent his missionaries everywhere. Egyptian teachers, technicians, army officers, civil servants, to Yemen, Saudi Arabia. There is hardly a corner of the Arab world that does not feel the contagion of Egyptian ideas. There are nearly 2,000 Egyptian schoolteachers in Saudi Arabia, where there were no schools at all 10 years ago; and this kindergarten class, with its Egyptian teacher picked by the Egyptian Government, is a thousand miles from Cairo, in the sheikdom of Kuwait, an outpost of Arab feudalism on the Persian Gulf. Arab nationalism is a republican movement—the enemy of kings—and the Egyptian teachers and army instructors are its agents. They are the subverters of the old royal order, with its Bedouin tribal sheiks from the desert paying homage to feudal lords like Jordan's King Hussein. The Arabs remember how the British used and abused the institution of monarchy; how one king from the Arabian Peninsula was given the kingdom of Iraq as a consolation prize after he had been driven out of his own country; and how Hussein's own kingdom, Jordan, was invented and carved out of the desert to accommodate British interests and to console a second prince of the same exiled royal family. In the royal armies equipped by the West and trained in a western pattern, the Arabs see the vestiges of colonial rule. The United States inherited Britain's royal allies, and our stake in the Middle East became tied to them; but it was already too late to review their prestige in Nationalist eyes. The kings of Arabia are hateful to the Nationalists because they also identify with western interests the dead King of Iraq through the Baghdad Pact, the King of Saudi Arabia through his oil ties and his American airbase, the King of Jordan through the British and then the American subsidies without which his state could not survive.

Today, even the absolute monarch of Saudi Arabia, King Saud, the Sheik of Sheiks and Protector of the Holy Places, has lost his moral position. Even in his own country, there is now open and contemptuous criticism of the wastefulness of kings, growing resentment of royal squandering and financial mismanagement, and of the whole expensive royal establishment, with its air-conditioned palaces and Rolls-Royces, its swimming pools and bodyguards, its vast retinue of servants, its lavish hospitality, its round of banquets. In Saudi Arabia which I visited recently the greatest and most costly modern monument is a palace that has the biggest central air-conditioning plant in the world, outside the Pentagon. This is the feudal way of life in modern dress, the modern look supported and magnified by a modern source of income: oil. The money that oil has brought in has changed the life of the Arab countries in this decade. It has created a new industrial working class, and a commercial middle class on the fringes of the new industrial society. It has sharpened the contrasts of the Arab world, the extremes of wealth and poverty. It's on a tide of oil that western commerce, western goods and western social ideals have reached the most backward Arab lands and swept away old customs. The combination of oil wealth and Egyptian radicalism has been overwhelming. The Arab educated in Texas, California, or Cairo as a geologist or oil engineer returns to his country and looks on its backwardness with contempt.

It is no wonder that Nasser is the sworn enemy of the oil monarchs. Nasser is the leader of a have-not country whose population is increasing at the rate of half a million a year. In the field of oil politics, he stands for two things. He is the apostle of the idea that oil is the source of Arab strength. He stands for Arab possession of Arab resources. Secondly, he wants a redistribution of oil revenues so that Egypt gets a share of them. This is the meaning of his war on kings. Now that Iraq has turned nationalist, Nasser has a first wedge in a great oil-producing country; and oil has become the issue on which, sooner, or later, he must try his strength.

For Nasser, the real test of the Iraqi nationalists, the test of any union or federation that he may be able to sell to them will be how much, if any, of Iraq's oil revenues he will be able to get from them.

But Nasser has other targets. For example, the oil of Saudi Arabia, the country where the United States has the greatest direct stake. Republican Nasserism is a popular force even there—in the professional classes, in the civil service and, most crucial of all, in the Saudi Army; and the forces of public opinion generated by Cairo have already shaken the throne of King Saud. The Saudi dynasty is in the crisis and we simply do not know whether the

forces that triumphed in Iraq 2 weeks ago will triumph in Saudi Arabia tomorrow.

The Arabs are a hard people to get along with. They are volatile, proud, suspicious, emotional. They suffer from bitter sense of inferiority.

They are quite willing to sacrifice practical self-interest in order to prove a point. In their eyes, if you are not entirely with them, you're against them. These traits alone make Arab nationalism difficult to work with. What makes it all the harder is that this movement, which has just shocked the West into a new recognition of its power, has become a factor in the struggle of the cold war. And the Arab tide is still rising.

Mr. SCHORR. I am Daniel Schorr, until recently CBS News correspondent in Moscow.

Arab nationalism, as Winston Burdett said, is not pro-Communist. And communism is not pro-nationalist either. But communism today is rising—and prodding—this force because, at this stage, they are traveling in the same direction. Their parallel aim—to drive the West out of the Middle East.

Not all of their aims are parallel. The Kremlin would like to deny Arab oil, which it does not need itself, to Western Europe for the specific purpose of creating economic distress in the West, tightening the cordon of isolation around the United States, the final and greatest prize in the drive for world domination.

Nor will the Soviets, as Nasser knows, be content to accept a strong, independent, non-Communist Arab federation. Its further objectives will be disclosed later. But, for now, the Kremlin soft-pedals Communist ideology. It aids Nasser though he has banned the Communist Party. It concentrates on building tension between Arabs and the West through war scares. It provides military and economic aid, with no visible strings attached, to encourage the Arabs to defy the west and it fans the fires of fanaticism against Israel.

The Soviets seek the role of protector and defender of Arab nationalism; flattering Arab leaders, bringing them to Moscow and promising them disinterested support as they did recently with Nasser.

Said Khrushchev: "Nasser is fighting for independence and our sympathies are on his side." But, elsewhere Khrushchev said, that this is a good time for Marxists, and he said nationalism is the first stey. The first step toward what, he did not say.

But the tactics of the first step are clear—eliminating Western influence in the Arab world, establishing Russia as a major power in that region, opening the way for an unhampered onrush of Nasser nationalism, claiming credit for having accomplished this, making the Arab nationalists dependent on the Soviet Union.

That is act 1, now reaching its climax and if it follows the Soviet script, then Arab nationalism will emerge as a force oriented to Russia, if not to communism. Then will come act 2.

Mr. SMITH. What is American policy toward Arab nationalism? It is one of the ironies of the times that Russia accuses the United States of having imperalist designs on the Arab nations. In fact, American critics of official policy say we have no design at all, and that is what is wrong with us.

America did as much to create Arab nationalism as any great power did.

Our businessmen and engineers went in to dig up oil, helping create much of the wealth that makes the Arab world important.

We were the chief sponsors of the creation of Israel which beat the combined Arab armies, stung Arab national pride and thus started the nationalist revolutions by humiliated officers like Nasser.

But having inadvertently helped launch Arab nationalism, we have failed to deal with it effectively. In fact, until the latest revolution of humiliated officers, that in Iraq 2 weeks ago we do not seem to have recognized it as a new force. Critics say that it is characteristic of our policy—or lack of policy—that we have never made up our official mind how to deal with the leader of Arab nationalism, Nasser. We could never decide whether to be hostile or to be friendly, so we have been each alternately.

We made an offer to help him build his main project, the Nile Dam at Aswan. Then, in a manner the Arabs considered an insult, we publicly withdrew the offer. When in reaction to that he seized the Suez Canal and Britain and France joined an attack on him; we intervened and it was mainly American action that saved Nasser. But having saved him we blocked his dollar accounts and refused to let him buy medicine and food that Egypt needed in the United States.

Arab nationalism is hard to make friendly to a Western nation. It may be impossible to contain or overthrow it, but the point is, critics say, we have not consistently tried either policy.

If our aim has been to win Nasser's friendship, we have failed as he has become increasingly hostile to us. If our aim has been to weaken him, we have failed in that too, for he has moved from strength to strength. And now we are approaching the summit with no visible new idea.

From what has been said up until now the West's three chief interests in the Arab world seem to be first oil, second the future of the Arab quarrel with Israel, to whose continued existence we are morally committed, and third the Arabs' increasingly close relations with Russia in the cold war. What about those features? First, what is the future of western oil interests in the Middle East?

Mr. BURDETT. The future is, that very soon the Arab nationalists are going to demand a radical revision of their oil relations with the West which means their relations with the international oil companies. For example we can expect that the new regime in Iraq will seek to end a situation in which a single foreign company has the sole oil concession for the entire country. The Iraqi nationalists will almost certainly demand that this monopoly be broken up. Next they may ask: Why should they tolerate absentee ownership at all? Why should a board of directors, made up of Englishmen, Frenchmen, and Americans, and sitting in London, have the power to make policy decisions on which Iraq's future depends? And then, the question why? Why should their oil cease to belong to them the moment it is loaded into a tanker and shipped away? Ultimately the Arabs will demand an entirely new pattern of ownership and control that will make them partners in the world's distribution system and give them power in the world's markets. Indeed, some prominently placed Arabs are already demanding this. Of course, oil is of no use to the Arabs unless they can get it to market and today only the international companies, with their marketing system, can do this for them. The men I have talked to in the oil business about this say that the Arabs ought to be reasonable; that they will not want to risk an oil shutdown; and that what they really want, after all, is a larger cut of the oil revenues. After visiting the oil countries, it seems to me that this is only half the story. Of course, the Arabs want more money; but what they mainly want, it seems clear, is not a bigger cut but the pride and prestige of possession, and the political power which they believe that this will give them in the markets and political forums of the world. This is the grand objective of Arab nationalism—the goal which the West must prepare to meet, if we are to achieve our essential aim, with respect to oil, which is simply to keep it flowing to the free world.

Mr. SMITH. And now, Israel. What is the future of the Arab-Israeli dispute? Is any settlement possible to visualize?

Mr. BURDETT. Yes, it's possible to visualize a settlement. It appears now that in the present situation there's one possible source of hope and one great danger. The hope is that if the Arabs are able to unite, and if they are able to form over the years some kind of stable union, then they may gain the strength and confidence that would allow them to negotiate with Israel for a settlement. As much as anything, it has been fear and disunity among the Arabs that has made a settlement politically impossible up to now. The danger is an immediate one. It is that Israel's neighbor, Jordan, may go over to the nationalists in a sudden violent coup. If that should happen, Iraqi troops would probably then march into Jordan, then, Israeli troops would march in from the other side in self-defense, and go as far as the Jordan River, the historic border of Palestine. There would be thousands of new Arab refugees, and chaos in Jordan, and probably a new Arab-Israeli war.

Mr. SMITH. Now, the Arab role in the cold war. An increasing number of spokesmen from all over the world have suggested trying to neutralize the Arab nations, declare them off limits, or out of bounds to both Western and Russian shipments of arms. That, in fact, is the one concrete proposal that has been put forth as the substance of a summit meeting—if the summit meeting happens. There has been a hint that the United States may be willing to consider some limited form of a neutralization to stop arms shipments to some Middle Eastern countries. Is that possible?

Mr. SCORR. It's important to remember that the first proposal for neutralization originally came from Moscow a year-and-half ago, after Suez. Then it was a proposal for a big four conference to agree on banning arms shipments into the Middle East and liquidating all foreign bases, which means Western bases. Today it is a summit conference but the proposal is basically the same. Russian strategy remains the same for a summit conference because from the Soviet's viewpoint, it would crown their campaign to drive the West out of the Middle East. And still neutralization might be worth considering if it also served our aim of reducing tension in that region, and if some way could be found of making it acceptable to Israel. But, while we might be able to pull out of the Arab countries, we cannot—by treaty if for no other reason—withdraw from Turkey, Iran, and Pakistan. And it's very dubious that Russia will accept such exemptions. Also in the Middle East, as elsewhere, the attempt to quarantine one arena in the cold war gets embroiled in the issues of the cold war itself. It is hard for us to disengage militarily from an area where the Russians are busy engaging themselves. Until general disarmament or some other wider agreement establishes confidence between East and West, the prospect for Middle Eastern neutralization looks unpromising * * * even if it were desirable.

Mr. SMITH. The summit meeting is still—as an Assistant Secretary of State is quoted today as saying—"all fuzzed up." We do not know for sure whether it's going to take place at all. Or, if it does, where it will take place and exactly what will be talked about, if it does take place.

But unquestionably the main factors that a summit meeting would have to take into consideration are radical Arab nationalism and the Soviet attempt to take it over. A chief significance of the revolution in Iraq 2 weeks ago is it shattered a kind of balance in the Arab world between pro-Western Arab governments and pro-Nasser Arab governments. Nasser and his form of nationalism is now clearly in the ascendancy and

may soon win new converts. Today's news has the item that the feudal ruler of Kuwait, the richest of Arab oil lands, has asked Nasser for more Egyptian school teachers for his schools. Among semiliterate peoples, teachers are the main purveyors of influence. The tide therefore appears rising, faster than before.

A policy for the West to treat with this force is for statesmen to design. But reporters who have watched this question grow for years on the scene in the Middle East and in the great capitals of the world may be allowed to conclude that a consistent policy is now a matter of urgency.

Good evening.

Getting Ready for the Seaway

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. BYRNE of Illinois. Mr. Speaker, Chicagoans are becoming increasingly seaway conscious and this is good. I do not think that the majority of the residents of Chicago really begin to know just what the St. Lawrence seaway operation is going to bring to Chicago.

If our beautiful city continues to be guided by the vision of those men in the Chicago Regional Port District and the Chicago Association of Commerce and Industry and takes the steps to be prepared, I have no doubt that Chicago will catch up with New York.

As a Member of Congress and a member of the House Public Works Committee, I intend to avail myself of every opportunity to get the seaway story across to the people in my district. The development of the seaway reads like an adventure story and in reality, it is another instance of man's using his God-given mind to harness the resources of nature for the greater development of United States, Canada, and the rest of the world.

I am proud to be a product of Chicago and I have yet to find another city with the vibrancy felt in Chicago.

The Chicago Tribune expressed itself in a fine way on this subject last week:

GETTING READY FOR THE SEAWAY

Our Canadian correspondent, Eugene Griffin, has visited Toronto and Buffalo in order to find out what those ports are doing to get ready for the St. Lawrence seaway.

He found them well aware of what the seaway will mean to them in the way of increased shipping, and more active than most other lake ports; but their biggest plans are still in the dream-and-talk stage. Toronto, which is Canada's biggest lake port and handles about 5 million tons of cargo a year, has built two million-dollar terminals, is building a third, and plans a fourth. Still in the talking stage is a $60 million project for converting the west end of Lake Ontario into a vast harbor over a 30-year period. Toronto, being nearer midwestern markets than Montreal, hopes to make quite a dent in the latter's overseas shipping business.

Toronto has done more than Buffalo, though Buffalo handles five times as much shipping. Buffalo set up a port authority 2 years ago, established it on a 3-mile stretch of lakefront, and endowed it with the income from city parking meters and from part of the Peace Bridge tolls. But work has only reached the dredging stage.

The significant thing about both cities, especially Toronto, is an awareness that the expansion of harbor facilities cannot wait until the ships come in sight, or even until the increased business is assured. If they don't have their facilities ready in advance, they reason, the business will go to some other lake port.

Fortunately, Chicago has been guided by this reasoning for some time. The Chicago Regional Port District was established 4 years ago and has spent $24 million on grain elevators, warehouses, docks, and rail spurs. It is already operating at a profit, and is out to borrow another $25 million for more docks and other facilities.

The port district has jurisdiction only between the Indiana line and 87th Street. Farther north, the city has committed $4 million for the improvement of berthing facilities in the Navy pier area.

Arrangements in the Chicago area are not perfect. For one thing, jurisdiction is split three ways geographically, between the city, the port district, which is under the joint control of the Governor and mayor, and the Indiana communities.

But Chicago's lead in planning and construction will pay off when the ships come in. The whole area already handles about 75 million tons of cargo in a good business year, and is the world's second largest port. Whether we catch up with New York, as some people predict, remains to be seen. In any case we'll be ready for whatever business we can lure our way in the next few years and for this we can be grateful to those who foresaw years ago what the seaway will mean to us.

The Jews In Alaska

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mrs. GRIFFITHS. Mr. Speaker, I respectfully request permission to insert in the RECORD the following article by Mr. Philip Slomovitz, editor and publisher of the Jewish News, which is located in my district.

THE JEWS IN ALASKA

(By Philip Slomovitz)

A new field for Jewish social research has opened with the admission of the Territory of Alaska as the 49th State in our Nation.

While it is known that Jews have lived in Alaska for more than a hundred years, very little is known about their continuous functions as a community, or about their organizational life as a religious entity.

It has definitely been established in several earlier studies that individual Jews have explored Alaska; that they have participated in the numerous gold rushes; that there were Jewish traders there. But until very recently there were no Jewish roots in Alaska.

Alaska was discovered by the two Russians, Bering and Chirikov, in 1741, and was then declared a Russian possession. The Russian-American Fur Co., formed in 1799, encouraged trade between the newly discovered territory and the United States. Alaska was sold to the United States for $7,200,000—2 cents an acre—in 1867. A dispute over the Alaskan-Canadian borders was adjusted in 1903.

These dates may be very vital to Jewish historians and demographers in their search for data about Jewish experiences in Alaska. In the 125 years of Russian control of the territory, there had begun fur trading and fishing. Jews are believed to have shared in both activities. While government restrictions and discriminations may have curtailed their participation in fishing, fur trading certainly is believed to have attracted Jewish skill.

It is not to be inferred from this, however, that the Jews who were active in trading in Russian-held Alaska were Russian Jews. In all probability, they were mainly from neighboring Canada, with a sprinkling of American Jews.

When the United States acquired Alaska, Jewish interest in the Territory increased, and adventurous Jews came there by way of the States of Washington and California. The major links for several decades were with California, many Jews from the Golden State having established businesses in the chief Alaskan centers—Juneau, Anchorage, Fairbanks, and Ketchikan. But there was an equal interest among Jews in the State of Washington, sailings by boat from this country to Alaska having been arranged for many years, during the latter part of the last century; and the early part of the present, by way of Seattle.

Thus, with Seattle as the final point of embarkation from this country to Alaska in the eighties and nineties, the Klondike and Yukon gold rushes were attractions for Jews as they were for non-Jews. In a sense, this new attraction to the Northeast also was responsible for Jewish migration movements to the State of Washington.

A typical example of the settlers in Alaska, in the late nineties was a former Detroiter, Herbert Robinson Greenberg, who died last year at the age of 99. Greenberg left Detroit for California in 1896. From there he went by boat to Seattle, and from Seattle he went to Alaska on a summer boat. It took him 9 months to make the trip to Alaska. Today, by air, traveling time to Alaska from San Francisco is 5 hours.

Greenberg joined the Klondike gold rush and staked three successful gold-producing mines. He was in the habit, on his visits to his great-grand-nephews in Detroit, to present them with gold nuggets, and he was called Uncle Nugget. One of his mines became known as Bessie Mine and was the subject of a feature article in Time magazine 20 years ago.

Herbert Greenberg lived in Alaska from 1897 to 1954. He built the first Alaskan radio station and it was later taken over by the United States Army. His children now live in California—a typical result of Jewish wanderings away from small communities where there is danger of intermarriage because of the limited number of Jewish residents and the limitations in Jewish religious and cultural activities.

The three major Jewish personalities whose names are associated with Alaska are Ernest Gruening, the former Governor of Alaska and now its Senator-elect; and the two California pioneers, Lewis Gerstle and Louis Sloss.

Gerstle, who was born in Bavaria, December 17, 1824, worked his way on a boat to the United States in 1847, became a peddler in Louisville, Ky., was attracted to California during the gold rush days of 1848, and traveled by way of New Orleans through Panama to the Golden State. He opened a fruit stand, labored in the gold mines, later went into the wholesale grocery business in Sacramento, then moved to San Francisco and became a mining stockbroker.

When Alaska was purchased by the United States in 1867, he joined two other firms in acquiring the Russian-American Alaska Co., and acquired seal fishing rights. He also established a steamship line between San Francisco and Alaska. Gerstle was active in California Jewish affairs—congregational and philanthropic—and served as treasurer of the

University of California. He died November 19, 1902.

Louis Sloss, who also was born in Bavaria, was several months older than Gerstle, having been born July 13, 1824. Upon his arrival in the United States in 1845, he, too, became a peddler, in Mocksville, Ky., and later also went to California where he met Gerstle and both became partners, their business association lasting for 50 years. He was active in philanthropies and was treasurer of the University of California for 17 years. He died June 4, 1903.

Gerstle and Sloss were married to two sisters, Hannah and Sarah Greenbaum.

The career of Gruening is now a matter of record. It was due mainly to his valiant and untiring efforts that the campaign for Alaskan statehood materialized. Ernest Gruening, like his father, Dr. Emil Gruening, earned a medical degree from Harvard College. But, upon receiving his doctor of medicine degree in 1912, he turned instead to journalism and held numerous important editorial posts in Boston, Mass., and Portland, Maine. He served as editor of the New York Tribune and the Nation. Then he was given major Federal appointments.

As Governor of Alaska, Gruening formed the first Alaska National Guard in 1940, and during the last war was the organizer and commander of the Alaskan Territorial Guard. He was a member of the commission that supervised the construction of the great highway connecting Alaska to the United States.

A great interest was taken in Alaskan possibilities as an immigration center for Jewish refugees by Miss Ruth Gruber (now Mrs. Philip Michaels, of New York), the well-known writer, traveler, and lecturer.

Miss Gruber, as a member of the staff of the late Secretary of Interior Harold L. Ickes, in the Franklin D. Roosevelt administration, did most of the research for her Department in Alaska. She prepared voluminous reports on the Territory and she envisioned Alaska as a place of settlement for many thousands of Jews who were compelled to escape from naziism. But her idea never materialized.

Only about 35 years ago, a Jewish merchant was one of the leading citizens of the Alaskan city of Juneau. Isadore Goldstein was a popular merchant there and was highly honored for his honesty and integrity. He was elected mayor of Juneau six times.

His parents, Robert and Anna Goldstein, came from California and established a mercantile business in Juneau. Their son, Isadore, acquired that business. Isadore was married to Miss Carol Kahn, of San Francisco. He enlisted in the United States Army in World War II and temporarily left "Uncle Sam's Attic" to serve overseas. But his family still continues the Juneau mercantile business and may be known for a long time among the great pioneering families in Alaska.

Among the early American Jews who came to Alaska was the fur-trading merchant, Jack Goldstone, who was believed to have inspired the purchase of Alaska by the United States.

There are no known figures of the number of Jews in Alaska. It is believed that there are less than a thousand Jews there. There is no organized Jewish community, but with the formation of servicemen's groups there, the Jewish Welfare Board established its services and organized congregations for the men in uniform as well as for the residents in the major cities.

The Jewish Welfare Board chaplain who is in charge of the Alaska Jewish servicemen is Rabbi Joshua B. Wachtfogel, who is attached to the Alaskan Air Command in Seattle, Wash.

The Jewish Welfare Board service committee chairmen for the Alaskan Territory are: Burton H. Goldberg, Anchorage; Robert Sachs, Fairbanks; Charles Goldstein, Juneau.

The Governor of Alaska, Mike Stepovich, upon his visit in New York after Alaska was admitted to the Union, spoke of the 49th State as the new frontier of the United States. As such it is beginning to attract the adventurous and men of vision. We can well look to the near future, when organized Jewish communities will be among the major pioneering groups in the advancement of the new United States State.

A Letter From Europe

EXTENSION OF REMARKS
OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 11, 1958

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from a young friend who is currently traveling in Europe. He has an intelligent and perceptive approach to a number of problems which have compelled public attention. I am sure that his unofficial view of London, the Brussels Fair, and Germany will be of interest.

LONDON, *July 1958.*

I arrived in London just in time for the Middle East crisis amidst a chorus of "I told you so; we were right all the time; you should have supported us in Egypt or, at least, waited another week before you stopped us." Nevertheless, a great deal of criticisms could be discerned among thoughtful persons, particularly since the United States justification for the Lebanon intervention was accompanied by a particular weak set of reasons, at least, as reprinted in the English press. I had lunch with Cristopher Audland, who, after 4 years in Washington as the British Embassy's congressional outpost, is handling Somaliland and Ethiopia in the Foreign Office's African desk. This actually makes some sense, as the American desk is one of the least important desks, as there are so many United States-British contacts on all levels in the Government that United States-British policy is often made outside of the Foreign Office. Cristopher sits with five other "country" men in a large, austere, Victorian, bare room in Whitehall, directly across the street from 10 Downing Street. He has a little balcony, from which I saw Prime Minister Macmillan greeting at the door what seemed to be a group of Saudi Arabian sheiks. His hours are from 10 to 6:30, 5 days a week, which is standard in all Government offices. No one seemed to mind the cheerless looks of the office surroundings and during my 20 minutes in the office the telephone rang only once. The younger people, like Cristopher, were critical of the armed-intervention policy—a policy that placed just enough troops to let Khrushchev made hay with the neutrals and not enough to materially affect the balance of power between the Communists and the West.

London is jammed with people, many tourists from Commonwealth countries. The traffic system is impossible, and some one-way streets and parking restrictions are beginning, with more stringent measures lacking, to be introduced. Also, parking meters are being set up, although a taxpayer has filed suit claiming this is an infringement of civil liberties and the Magna Carta. Typically British, with their superregulated life, they have three violation zones on the meters; the final zone (a violation of more than 3 hours) calls for automatic arrest warrant issued, whereas the others call for fines.

Inflation is rampant in London. Over the last 2 years the price level has gone up another 15 percent. Wages have not kept pace, and there is much grumbling. The lack of a capital-gains tax has created a new class of millionaires, mostly real-estate operators and other less-dignified gamblers.

There is some movement in the direction of modernization, particularly in their administrative techniques. Progress is also being made in local government but rigid limitations remain on the ability of localities to borrow money, and finance long-term projects.

Among the upper classes a great deal of anti-Americanism remains but among the lower classes one discerns little. The word Dulles has become a symbol of all that is wrong in America. Less talk is heard about Little Rock, since there is an increasing amount of prejudice color bar in Britain. Dance halls are discriminating and so are most employers. At London University only 5 percent of the colored students were able to secure part-time employment whereas for white almost all that applied got some.

The National Health Service is working better although most doctors are still very bitter. One difficulty is, mostly in London, that many doctors that can make their living in treating patients for cash fees have not joined and in the West End this means almost every better doctor has not joined. And as I found out when I wanted to get a boil lanced, all foreigners are expected to pay, even though they have the legal right to be treated free. When this right is mentioned, you will get an appointment, but only in 3 months time.

The climate in London in the summer is cool and the countryside is lovely. A great country, even if they do drive on the wrong side of the street.

THE BRUSSELS WORLD'S FAIR

The Belgians have done a wonderful organizational and planning job in presenting a remarkable fair to the world. As one who can still remember the 1939 World's Fair (but not the 1936 Chicago one, as I have been accused) I must admit that the Belgian Fair, located in beautiful natural surroundings, tops it. Only the nighttime commercialized carnival atmosphere with its myriad of rides, hot dog and ice cream stands leaves something to be desired. (At night the pavilions are closed and everything is concentrated in the "Coney Island" section.) I spent a great deal of time in the United States, Russian, British, German, and other pavilions. There is no question that the American pavilion is more popular than the Russian. The general idea of the United States pavilion, namely to show the way the United States lives is a much more effective presentation than the ponderous Soviet machinery and other industrial development. The United States pavilion is an architectural marvel and is distinctly superior to the large and more costly Soviet building. On the other hand the United States pavilion could, at little cost, be much improved. Its worst drawbacks are due to unimaginative management.

The United States pavilion is weakest in its public relations aspects. It has almost no literature to offer, is the only pavilion that does not sell souvenirs or native products and has one of the worst restaurants. The concession was given the New York Brass Rail restaurant chain which offers poor service, greasy food, at very high prices. A ham sandwich is a dollar, a hamburger 45 cents, an ice cream soda is 50 cents. These are typical prices on which the Brass Rail Co. must do very well. The Soviets offer a great deal of free literature (even if

rather poorly done, see enclosed); we offer a 20-cent pamphlet. It would be relatively easy to give away, as the United Arab Republic does very effectively, cheap picture postcards of major American sights. And why not let Stuckeys or some other souvenir chain open a stand there?

We have an excellent thing in having 200 cheerful, dedicated college girls on duty. But why dress them in the worst looking sack dress uniforms possible with most of them, since it is cold, wearing ill-fitting yellow raincoats. They should have either good uniforms or wear their own clothes with an armband.

On the day I was there, the exhibit, Unfinished Business, was roped off without explanation, which made a poor impression. (This is on Negro problems.) It was explained to me afterwards that a guide would only take groups through so that wrong ideas could be explained, and on that day the guide was sick.

Finally there is insufficient material concerning democracy. The Swiss on the other hand have a very effective exhibit concerning their form of government. There is no reason why a copy of the Declaration of Independence, the Emancipation Proclamation, etc. could not be posted.

To sum up there is nothing wrong with the United States exhibit that better and more imaginative management could not cure. The famous caption on the 1840 chair that "it is typical of most chairs used in United States schools today" still had not been changed. When I went to the office to suggest a change in this, a Belgian, who was the top man on duty at the time, told me smugly that I should write my Senator as they thought they had a pretty good exhibit and only a Senator could make them consider changes. It is this attitude that keeps the United States pavilion from being as outstanding inside as it is from the outside.

Of the Communist bloc pavilions, the Czechoslovaks presented the most effective show. In general smaller countries did a more effective job as they have less of a problem in selection—but the larger countries had theaters where in the evening they could present cultural events. It is here that the United States was particularly effective and United States shows were always sold out. The Germans had a fine building architecturally but very pedantic and hard to understand exhibits. The British had poor architecture but interesting exhibits using a lot of movies. The French had a huge, very cluttered up exhibit hall, but their restaurant was excellent.

On the whole, the fair, expensive, is well worth a visit. The Belgians publicly say they are losing money on it, having expected 50 million and getting only 35 million visitors, but the Brussels hotels and stores sure are doing well.

FIRST GERMAN IMPRESSIONS

The great phenomenon of present-day Germany is the apathy of the average German citizen and his nonparticipation in political life. This is, of course, exacerbated by the CDU which, like the Republicans in the United States of American, places the popularity of its leading figure coupled with 1 or 2 simple issues, usually in foreign policy, into election campaigns. It has made little attempt to imbue into the public any systematic theory of politics. The tragic feature of SPD is that it has played along in this game of the primacy of foreign policy. In fact the last election was little more than a referendum on the question whether or not the West German Army should use atomic bombs. Adenauer skillfully characterized the SPD as pro-Russian and skillfully won the election, even though most Germans look upon atom bombs with some degree of fear and uneasiness. But they are much more afraid of the Soviet Union. Almost every German is anti-Russian having experienced personally communism in one fashion or another and a more sophisticated political approach particularly to domestic politics is lacking. One result of the political apathy has been the gradual destruction of the small parties as the West German increasingly votes for 1 of the 2 major parties.

Furthermore the institution of federalism, despite universal grumbling has contributed a larger number of dedicated public servants and has given the SPD the opportunity to govern, and govern responsibly, on the land level. It is a great pity that the SPD cannot realize that it must get out of the 30 percent category into the 51 percent. Thirty percent would have been wonderful in the Weimar Republic, but today control rests with those who have the power in the head of state (hence majority of legislature) which requires in the Bonn Republic a 51 percent majority. Indeed, as the title of a recent book says, Bonn is not Weimar. In addition the judiciary has effectively asserted its independence—just recently it declared a pet CDU law exempting contributions to political parties from all taxes as unconstitutional. Democracy is making progress in Germany partly as a result of the increasing prosperity, partly of the intercourse with other democratic countries, and most importantly because of the gradual changes in the social structure brought on by common developments in Western Europe. Many of the problems here, social inequality, bureaucratization, urban-rural problems, are common to all Western countries. What is still a peculiarly German problem is the inadequate understanding of its own history and an honest appraisal of the forces that led to the rise of fascism and communism, together with a greatly underdeveloped sense of social responsibility on the personal, group, and particularly community level. The standard of living here is still lower than in Great Britain or France, but like in the United States, a great deal goes into automobiles, travel, and entertainment. This is a hasty first letter and I hope to write something better in a week or two. Best wishes to all.

CHARLES R. FOSTER.

Uncle Dan From Doolie on Inflation and Saturday Work for Congressmen

---

EXTENSION OF REMARKS

OF

HON. SAM J. ERVIN, JR.

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, August 11, 1958

Mr. ERVIN. Mr. President, those of us who accept as true the proverb that "A merry heart doeth good like a medicine," are certainly indebted to Thomas M. McKnight, publisher of the Mooresville, (N. C.) Tribune for the articles he writes under the pen name "Uncle Dan From Doolie."

I feel certain that Members of the Senate and House can lighten their heavy burdens a little if they will read "Uncle Dan's" comments on inflation and Saturday work for Congressmen, which were published in the Mooresville Tribune on July 31, and Augus 7, 1958.

In order that those comments may be made available to them, I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Mooresville (N. C.) Tribune of July 31, 1958]

UNCLE DAN FROM DOOLIE SAYS

DEAR MR. EDITOR: There's rumors going around about some Congressmen working on Saturday's so's they could hurry and git through. Of course, I'm using the term "working" in its lighter sense here.

Now, Mr. Editor, I don't git alarmed as a rule over things that happens more'n a few miles from my house, because by the time a man keeps his own place from gittin into the hands of the banker or the Sheriff and figgers out enough answers to his old lady's questions and gits used to having his taxes reduced by the politicians in ever campaign and raised after ever election, he ain't got much time left to git alarmed about things taking place very far from home.

But I think this thing of Congressmen working on Saturday is heading us fer complete ruin. It has took me years and years to convince my old lady that working on Saturdays is unthinkable and un-American. When we was first married and I wanted to go to town on Saturday I had to claim I was going to the courthouse to git some farm papers signed, or the cultivator needed a new point. I recall that onct I even forged a jury summons to git to town on Saturday. But a couple wars come along and us men folks got bolder and finally got it down to where if we want to go to town on Saturday we just put on our other shirt and tell the old lady we'll be back in time fer church Sunday morning.

Now, if Congress, a outfit I figgered we could depend on to stand back of things, a sort of last refuge agin change and un-American ideas, is going to start working on Saturdays, then things is gitting in bad shape back here at home.

We got three kinds of Congressmen in Washington, the good ones, the bad ones, and those that is too lazy to show a marked trend in either direction. Up to now the good ones and the bad ones has been wrassling it out to a tie. If them lazy ones pitch in and start working on Saturdays, things is going to the dogs fer certain. A heap of folks might say that it ain't going to hurt nothing if them Congressmen do a little work onct in a while on Saturday. If you give some fellers a inch they'll take a foot, but you give a Congressman a inch and he'll take the shirt off'n your back and pass a law putting you in jail fer going naked.

I would appreciate it no end, Mr. Editor, if you'd write our Congressman and nip this Saturday business in the bud.

Yours truly,

UNCLE DAN.

[From the Mooresville (N. C.) Tribune of August 7, 1958]

DEAR MR. EDITOR: I doubt if you city folks has noticed it, but you don't see many scarecrows in the fields this year. The price of clothes is so high that a farmer can't afford to dress up a scarecrow anymore. If he's got clothes good enough to scare a crow away, he's probably wearing 'em to church on Sunday. When you git right down to brass tacks they ain't much difference between depression and inflation. Back during the big depression money was so tight that there wasn't none to speak of, and now it's so cheap that a farmer can't afford to dress up a scarecrow. Ed Doolittle says it's cheaper fer him to move his son-in-law and his rocking chair from the porch to the cherry tree than to rig up a scarecrow to keep the birds away.

One thing inflation has done to the country, inflation plus all these taxes that causes a feller to figger his take-home pay. It's taught folks to figger that couldnt' count up to 50 afore it started. One feller up at the country store said he used to set and dream what he'd do if he had a million dollars. Now he says he dreams what he'd do if he had $2,000,000.21. The extra million, he says, is for taxes and the 21 cents is fer them parking meters they got in town.

One thing I don't understand about this inflation. They say the banks is so full of money the clerks has to watch where they're walking and that they won't stoop over to pick up nothing unless it's a five spot or better. But when I go in to borrow $200 I sneak up to the window and git permission to go into the sweat box with the cashier. And I set there a hour twisting my hat into a wad and gitting all nervous while they take my pulse, my mortgage, and my shirt. And even then I ain't shore I'll git the money until they check the title and investigate around the country to see if I ever had any horse thieves in the family or has been black-balled in the Masons.

Well, I see by the papers where they got a factory in Georgia that is making wimmen's girdles out of peanuts. They say the protein that gives a peanut food value makes fine girdles. It makes a feller sorter sad to think about what science is doing to this world. It used to be a feller could pull up a handful of peanuts and set on a stump and enjoy hisself without worrying. Now evertime he eats a peanut he'll be wondering if he ain't depriving some pore working girl out of a two-way stretch.

Yours truly,

UNCLE DAN.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 11, 1958

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of August 9, 1958:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

AUGUST 9, 1958.

Adjournment of Congress like a mirage, recedes as it is approached. No telling now when it will be, although most important legislation has been considered. Many ruefully agree that the sooner Congress adjourns the better for the Nation's good.

The debt limit increase resolution to increase the permanent debt limit from $275 million to $285 million and a temporary increase to $288 million passed handily 286–108 (ALGER for). First, it was obvious to most that after the goods are bought they must be paid for. Even those who opposed many of the spending programs, as have I, are bound by the majority vote that promises later Federal payment. The only way to cut spending is to vote against specific programs. There is no other way. Second, debt limit is a misnomer. It is debt management we are talking about, that is, what form, for how long, etc. that Federal indebtedness will take, and the Treasury Secretary must be given latitude to arrange the best terms for Government securities or it will cost taxpayers even more in taxes. The pity is, there is no limit on Government spending or borrowing, until and unless we have a forced balanced budget. The yearly forced balanced budget has been and shall continue to be a continuing legislative interest of mine. Only in this way will the people be safe from inflation from Government overspending and be assured of sound fiscal Government. Thus far, neither the pressure groups, the Congress, nor the administration has exercised the necessary self-discipline in spending. The contingent liabilities of the Federal Government not covered by the debt limit now total approximately $283 billion.

The Welfare and Pension Plans Disclosure Act provides for registration, reporting, and disclosure of all such plans. Eighty to eighty-five million people rely on a million or more pension and welfare plans involving $30 billion now invested. The idea of this bill was to provide regular accounting of the financial operations and assets of these plans through the Federal Government, mainly a result of many labor union misappropriations and mismanagements of such funds. The great debate took place over the requirement of all business firms reporting their plans in detail. Proponents claimed that all business firms, just like unions, should give detailed accounting. The opponents pointed out (1) that the detailed and burdensome paperwork would be prohibitively expensive (over 5 million documents immediately required by Government); (2) that employees can be adequately protected by a full accounting without the Federal forms; (3) that such Government regulation will cause many pension and welfare plans to be stopped; (4) that labor unions should obtain their demands through collective bargaining, not through legislation. The Bosch amendment to exempt those businesses with level-of-benefits plans (fixed benefits to employees, but variable cost to employers) was defeated and the bill passed. How ironic that a bill to prevent misuse of members' money by some labor bosses should be used to hamstring business pension and welfare plans, to the detriment of employees. That's how big labor controls congressional legislation.

The National Defense Education Act of 1958, this year's Federal aid to education passed much to my sorrow although watered down by amendments. The bill provides $1,070,000,000 over 7 years for (1) scholarships, (2) loans, (3) grants to States, (4) language teaching, (5) graduate education, (6) counseling programs, (7) research, (8) statistical. Like the dew it covers everything. The debate produced astounding statements. That Congress would even debate such a bill I found hard to believe. But I saw it and heard it. My objection included: (1) The language barrier, using generalities—"defense," "temporary," "emergency," "national interest," to justify Federal aid, without factual justification. (Has Federal Government a greater interest in students' education than parents?) (2) Fear of Russia is motivating us, not appreciation of American strength in free institutions of education. We must not emulate Russia, to beat them. Russia has Government control of education. (3) Federal control will follow Federal aid, with local control losing out every step of the way. (4) Responsible students and parents are not developed, but destroyed, by Federal handouts. (5) Thousands of private scholarships will dry up. My contribution included: "We are in a deficit position $12 to $15 billion or more this year. We will meet this deficit by a large tax increase or by inflation with printing press money, cheapening our currency. We have a debt of $250 billion and contingent liabilities of $283 billion. By what right do we offer grants and loans under this heavy Federal debt? Is it fair for the heavy laden taxpayer to pay taxes, these to be distributed as scholarships? Maybe the taxpayer prefers shoes for a son or daughter. Maybe he would prefer the student to hustle and earn his way, even as he, the taxpayer, is working to provide the needs for his family. Should he or the Government do the providing? If the taxpayers' money is taken in taxes he will need Federal aid to support and educate his family. So what is the best way to do it—by leaving the fruits of labor, the earnings in the earners' hands or by Government taking it in taxes to redistribute, to return enough to support him and his family? It is a simple choice—simply explained—with a frighteningly simple conclusion if our choice is wrong. We will all be wards of the Government, not just the students, or those destitute taxpayers who are bankrupted first."

Hold That Camel!

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, August 11, 1958

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Zanesville Times Recorder, one of the fine daily papers serving central Ohio.

In the space of a few well-written paragraphs, this editorial points out in no uncertain terms the dangers embodied in S. 1869, the so-called bond revenue TVA finance bill which now rests in the House Rules Committee.

If this legislation is allowed to pass, a Government agency will for the first time in the history of this country be able to completely bypass the Congress, and the taxpayers—who have been literally forced to pour billions of dollars into the TVA empire—will be left holding a very shaky second mortgage.

I am pleased to note that many, many thinking people throughout the country are becoming increasing aware of how bad this particular legislation really is, and are beginning to speak out strongly against it. I hope that their words are not lost to us in these closing days of the session, and I commend this editorial to every Member of Congress, regardless of his political affiliation:

HOLD THAT CAMEL

TVA, the socialistic camel that got its nose in the free enterprise tent awhile back, is doing some more shoving. Senate bill 1869, passed by that body last year, and recently approved by the House Public Works Committee, proposes to expand the service area of this tax-built, tax-consuming (but not tax producing) power octopus by 25,000 square miles—so that it might logically be called the "Mississippi Valley Authority." Further, and perhaps more devastatingly, it propdses for the first time in the sad history of Government-operated businesses to sell bonds ($750 million worth) to the investing public and incidentally bypass congressional control.

With the passage of this bill, Uncle Sam would be giving the taxpayers the back of his hand, since it would wipe out the present requirement that TVA repay to the Treasury in 40 years the $1.2 billion of tax money now owed. Repayment would only be made after the bondholders claims are paid, and

TVA could use its power revenues (which should go to the Treasury) to build still more producing capacity without congressional approval.

It does not take much imagination to see this camel (which we might as well start calling the Mississippi Power Authority) kicking the whole private tax-paying electric power industry out of the tent. With the continuance of such unbridled expansion there can be no other outcome. And yet, that is but the beginning of the end. With electric power generation completely in Federal hands, the "nationalization" (a nice word for seizure) of all industry and all business would logically follow. The planners doubtless have the details worked out now—a progression of control so gradual we would never be quite sure at what point, or on what day, we finally became slaves.

Congress, to save its own waning prestige and to check the erosion of its powers by the williwaws from the White House and the snows from the Supreme Court, should arise in whatever might it still possesses and reject legislation degrading to that body. But the Senate has already passed this bill. And unless there are cries of outrage from home, the House, stricken with adjournment fever, will pass it—and quickly.

But Americans who cherish any hopes for capitalism, to say nothing of ever getting the Government out of business, must not let this happen.

Soviet Tests Raise Fallout More Than United States Blasts

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. DURHAM. Mr. Speaker, I would like to call to the attention of the House a recent Associated Press dispatch from Moscow, dated August 1, reporting that Soviet nuclear tests have caused larger temporary increases in radioactive fallout to Japan than United States tests. These were the conclusions of Japanese scientists who reported on the results of a study to a conference of the International Geophysical Year in Moscow.

In view of the misleading and vicious propaganda leveled at the United States in recent months by the Soviet Union regarding United States weapons tests in the Pacific, I think it is important for us to keep the record straight. In the words of Dr. Y. Kawabata, chief of the observation division of the Japanese Weather Bureau, the latest increase, "seems to be due to frequent tests in Siberia or the Arctic." I think the facts speak for themselves.

Mr. Speaker, under leave to extend my remarks, I include the article at this point in the RECORD:

[From the New York Times of August 2, 1958]

JAPANESE SCIENTIST REPORTS SOVIET TESTS RAISE FALLOUT MORE THAN UNITED STATES BLASTS

Moscow, August 1.—A Soviet nuclear test brought larger temporary increases in radioactive fallout to Japan than a United States experiment, a Japanese scientist reported today.

The reason is that a radioactive cloud has less distance to travel to Japan from Soviet test sites and so is hotter on arrival, the International Geophysical Year Conference in Moscow was told.

Dr. Y. Kawabata, chief of the observation division of the Japanese Weather Bureau, said that the level of fallout intensity had been steadily increasing since the study started in April 1955. He said that the latest increase "seems to be due to frequent tests in Siberia or the Arctic."

The Soviet Union said March 31 that it was suspending tests.

Measurement of nuclear fallout over large parts of the world is one activity of I. G. Y., a study of the earth and its environment. Dr. Kawabata is a member of the I. G. Y. discussion group on fallout here.

TIMETABLE GIVEN

Dr. Kawabata gave this timetable for the arrival of fallout in Japan:

From Bikini or Eniwetok, 1 to 2 weeks, from the Nevada area, 2 to 4 weeks; from Siberia and the Arctic area, 3 days to 1 week.

Dusts produced in Siberia or in the Arctic reached Japan more directly than those from Eniwetok, which move with the tropical winds, then turn near the Philippines toward Japan, Dr. Kawabata said. Dr. Kawabata explained that fallout was measured with every rainfall since April 1955. Measurements show peaks corresponding to nuclear explosion tests.

The scientist said that the intensity of fallout radiation seemed to be rising and this "suggests a dirtiness of atmosphere which is gradually increasing in respect to artificial radioactivity."

"The level of dust radioactivity is steadily increasing and the latest value is at least 10 times what it has been," he added. "This seems due to frequent tests in Siberia or in the Arctic."

Hon. William S. Hill

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. HARVEY. Mr. Speaker, as friend and colleague, I add my heartfelt tribute to the many that are being paid the Honorable WILLIAM S. HILL, of Colorado.

One of the finest dividends that life in Washington has paid me and Mrs. Harvey is the privilege of knowing Bill and Rachel Hill. Finer friends we will never know.

Congressman BILL HILL will be leaving us at the end of this session, but memories of him will surely remain vivid in many hearts for years to come. BILL HILL to me is that enviable type of high character and arresting personality—easy to know, like and admire, and hard to forget for the very human touch that is his in all his endeavors.

I stand with those, too, who say this man has left his mark. Some of BILL HILL's commonsense has rubbed off on more than one piece of legislation that came his way, and in consequence that legislation is wearing well in its service to farmers, to small-business men, to the whole American citizenry.

On this occasion words are inadequate. It can but be hoped that BILL HILL and his wife realize in some small way the void they leave behind for many of us as they go back to their beloved Colorado. With them go our prayers for the happiness they deserve.

Fifth Anniversary of the Congressional Employees Federal Credit Union

EXTENSION OF REMARKS
OF
HON. GEORGE W. ANDREWS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks, I am pleased to include for the RECORD information concerning the Congressional Employees Federal Credit Union, which union will soon observe its fifth anniversary.

A Congressman made a suggestion to a friend back in 1953 that has resulted in doing much good and providing financial help for many Capitol Hill persons. As a result of that suggestion, assistance has been made available to House employees suddenly stricken by misfortune, disaster, tragedy, and by many other acute and often desperate situations requiring quick financial aid. His suggestion resulted in the organizing of the Congressional Employees Federal Credit Union.

This credit union, which will soon observe its fifth anniversary, has proven both helpful and profitable to the employees of our offices and others employed by the House of Representatives. For instance, many an employee faced with the sudden need to return to his member's district on urgent business, and being short of funds, has found quick assistance at the credit union office. This is but 1 of the 50 or more uses to which the more than 2,100 loans, made by our credit union, amounting to over $450,000, have been put.

Our credit union began its operations in August of 1953 with about $150 on deposit put there by the charter members. It now has assets of over $130,000. Deposits owned by 819 persons employed on the Hill, on July 1, amounted to $128,064.39. It has current 416 loans amounting to $96,952.05. It has, including July increases, $37,295.26 in outside Government-approved investments. Our credit union has consistently paid 4 percent dividends since its first year, when it paid only 3 percent. Our credit union has exceeded the reserve bad loans requirements of the Government and in addition started 1958 with undivided profits of $1,461.26. Each passing month has seen an increaes in its growth, deposits having increased from $6,625.29 on January 1, 1954, to more than $130,000 as of July 21, 1958; its members from 158 to 819 during the same period. During 1953 it loaned during its part-year of operation $4,328.82. During 1957 it loaned $183,882.85 to the employees of the House. Its average deposit increased

from $41.33 in 1954 to $156.36 in July 1958 and for 1958 its growth is running well ahead of 1957.

Our credit union, as one of its benefits to its members, pays for insurance on its members, based on each member's age and deposit. For instance, a credit union member not over 55 years old who has $1,000 on deposit, automatically has an equal amount of insurance payable in event of death or total and permanent disability. It he has only 1 share or $5 on deposit, he has $5 insurance paid by the credit union. Our credit union loans are also insured by the credit union and any borower who dies or becomes totally and permanently disabled, has his loan balance paid by the insurance company.

The operating personnel of our credit union is: president, Miss Arista Huber—Congressman Jenkins of Ohio; vice president, L. K. Alderman, Jr.—Congresman Barden of North Carolina; secretary, Miss Pauline Graves—House Agriculture Committee; treasurer and former president, Ralph A. Patterson—Congressman Wainwright of New York. The 7 directors, in addition to the 4 officers are: John T. Calkins—Congressman Robison of New York; William H. Hackett—Congressman Cederberg of Michigan; and W. H. Palmer—House Property Custodian's Office. Robert B. Vail is the assistant treasurer and manager. Among others who are contributing valuable assistance in the operation of the credit union are Henry C. Oglesby, Helen Goldsmith, Frank Crowley, Virginia Morris, Barbara Burke, Mary Bowman, Clara Herman, Marie Ridgeway, Joan LeFevre, Lud Andolsek, Eugene Krizek, William F. Vail, and others.

I am sure the development of our Congressional Employees Federal Credit Union, which Members of Congress are eligible and cordially invited to join, will be of interest to us all.

A copy of its July financial and statistical report may be had by phoning the credit union in the House Folding Room, extension 2215.

Pentagon in Contractual Whirl Over Space Weapon Management

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks, I wish to include the following article, Pentagon in Contractual Whirl Over Space Weapon Management, which appeared in the August issue of Aeronautical Procurement magazine.

The author, Allen M. Smythe, a financial writer, has written a number of business articles pertaining to national defense in financial, trade, and military journals:

PENTAGON IN CONTRACTUAL WHIRL OVER SPACE WEAPON MANAGEMENT

(By Allen M. Smythe)

With our weapons systems increasing in complexity, size, and lethality as we enter the space age, the Pentagon realizes that management and contractual policies for producing these new weapons will have to be adjusted. Relationships of the prime contractor and his major component subcontractors are being reexamined.

Airframe manufacturers, disturbed by official warnings that prime contracts for guided missiles and spaceships may be shifted to electronic and rocket propulsion firms, have been urging the armed services to adopt some form of team contractors. The Navy already has established a group management for the Polaris program. The Air Force is introducing a plan with the initial awarding of the first phase of development contracts to two teams of contractors.

The Atlas system concept is one whose workability can be debated. Convair, listed as the prime contractor, will build the airframe and be responsible for testing. Associate contractors will produce the propulsion engines, guidance system, nose cone, and other large and complex components. Ramo-Wooldridge has been awarded the inspection and technical supervision. In actual practice, management responsibility rests with the Ballistic Missile Division of the Materiel Command. Such management duties for the Air Force officers were not contemplated.

While the Ballistic Missile Division is set up as a permanent agency, the Special Projects Office of the Navy is a temporary unit to expedite the building of the entire Polaris program—nuclear-powered submarines, shore facilities, and testing vessels, as well as the Polaris IRBM.

The Special Projects Office has a team concept for the management of this program, including various agencies of the Navy and main contractors alike. For instance, the steering committee has representatives from the Bureau of Ships, Bureau of Ordnance, Naval Ordnance Laboratories, Lockheed, Sperry, Aerojet, Westinghouse, and M. I. T. It is an efficient and workable group for the management and timing of the program.

The Special Projects Office has complete and positive control over all management activities. In effect, the Bureaus and contractors act as subcontractors for the overall program. Letters of intent, cost-plus contracts, and price-redetermination contracts are made by negotiation with the individual firms according to Navy procedure.

The initial Air Force Dyna-Soar project awards go to two teams of contractors. One group consists of Boeing, General Electric, Aerojet, North American, Ramo-Wooldridge, and Chance Vought. The second group consists of Martin, Bell, and Minneapolis-Honeywell. The funding of this initial development work is not expected to run over $5 million.

The Dyna-Soar, incidentally, is a vehicle which can be propelled through the upper atmosphere or orbit around the earth. It can be brought back to earth, and can be used both for bombing or reconnaissance. Its complexity will require scientific skills that are not available in any one company.

Detailed contractual arrangements have yet to be made with these contractors. Contract extensions, amendments, and terminations are to be expected as technical progress and scientific breakthroughs are made. The whole theory of team contractors is on a trial-and-error basis in this instance.

Earlier this year, the Air Force asked for cooperation from airframe firms and their trade groups to help solve the financial, management, and legal problems inherent in the weapons systems of outer space. They asked that industry devise a plan that would fit in with present Defense Department policies, such as aid to small business. They emphasized that management proposals were the outstanding needs of the present procurement policies.

Combined proposals of two or more contractors would be considered by the United States Air Force Selection Board in making awards. These combined efforts would be considered either permanent or for a single specific weapon.

Most of the airframe companies are enthusiastic over this suggestion. It offers them greater financial security and profits and maintains their standing as important military contractors.

Electronic firms and rocket propulsion builders are not so enthusiastic. Electronic trade groups have been urging the Pentagon to give their members more prime contracts for guided missiles. They have a compelling reason: Most of the scientific skill and cost go to electronic firms, regardless of type of contract.

Rocket propulsion companies whose technical experts have been responsible for many of the scientific breakthroughs for spaceships are also anxious for the prestige and responsibility as prime contractors on these new weapons systems.

While different trade associations may reflect various viewpoints, they agree on one point—the concept of team contractors may run afoul of antitrust laws. Many prefer that the Pentagon request special legislation to clear this up in advance, recalling the difficulty of retroactive and clarifying amendments to the renegotiation, profit-limiting, and other restrictive laws.

The team approach to the management problems for producing the weapons of the future hinges on the single point of responsibility for a weapon system manager. Should this manager be a national defense agency, an engineering management firm, a unit of a scientific organization, a major contractor, or a technical laboratory? There are some positive views, if not unanimity, on the subject.

One thing is certain. While present management systems are O. K. in theory, they are ponderous in operation. The weakness is the lack of emphasis on efficient management, plus the inability to reorganize when difficulties arise at the top level of administration. Industry observers, as well as Pentagon officials, now agree that management control is the key to effective weapons, fast delivery, and reasonable costs. Time will tell whether the team approach is the answer.

Raymond Albert Young Is Louisiana Champion Competing in Teen-Age Road-e-o

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. WILLIS. Mr. Speaker, the seventh Annual Jaycee National Safe Driving Teen-Age Road-e-o is under way in Washington this week and I take much pride in the fact that the Louisiana champion in this event is from my con-

gressional district. He is Raymond Albert Young, son of Mr. and Mrs. William Young of Centerville, La., who won State honors in the Louisiana finals held at Lafayette. He is accompanied to Washington by Ted L. McIntyre, son of Mr. and Mrs. F. P. McIntyre, of Franklin, La., a member of the board of directors of the Franklin Junior Chamber of Commerce.

Fifty-one top teen-age automobile drivers from the 48 States, the District of Columbia, Alaska, and Hawaii are participating in the national finals of the Road-e-o which opened today and will continue through Thursday. They are indicative of the interest and enthusiasm of over 300,000 teen-agers in more than 2,500 Junior Chamber of Commerce communities who believe that good driving is just as much their responsibility as it is of other age groups.

The purpose of this very deserving project is to give young drivers the opportunity to prove their ability to drive safely, improve their driving habits and attitudes, and to stimulate community interest in high school driver education programs.

Each State participant receives an all-expense paid 4-day trip to Washington to compete for the 3 top awards—$2,000, $1,500 and $1,000 educational scholarships to be presented at a banquet Thursday night. The contestants undergo a thorough examination of their driving ability, knowledge of the rules of the road, and a personal evaluation of their attitudes and aptitudes will be weighed before the winners are announced. The various events are being staged at the Willard Hotel, road-e-o headquarters, and at the National Guard Armory.

I am happy to join with all other Louisianians in wishing our State champion the best of luck in the road-e-o finals, and in the hope that he will become the national champion.

Communists in Latin America

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. FASCELL. Mr. Speaker, recent international events have clearly pointed out that the United States and the free world must face, for years to come, a continuing struggle.

The principles of our life and Government are under constant challenge. Every moment of disinterest and relaxation will be capitalized upon as the time for a forward encroachment by international Communists and their followers.

The United States has just adopted the largest military budget in our peacetime history. We are all agreed we must be militarily strong to withstand any aggressive action.

Yet the most distressing gains against the free world in recent years have not been made by direct military attacks. The gains have been achieved by indirect means.

We in this country must marshal the forces and efforts of the free world to effectively combat the Communist nonmilitary and indirect methods.

It has been my belief the first place to consolidate and strengthen our mutual efforts is close to home—Latin America. A strong and effective Western Hemisuhere will provide leadersihp and strong moral support for the rest of the free world.

Furthermore, as individual Americans we must use our enthusiasm and zeal to nurture and broaden the base of acceptance of our principles of life and government.

Our citizens have asked many times what can we do? There are many ways by which the individual can help foster and improve better international relations for his country.

In Florida we have been very conscious of this, particularly in my district.

I take this opportunity to set forth for my colleagues' attention these following two articles—which have appeared in the Miami Herald and the Miami News—of a series on Communist activity in Latin America:

[From the Miami (Fla.) Herald of August 5, 1958]

MOSCOW IS BOSS, ARGENTINE EDITOR BRAGS OF POLICY

(By Al Neuharth, Herald assistant managing editor)

(This is another in a series of articles about Communist activity in South America.)

BUENOS AIRES.—When we walked into the offices of La Hora, the daily Communist newspaper here, the headlines of its latest edition screamed:

"England and the United States Prepare To Increase Their Aggression."

Beneath it in smaller type:

"Russia Denounces It."

This was the Moscow mouthpiece in South America, feeding its readers the Pravda and party line.

We asked Ernesto Giudici, La Hora's chief editor, where he got the news dispatches for his newspaper.

"Some from Tass (Russia's official news agency) and many we write ourselves," the Red editor explained.

He wasn't kidding.

Out in the newsroom, reporters sat around rewriting wire service stories. The purpose: To take out the objective and factual aspects, and substitute the Communist Party line.

This is the type news Ernesto and his comrades have been publishing here for 3 months. They claim 80,000 copies of La Hora (The Time) are being bought daily by readers in Buenos Aires.

Whatever the number, they're getting a strict Red Party line, straight from Moscow.

Ernesto and his buddies made no pretense of being just a national Communist Party, as some Reds claim elsewhere in South America. These boys are proud of being a part of Moscow's international communism.

They talk as they write. Listen to some of the exchanges and you'll get the thinking of these Red neighbors.

We asked Ernesto, tongue in cheek, if he approved of our landing marines in Lebanon.

"The best thing you can do is get the hell out of Lebanon just as fast as possible."

On that subject, we noted that Buenos Aires Reds stormed the American Embassy here 2 weeks ago in protest against the Lebanon situation. A crowd of 1,000 threw rocks and ink bottles.

We figured those respectable Red newspapermen wouldn't admit to any part in that riot. But we sprung the question anyway.

"The whole bunch of us were right in the middle of that," he proclaimed proudly.

No hedging. No double-talk. These boys give it to you straight. They have been commissioned by Moscow to spread communism through this part of the world, and they aim to do their job.

Ernesto and his comrades take themselves seriously. But that outlook isn't shared by the Argentine government of President Frondizi.

The Communist Party has legal staus in this country. The government considers it no threat.

We asked Dr. Mariano Wainfeld, assistant to President Frondizi, about La Hora's claim of strength.

Wainfeld, the Sherman Adams of Argentina, shrugged it off. He insists La Hora has very little circulation and the Communist Party has no influence.

Ernesto just smiled and called Wainfeld's remark stupid.

The Red editor quickly pointed out that his party publicly supported Frondizi in last February's presidential election. He admitted that Frondizi had not sought the Red support.

As a parting shot, we asked Ernesto if the United States can live peacefully in this world with the Communists.

"If Ike starts a war, New York will be destroyed in 5 minutes," Ernesto promised.

He's just our next-door neighbor, but he sounded like Nikita Khrushchev talking.

[From the Miami (Fla.) News of August 5, 1958]

REDS IN LATIN AMERICA, NO. 2—RIO WOULD DEAL FOR RUSSIAN OIL

(By Herbert Zschech)

RIO DE JANEIRO, August 5.—The Soviet Union's trade offensive has been under way in Brazil several months.

It has been more intense here than in many other Latin nations, and last month obtained its first success when Brazilians said "Yes" in principle to a barter-trade offer.

However, the deal depends on conditions spelled out by Brazil. There has been no indication the Soviets will agree.

Russia offered to supply Brazil with 200,000 tons of crude oil—worth about $9 million—in exchange for coffee, cocoa, and cotton.

NO GATE FOR INFILTRATION

According to reports which have not been denied, Brazil accepted the offer with these two provisions:

1. It should be strictly trade, not involving currency.

2. It should not be a pretext for Russian trade missions, technical missions, or similar groups to be sent to Brazil.

Alexander Volkov, a member of Russia's Supreme Soviet, said in Rio yesterday that the time was ripe for Brazil and Russia to renew diplomatic relations, which were severed in 1947.

The Soviet delegate said Russia was in a position to supply Brazil with large quantities of machinery, including oil-drilling equipment and nuclear plants with technical assistants.

The recent Russian offer was made through the Soviet Trade Bureau in Montevideo, which is the hub of Soviet South American

activities, to the Brazilian Government's oil monopoly, Petrobras. Brazil now imports about $400 million worth of oil annually, mainly from United States firms.

Russian trade specialists earlier submitted a proposal to supply ships in exchange for Brazilian coffee. Brazil rejected the offer, but then accepted a similar deal with Communist Poland for 12 merchant ships.

ALSO WANTS MANGANESE

The Soviets also have expressed interest in buying Brazilian manganese.

Red attempts to extend trade relations lately have been meeting with increasingly favorable reception by Brazilian nationalist groups, including some quarters close to President Juscelino Kubitschek.

The Brazilian foreign ministry has been the principal center of defense against these tendencies. It remains to be seen whether the recent resignation of Foreign Minister Macedo Soares will change this attitude.

Opposition deputies in the Brazilian Congress have frequently accused the government of attempting to blackmail the United States with the Russian trade offers in order to gain financial and commercial advantages in Washington.

KEY WEAPON IN RED DRIVE: NEWSPAPERS

The Communist press in Latin America is a key weapon in the Soviet Union's economic offensive. At least 15 daily Communist newspapers, all boosting the official Kremlin line, are being published now. In Brazil alone there are six Community Party daily newspapers.

Congressman Roland Libonati: A Job That Is Being Well Done

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. ROOSEVELT. Mr. Speaker, it is far too seldom that a Congressman receives recognition and praise for his accomplishments in print. However, on Saturday August 9, Mr. Drew Pearson engaged in some well deserved praise for our colleague from Illinois [Mr. LIBONATI]. Rather than in my own words, I am happy to include Mr. Pearson's fine testimony to Mr. LIBONATI's accomplishments in the RECORD under leave to extend my remarks.

In fact, his record of attendance on the House floor is phenomenal. LIBONATI has not missed one minute of the daily meetings of Congress since he took office.

He has a 100 percent voting record on all roll and quorum calls and, because he is always there, has been called upon by Speaker SAM RAYBURN and other leaders no less than 20 times to make the motion for daily adjournments.

In addition he has not missed a single meeting of the House Judiciary Committee, of which he is a member.

LIBONATI has introduced a total of 40 bills, dealing with slum redevelopment, juvenile delinquency, veterans' benefits, Alaska statehood, and employment rehabilitation of jobless and old people.

The bill he is proudest of is called the Youth Camp Recreation Act of 1958 to authorize the Department of Health, Education, and Welfare to establish a summer camp program for indigent children all over the Nation.

Before coming to Congress, LIBONATI was cited by the American Legion for the founding of the American Boys' Camp at Coloma, Wis., which has been in existence since 1937 and which provides accommodations for 800 children of veterans and servicemen each year.

Brief for the Defense

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mrs. GREEN of Oregon. Mr. Speaker, in recent months, and year, the severest kind of criticism has been leveled at the American public school system. All too often that system has illogically and unfairly been blamed for many of our ills.

It was good, therefore, to note the recent statement by the Oregon Education Policies Commission in defense of our educational system, placing in proper perspective the role of the school in the totality of community action and environment.

Attempting to shift responsibility is a normal human frailty. However, when the move is on to place responsibility for our present crisis solely on the American schools the attempt should be strongly resisted lest it dull our perception of the proper course of action.

The statement by the Oregon Education Policies Commission has been entitled "The Public Schools and Our Times." It could as well have been described as a bill of particulars as to society's failure to face up to its responsibilties. The Portland Oregonian has described the statement as a brief for the defense in an editorial in which the highlights from that statement are reviewed. I ask unanimous consent that such editorial be printed in full in the CONGRESSIONAL RECORD.

BRIEF FOR THE DEFENSE

A few days ago we noted that the Portland public-school administration was, in effect, biting back at school critics in its resolve to reduce extracurricular demands on school time. This week the Oregon Education Policies Commission, membership of which is drawn almost entirely from among professional educators, bit back more directly and with more sting.

In a 20-page statement entitled "The Public Schools and Our Times," the commission says: "Our present crisis is a total one, not just a school crisis. This crisis belongs to everyone. And everyone is thereby responsible."

The burden of the commission's forthright statement is a recitation of the failures of everyone in meeting the responsibility:

On national leadership: "Indeed, although conditions may dictate the necessity, the fact remains that we have even found ourselves in the contradictory position of supporting feudalistic governments so as to insure our oil supply."

On parents: "In a busy world of bells ringing in appointments, of mothers working, and fathers serving the god of success, children are being overindulged to assuage the guilt feelings of adults. They are overfed, overdoctored, and overallowanced. * * * It should also be noted that many adults are demanding that the schools get tougher while they ask shorter hours for themselves."

On the public: "The public sometimes manifests more interest in the business, athletic, and social aspects (of educational institutions) than in the academic."

On advertising: "While a school child may be learning about Franklin's frugality, out of school he is to buy and be happy."

On the press: "Stories about the significant issues of our time often get pushed to obscure positions in daily papers by more sensational topics of passing interests. Or they are diminished by traditional news formulas which equate them in space and form with less important stories."

On Congress: "The Congress piously places the words 'under God' in our flag pledge, and then many Congressmen advocate a Federal scholarship bill limited to science and mathematics students. Yet every true scientist knows that we must preserve those disciplines which transcend fact in the search for truth."

There is substance in the educators' saucy rebuttal; although we can't see any chance of improvement by putting the schoolmasters in the place of the news editors—or vice versa. There would have been greater substance had the commission acted fully on its own admonition: "To understand the nature of this crisis we need to look far beyond the schools, yet keep them within our vision." There is no critical scrutiny of the schools here beyond the admission that they have not reached their goals.

Perhaps this is explained in the foreword: "This statement is not intended to offer solutions to school problems. Later statements will deal with specific problems and recommendations for possible action."

These later statements should reveal whether the commission intends to take a positive and critical role in the direction of Oregon education policies or purposes merely to supplement its able brief for the defense of the schools.

The Political Doctors of the AMA

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. DINGELL. Mr. Speaker, an article recently appeared in the San Francisco (Calif.) Chronicle of June 30, 1958, discussing the social philosophy of the AMA.

It was most interesting to me to see the daily press recognize that the people of this country have not yet been able to drag the American Medical Association kicking and struggling into the 20th century.

The article is as follows:

THE POLITICAL DOCTORS OF THE AMA

As we say goodby to the doctors who have been visitors in San Francisco during the American Medical Association's convention, our thoughts and feelings are mixed.

Last week's reports of splendid advances in medical research made exciting reading; they captured our lay imagination and inspired our gratitude. The operation on Tommy Hunter's heart made all who watched it the debtors of the wonderfully skillful people who performed it.

Yet while we were edified by the scientific achievements of the medical profession, its sociopolitical proceedings left us limp and pale and gasping for breath. Any layman

reconciled to the 20th century could hardly help wondering if the heart that beats beneath the white coat does not beat with longing for the return of the 19th.

The social viewpoint revealed by the AMA's house of delegates was old-fashioned and stuffy and foundered under clichés. In their resolutions on public affairs, the doctors fell miles behind the other scientific professions. The explanation for this, we suppose, is that the intending medico's training is never really broadening after he leaves high school. Specialization atrophies his opportunity to acquire a social understanding. Thus, when the rubber gloves are removed and the plenary session is in order, a group of rather ignorant and discontented lobbyists for the status quo ante McKinley responds to the knock of the gavel. The clarity of mind that defeated polio is left at home in the laboratory and the spokesmen for medicine address themselves to issues that bring them income-tax problems.

When the delegates shouted their opposition to the idea of extending medical care to the aging beneficiaries of social security, when they raised their hands to deny people the right to chose closed-panel medical programs, when they declined to permit their own members to elect old-age coverage under social security, an image was created. Somehow it was not in character with the image of the selfless, white-bearded, ministering physician that public relations counsels have taught us to venerate.

Gen. Alvin C. Welling

EXTENSION OF REMARKS
OF
HON. EDWARD T. MILLER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. MILLER of Maryland. Mr. Speaker, I have noted with pleasure that the President has nominated and the Senate confirmed the appointment of Col. Alvin C. Welling to the rank of brigadier general. Having had the opportunity of observing General Welling's fine performance of duty in several roles in the CBI in World War II, as district engineer in Baltimore, and more recently as Engineer Commissioner of the District of Columbia, it is gratifying that his outstanding ability is recognized by the Department of the Army. His friends and associates will look forward with confidence to his continued success in the present and future assignments.

Under leave granted, I include herewith an editorial from the Washington Daily News of August 2, 1958. It reads:

COLONEL WELLING: SPARKPLUG

This is a birthday of sorts for Colonel Alvin C. Welling, who stepped into the ticklish job of District Engineer Commissioner just a year ago.

On his first anniversary as a city official, we wish to congratulate our town on its good fortune.

Urbane, witty, polished, but as sharp as a tack, he has proved to be just the sort of sparkplug this hamstrung city government needs.

Some men can not stand to see a job undone. It bothers them. So they go out and do it.

Colonel Welling is like that. We may not always agree with him, or expect to, but it is a pleasure to have him around, because you know where he is, and what he is doing, and he is always doing.

Now President Eisenhower has nominated him for brigadier general, the rank held by his immediate predecessors and one he richly deserves. We are confident that he will get his star with all the dispatch to which, in matters relating to Welling, we have become accustomed.

Weekly Broadcast of Congressman Emanuel Celler Over Radio Station WINS, New York City, Sunday, August 10, 1958

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the transcript of my weekly broadcast over Station WINS, New York City, Sunday, August 10, 1958:

THE UNATTAINABLE SUMMIT

Khrushchev has once again changed course. He now wants no summit conference. The switch this time should unify the West against him. Also, he has relieved President Eisenhower and Secretary Dulles of the burden of a summit conference. In truth, the latter only paid lipservice to a summit conference they did not want.

Khrushchev is now in retreat. He is no longer master of the "Red House," that is, the Communist world. He went to China to meet with his old friend, Mao Tse-tung, Premier of China. The latter must have told him off, and Khrushchev was forced to refuse the summit conference under the Security Council's auspices because this would bring to the Council table Chiang Kai-shek of Nationalist China and not Mao Tse-tung. Khrushchev countered by suggesting a U. N. Assembly meeting and very properly, President Eisenhower accepted. This is what we wanted in the first place.

It may be feasible now, in the General Assembly, gradually to enlarge the U. N. inspection forces in the Middle East. They could police the areas against direct and indirect aggression. This would be a great step forward in maintaining peace in that troubled area.

In his latest note, Khrushchev again delivered one of his abrasive, infuriating lectures and asked why American and British troops are not withdrawn from Lebanon and Jordan. We might well ask why Soviet troops are not withdrawn from Hungary. In the Assembly meeting there will undoubtedly be the airing of these charges and countercharges. In any event, any promise that Russia would make below the summit or at the summit, would be like pie crust—easily broken.

If you turn the pages of history, you will see that Russia has only on the rarest occasions recognized its treaty obligations. Between 1917, when the Communists came into power in Russia, and 1957, a period of 40 years, the rulers of the Red domain made 26 highly important international agreements with the non-Red world and violated every 1 of them. Let me cite a few of these damaged and violated treaties.

In 1928, the Soviet Government joined us in the Kellogg-Briand Disarmament Pact to outlaw war. Five times in 1939 and 1940, Russia breached her obligation and invaded Lithuania, Latvia, Estonia, Poland, and Romania.

In 1932, Russia signed a nonaggression past with Finland. Seven years later, in 1939, she invaded the territory of Finland.

In 1934, Poland signed a nonaggression pact with Russia, which pact Russia violated in 1939, when the Red Army invaded Poland. It was then that Moscow split Poland with Nazi Germany.

In 1945, at Yalta, Stalin agreed with Roosevelt and Churchill that, subsequent to Hitler's defeat, the liberated nations would solve their economic and political problems by democratic means. Instead, Moscow breached the agreement in Albania, Bulgaria, East Germany, Hungary, Poland, and Romania.

In 1945, Russia and Yugoslavia entered into a 20-year treaty of friendship and mutual aid, which 4 years later was denounced by Russia when Stalin expelled Tito from the Cominform.

Again in 1945, Truman, Stalin, and Churchill at Potsdam, agreed that defeated Germany, occupied by the United States, Russia, Britain, and France, should receive equal treatment in all occupation zones. Now only the Bonn Republic, occupied by the Western powers, is a sovereign state. East Germany, dominated by Communists, is a vassal of Russia.

At the summit conference in Geneva in 1955, the Russians agreed to embrace a new Geneva spirit of international friendship. Subsequently, Russia sent arms, infiltrators, and volunteers to Egypt and abetted the ambition of Nasser in his efforts for control of the Arab world. Russia, by these insidious means, joined Syria and Yemen to Egypt.

Thus what can we expect from any U. N. Assembly meeting as far as Khrushchev and Red Russia are concerned—naught but deception and sheer wickedness. Nonetheless we must within the framework of U. N. seek to find solutions for world peace, Russia or no Russia.

FRANCE AND THE NEW CONSTITUTION

Now, turning to France and De Gaulle, it would appear that De Gaulle, the new head of the French Government, has submitted a new constitution for the Fifth Republic of France. This new constitution is strong medicine for the politically ailing France. But it is really what the doctor ordered.

The Fourth Republic of France, like its predecessors, suffered from a diffusion of powers. The legislative branch was too strong, the executive branch too weak. There were repeated falls in the Government. Premier succeeded premier in rapid succession and the premiers were blamed for the many debacles that beset France. They were not to blame; the old system was to blame. It was like shooting the pianist because the piano is out of tune.

Now General De Gaulle seeks to remedy these political weaknesses and would set up a strong centralized executive and a weakened legislative branch.

The parliamentary form of government of France has been handicapped, on the one hand, by a large Communist bloc dedicated to opposition and obstruction, and on the other hand by a proliferation of weakened democratic parties, unable to agree. All this produced a form of legislative paralysis.

Here are some of De Gaulle's proposals:

1. The President will be elected for a term of 7 years, but not alone by the Parliament as at present, but by an electoral college of thousands of members, including city councils throughout the French union.

2. The President, not Parliament, will choose the Premier, who will, however, be responsible to Parliament. A vote of censure by Parliament can force the Cabinet out, but also the President can dissolve Parliament after it has served a year and force a new election.

3. To end the legislative impasse, any government bill will become law within 3 days unless blocked by a motion of censure, signed by one-tenth of the Deputies and approved by an absolute majority of the Assembly.

4. Parliament will vote only on specified major subjects such as budget and public welfare but all other subjects will be determined by decree of the government.

5. The President will have the power to negotiate treaties. During grave emergencies he has the right to govern dictatorially.

6. A 9-member Constitutional Council of 10-year terms will perform some of the functions of the United States Supreme Court to judge the constitutionality of all laws before they are promulgated. There will also be a high court of justice composed of equal but unspecified numbers of Senators and Deputies, elected for 6-year terms.

Whatever flaws may lie in De Gaulle's plan, in general it seems to me that it is a good plan. De Gaulle's program would be quite unsuitable for democratic United States but considering the nature and character of Frenchmen and the mores and history of France, his plan ought to succeed. Already, the stature of France has been heightened under De Gaulle's determined leadership and the country is playing a genuine role in the negotiations of the so-called big five.

In a word, De Gaulle's constitution will establish a strong executive, a reform long past due in France. It is hoped that the French people in the fall constitutional referendum, scheduled for late September or early October, will approve De Gaulle's program.

UNITED STATES JUDGE PUTS OFF INTEGRATION 7 YEARS

A Federal district judge, Sterling Hutcheson, at Richmond, Va., authorized a 7-year delay this past week in the integration of schools in Prince Edward County, Va. This county is where one of the pioneer cases decided by the Supreme Court originated.

Judge Hutcheson said he feared violence and he referred to the turmoil concerning integration troubles at Nashville and Clinton, Tenn., and Little Rock, Ark. This decision, involving a 7-year delay in the integration process, comes as a rude shock, especially after the recent decision of Judge Lemley, ordering a coolingoff period of 2½ years at Little Rock before integration in the Little Rock schools can be effectuated.

The Little Rock decision is now on appeal and arguments were heard before the Eighth Court of Appeals at St. Louis, the other day. The Judge Hutcheson decision must be appealed forthwith and I believe the National Association for the Advancement of Colored People has filed notice of appeal.

It is most tragic that these Federal judges have failed to follow the rule of the Supreme Court, that integration in the schools must be with all deliberate speed. Now we are confronted with delay after delay. There would seem to be a deliberate effort on the part of these judges to spike the decision of the Supreme Court. Meanwhile, President Eisenhower offers no real leadership on this troublesome question. We have no word whatsoever from the White House, except that we should be patient and wait. Our patience is about exhausted. At his last press conference the President reiterated his conclusion that respect for the integration decision can only come from within the individual. These are cold words of comfort to those who feel the sting of segregation.

INCREASED SOCIAL SECURITY

The House of Representatives recently voted an increase in social security benefits. The vote in the House was overwhelming with 375 in favor and only 2 votes against.

The bill that was passed embodies an average 7-percent increase in benefits for all individuals now on the benefit rolls with a minimum increase of $3 a month for retirement after the age of 65.

The average increase for workers now retired would be around $4.75 a month, effective the third month following enactment of the legislation. To finance these increases and to put the social security system on a more substantial actuarial basis, the bill would raise from $4,200 to $4,800 the annual wage base to be taxed under the pay-as-you-go insurance system. It also provides a minimum increase in the payroll tax from 2¼ to 2½ percent each on workers and their employers.

While the increases are not very large and the age at which one could start receiving benefits was not decreased, in toto, the amounts involved will be substantial. The increases are consonant somewhat with the rise in cost of living. It is a step in the right direction, although I admit it does not go far enough.

CLARIFYING LAW ON UNITED STATES FLAG

On August 5, the House passed a bill which I introduced to clarify the law relating to the design and dimensions of the United States flag.

There is no Federal statute which fixes the proportionate dimensions of the flag, including the size and arrangement of the stars in the Union of the flag. These matters have been regulated by custom. However, a study of past actions on the design of the flag each time a new State was admitted to the Union, discloses no established procedure. For example, in 1912, when Arizona and New Mexico were admitted, a joint Board of Army and Navy officers recommended a plan of the Union of the flag and thereafter President Taft, by Executive order, approved its action. However, when Oklahoma was admitted in 1907, the arrangement of the stars in the flag was decided without Presidential Executive order. The Navy simply wrote the War Department, suggesting that officers meet to recommend a design. When these Departments approved a design, other agencies adopted it.

Prior to these two changes in the flag, the military services arranged the stars without Executive order or legislation, but followed, generally, the basic law of 1818 which required the addition of a star on the 4th of July next succeeding the admission of a new State.

In 1947, the 1818 law was repealed. This 1947 act, however, contains a possible ambiguity because one section limits the number of stars to 48 and another section provides for additional stars on the admission of new States.

While I think these sections can be reconciled, I nonetheless feel that the law should be clarified. Certainly it will be necessary to amend the law after Alaska is admitted into the Union, in order that the provision providing for 48 States can be changed to 49 States.

Furthermore, there should be a Federal statute setting forth standards to guide those who are given the responsibility for rearranging the component parts of the flag. Today there is no set precedent for them to follow. My bill would place this important duty under the direction of the President of the United States.

There is an act authorizing the Army to design flags and other insignia for the military departments only and to advise other agencies on matters of heraldry. However, this act gives no express authority for the Army to design or rearrange the flag of the United States.

My bill contains flexible provisions and is so drawn that it will require no change if and when additional States are admitted to the Union. At the same time, it establishes clear standards for the guidance of those who will be charged with the responsibility of providing additional stars as new States are admitted.

Federal Timber Sales Policies

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. PORTER. Mr. Speaker, practically no private timber, outside of that owned by big companies for their own purposes, is available for mills in Oregon today. This means that Federal timber sales policies and programs are of vital concern to forest products industries.

Today I conferred in my office for 3½ hours with lumber operators from the Pacific Northwest, Western Forest Industries Association executives, and officials of the Bureau of Land Management and the Forest Service. Don Barker, who owns lumber mills in Grants Pass and Eugene, was spokesman for the lumber mills in Josephine County.

Mr. Barker presented me with the petition set forth below, which is endorsed by the Illinois Valley Chamber of Commerce in a separate petition following it. The Josephine County petition was signed by 22 lumber mills, the Grants Pass-Josephine Chamber of Commerce, and the Illinois Valley Chamber of Commerce.

The petition complains that the Forest Service has not put up timber on the schedule promised. It asks for timber to be put on the market so mills will not have to close. I have referred it to the Forest Service and have arranged for the top regional officials to confer with Josephine County operators in Grants Pass at an early date.

Under leave previously granted I include the two petitions:

PETITION TO THE CONGRESS OF THE UNITED STATES

The failure of the United States Forest Service to allot sufficient funds from its appropriations and to assign sufficient technical manpower to the Siskiyou National Forest is forcing Josephine County, Oreg., into a dire economic crisis. This area has suffered abnormally heavy unemployment for almost 3 years.

Timber-using industries constitute the foundation of its economy. Unless an immediate flow of logs can be achieved, these industries must either sharply curtail their operations or close completely.

The bulk of the available log supply is on the Josephine and Rogue River working circles of the Siskiyou National Forest. For lack of funds and manpower, the forest has never sold logs from these working circles

in any volume even approaching their allowable cuts.

The forest's hopes for men and money is reflected in its annual sales plans. But the volume of logs actually offered on the market simply fails to approach the announced plans on which operators and the dependent community generally ought to be able to rely.

The record speaks for itself:

Josephine working circle

[Annual allowable cut: 34 MM]

Calendar year	Sale plan	Actually offered for sale	Deficiency from sale plan	
			MM	Percent
1955	35.15	15.6	19.55	56.0
1956	37.7	27.56	10.14	26.8
1957	47.0	19.17	27.83	59.0
1958 (1st 6 months)	43.7	14.4	29.3	67.0

Rogue River working circle

[Annual allowable cut: 54.0 MM]

Calendar year	Sale plan	Actually offered for sale	Deficiency from sale plan	
			MM	Percent
1955	44.0	33.6	10.3	23
1956	37.0	3.3	33.7	91
1957	33.5	12.8	20.7	67
1958 (1st 6 months)	50.9	24.9	26.0	51

As this record discloses, these working circles are far below their allowable cuts.

This raises another aspect of the problem. Under Forest Service rules the Rogue River working circle, for example, should sell during the 5-year budget period 1955–59 a total of 5 times its allowable cut plus 1 year's allowable cut out of the far greater deficiency accumulated during past years. Hence, for the period 1955–59, this working circle ought to market 324 MM board-feet. But through the first 3 years of this period it has sold only 49.7 MM feet. The plan for the fourth year (1958) calls for the sale of 61 MM feet. If the Forest Service can fulfill its sale plan for 1958, and it has never yet been financed or manned to the necessary level, then in order to achieve the full allowable for this 5-year period it would have to sell during 1959 a total of 213.3 MM feet. Obviously, the deficiency on this forest is going to be incredible unless the Forest Service is willing to take sharp action.

And, according to the statements made by the Forest Service last winter to Senator GORE's subcommittee, unless the allowable cut is harvested on a reasonable schedule, it is lost forever. Applying the Forest Service's rules in this respect, it is permissible to carry 54 MM feet of the current deficiency to the next budget period, 1960–64. Hence, if loss is to be avoided, of the 213.3 MM feet of deficiency that will accrue on January 1, 1959, 54 MM may be carried for sale into future years. This leaves an absolute minimum of 159.3 MM that ought to be sold in 1959 if the community and the Nation are to avoid substantial loss.

To this community, logs mean jobs. Logs mean payroll. Logs mean customers for the merchants and taxpayers for the community. We cannot survive under this type of forest management. Some of us must have logs on the market now for harvest during the coming winter. Otherwise our mills must close. We cannot operate them without logs. This will mean still another winter of deep unemployment in this community.

The Forest Service has every cent of appropriation it sought for timber sales and administration. The allowable cut figures are compiled by the Forest Service, itself. Splendid access into much of the untapped areas near our town has been supplied by a magnificent, new, all-weather road constructed by the Department of the Interior. This road is available to the Forest Service. The Forest Service does not use this road. And our community starves for logs.

The timber is here. The access is here. The mills are here. The labor force is here. We lack only men and money for our forest. The Forest Service has the men and it has the money. If the Forest Service continues unwilling to use its men and its money in our area, our community will rapidly wither.

We ask the Congress, and its individual Members to investigate this critical situation and to induce or compel the Forest Service to put on the market a full supply of logs within the limits of sustained yield. If this is not done at once, Josephine County cannot escape another dreadful winter of unemployment, loss, and suffering.

PETITION OF THE ILLINOIS VALLEY, OREG., CHAMBER OF COMMERCE

To Members of the Congress of the United States:

The Illinois Valley Chamber of Commerce heartily endorses the petition of the lumbermen for an increase in the timber cut in the Siskiyou National Forest and the south Josephine section of the lands administered by the Bureau of Land Management.

The past record shows that cutting in this area is far below the allowable cut.

The failure of the Government agencies concerned to get timber on the market has resulted in a depressed economic condition here, and unemployment.

We believe that the Congress should adopt policies requiring more timber sales, and provide the necessary funds to the National Forest Service and the Bureau of Land Management to carry out the mandate.

This chamber of commerce is the overall civic body of the Illinois Valley, made up of businessmen, professional men, merchants, etc., and generally represents a cross-section of public opinion.

This endorsement has been voted by its board of directors,

Sincerely,

ALLAN MARKLEY,
Secretary.

Two Slovak Cardinals of a Century Ago

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. FLOOD. Mr. Speaker, three leading American Slovak fraternal organizations will hold their national conventions in the following few weeks. The first Catholic Slovak Union of United States of America and Canada will convene for its 33d convention this month in Detroit, Mich., where also will be the 23d convention of the National Slovak Society during the week of September 15. The Pennsylvania Slovak Catholic Union, with national headquarters in Wilkes-Barre, Pa., will meet for its 31st national convention in Pittsburgh, Pa., during the week of September 22, 1958.

These national conventions are important to our social and civic life. Their combined membership is over 200,000.

During these national conventions their progress and past history are reviewed. Last month, during the Slovak Gymnastic Union Sokol national convention in Cleveland, Ohio, their youth performed gymnastics and calesthenics, winning the praised of the city, States, and Government officials. In tribute to the Slovak history and culture, I wish to publish an article entitled "Two Slovak Cardinals of a Century Ago," by Mr. John C. Sciranka, of Passaic, N. J., which appeared in the Bethlehem (Pa.) Bulletin and other Peerless publications to show the important part the Slovakian leaders played in the past. Mr. Sciranka is an editor of the American Friends of Slovak Freedom. The article follows:

TWO SLOVAK CARDINALS A CENTURY AGO

(By John C. Sciranka)

With His Eminence Cardinal Stepinac of Yugoslavia often in the press on account of his imprisonment by Marshal Tito, no doubt, it will interest our readers that a century ago a Slovak by birth, Juraj (George) Cardinal Haulik, received his red hat from the Holy Father as first archbishop of Zagreb, the capital of Croatia.

Cardinal Haulik was born in 1788 in the historical city of Trnava better known as "Rome of Slovakia" on account of its many churches. In 1837 he was consecrated bishop and in 1853 he became first archbishop of Zagreb. Three years later he received his cardinal's hat from Pope Pius IX.

Cardinal Haulik was so popular that he was chosen "ban" or a governor of Croatia, where he fought for the independence of Croats. And in spite of his uncompromised leadership he was never imprisoned like his 20th century successor, Cardinal Stepinac.

Cardinal Haulik is remembered by the Croatians as a true champion of their liberty. His reign of leadership in 1861 marks the golden era in the history of Croatian nation.

He is remembered as a great humanitarian. The city of Zagreb and his archdiocese will never forget the many institutions he founded and the generous scholarships given especially to the poor students. Many a Croatian family owes its cultural and intellectual rise to the generosity of this Slovak Cardinal by birth and a true leader of Croatia by adoption.

During the years of 1850–53 he published his scholarly three volumes, entitled "Selections Encyclicae Literae et Dictiones Sacrea," which was printed in Vienna. The volumes are eagerly studied by the theologians even in this age.

Cardinal Haulik died in 1869 and the entire Croatian as well as all Slavonic nations mourned his death. His full name was Juraj (George) Cardinal Haulik de Varallya but he is registered everywhere as Slovak, who loved dearly his nation.

Indeed, the Americans of Slovak origin and descent are proud that a century ago a Slovak cardinal occupied the throne of the Archbishop of Zagreb now vacant by the persecuted Cardinal Stepinac, whose red hat and robes are still awaiting him in Vatican. Let us hope and pray that with the turn of events in Europe, Cardinal Stepinac and all imprisoned church dignitaries, as well as civic and political leaders, will soon be free.

ALEXANDER CARDINAL RUDNAY

The other Slovak cardinal is His Eminence Alexander Rudnay who was elevated to the princehood of church before Cardinal Haulik.

Cardinal Rudnay was born 16 years (1760) before the Declaration of our American Independence (1776) in the town of Sv. Kriz (Holy Cross), the historical county of Nitra, Slovakia, from a family of noblemen. At the time of his birth, Slovaks had quite a few lords, known as "zemani." The future prince of the church received the best education. His family expected him to choose a diplomatic career. He preferred

priesthood and was ordained in 1783. A year later he received his doctorate of theology. For a short duration he was a chaplain on the estate of Count Berenyi. Later he was a curate at various places.

His magnetic personality and wide knowledge of sciences aided his rapid rise. In 1808 he was consecrated titular bishop and also became adviser on church matters to the Government in Budapest. In 1816 he became ordinary of the see of Sibinia and in 1819 archbishop of Estergrom, also known as Ostrihom.

It was a period after the Turks plundered his see. His predecessors were forced to leave the city, which was left in ruins, including the historical cathedral and the archbishop's palace.

The new cardinal went into a planned building action and left an immortal reputation as a builder of a new cathedral and other religious institutions. He also built a new seminary, which later, to our sorrow, expelled many Slovakian seminarians for their nationalistic adherence to the rights of their persecuted nation. Quite many of them were forced to come to America and after finishing their schooling here they became leaders in American Slovakian life. One of the expelled Slovak seminarians, Peter V. Rovnianek, came to the Cleveland, Ohio, seminary at the invitation of Rev. Stephen Furdek and before ordination he chose to become a lay leader. Rovnianek is known as father of the first American Slovak fraternal organization, the National Slovak Society, which he organized on February 16, 1890. He was also publisher of the American Slovak Gazette (founded October 21, 1886), as well as the first Slovak daily in America.

All these American Slovak leaders were great lovers and admirers of Cardinal Rudnay, who proclaimed on more than one occasion, although a primate of Hungary, with power to crown the King and Emperor, these historical words: "I am a Slovak; and though I should sit in the chair of Peter, I shall remain a Slovak."

Cardinal Rudnay built many beautiful churches in his archdiocese which still stand to the glory of God.

He was a great humanitarian, which he proved on many occasions and especially during the famine in Transylvania (where Capt. John Smith, builder of Jamestown, Va., fought the Turks in 1601–02, for which he was decorated by Duke Zigmund Bathory). He received his red hat in 1828 from Holy Father Pope Pius VIII, and died in 1831. A year after his death, Canon Palkovic published his sermons in his birthplace, the seat of the literary society of St. Vojtech (Adalbert), largest Slovak cultural institution in the world, of which many American Slovaks are members.

The Slovaks, indeed, are proud that at the time the father of our country, George Washington, was fighting for our freedom that a young Slovak, Alexander Rudnay, was preparing for priesthood and became prince of church, promulgating the same ideals of freedom as our Founding Fathers in the first American colonies.

The American Slovak youth should look with pride to its heritage that over a century ago Slovaks had two cardinals of Slovak birth, who always gave evidence of their love for the country of their forefathers, Slovakia, which today is fighting for its freedom, for which it is ripe due to its historical and cultural background of great leaders like Cardinal Rudnay and Haulik. May their memory live always in our hearts and minds, and may it inspire the present and the future generations to preserve these great ideals of four freedoms.

Interesting Opinions on Recession

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. DENT. Mr. Speaker, every now and then an interesting, different and thought-provoking article appears in one or more of our newspapers that should be given wider circulation than is always possible in a given area.

With this in mind, I want to submit for insertion in the RECORD the following featured article from the New Kingsington Dispatch, New Kensington, Pa. It covers the opinions of two well-known labor leaders, Mr. Charles Winnie Keller, president of local 302 of the United States Steel Workers and John Haser, president of Northern Westmoreland Labor Council. Both of these men are qualified to speak on this important subject.

[From the New Kensington (Pa.) Dispatch of August 4, 1958]

DO-NOTHING GOVERNMENT HIT—RECESSION CALLED CONSPIRACY TO BREAK UNIONS—UNION-BUSTING PLOT ENVISIONED

(By Philip M. Haskell)

One of New Kensington's top labor leaders has indicted manufacturers throughout the country for causing the recession and the Federal administration for its continuance.

Charles "Winnie" Keller, president of local 302 of the United Steelworkers, charged that the recession was result of a long-range program on the part of the National Association of Manufacturers and the Chamber of Commerce to break labor unions.

Another union official predicted harder times in fall.

Keller also raped the Federal Government for doing nothing to stimulate the economy.

He accused industry of building up large inventories and flooding the market with cheaply made foreign goods.

He cited the glass industry as a prime example of an international cartel dumping goods on the United States market.

"The responsibility for stimulating business rests with the Federal Government," he declared. So far, he charged, they have done little or nothing.

Keller also hit automation and the tendency of companies to combine classifications and eliminate jobs.

During one period at the Alcoa plant production increased 64 percent while workers' earnings decreased 34 percent, he stated.

For an improvement of the local economic situation Keller proposed:

A reduced workweek to combat automation.

Government spending on public works.

The plowing back of more shareholder profits into the expansion of industry.

That companies produce more products in the local plants rather than having them manufactured elsewhere.

That diversified industry be attracted to this area.

A prediction that times will be tougher in the fall than they were last year was made by John Haser, president of the Northern Westmoreland Labor Council.

"The recession is far from over, he charged and the Federal administration has done nothing to combat it."

As a cure Haser outlined organized labor's 10-point program.

Lower taxes for small incomes, increased unemployment compensation, and an expanded public works program were the principal points of the program.

"To have mass production you have to have mass consumption," he said.

To accomplish this you have "to get the young people back to work," he continued.

Union leaders pointed out that 20 years seniority was necessary in several area plants to hold a job.

Haser also endorsed Keller's stand for shorter workweek to combat automation.

In the wake of an article of this kind the following news item in the same paper shows clearly why men in various walks of life are giving more and more time to thinking about our economic situation.

JOBLESS TOTAL REMAINS HIGH

Despite a slight drop in unemployment-compensation claims the jobless in the New Kensington area total almost 7,500 according to the Pennsylvania State Employment Service.

This figure is approximately three times the number unemployed during the same period last year.

Normal unemployment payments extend for 30 weeks. For those who exhausted their benefits after June 30, 1957, the Federal Government extended payments 15 weeks.

Unemployment benefits range from $10 to $35—the average is $28.

During the first 6 months of the year benefits in the area rose to $4,500,000 from $2,378,000 during the same time last year.

Fifteen temporary workers have been hired to handle the increased load.

Why 108 House Members Oppose Increasing the Debt Limit

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. PELLY. Mr. Speaker, the following editorial from the July 31, 1958, issue of the Bremerton Sun explains in simple terms and at least in part why 108 House Members including myself voted against raising the debt limit:

MORE SHRINKAGE IN YOUR DOLLAR

President Eisenhower's new request for a $10 billion increase in the permanent national debt limit means the dollar bill or sawbuck in the bank or in your pocket is going to shrink some more.

The weight and dimensions of your dimes and folding money will not shrink, of course. But their purchasing power will—in terms of beans or biscuits or butter, or in terms of anything you may buy.

In terms of what this shrinkage does to the individual and collective funds of the people of the United States, this is larceny on a scale greater than grand. All the footpads and burglars of all times surely could not have made away with as much of the citizens' money as the process of currency inflation has accomplished in a single year—the year 1942, for example.

That was a big year in the cycle of currency inflation. The Finance Committee of the United States Senate calculates that the dollar shrank in purchasing power in 1942 by 9.1 cents. The year 1947 showed a 9-cent shrinkage.

Only 4.4 cents were melted away from the value of the United States dollar in 1948 and only half a cent in each of the following years, according to the committee's calculations. In very recent years the inflation trend has been substantially checked but not stopped.

During the first 4 months of this year the depreciation of the dollar averaged only 0.2 cents per month. The big, bad fact, however, is that the Senate committee figures show that from an arbitrary valuation of 100 cents in the year 1939, the dollar had shrunk in purchasing power by the end of April 1958 to 48.1 cents.

In just under 20 years, therefore, the value of the proud product of the United States Bureau of Engraving and Printing has gone off by nearly 52 cents, a bit more than half. A $10 bill now in circulation is worth slightly less than $5 in terms of 1939.

Where all of this will end, none can say—not even those in the top echelons in Washington who borrow and spend the money which puts the Government in more debt and requires raising the debt limit in bites of $10 billion a whack.

Tribute to the Christian Science Monitor

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1958

Mr. KEATING. Mr. Speaker, a 50th birthday is an important occasion any time. The 50th anniversary of the Christian Science Monitor is particularly significant because it marks a half century of important contributions to the American scene. It marks the golden anniversary of a newspaper which has done as much as any single publication in this country to raise the standards of journalism.

The breadth and depth of the Christian Science Monitor are properly legendary. I never cease to be amazed at the speedy and accurate manner in which the Monitor's outstanding staff interprets rather than reports, analyzes rather than repeats, the major news events of the day. I look forward with pleasure to the thought-pieces on little publicized, but important topics, and the penetrating essays on subjects far removed from the ordinary spotlight of news events. I applaud the Monitor's adherence to a pithy style and its stress on that which is really important and not what is merely sensational.

All of these attributes add up to the international daily newspaper. Its worldwide reputation merits that title.

To the firm hand and leadership of Erwin D. Canham, the present editor, must go much of the credit for this outstanding performance. He has consistently championed the highest ideals of journalism and the purposes for which the Monitor was founded.

It is a pleasure to salute the Monitor on its golden anniversary and to express the wish that it will continue for many more years its unique mission of analyzing, searching, and dissecting the byways, as well as the highways, of the world in which we live.

Comparatively Low Earnings of Employees in Gasoline Service Stations

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. ROOSEVELT. Mr. Speaker, last year Subcommittee No. 5 of the House Small Business Committee of which I have the honor to be chairman, held hearings in Washington, D. C.; Denver, Colo.; Los Angeles, Calif.; and Chicago, Ill; regarding distribution practices in the petroleum industry. During the course of these hearings testimony was heard which showed a rather dreary financial picture of the average gasoline dealer's earnings.

In the report issued by the subcommittee—House Report No. 1157, 85th Congress, 1st session—it was noted that very many dealers experienced difficulty in obtaining financing, were dependent upon their oil company suppliers, suffered from price discrimination and coercion, and had other grievances, with the result that there was a large turnover of these distributors. In confirmation, in part, of the small financial returns received by the average retail gasoline service station operator, are the hours of work and the earnings of employees in such occupation as compared with those in other businesses.

The United States Department of Labor's Bureau of Labor Statistics conducted a comprehensive study of earnings of nonsupervisory employees in retail trade for the month of October 1956. It is Bulletin No. 1220-4 and contains the latest published figures relating to gasoline service stations. I shall try to summarize some of the findings.

Widely dispersed throughout the country, in the smallest towns and the largest cities, individual gasoline service stations are comparatively small in terms of employment, rarely employing as many as eight workers. Composed almost exclusively of men, the work force is largely paid on a time-rate basis—although some larger companies provide commission payments on the sale of tires, batteries, and accessories.

Nationwide, gasoline service stations employed approximately 390,000 nonsupervisory employees in October 1956. As a group, these employees averaged $1.21 an hour, which included commissions and bonuses. It was found that 54 percent worked 48 or more hours per week.

It appears to be of special interest that although the South accounted for only about one-third of the total nonsupervisory employment in gasoline service stations, it accounted for almost two-thirds of the employees earning less than $1 and 83 percent earning less than 75 cents an hour.

For comparison purposes, I consulted the Statistical Abstracts of the United States. This indispensable compendium reflected that employees in wholesale trade worked an average of only 40.4 hours and earned an average of $2.01 an hour. Nonsupervisory employees in furniture and appliance stores worked an average of 42 hours weekly, earning an average of $1.65 an hour, and those in lumber and hardware supply stores, for an average of 42.5 hours, made an average weekly salary of $72.68 or at the rate of $1.73 an hour.

Thus, statistics appear to confirm the complaints of small and independent gasoline retailers as well as the findings of the subcommittee in respect to some of the financial problems encountered by the retail segment of the petroleum industry. From this study, one can readily conclude that such retail gasoline dealers seem financially unable to pay their employees salaries equal to that received by workers in other merchandising fields.

The Rose, Our National Flower

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. DAVIS of Georgia. Mr. Speaker, on January 7 of this year I introduced House Joint Resolution 465, designating the rose as the national flower of the United States and authorizing the President to so proclaim it. Interest in this matter has been widespread and, in fact, nationwide. As an indication of this interest, the General Federation of Women's Clubs, meeting in Detroit, Mich. for their 67th annual convention, adopted a resolution on June 6, 1958, urging the Congress to enact legislation to designate the rose as our national flower. This resolution was submitted at the national convention by the chairman of the Gardens Division, Mrs. Chester E. Martin of Atlanta, Ga. Under unanimous consent, I insert the resolution herewith:

THE ROSE, OUR NATIONAL FLOWER

Whereas the United States of America has no national flower; and

Whereas the rose grows in profusion in all States and blooms in all seasons of the year and lends itself to multiple use; and

Whereas the rose by its beauty has won a place in the hearts of the American people: Therefore be it

Resolved, That the General Federation of Women's Clubs, in convention assembled, June 1958, urges the Congress of the United

States to designate the flower commonly known as the rose as the national flower of the United States.

Submitted by Mrs. Chester E. Martin, chairman, gardens division. Approved by policy committee. Adopted June 6, 1958.

The United States Wise Woman

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. LANE. Mr. Speaker, I wish to include a very sensible article on one for whom we in Massachusetts are justly proud for her brilliant and outstanding public service to the United States both here and abroad.

[From the Boston Globe of August 10, 1958]

THE UNITED STATES WISE WOMAN

(By Marjorie W. Sherman)

They all think she's wonderful, from the King of Belgium to the push-push boys who run the pedalchairs round the fair. She is affectionately called the United States wise woman in Spanish, and the Germans and French and Belgians come to her with many of their problems of diplomacy. "Ask Madame Howard" is one of the best answers in Brussels, and this slight, sweet-faced Bostonian can usually help.

"Where can I get American apple pie and ice cream," the hungry, homesick New England businessman wants to know. (And the answer to that one is right at the Brass Rail.)

Speaking of apples, green ones, that is, you wouldn't believe how many Americans ask what the trees are outside the United States pavilion. (There are apples—green ones—growing right on them.)

Some questions are harder, at least to find the right answer for—can somebody's 6-year-old please wade in the exhibit hall pool ("it's the only thing he wants to do at the fair")?

Can you find my daughter, she wants to stay here and work so she has run away, she doesn't speak any English?

What is the name of the red flowers in the gardens you can see from the road train (there are some 2 million plants used in the 500 acres of the exposition grounds)?

They want to get married at the fair, some of them are suddenly afraid they're going to die at the fair.

Deputy Commissioner General Katherine Howard is on demand many, many hours out of the 24. And she loves it. She has her family with her, including her pretty niece, so her lovely Brussels house (which she had to decide on sight unseen and which is just as delightfully like her as her Beacon Street home here) is full of young people most of the time.

Her decorative red-carpeted offices at the United States pavilion make you think of the United Nations any day in the week, and kings and prime ministers come in to refresh their minds as well as rest their feet. She has personally entertained more than a thousand of the fair's visitors, and officially greeted thousands more, and in addition she has given luncheons and dinners in the name of the United States to scores of VIP's in her attractive pavilion dining room.

She and Mr. Howard still find time to enjoy Belgium (which they feel has a lot of the conservative, pleasant living pattern of Boston), and their many Belgian at-home invitations, a real tribute to the gracious intelligence that characterizes Katherine Howard.

Her praise goes to so many others at the pavilion—the more than 200 girls who are the United States friendly, efficient guides and who ought, frankly to get a credit rating toward a career in the diplomatic service by October and fair's end.

They are a most attractive crew, in their chemstrand-nylon gray pleated skirts and flower-fresh yellow blouses, their decorative shoes and matching gray berets.

All of them speak French, a number of them Spanish and German as well, and they've yet to put a foot wrong, even though the arrogant demands of some of the fair's thousands of daily visitors must tempt them sometimes. They've been on duty from April, living five to a small, neat room, and nearly half of them plan to stay on in Europe to study this winter, even though less than a third of them had ever been in Europe before this year.

About 60 of the guides are college boys, and girls or boys, they are wholly a credit to their country, and they got the unofficial but fervent best at the fair from the Rotary Club (and nearly a third of the world's 450,000 Rotarians are estimated to have visited Brussels so far).

Their own top vote for the United States pavilion's best, in fact, it is most of the exposition staff's No. 1 "don't miss" of the entire fair, is the Circarama, the 360-degree Disney color movie that takes 19 minutes, is seen standing in a small circular building where 11 synchronized-projectors produce an uninterrupted panorama.

It's new to the world, deftly and beautifully done, makes you homesick quicker than the Stars and Stripes, and Katherine Howard thinks she must have seen it at least 27 times. I left her getting ready to take Mollie and Ernest Henderson and Bessie and Sam Pappas in just as soon as they arrived.

Congresswoman Florence P. Dwyer Among America's Outstanding Women

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. CANFIELD. Mr. Speaker, it has been announced by the Office of the United States Commissioner General of the Brussels Exhibition of 1958 that during the year that Office will present American women who have distinguished themselves in various fields of endeavor.

I have been pleased to learn that among America's outstanding women who have been given a cordial invitation to be featured in a special program to be arranged in their honor is our distinguished colleague from New Jersey, Congresswoman FLORENCE P. DWYER.

Regretfully, it appears, Mrs. DWYER has decided she will be unable to accept the invitation due to the demands of her congressional assignment. This, however, is readily understandable to the thousands who have followed the legislative work of this remarkable woman in the State Legislature of New Jersey and more recently in the Congress of the United States. She is an indefatigable representative, specializing in so many humanitarian fields in which women are preeminent, and her works in committee and on the floor of the House of Representatives, have attracted wide attention and acclaim.

Citizen Patterson Speaks

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. HOSMER. Mr. Speaker, at the venerable age of 82, George E. Patterson of 926 Appleton Street, Long Beach, Calif., looks on the passing political scene with a long lifetime of knowledge and experience. A former attorney and newspaper publisher, Mr. Patterson sent me the following analysis under the title "Let's Win" which seems to be of general interest:

LET'S WIN

The Republican (or Lincoln) Party is on trial. The party organization and leadership has been greatly blessed by Eisenhower.

We have had 12 Republican presidents and 4 Democrat presidents since Lincoln. The writer has personally been interested in this party since Grant. We have noticed the only time the party has been defeated has been when there was a split in the Republican Party. For example, the Taft-Theodore Roosevelt split.

The present Democratic Congress, elected because there is a split in the Republican party, is making it difficult for our President in his efforts to serve our country. He needs cooperation. It is not cooperating with our President in trying to formulate policies in the public forum. Tell the President. As leader of his own party and this country he must adopt and enforce the policies of our country under the Constitution. All parties must unite back of the President in foreign affairs.

Foreign countries must not be permitted to interfere in our Foreign Policy. They have in many ways in times past. In fact, foreign countries have involved us in wars by interfering in our foreign policy. In the past three wars, during Democratic administrations, foreign powers have interfered and have created conditions which lead us to war.

The three wars during Democratic administrations, World War I, World War II, and the Korean (or Truman) war, cost the United States $350 billion and 1,450,000 causalties. We must not forget that Eisenhower stopped the Korean war thus saving millions of dollars and thousands of human lives. Likewise, we must not forget we practically fought that war alone and paid most of the cost alone. Other countries pushed us into that war and then scattered. Eisenhower had the courage to stand against the pushing tactics of other countries.

We all know how England, France, and Israel tried to involve us in Egypt. We have Eisenhower to thank for stopping that war. Wars cause inflation followed by deflation. Another fact to remember is that the national debt was $16 billion under the Coolidge (Republican) administration. Then that debt went to $283 billion, under Roosevelt and Truman. This was besides the untold amount of Democratic commitments and vast increases in taxes, direct and indirect. Many of these were passed over to Eisen-

hower although he had nothing to do with creating them. That increased the cost of living tremendously. Eisenhower inherited the result of 20 years of Democratic rule.

There is talk of cutting the defense budget in these perilous times—playing politics. The Democrats throw up a smoke screen to cover their extravagance. The United States Government was in existence 156 years before the Truman administration. The Guarantee Trust Company of New York said: "Truman, in his 7 years of office, and the Democratic Congress, taxed the American people $50 billion more than all the other 31 Presidents combined including Franklin D. Roosevelt." The Truman administration spent more than all the other presidential administrations combined.

This is colossal stupidity, as most taxes are paid by poor people, directly or indirectly. Truman's Attorney General, Howard McGrath, had this in mind when he said while Truman was President: "I know enough about the White House to blow it so high the force of gravity would never bring it back to earth."

The recent conviction of fraud in the Federal court of St. Louis of Mathew J. Connelly, who was secretary to President Truman, and T. Lamar Caudle, who was Assistant Attorney General under Truman, in charge of Tax Division, is typical of Democratic laxity.

The Democratic Party gave diplomatic representation to Russia. This was followed by Russia sending thousands of their representatives here to preach communism. The Democratic Party gave Manchuria to Russia. This is the most productive section in China and resulted in Russia being in control of China. The Democratic Party loaned over $11 billion to Russia, gave materials to Russia, loaned ships to Russia (which Russia refused to return), and gave part of Germany, including Berlin, to Russia, and many other concessions. All of which made Russia strong. Now Russia turns against us.

The Democratic Party has been under the control of big city bosses and labor leaders. They forced the nomination of Harry Truman as Vice President on President Roosevelt. Senator Barkley, recently deceased, said during the Truman administration, when Barkley was a candidate for Democratic nomination for President, the city bosses and labor leaders forced him to retire as they were promised greater control of the Democratic Party. The Democrats, through their control of committees, played politics with our defense in last session of Congress.

The Republican Party first advocated social security under President Hoover. The Republican Party first advocated under President Hayes, the doctrine where local and private enterprise were inadequate the Government should undertake the job. The Republican Party put the Government in the parcel-post business under President Taft. The Republican Party first enacted the Sherman Antitrust Act under President Harrison. The Republican Party first championed reciprocity with Canada under President McKinley. The Republican Party, under President Theodore Roosevelt was the force back of the progressive movement to regulate big business and not wreck it. The Republican Party, under Coolidge, passed the first law giving organized labor the right to bargain collectively. We might go on enumerating hundreds of other acts the Republican Party favored, helpful to small business and people generally.

However, there are two elements in the Republican Party, the standpat and the progressive. When the Democrats were successful in Washington the ideas of the progressive Republicans were confiscated by the Democrats and adopted as their own, and so publicized.

The farm problem, which is a result of war, is very vital and the consumer problem is also vital. When Eisenhower took office, there was a $9 billion farm surplus, which was costing $1 million a day storage. The two largest farm organizations, the American Farm Bureau and National Grange were against rigid price support. Eisenhower has accomplished much, and if given proper support by the Democratic controlled Congress, will solve the farm problem.

There are many things which add to the farm problem. Labor cost has gone up about 200 percent since 1940. Now nearly 70 percent of cost of a product is labor. We all labor and sympathize with the laborer. But for the plutocratic labor boss to try and make the farmer believe he will be benefited by raising the labor cost, is silly.

Eisenhower has been fighting for the American system of free enterprise, as opposed to Government controls and regulations, individual liberty as opposed to individual enslavement.

England tried nationalization of railroads, coal mines, etc., resulting in great deficits and losses. Germany did away with Marx's ideas, substituted private for state regulation and management, and today it is the most prosperous country in Europe.

President Eisenhower is trying to maintain the peace and prosperity and keep expenses down to the minimum, all things considered, and serve all the people regardless of race, creed, pressure groups or politics. That is a gigantic undertaking. Let us help him?

Coping With the Problem of the Drunken Driver

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, August 11, 1958

Mr. NEUBERGER. Mr. President, I ask unanimous consent to include in the Appendix of the CONGRESSIONAL RECORD a most effective and informative article from the New Christian Advocate of August 1958, by Mr. William N. Plymat. Mr. Plymat, a leading church layman in our Nation, is president of the Preferred Risk Mutual Insurance Co., which caters only to motor-vehicle operators who do not drink intoxicating liquor. He is also an able attorney at law. In this article from the New Christian Advocate, Mr. Plymat pleads for a realistic approach to the urgent task of coping with the intoxicated and drunken driver who imperils not only his own life, but that of his passengers and others using the highways and public streets.

I ask unanimous consent that the article by Mr. William N. Plymat, entitled "We Need an Intermediate Offensive on the Drinking Driver," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE NEED AN INTERMEDIATE OFFENSIVE ON THE DRINKING DRIVER

(By William N. Plymat)

From the day the motor car first arrived on the scene, Americans have been plagued by traffic accidents involving drinking. For many years we have tried to cope with this problem by sporadic campaigns attacking "drunk drivers." We have set up heavy penalties for this offense. We have developed chemical tests for proof of "drunk driving." We have sometimes sent men to prison for repeated offenses, and in some States we have taken away driver privileges.

But today we are still plagued with the problem, and it does not seem to be getting any better. At least 15,000 lives are being lost and at least 200,000 persons are being injured yearly in traffic accidents involving drinking. It is apparent that something more is needed—and I have a suggestion.

An intermediate offense would be an effective tool in the reduction of drinking-driving accidents, and the offense should be defined simply in terms of blood-alcohol.

In general, we have been proceeding in reverse on this problem. It is said, in substance, that it is illegal to operate a motor vehicle while intoxicated. And then the attempt is made to define "intoxication" in terms of blood-alcohol. Actually, what we should be striving to stop is drinking-driving, and the offense, I say again, should simply be defined in terms of blood-alcohol. It should be illegal to drive with more than a certain amount of alcohol, and drivers should not be allowed to go past the threshold of impairment without violating a law.

In some States laws have been passed defining this offense of driving while intoxicated in terms of presumptions. Under 0.05 percent is a presumption of innocence, over 0.15 percent is a presumption of guilt, and the twilight zone in between evidence to be taken into account with other evidence. As a practical matter, what has happened? In many places we simply do not attempt to convict anyone unless they have a blood-alcohol content of over 0.15 percent.

I have known a judge to dismiss a charge of drunk driving against a driver when the test showed a little over 0:15 percent. The Iowa highway patrol has said they now file driving-while-intoxicated charges against all drivers found to have 0.15 percent alcohol in blood tests, but they did not say what is done beneath that level. They referred to the zone 0.05 percent to 0.15 percent as borderline cases.

We should seek to find the point at which impairment begins and make it illegal to drive with more than that much alcohol. Where is the point at which impairment in driving ability begins?

A pioneer study in Evanston, Ill., was reported by Richard L. Holcomb back in 1938. A random sampling was made of drivers throughout a week, with balloon tests determining the percentage of drivers who had alcohol and the amount in each case. A total of 1,750 subjects were tested and only 24 refused to take the test. At about the same time over a period of 3 years, 270 drivers in accidents requiring hospitalization were tested.

It was found that only 12 percent of the drivers in the normal population had alcohol, but 46 percent of the accident drivers had alcohol. And less than one-half of 1 percent of the normal population had more than 0.15 percent alcohol.

Both laboratory and road tests were made in a Swedish study undertaken in 1950 to determine the effects of small amounts of alcohol on driving ability. Two groups of expert automobile drivers, 37 persons in all, drove on a special test track designed to measure driving ability. One group, chosen at random, served as controls; the other drank beer or distilled spirits. All the subjects performed the test drive twice, the alcohol group before and after drinking.

Among the findings was this: "The threshold of impairment of driving ability in expert drivers is an alcohol concentration of 0.35 to 0.40 per mil in the blood."

Some of these drivers performed laboratory tests. One was a flicker test—this determined the ability of the eye to distinguish a flickering light. A blink test was

used and determined the stimulus necessary to elicit a blink reflex. The final summary of this study carried two interesting statements:

"The threshold of impairment corresponded to an alcohol concentration in the blood of 0.2 or 0.3 per mil on the flicker test and 0.4 to 0.5 per mil on the blink test. The results indicate agreement between practical road tests and laboratory experiments as a means of testing driving ability."

Some very interesting data has come from three States recently indicating alcohol involvement in fatal accidents and the ranges of alcohol. In Delaware, in 1955, 138 drivers were involved in 97 fatal accidents and of these 20 drivers (14.5 percent) had 0.15 percent alcohol while 13 drivers (9.4 percent) had 0.05 to 0.14 percent, and 3 (2.2 percent) had less than 0.05 percent of alcohol in their blood. But 20 drivers (14.5 percent) who were not tested had been drinking, in the opinion of the investigation officer.

In New Hampshire in 1955, there were 107 tests in fatal accident cases, with 55 being negative. Of the positives, 14 were in the zone 0.01 to 0.04 percent inclusive, 13 in the zone 0.05 to 0.14 percent, and 25 in the zone 0.15 percent or above.

In Montana between March of 1955 and November of 1956, there were 347 fatal accidents killing 438 persons. Blood samples were obtained from 202 of those killed. Of the 202 analyses made, 14 (or 7 percent) were contaminated by embalming fluid when the sample was drawn.

The blood-alcohol levels of the remaining 188 cases followed this distribution: 44 (or 23 percent) had less than 0.05 percent; 58 (or 31 percent) ranged between 0.05 and 0.15 percent; 86 (or 46 percent) ranged over 0.15 percent.

In Maryland, in 1953, examinations were made in 173 cases for incidence of alcohol in motor vehicle fatalities and, of these, 64 were found to be negative with 7 in the zone 0.01 to 0.04 percent, 34 in the zone 0.05 to 0.14 percent, and 70 over 0.15 percent.

The really significant information in these fatal accidents is the fact that there is such a sizable number of persons with 0.05 percent or higher of alcohol in fatal accidents. While the Evanston study was a long time ago, and we might wish there were more like it to corroborate it, the fact remains that a very small percentage of all drivers on the road appear to have alcohol, yet among fatals it runs high in percentage in all categories. And there is sizable significance in the area of 0.05 percent and higher.

What I have tried to show is that the point at which it should be illegal to operate a car so far as blood alcohol is concerned is 0.05 percent. There are already laws in two nations to that effect, and support is developing in the United States for one.

In 1926 Norway enacted such a law.

In August of 1957, G. Nelker, the principal executive officer of Ansvar, a prominent Swedish insurance company and former secretary of a Swedish governmental committee that investigated the alcohol problem, made this statement to me in a letter:

"According to (our) new law the lower limit is decreased to 0.5 per mil. Every driver with more than 0.5 per mil (the same as 0.05 per cent by American measurements) in his blood should be convicted for drunken driving. In case he has more than 1.5 per mil alcohol in the blood he should be convicted to prison even if the doctors have found him not drunken."

Dr. Horace E. Campbell, chairman of the Automotive Safety Committee of the Colorado State Medical Society, presented to his society a resolution asking that it be made illegal to drive with a blood-alcohol level of 0.05 percent. The resolution was passed in September 1957. Opinion in favor of the 0.05 percent limit is growing steadily.

We could leave all existing laws regarding "drunk driving" stand as they are and pass an intermediate offense law. Such a law would simply declare that it was illegal to operate a motor vehicle with more than 0.05 percent alcohol in the blood, and the fine could be a smaller one, by a considerable margin, than for drunk driving. A lesser offense such as this with a smaller penalty would help deter such conduct.

It would not be as difficult to convict, since the jury would not be considering whether the driver was drunk but only whether the driver had more than 0.05 percent alcohol. This would be a determinable fact, and the chemical test would answer the question clearly and precisely. While there might be those who would believe they could drive safely with blood-alcohol concentrations of 0.05 percent to say 0.15 percent, they would be discouraged from trying since with a lower fine, and a simple blood-alcohol test, conviction and fine would be more certain.

It it were possible to get such an intermediate offense law passed, we would then have the job of publishing widely the fact that if a man has two 14-ounce bottles of 3.2 percent beer, or 2 ounces of 100 proof whisky and weighs 150 pounds and is an average moderate drinker, he is in the zone of impairment; and if he has 3 bottles of such beer or 3 ounces of whisky he will be above 0.05 percent and in violation of this law. It would be as simple as that.

Nuclear Submarines

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, August 11, 1958

Mr. JACKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the following article by the Honorable CHET HOLIFIELD entitled "Nuclear Submarines Doom Large Surface Ships," from the May 1958 issue of Western World.

The ideas set forth in this article can provoke further serious thought and study on the role of surface and undersea ships in the Navy of the future.

There being no objection the article was ordered to be printed in the RECORD, as follows:

NUCLEAR SUBMARINES DOOM LARGE SURFACE WARSHIPS

(By CHET HOLIFIELD)

(In urging the West to increase production of atomic submarines with nuclear missiles United States Congressman CHET HOLIFIELD, member of the Joint Committee on Atomic Energy and Chairman of the House Subcommittee on Atomic Legislation, states that today's weapons will be obsolescent when the weapons now on the drawing board have been manufactured.)

The aircraft carrier, since World War II the pride of naval enthusiasts everywhere, may well be obsolescent—or within 5 years, obsolete. I propose to present a line of reasoning which is growing rapidly in both Houses of Congress of the United States and in the free world.

Within the free world's navies we find a growing realization that the day of the great surface ship is ending.

Testimony before United States congressional committees, in behalf of the large nuclear aircraft carrier whose keel was unobtrusively laid on February 4, 1958, seemed weak and even apologetic. The principal argument was that aircraft carriers would still be needed for limited war purposes. There was no real, strong testimony seeking to justify the aircraft carrier on the basis of a competitive weapon system for use in an all-out nuclear third world war. The United States Congress reluctantly approved one large nuclear aircraft carrier, but it may yet be canceled.

In my opinion, its two sister carriers, requested by the admirals, will never be built. Techniques of faster and less vulnerable weapon systems are increasing so fast that as Deputy Defense Secretary Donald Quarles said, "If it works, it's obsolescent."

We are in the middle of a weapon development revolution. Yesterday's arms are inadequate to meet the weapon of today. Today's weapon systems will be obsolescent when weapon systems now on the drawing boards become a production reality. If this premise is sound, western governments should reevaluate all weapon systems constantly and cancel, without regard to present money investment, any grand design based on nostalgia or tradition. The real issue is whether the 4 years required for launching another large carrier and the billion dollars for the aircraft carrier and its complement of planes shall be used in a sacrifice to naval tradition or should the time and money be used to produce modern hunter-killer and missile-launching submarines to meet the No. 1 naval threat of the Soviet Union.

Tradition dies hard and military traditions die hardest of all. There are still military oldtimers who long for the pomp and ceremony of a cavalry company in dress array, and there are still admirals and incipient admirals who long for the thrill of being piped aboard a great ship and the prestige and feeling of grandeur which can only be realized from the centuries-old pinnacle of naval achievement—the admiral's bridge.

Today the admirals are clinging desperately to large surface ship tradition. They now ask for great ships that must have many planes and attendant ships which they hope will protect them from new terrors in the form of surface-to-surface guided missiles, air-to-surface missiles launched from a plane more than 100 miles away, and from torpedoes and missiles launched from underwater craft of an advanced power and speed never known before.

SURFACE TARGETS ARE VULNERABLE

All of these weapons can carry nuclear warheads so powerful that direct hits are unnecesary. Any of these weapons systems can achieve destruction of a billion dollar surface craft with one hit or near hit. Defense of the giant carrier now requires total defense. This is something new. A carrier will not absorb the nuclear punch and limp into drydock for repairs, so it can fight another day. Any nuclear missile from the sky or the depths will do the job. Total defense can never be attained. All targets are vulnerable in the atomic hydrogen age, therefore all targets must be expendable. This means that military hardware, whether it be naval or air, must be capable of maximum dispersal and mobility. It must be possessed of great capacity for evasion. It must be either fast or able to hide. If its position is fixed, predetermined missiles can be permanently keyed in for push button annihilation. If it is on the surface of the land or water it can be found and fought by supersonic plane or missile. If it moves slowly by land or water it cannot escape the techniques of faster pursuit and total nuclear destruction.

The argument advanced by Admiral Burke before the House Appropriations Committee

on January 13, 1958, as justification for the new nuclear carrier is based principally on two points:

1. A carrier with its planes is necessary for brush fire or limited war purposes.

The answer to this is that the United States already has 100 aircraft carriers. If limited war requires all of these carriers and more, then I submit that the war is neither limited nor brush fire.

2. Admiral Burke stressed the increased value of mobile bases (aircraft carriers) because of the oncoming missile capability to zero in on a fixed military base.

This argument is sound in principle, but actually weak, as can be shown in detail later. Its two weaknesses are relative slowness and easy detectability, because of surface visibility.

The carrier proponents point out the vulnerability of Strategic Airforce Command bases, crowded with B–52's and B–47's, to missiles zeroed in on them from foreign enemy launching sites. General LeMay admitted this vulnerability before a United States congressional committee—and asked for more SAC bases to facilitate dispersal of present massed bombers. Such facilities should be furnished as soon as possible. But the carrier proponents do not prove their case by pointing at the fixed bases of SAC. Carriers and their attendant fleets of small ships are not fixed as rigidly as SAC bases but their mobility is limited and slow when compared to that of supersonic planes with long range air-to-surface nuclear missiles. Their detectability is very great. They cannot hide on the surface of the ocean.

The new fast nuclear submarines possess pursuit capability never possessed before by conventional submarines. In addition to their almost unlimited cruising range, their great speed and long submergence qualities make them a formidable foe of any type of surface ship. They are a very evasive weapon, hiding as they can in the depths of the oceans from reconnaissance plane or surface craft.

RUSSIA'S UNDERWATER NAVY

Frankly, I want the United States Navy to meet the Russian Navy—if it must—with better weapons than it now has. I want it to be able to fight on the level which the Soviets have chosen for their naval operations.

What is that level?

The Russians have deliberately built submarines as their principal naval weapon. They are not building large surface ships such as carriers. Their surface ships are fast and relatively small; they are for minelaying, subchasing, and missile launching. But their Sunday punch (navywise) is their huge submarine fleet.

The publication, Jane's Fighting Ships, for 1956–57 and 1957–58, should be authoritative enough. It states that Russia has a fleet of over 475 submarines compared to America's 204.

We should not waste time debating the point of whether the Soviets yet have nuclear-powered submersibles or not. This merely confuses the issue. If they do not have them today, they undoubtedly will have them tomorrow.

Let us consider the scope of risk in possible Soviet submersible warcraft.

First, Hitler started the World War II attack on his opponents' shipping with an operating fleet in the Atlantic of 57 submarines. As the war continued he lost some and built some. During World War II, 24,246,489 tons of allied shipping were sunk by submarines, aircraft, surface craft, mines, collisions, and other enemy action. Of this total more than half (14,547,463 tons) were sunk by submarines. There was a time when the Atlantic sea coast was dotted with burning oil takers, supply ships, and troopships. Our convoys were under constant attack as they crossed the Atlantic. The convoy protection of World War II was inadequate—although it was helpful. Convoy protection today is impossible because of the wide target of nuclear destruction from a single megaton missile or torpedo. Ships cannot be massed close enough for convoy protection as the attack weapon now could extend its destruction from a single ship to other ships nearby. If you separate the convoy ships outside of the circle of nuclear destruction from one weapon, you forfeit the advantage of the convoy.

Today, according to Jane's Fighting Ships, the United States starts with a Soviet complement of more than 474 submersibles instead of Hitler's 57. Jane's states that a large percentage are long-range boats of new construction. Jane's adds that some 100 submarines are now under construction in Soviet dockyards, as a part of a submarine building program involving 75 to 85 new modern submarines each in 1958 and in 1959.

OUTMODED SUBMARINES ARE NO ANSWER

America ended the war with 232 submarines built mostly under wartime pressure. We are supposed to have about 204 now. Some are in mothballs, some are of pre-World War II vintage, many are old submarines converted to snorkel, some are post-World War II snorkel type. A conservative estimate would me that only about 100 of the 204 are effective even on a conventional-type basis. Five are nuclear propelled, the *Nautilus, Sea Wolf, Skate, Swordfish* and *Sargo*. Fourteen more modern nuclear submarines are under construction or on order, and Congress has just appropriated money for 3 Polaris-launching nuclear submarines.

My argument for the superiority of the submarine over aircraft carrier does not hinge on outmoded submarines. It hinges on the superior capabilities of the new nuclear-propelled submarine compared with the new nuclear-propelled carrier whose keel was laid February 4. I am arguing for the future, not to sustain the techniques or traditions of the past.

My principal argument is that new naval problems have been posed because of new techniques in submarine effectiveness as a result of the use of nuclear energy. These new techniques and capabilities are far more revolutionary when associated with submersibles than with nuclear powered aircraft carriers. Nuclear energy has given to both unlimited cruising range without refueling—but nuclear energy has increased submarine underwater speed several hundred percent. On the other hand the speed of the carrier's movement is governed by the average speed of the flotilla. Nuclear energy has also given the submarine almost unlimited submergence instead of the 48-hour battery time of conventional diesel craft. It has also given the submarine a new quality of relative silence in place of the vibration of a diesel reciprocating engine. All of these new and revolutionary qualities contribute to evasiveness and concealment from detection. The underwater speed of the new *Albacore* type may well exceeded the surface speed of the nuclear carrier. It is because of these advantages that I do not hesitate to predict the end of the large aircraft carrier, be it equipped with nuclear or conventional propulsion power.

Many strategists in the Navy already see the handwriting on the wall; even those who still remain true to large surface ship tradition reveal in their testimony before congressional appropriation committees from time to time their deep concern at changing factors of offense and defense.

Secretary of the Navy Thomas S. Gates testified before Congress this year that we should "accelerate the Polaris missile-submarine weapons system. We are convinced that this is the most important contribution that can be made to the national deterrent power. It requires no launching sites in the continental United States or foreign land bases."

Adm. Arleigh Burke said the Polaris "should present to the enemy an unquestioned and continuing United States military capability which he cannot fail to understand and appreciate. At the same time, it should remain unobtrusive and politically least offensive in the public-opinion forums of the world."

I submit that no other weapon system, including the carrier system, can meet these stern requirements so ably outlined by Admiral Burke.

My contention is simply that the United States has, according to Jane's Fighting Ships, over 100 carriers now. True, many of them are of World War II vintage and are smaller and slower than the *Forrestal*, the *Saratoga*, and the planned nuclear carrier. But when we consider that they are already justified for use in a limited or brushfire type of war, it seems obvious that we should rely on the existing aircraft carriers for their present and foreseeable mission. No NATO countries should expend further billions of precious defense dollars for obsolete or obsolescent weapon systems.

We desperately need a crash program now for the more effective naval weapon system which we know can be built. This system, of course, should not be geared to the large missile-launching submarine (Polaris) alone. The smaller, faster hunter-killer attack type is just as important. If we are to seek out and kill the Soviet submarines, we must not rely alone on surface subchasers. We must add to our defensive capability, submarines designed especially to seek out and destroy enemy submarines. Fortunately, at this time, most of the Russian submarine fleet are of the diesel-propelled type and therefore are slower and more detectable than the fast new nuclear type we can build.

I believe that the era of the aircraft carrier is drawing to an end. It is vulnerable to supersonic missiles guided into its bowels from supersonic aircraft. We have the supersonic attack bombers today. We have the air-to-suface Falcon, Genie, and Rascal missiles. They are the forerunners of air-to-surface nuclear missiles of greatly increased range and destructive power. These missiles and their deadly successors will be ready long before great carriers can be built. They will help to make any type of expensive surface carrier obsolete before it is launched.

The free world must not, I emphasize, continue to be a slave to the traditional concepts of the last war. We all must recognize the new and revolutionary techniques which so clearly point to the new blitzkrieg techniques of world war III. It is only through a constant checkmating of enemy capability that we may be able to buy time to establish world peace. If our power of deterrence wanes by default, or by perpetuation of Maginot-line concepts of defense and offense, we shall be responsible for the suicide of civilization.

Why Not Go Into Politics?

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 11, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a well written and most interesting article written by Thomas Winship, that appeared in the Boston Sunday Globe on August 10, 1958, that should be read by representatives of business and labor.

WHY NOT GO INTO POLITICS?

(By Thomas Winship)

As another political season approaches, it is natural, and indeed encouraging, that we are being treated to such a rash of suggestions on what politically sensitive segments of our society should or should not do in the arena of elective politics.

This year's most popular subject seems to be the American businessman. It goes like this: Wake up, Mr. Businessman, and get into politics. It's to your own selfish interest to do so. Labor has stolen the march on you.

Lemuel R. Boulware, General Electric Co.'s tough, brainy idea man and vice president, recently preached this theme to several hundred businessmen in Phoenix, Ariz.

"In the 60-odd years since the Sherman Anti-Trust Act first warned business it was in real and deserved political trouble," said Boulware, "we businessmen have continued to concentrate on what used to be our whole job, but which, while still vastly important, is now only part of our job."

TAKE LESSON FROM FOE

"We have needlessly neglected to pay enough attention to politics and politicians," Boulware continued.

From where the General Electric executive sits, the business community's traditional skittishness of day-to-day politics left the field wide open to the labor movement to develop what he considers too much political muscle for the country's own welfare. Opinion obviously differs on labor's real political strength.

Boulware is too much of a realist to think labor's involvement in politics has been unwise or unethical.

In fact, he urged businessmen to take a few lessons from the CIO's political action committees and its other political organizations.

"We cannot quarrel," said Boulware, "with the right of any citizen—in fact we earnestly support his right—to seek through political action political solutions to what he considers his problems."

HOW TO DO IT

The General Electric spokesman went on to spell out a program for political action that would serve as a fine blueprint for CIO–AFL headquarters.

The same advice to businessmen—i. e., learn to be as at home in city hall as at the country club or in front of a stock ticker—comes from another quarter.

Prof. Norton E. Long, a New Dealer and political science lecturer last year at Littauer School of Public Administration, gives the businessman another mouthful in the current issue of the Harvard Business Review.

Too often, Professor Long decries, "the business community still is engaged in ritual do-gooding, waiting for George to do it, blaming the politicians, and, on occasion, calling for a business superman in a form of a Richard K. Mellon (in Pittsburgh)."

Full development of the potentials of the metropolitan economy must to a large extent come from the ranks of business, not from the politicians, says Long. "The politicos as a class are closely tied to the jurisdictions of the past," the professor holds, "and for the most part, their attitudes are reactionary."

That is a New Deal professor, a sometimes ghost writer for Michigan Gov. Mennen (Soapy) Williams, talking—calling on businessmen to take over from the elected politicians in the governmental field of local economic development because most politicians are too reactionary.

DROP POLITICS

From still another corner comes some quite different advice for the labor movement. In Harper's this month, a former AFL–CIO union staff worker tells labor to get out of party politics this year and possibly in 1960, too.

"As a former union staff man and a continuing supporter of organized labor," Dick Bruner writes, "I think the AFL–CIO should pull out of party politics right now.

"Their candidates will do as well or better without them, will be just as grateful or ungrateful if they win, and will respect their influence more deeply the next time."

Bruner concedes that unions should continue thir practice of exposing the voting records of politicians and of urging their members to vote. But for the next few years labor should tidy up its own house, somewhat disheveled by McClellan Rackets Committee hearings the past 2 years, and undertake an honest appraisal of its real function, Bruner concludes.

Who's right? Should organized business plunge deeper into political life? Should labor rein in its leadership in an election year? Several points seem clear.

DO IT YOURSELF

There is ample resiliency and there are ample checks and balances in our system of government for tough, aggressive wooing and pressuring of political candidates or officeholders. Citizen revulsion eventually takes care of excesses by a special interest lobbyist or an officeholder.

The more businessmen and labor leaders take an active part in politics the better will be the country's economic, political, and spiritual health.

Also, leaders of business and labor should throw themselves into the spotlight of public opinion and political activity more aggressively than ever for a common and very selfish reason:

It is, that both business and labor suffer today from below-par public relations.

Labor's public image has been marred by indefensible power and financial greediness on the part of a tiny handful of leaders. Their housecleaning has begun.

Business' public relations is in poor shape today essentially because too many businessmen devoted too much time to their own shops in the post-World War II boom years, and not enough time and energy to unselfish public service on the town, city, and national level. Too many have sat back in their offices and blamed the day's public affairs shortcomings on "those corrupt politicians."

Let's hope both business and labor are on the political firing line this fall, on election day and every other day in the year like never before.

CARE: Helping Others Help Themselves

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1958

Mr. KEATING. Mr. Speaker, in recent years, upward of 35 million refugees have been driven from their homes by wars and political upheavals. Through the nonprofit organization known as CARE—Cooperative for American Remittances Everywhere, Inc.—Americans are helping these unrooted peoples and others in benighted areas of the world to get back on their feet.

The help provided by CARE takes many forms. It basically revolves around the sound principle that the best way to aid these people is to help them help themselves. Thus, CARE's self-help program provides farm tools, woodworking outfits, textbooks, fishing equipment, sewing machines, and other occupational materials which permit the recipients once again to earn their own living and become productive, self-supporting members of society.

CARE distributions in more than 50 countries have totaled nearly 23 million food, textile, and self-help tool packages and special shipments. This includes more than 260,000 tons of American farm surpluses given to CARE by the Government.

I am proud to report that residents of my home city of Rochester, N. Y., have contributed over $200,000 for CARE's work since the founding of the organization. This figure is a tribute not only to the many volunteer workers in the city who have given so willingly of their time and effort, but also to the thousands of city residents who have cheerfully and generously contributed to this worthy cause. Rochester's response proves once again that it is a city with a heart ever open to help those in need.

New York State, as a whole, has played a prominent role in the success of CARE. It leads all States in terms of total contributions with a sum of over $23 million. Contributions from the entire Nation have reached a total of $135 million.

In the short span of 12 years CARE has become one of the most effective tools in America's program to win friends overseas and to build effective and stable allies in all corners of the globe. Particular emphasis today is being placed on the self-help program, which is designed to put into the hands of needy people in underdeveloped areas the tools and supplies they need to raise their own standards of living and thus become self-sustaining members of their communities.

CARE is currently conducting its annual self-help campaign throughout the country. These self-help packages vary in type and price. An elementary school kit may be sent to a child in Korea, Hong Kong, or Vietnam for a dollar. Agricultural hand tools range from $8 to $13. A plow can be sent to east Pakistan for $8, to Greece and Malta for $11, and to Mexico for $17.50.

Kits to train apprentice workmen in the needle trades, to be auto mechanics, electricians, plumbers, or masons, range from $10 to $35. A refugee fisherman, who has fled from Communist China to Hong Kong can be given a new start in life with a CARE liner and neter fisherman's kit for $15. CARE also has an extensive book program, which includes technical and medical books for universities and hospitals, children's books in English, Spanish, and Chinese, and a portable library containing 99 paperback books in the fields of history, biography, art, science, and fiction.

Mr. Speaker, we have recently heard a good deal of talk about the need for bringing our foreign policy more in line with the needs and realities of the world situation today. We have read and heard a great deal about extending and expanding wise and generous trade and aid policies. Most of these suggestions have envisioned governmental programs of help and encouragement.

CARE represents a simple, inexpensive means by which each individual American citizen can express his concern with his brothers around the globe and his determination to help improve their lot. It is a concrete means for showing the people of the world that we really do care.

By providing a conduit for Americans to express this heartfelt concern for their less fortunate fellow men, CARE is contributing immensely to the building of a stable and peaceful world. The people of CARE deserve the commendation of all.

I want to take this opportunity to salute all of them for the splendid job they are doing. Although I am most familiar with those in Rochester, N. Y., I am sure their fine example is being followed in countless cities all across our Nation.

I hope thousands of our citizens will continue to contribute to this program to promote the renewal of human dignity in the free world. They may do so by means of donations through local CARE offices or any office of Railway Express, which accepts CARE contributions as a public service. Such contributions help solidify the already strong bonds made possible by this heart-to-heart, man-to-man program of living, human dynamic, personal diplomacy.

Mr. Speaker, under leave previously granted, I insert at this point in the RECORD a graphic description of CARE's work which appeared in the Christian Science Monitor of March 12, 1958:

CARE EXPANDS AID

(By Emilie Tavel)

A freshly baked bun, a glass of milk, a child's smile—for a dozen years Americans have CARED for the world this way.

Since May 1946, when Cooperatives for American Remittances to Everywhere, Inc., began, Americans' generosity and the open-handedness of the United States Government have probably made CARE the most universally understood word in the English language.

What does it mean? Food for hungry people.

America's collective pocket today bulges with personally signed thank-you's for the 20 million packages of food sent to people in 50 countries of Europe, the Middle East, Latin America, and the Orient.

Beyond that, CARE has distributed abroad nearly half a billion pounds of farm surplus foods in bulk. And every day this year CARE is feeding 11 million persons.

Hungry people can understand statistics like that.

And anyone can understand a statistic like this, fantastic though it sounds: A $1 gift sends 22 pounds of such surplus farm goods sailing off to a needy family on the other side of the world.

CARE is a man-to-man operation free from government strings. It reduces the staggering needs of today's world to proportions, which any person can grasp, any heart can respond to, almost any pocketbook can afford. It is a nonprofit, nonsectarian, private relief agency.

WHAT IS CARE, U. S. A.?

In 12 years, what has happened to the famous box marked "CARE, U. S. A."? It is gradually changing size, shape, and content. It is steadily shifting from help to self-help, from a handout to stave off hunger to a leg-up onto the road to recovery.

The significant fact is that 1957 was the year self-help as the new focus for CARE caught on with the public. Contributions for tools, books, and implements rose from 7 to 15 percent of last year's total donor gift of $7 million. Total contributions rose 66 percent over fiscal 1956.

This means that today a dollar bill can run these exciitng errands for the contributor:

It can hand a Hong Kong fisherman a new nylon net—to him a marvel—to replace the gear he lost in his flight from Communist China.

It can give a beautiful, colorful book to ac hild who has never even seen a book before.

It can place a kit of tools in the hands of a young man who has trained himself in a trade but is useless to his country because he has no tools with which to practice his skill.

It can thrust into the soil of a primitive farm the steel blade of a shiny new plow.

In the United States, September smells like new school shoes, like pencils and pads and unopened books. But elsewhere for too many children to count it means no such thing. They don't go to school either because there is no school or because they just don't have the equipment.

This is where the CARE school kit comes in. It is nowhere more dramatically appreciated than in Hong Kong, where thousands of refugees from China sleep on rooftops and in streets, and figure they are fortunate if they can rent space under a bed.

Last September CARE delivered thousands of school kits to unsmiling Chinese children. Little hands tugged eagerly at the boxes, each containing writing pads and copy books, pencils, and eraser, a ruler, crayons, and a pencil sharpener.

Describing the result, Frank Robertson, the Christian Science Monitor's correspondent there, reported that "what followed can only be described as communal rapture." Such a school kit costs the donor $1.

Besides food parcels, school kits, and fishing gear, CARE is supplying playground equipment for children of the streets, and has set up a revolving loan fund for fishermen to repair their junks.

CARE officials realize that once elemental hunger has been halted, the next and greater need is to put hands to work. "This is the challenge that shapes the CARE of today and tomorrow—self-help," says Richard W. Reuter, executive director of CARE. "It has been called the biggest overseas job of our generation."

JOINT PROGRAM DYNAMIC

"Self-help and food together, moreover," he says, "make a total program far more dynamic than just the sum of the two parts. Thus school feeding and school kit distribution together build minds and bodies for a more productive new generation. Food allotted to a trade school gives the greater strength needed for energetic new activities made possible by CARE vocational equipment."

Darcy Wilson, New England director of CARE, says: "We think that in X number of years the really outstanding thing CARE will have done is to educate Americans to the importance of a self-help program and to act as the agency for sending that help overseas."

CARE has four separate programs—the original CARE package to designated individuals, the $1 Food Crusade 22-pound surplus food package, and the self-help tools program which supplements technical assistance to village projects with such wonders as sewing machines.

The fourth is one you hear little about because you are never asked to contribute to it. Called the country feeding program, it provides thousands of children in needy countries with school lunches—often the only meal they have all day.

The United States Government gives the food out of its surplus stocks and pays the ocean freight to deliver it. The host country pays for internal transportation and all costs of the CARE teams which administer the program and account for every last pound.

Before British and French bombs pounded Suez and Israelis raced across the Sinai Desert in September 1956, CARE's country feeding program in Egypt was the largest voluntary agency feeding program ever undertaken. Its suspension by the United States Government at that time caused some hard feelings among Egyptians.

It can now be reported that CARE feels the time is close when the United States Government will permit it to move back into Egypt with a program of school feeding of an even greater tonnage than before. This time corn and wheat are expected to be added to milk and cheese. CARE's job is to be where the need is greatest. Often the areas of greatest need are areas of greatest tension.

At this moment globe-trotting Mr. Reuter is in the process of signing contracts with Turkey, Iran, and Ethiopia, countries never reached before by regular CARE remittances.

Eager to build up their industry and agriculture, these nations have asked for the farm tools and vocational equipment CARE is prepared to supply—with your help.

It has always been CARE's intention to phase out whenever a country could meet its own needs. Nevertheless, CARE itself has been delighted to discover, when quitting a country, that it has left behind valuable organizational machinery that country never had before.

Iran particularly wants CARE to set up a school feeding distribution program, which can be continued after CARE leaves.

In Ceylon, CARE teams personally oversaw the baking of bread for the school-lunch program. Today native Ceylonese do the baking; the Ceylonese Government is supplying some of the food and is taking over some of the costs.

The Foreign Policy of the Federal Republic of Germany and the United States

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 11, 1958

Mr. FULTON. Mr. Speaker, I am submitting for the CONGRESSIONAL RECORD the excellent research and analysis of one of the administrative staff of my Washington office, Mr. Sheldon Parker, of Williams College and Pittsburgh, Pa., on the recent status of the fine relations that exist between Germany and the United States:

THE FOREIGN POLICY OF THE FEDERAL REPUBLIC OF GERMANY AND THE UNITED STATES

With the ratification of the Paris Treaties on May 5, 1955, came national sovereignty for the Federal Republic of Germany. Accompanying the restoration of her independence was a great sense of duty for improving the world situation, complete freedom of action in every field, and, more directly, a membership in the defense community of the Western World. The presence of troops of the Western powers on German soil in accordance with a joint alliance of defense provides the basis of the close relationship between the foreign policy of Germany and the joint defense policy of the Western powers.

On May 28, 1957, in speaking before the United States Senate, Chancellor Konrad Adenauer outlined the general direction of the foreign policy of the Bonn Government. He called freedom the first principle of the Government's policy and effectively showed why the German people feel so strongly about its attainment. In the past they have experienced a totalitarian regime imposed on the country during the National Socialist regime. At present the German people are vividly aware of the reality of communism which has taken the form of a Communist dictatorship in the Soviet zone. Besides rejecting the totalitarian form of government, the Federal Republic has shown that it wants freedom by its firm alliance with the West. Its policy of integration is a decided manifestation of this desire. West Germany has participated in all the European organizations set up in recent years. On January 1 of this year, France, Italy, Belgium, Holland, Luxemburg, and Germany started to join their separate national markets into one common market system by gradually doing away with custom duties and quantitative trade restrictions. On this date the six nations also jointly started to make plans for developing atomic energy for industrial use, to set up a common market for all fissionable raw materials, and to finance jointly research and experimentation.

The Coal and Steel Community of the 6 nations has in the 5 years of its existence provided a common market for coal and steel which is free from custom duties or import quotas. The Economic Community of the six countries is an important gain for American foreign policy; these countries are at present more valuable and freer allies. While the European Economic Community deals specifically with the economic character of the unification of Europe, it is also a very important political event. By transferring decisions on the economy to a group of supranational agencies, each nation has rejected part of its national sovereignty and has advanced the progress toward a federal union.

To Dr. Adenauer, European unity is second in importance only to German reunification. The German Republic cannot be complete until it includes the East German sector under Communist domination. The Chancellor has repeatedly made it clear that Germany's freedom must be won only in connection with the West. Although he realizes that millions of people are forced to live under a regime of lawlessness, arbitrary rule and slavery, he refuses to back Russia's demands for Germany's withdrawal from all European security pacts as a condition for German reunification. To heed Russian proposals would be to betray Europe and to postrate Germany before Russian imperialism in the East. There is no room for neutrality in Adenauer's program whether it be of the political or ideological type. For Germany to back neutralization would be to open the rest of Europe to Soviet influence. What is more, the Federal Republic would be surrendering to a reunited Germany of Russia's liking. The liberty of 53 million Germans would be sacrificed for the return of 18 million Germans in the East sector. Adenauer could never consent to such drastic sacrifices in order to attain reunification.

Dr. Adenauer regards Germany's relations with France as of the utmost importance in guaranteeing the peace of Europe. Back in 1850, Alexis de Tocqueville, the French political thinker refuted the arguments of a French neutralism which was against the close collaboration of Germany and France. De Tocqueville pointed to the greater danger of Russia in trying to allay French fears of Germany. Both Adenauer and De Tocqueville were thinking along exactly the same lines in advocating a strong bond between Germany and France to combat the Russian threat. De Toqueville made the following statement to counter the arguments of those against the union of Germany and France: "What exactly is the danger from Russia, which threatens European independence? It is my conviction that sooner or later our Western World will be in danger of falling under the despotism, or at least the direct and irresistible influence of the czarist regime. That is why I feel that our first aim must be to further the unity of all German tribes, in order through them to oppose the influence of the Russians. The world is in a new and changed situation; we must adjust our old principles, and we must shed the fear that our neighbors will become too strong, so that one day they will be able, together with us, to push back the common enemy."[1] The ratification of the Paris Treaties, the acceptance of the Federal Republic in the West European Union and in NATO have made Germany allies with France. The settlement of the Saar issue in the spirit of friendship eliminated the last issue which divided France and Germany until war between these two nations has become unthinkable.

West Germany's admittance to full membership in the North Atlantic Treaty Organization in 1954 marked a vast departure from the decision of 1945 in which the Western powers were determined that Germany would never again have arms. The Communist attack in South Korea in 1950 served to remind the United States of the situation in Germany and was largely responsible for the change of mind. In Korea there had been a well-trained army to the north attacking an undefended country in the south. In Germany there were Russian forces poised on the borders of a Federal Republic which had no forces of its own with which to defend itself. The decision to rearm Germany could have been avoided by one of two ways: either the occupying powers could have undertaken the defense of the country, or they could have left Germany undefended. Neither of these plans was or is feasible. Frenchmen and Englishmen would not risk their lives on German soil while at the same time preventing the Germans from defending their homeland. To lose Germany's 53 million people, along with industrial and natural resources, would adversely alter the balance of power and could not be permitted by default.

Originally, German rearmament was to be brought about within the European Defense Community. Under this plan, Germany would have no army of its own; there would be only a European army with French and German soldiers wearing the same uniform. Memories of the war prevented France from accepting such an arrangement, and Germany had to be rearmed without the concept of a European army. Germany later was brought into NATO as a full member and as an active participant in the defense structure of the West. According to present plans, Germany will be contributing 350,000 men to NATO defense by 1961 in addition to a tactical air force and a limited navy whose principal task is coastal defense. The Federal Republic is genuinely committed to carry out the requirements made by NATO even though they might not always be popular with the German citizens. In a recent parliamentary debate, Chancellor Adenauer told the Bundestag that his Government would not oppose nuclear arms for West German's army should the North Atlantic Community require it. He gave excellent reasons for this policy decision. For Germany to turn down offers of arms would be tantamount to removing itself from the organization, and because of her geographical location and industrial power Germany cannot isolate herself from the rest of Europe. He further stated that Germany would be drawn into the conflict whether it was armed or unarmed. The West German Government fully supports disarmament, but it is anxious to see Russian actions replace its vast number of words.

Before the decision on German armament could be enacted, it was necessary to convince ourselves, to convince the Germans, and to convince the French that there was no other way of countering the Soviet challenge. This process partially took the form of a meeting with the Russians in 1954 to see whether or not the unfavorable situation had changed. The Soviets refused to agree to the West's plan for a European security system under which the Soviet Union would be protected again the possibility of a German attack. In return the United States requested that free elections be held in all four zones so that the country might be united and given the chance to determine its own foreign policy and it own alliances. The Soviets again rejected the plans in meeting at Geneva in July and October of 1955. The Soviet Union has shown in quelling uprisings in Eastern Europe and Hungary that it will not hesitate to use force or threat of force to back up its ultimate objectives. This position held by the Russians makes it imperative that the military might of the North Atlantic Alliance be maintained. This alliance also demands flexibility in adapting to changing conditions in the world.

To further alleviate fears of German rearmament, its leaders have created a constitutional basis for the armed forces which makes it impossible for reenactment of the era of German history when the military determined the policies of the country. They wisely created a state within a state and drafted laws which reflect the democratic mood of Germany today. In addition a committee of prominent citizens representing different political philosophies was set up to screen all Germans nominated for the rank of colonel or above in the new army. This action appears to have satisfied any fears about the taint of nazism in the officer corps. The corps will be dedicated to the defense of Germany as a democratic member of NATO.

Chancellor Adenauer, more than any one man, has been responsible for the strong ties of Germany's foreign policy with the United States. The constitution and state laws reflect the very best of the Western-oriented system of law. Under his strong administration Germany's moral and political life has assumed a new direction and order. Dr. James Conant, former United States High Commissioner to Germany and Ambassador in 1955, paid tribute to Chancellor Adenauer recently when he stated that "I believe that history will record that his greatest service to his country and to humanity lies in the fact that he and his associates have restored the moral worth of Germany in the eyes of the free world."[2]

The octogenarian Chancellor rightly contends that alinement with the West is natural in view of Germany's spiritual, cultural, economic, and political outlook on life, which refers her in that direction. Dr. Adenauer's overwhelming victory at the polls on September 15 of last year also marked a great victory for the West and what it stands for. The Christian Democratic Union with its Bavarian affiliate, the Christian Social Union gained the majority of the seats in the Bundestag for the first time since the Federal Republic was founded in 1949. In a remarkably high turnout the party of the Federal Chancellor gained over half the votes, as compared to just over 45 percent in 1953. This victory should assure the continuance of at least 5 more years of effective

[2] New York Times, January 8, 1958, 2:6.

cooperation with the United States for the mutual benefit of both countries.

The Federal Republic of Germany occupies a very strong position in Europe today. A stable currency, its strategic location, its manpower potential, and its strong economic condition contribute greatly to this strong position. The important role that West Germany plays in European affairs is further accentuated by various problems besetting some of the other European countries. The relations between the Federal Republic and the United States can best be summed up in the word "partnership"; in the past there has been a give and take between the two countries which has worked for their benefit and for the benefit of the free world. Every indication points to the successful continuance of this partnership in the future.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Daily Digest

HIGHLIGHTS

Senate passed 123 measures on calendar call, cleared reciprocal trade extension for White House, and worked on excise tax technical changes.

House adjourned out of respect to Representative McVey.

Chamber Action

Routine Proceedings, pages 15390–15404

Bills Introduced: 6 bills and 1 resolution were introduced, as follows: S. 4260–4265; and S. Res. 375.

Pages 15391, 15559

Bills Reported: Reports were made as follows:

Pursuant to authorization granted on August 8 the following 33 bills were reported during adjournment on August 9:

H. R. 6448, private bill (S. Rept. 2279);

H. R. 12217, to amend the Bankruptcy Act relative to reorganization of railroads (S. Rept. 2280);

H. R. 12894, to authorize the making, amendment, and modification of contracts to facilitate the national defense, with amendments (S. Rept. 2281);

H. J. Res. 652, H. R. 9160, 9851, H. J. Res. 659, 653, 661, S. 3028, 3814, H. R. 1329, 1339, 2062, 6589, 7738, 7746, 8732, 8905, 9180, 9197, 9765, 9993, 10515, 12942, 13151, 8134, 5351, 2592, 12256, 7866, private bills (S. Rept. 2282–2309);

S. 4031, to amend the Veterans' Readjustment Assistance Act relative to change of educational or training program by an eligible veteran, with amendment (S. Rept. 2310); and

H. R. 13559, to amend the War Orphans' Educational Assistance Act to provide special training for handicapped orphans, with amendments (S. Rept. 2311).

The following bills were reported today, August 11:

H. R. 9673, to amend the U. S. Code to specify the conditions under which retired pay may be paid in the case of retired officers dropped from the rolls, with amendments (S. Rept. 2312);

H. R. 12967, to amend the Fair Labor Standards Act relative to review of minimum wage rates in Puerto Rico and the Virgin Islands (S. Rept. 2313);

H. R. 1168, relating to preservation of basic compensation in downgrading of Federal employees (S. Rept. 2314);

H. R. 10495, extending limits for establishment of postal stations and branch post offices, with amendment (S. Rept. 2315);

S. 4191, to maintain existing minimum postage rates on certain publications mailed in the county of publication, with amendments (S. Rept. 2316);

H. R. 13404, to grant longevity credit for service performed in the Panama Canal Zone postal service (S. Rept. 2317);

S. 1801, 3950, 1258, 4061, H. R. 9783, 2338, 6773, 8407, 11236, 12204, 12364, 12624, private bills (S. Repts. 2318–2329);

S. 4249, to authorize a program for the conservation, restoration, and management of the rare Hawaiian Nene goose (S. Rept. 2330);

S. 4213, to afford vocational rehabilitation to veterans in need thereof to overcome a service-connected disability handicap of 30 percent or more, with amendments (S. 2331);

H. R. 7450, increasing retirement benefits to former D. C. policemen and firemen and to their widows, widowers, and children, with amendments (S. Rept. 2332);

S. 4091, regulation of fares for transportation of D. C. schoolchildren (S. Rept. 2333);

Individual views on S. 337, to establish rules of interpretation governing questions of the effect of acts of Congress on State laws (pt. 2 of S. Rept. 2230); and

Veto message on S. 2266, to provide a method for regulating wage rates for employees of Portsmouth, N. H., Naval Shipyard, with recommendation of Committee on Armed Services that bill pass over President's veto.

Foreign Policy and the Future

EXTENSION OF REMARKS
OF

HON. JOHN D. HOBLITZELL, JR.
OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 12, 1958

Mr. HOBLITZELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Foreign Policy and the Future," which was published in the Wall Street Journal of August 12, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOREIGN POLICY AND THE FUTURE

A drastic, sweeping revision of our foreign policy is demanded by Senator FULBRIGHT, and we may be sure this will not be the only such call in the months ahead.

Certainly the Mideast situation shows the need for a hard scrutiny of the fundamentals of American policy everywhere. But whether drastic changes are required everywhere is another matter. It could be a mistake to conclude that the considerable failures of our Mideast policy prove that our policy as a whole has failed.

Indeed, it can be said that we failed in the Middle East just because we departed from standards which have stood us in good stead in other places. It is almost as though American policymakers had for 10 years or more carefully misread Mideast history and psychology, and thereupon set off toward several mutually contradictory goals.

Here, it seems to us, are some of the ways the United States went wrong in the Middle East.

First, refusal or inability, throughout the postwar years, to sit down and figure out an American policy for the Middle East based on American interest. What is the American interest? It is not direct in the sense that we need Mideast oil or even necessarily bases. It is indirect, though nonetheless important: To assure that the oil does not fall into Communist hands which could deny it to West Europe or use it as an economic squeeze. And, in a broader strategic sense, to assure that a sizable force in the world—the Arab-Islamic bloc—remains friendly to the United States or at least genuinely neutral between the West and the Communist empire.

United States policy in practice has worked against those ends. Consider the way the United States supported the creation of the State of Israel—a quite understandable position if we had any reason to suppose that the Arabs and Israelis could be persuaded to live in peace with each other. That, of course, was not the case. So our stand produced a jittery Israel and won for us the antagonism of the overwhelming majority of the people in the Middle East.

Second, we have not always recognized the implications of the revolutionary shape of the postwar world. It would have been abundantly clear, at least by the time of India's independence in 1947, that colonialism was in fact one of the great casualties of the war. True, the United States did support some independence movements, and at times seemed to support Arab aspirations, but in the Middle East it wobbled badly and consequently sowed confusion.

These remarks do not mean that all nationalism is good or—God forbid—to be equated with the American Revolution. Still, the United States did have a revolutionary origin, and in any case anticolonialism was a postwar fact that the United States would have to face sooner or later.

Third, we have often tended to regard Arab nationalism as identical with communism. There has been an imperfect realization of the fact that the Arabs hate Britain, France, and Israel far more than they fear Soviet Russia, which never attacked or colonized them; therefore the American efforts to keep Russia out, through the Baghdad Pact and the Eisenhower doctrine, were not popular and failed to prevent the rise of Communist influence. At the same time, in trying to oppose communism, the United States was drawn into backing unpopular Mideast regimes like the defunct monarchy in Iraq and the collapsing one in Jordan.

The frequent assumption that those who dealt with the Communists—notably Nasser—were automatically Communist stooges certainly suffers from deficient proof. But because of it the United States took it for granted that the turmoil in Iraq, Jordan, and Lebanon was fomented by Nasserites acting in effect as Soviet agents, and on that basis the United States intervened in Lebanon.

The upshot of all this is that today the United States appears perhaps to most Arabs as anti-Arab, tightly tied to Britain and France, alined with the unpopular monarchy in Jordan, and committed to opposing Arab aspirations as they were reflected in the uprisings in Iraq and Lebanon.

That picture could hardly be better designed to propel the Arab world toward Moscow—a journey on which a vacillating and chaotic American policy has already helped start it.

How, in view of the foregoing, is it possible to assert that America's worldwide policy has not been a failure? We must remember that the overriding concern, once Washington awakened to the Communist menace, has been firm resistance to the expansion of the Communist empire (ironically this helped blind us in the Middle East) and so the prevention of another world war.

That basic policy, by and large, has so far been successful. Since the fall of China, the Communists have gained no significant additional territory. They have not dared, in view of America's overwhelming retaliatory military power, to launch a world war. This American achievement, surely, is more important than our past failures in the Middle East; surely no one seriously suggests that our resoluteness against Red encroachment be "drastically" revised.

And this policy has been successful because, unlike our Mideast confusions, it has shown America in its true posture of the friend of freedom against the age-old forces of political repression.

All the same, our Middle East experience indicates that resistance to Communist military attack will not by itself be enough for the future. The Communists evidently intend to employ everywhere they can, just as they have in the Middle East, the techniques of political subversion—arms deals, trade pacts and some aid, propaganda and civil strife. The United States must, within reason, be prepared to meet that, too, and the Middle East, again, suggests some possible approaches.

The answer lies not in indiscriminate American foreign aid and propaganda; indeed, these are self-defeating or worse, unless our policy impresses people as being in our own interest and faithful to the image the world has heretofore had of us. Nor does it lie in an indiscriminate show of force, as in Lebanon. Nor in reacting, as to Iraq, as though every revolutionary movement were automatically a Communist plot.

By most accounts there remains latent good will toward us in the Middle East. Certainly we can work toward an accommodation of the forces of Arab nationalism; a consistent policy of sympathy for Arab aspirations could revive that good will, particularly if the United States backed it up by dissociating itself from unpopular Arab regimes and by making it clear that its alliance with Britain and France in Europe does not require it to support Britain and France in the Middle East.

It is not necessary to cheer every fanatic and every nationalist crackpot. But it is necessary to avoid being maneuvered as we have been maneuvered in the Middle East, into seeming opposition to change when change is what is now stirring much of the world. A clear and comprehensible policy, supported by such actions as diplomatic wisdom may require, would have to be applied not only to the Middle East, but to north Africa and dark Africa. If it were, it could have highly favorable repercussions throughout the whole newly emerging, uncommitted world.

The present and the future, to be sure, can never be severed from the past, and the Eisenhower administration inherited a formidable array of foreign policy woes. The greatest threat to American security—Communist imperialism—need not have grown so great if the United States had chosen different courses in World War II and the wartime agreements. China need not have gone Communist except for United States misunderstanding—inexcusable ignorance—of communism. Korea need not have happened but for American ambiguity. The landings in Lebanon derive from at least a decade of Washington's mixed-up Middle East policies.

Yes, the mistakes of the past need not foredoom the future unless we permit it. We have successfully resisted communism's military march. It remains only to move forward from that. The most valuable counter to the growing threat of Communist subversion is the United States' own history, principles, and conduct. Too often in the postwar era, and especially in the Middle East, we have seemed to act contrary to our beliefs and so confused not only the Arabs but everybody else. We must once and for all bring our international deportment back into line with our own national traditions and national interest.

It is fantastic that the United States, of all countries, should appear in the light of an imperialistic power while the imperialist Communists get away with the pose of champions of liberty. It is even more incredible that on such a phony platform they

should be in a position to tempt much of the world.

And, if we will only adhere to our own heritage, it is wholly unnecessary.

Senate Group Says South Red's Target

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 12, 1958

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article, entitled "Senate Group Says South Red's Target," published in the New Bedford (Mass.) Standard-Times, dealing with the tragic incident at Little Rock.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

No. V—SENATE GROUP SAYS SOUTH RED'S TARGET

WASHINGTON.—What lies ahead for race relations in the South and, indirectly, for the Nation? If the pattern of the last 3 years is followed in the future, the outlook is not favorable. Some may want to ignore the record, but they cannot hide it. Racial disturbances since the Supreme Court decision of 1954, culminating in the use of armed force at Little Rock, have made 2 areas of opinion where there were 3.

The middle ground on Southern civil rights issues, the ground on which progress had been steady if slow, is virtually deserted. Sides have been chosen, of necessity.

TWO EXTREMIST CAMPS

Without this conciliatory middle area, there are two extremist camps.

One is headed by the National Association for the Advancement of Colored People. The Communist Party officially has planted its standard in this camp, its purpose to promote racial tension behind the NAACP program.

The other camp includes various white citizen organizations, established authorities of many Southern municipalities and States and, as time passes, more and more of the moderates.

The no man's land between these two camps is widened in an election year, like the present, and with the 1960 presidential campaign drawing closer. Neither major political party, nor, apparently, the Federal Government, wishes to intervene.

A HANDS-OFF ATTITUDE

The hands-off attitude in Washington was evident during Senate Judiciary Committee examination of incoming United States Attorney General William P. Rogers. The prospective head of the Federal agency that sent troops to Little Rock was not asked about his views on civil rights, not even by Southern Senators.

Absence of leadership from Washington has increased the importance of the role played by the NAACP. Its leaders apparently plan no change in policy.

Reviewing events through Little Rock, Dr. Channing Tobias, board chairman of the NAACP, declared,

"But this record of advance is only a beginning. Unjust practices are still commonplace in many parts of the Nation. The people have a continuing responsibility to take the lead, to assure the winning of equality in all communities, large and small, North and South.

GOOD OBJECTIVE

"The pattern is set; it's up to us to fill in the details of the picture. Only then will we have achieved our goal of a democratic America living up to its ideals."

These words from an influential Negro leader describe an objective which the majority of Americans would be happy to work toward.

But there is little reason to suppose that the good intentions of the NAACP will not capitulate, as they have before, to the driving, inflammatory race-tension strategy of the Communist Party.

After the 1954 court decision, the leadership of the NAACP promised moderation, a quiet talking over of issues among all segments.

EXACTLY AS FORECAST

Instead what transpired was a series of big, sharp struggles in civil disobedience and violence, exactly as forecast by Benjamin J. Davis, chairman of the Negro Commission of the Communist Party.

Today, Davis and his coworker, James E. Jackson, Communist chief for southern affairs, are using phraseology much like Dr. Tobias in predicting the future.

"The people must take the lead," says Davis. "Negro liberation is now the property of the whole American people."

Jackson's view: "The response to Little Rock has signalized that ours is the time ripe with opportunity to secure major victories in the cause of Negro freedom."

These words have a ring like Dr. Tobias,' but an utterly different intent.

AIMS NEFARIOUS

"You are aware, of course," FBI Director J. Edgar Hoover commented for the Standard-Times, "the Communists have no sincere interest in promoting racial harmony, but are ever alert to exploit any issue to further their nefarious aims."

This observation may be obvious to many Americans.

But is it obvious to Dr. Tobias, who has been associated with 40 Communist fronts, board chairman of NAACP, or to W. E. B. DuBois, honorary chairman of NAACP, who has been identified with 82 Communist fronts, more than any other American citizen?

Apparently it is not.

As recently as March 1958, the NAACP leadership brought a court action in Florida seeking to halt an investigation by the Florida Legislature of Communist activity in that State.

Besides the NAACP, leadership in the integrationist camp will come from the Reverend Martin Luther King, leader of the Montgomery, Ala., bus boycott. Mr. King also seems hazy in distinguishing between the Communist way and the American way.

A COMMUNIST EXPLANATION

At its 1957 national convention, the United States Communist Party selected a man identified by the Communist Daily Worker as Mr. King's secretary, Bayard Rustin, to be an official observer. Rustin praised the democratic proceedings of the convention in a report later denounced by FBI Director Hoover.

Mr. King was quoted as telling a Chicago assembly last year, "It (the Montgomery boycott, in which there was much violence) is a part of something that is happening all over the world. The oppressed people are rising up. They are revolting against colonialism and imperialism and all other systems of oppression."

This explanation is exactly that of the Communist Party, the depiction of the American Negro as a kicked around colonial, oppressed by imperialists.

Yet the same Rev. Martin Luther King was 1 of 4 Negro leaders who called upon President Eisenhower in June 1958, to try to set the pattern for racial progress.

A LOOK TO FUTURE

A former Negro Communist official, who later worked for the United States Department of Justice, sees the future in these words:

"In my opinion, the Negro leadership should realize that they have responsibility," a Louisiana legislative committee was told by Manning Johnson, "a responsibility to guide and spirit their people along the right paths, help to pull themselves up by their own bootstraps, and to work together as a group for cooperation, mutual cooperation between races, to the end result that they can keep what they have, strengthen their economic and political position and move on to higher things.

"Men of King's type will not give that kind of leadership. The only thing they know is the threat and a sword.

"I know the NAACP can't do that. They have called the leaders of Southern life every conceivable type of name. They have labeled them everything they can, and there is no basis for them to negotiate with them because they have already built up a wall that cannot be gotten over, gotten under, or gone around."

Former Communist Johnson's judgment may be harsh. But the future will make him an accurate prophet unless there is wider understanding of the Communist background to immediate integration, to be accomplished by force if necessary.

In a little publicized report of last November, the United States Senate Internal Security Subcommittee declared: "There is a present-day pattern of Communist activity in the mid-South area. The Communist participants * * * make up the basic framework of a Communist operation that is directed against all generations of people in the South."

To that could be added, "and in the Nation."

Segregation in Arkansas Schools

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 12, 1958

Mr. DOUGLAS. Mr. President, as the beginning of another school year approaches, it seems apparent that there will be significant developments not only in Arkansas but also in Virginia in the progress toward compliance with the constitutional requirements of equal protection of the laws. While 16 Members of the Senate from both parties have joined in proposing legislation to assist the transition to compliance with the Constitution, S. 3257, there are also obligations on the executive branch of the Government to deal with this important matter.

In the same spirit in which Mr. Ashmore has analyzed the problems in Little Rock, 2 editorials from the St. Louis Post Dispatch, 1 entitled "Mandate and Challenge" from the issue of August 1, 1958, and the other entitled "From Little Rock to Arlington," from the issue of August 6, 1958, highlight these executive responsibilities.

In the hope that high officials of the executive department will give some at-

tention to the constructive action that may be taken to avoid unfortunate occurrences in September, I ask unanimous consent that these two editorial be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the St. Louis Post-Dispatch of August 1, 1958]

MANDATE AND CHALLENGE

Gov. Orval Faubus says his renomination in Arkansas is a mandate to resist integration. If so, it is also a challenge to the Federal Government to assist compliance with court orders on integration.

Integration is, after all, the law of the land. The Federal Government—and this means the Eisenhower Administration—cannot permit a governor indefinitely to defy the United States Constitution.

Yet as matters stand the only agency attempting to enforce this aspect of constitutional law is a private agency, the National Association for the Advancement of Colored People. While this harassed group is appealing Federal District Judge Lemley's ruling for a delay of high school integration in Little Rock, the Federal Government sits idly by.

President Eisenhower has never said he favors integration. Attorney General Rogers has not ordered the Justice Department to intervene in the appeal. His civil rights chief, Assistant Attorney General White, has indicated plainly that the Department has no plan to cope with the Little Rock issue.

Next Monday, all seven judges of the Federal district court of appeals will convene in St. Louis to hear the appeal. One month later, Little Rock's Central High School will open its doors. If the appeals court should reverse the Lemley ruling, those doors must open to an integrated student body.

Hence the Government has only a month in which to prepare to support integration and enforce the law. What could the Government do?

It could, for one thing, be prepared to nationalize the Arkansas National Guard before Governor Faubus could use any part of it to defy the law, as he did last year.

It could order the Justice Department and the FBI to be on guard against law violations and to be ready to make arrests. Little Rock's school board has complained that Federal authorities in the past school term "placed on the district the full responsibility for compliance." This time the Government ought to be ready to use its law enforcement arm to enforce the law.

It could also ask its Department of Health, Education, and Welfare to offer expert advisers to assist the Little Rock board in maintaining discipline and high educational standards. Witnesses told the district court that normal disciplinary rules were not fully and impartially carried out last year.

Above all, if the appeals court rules that integration must proceed, the President of the United States and his Attorney General should make it plain that integration will proceed. Otherwise the Little Rock case may stand as a bastion against the Constitution, with Governor Faubus waving his flag of defiance from the ramparts.

[From the St. Louis Post-Dispatch of August 6, 1958]

FROM LITTLE ROCK TO ARLINGTON

The seven judges who comprise the United States court of appeals for the eighth circuit now are weighing the arguments for and against District Judge Lemley's suspension of racial integration at Central High School, Little Rock.

The court of appeals heard the case with commendable dispatch. Judge Lemley's order was issued some 6 weeks ago. In an effort to complete its step in the appeals process as promptly as possible, the court of appeals convened its full bench here in St. Louis much earlier than might have been expected. The prospect is that the court will have passed on the 2½-year suspension order before the opening of school.

Meantime a new Little Rock could be in process of development in Arlington, Va. For on September 4—in less than a month—5 Negro children, backed by a Federal court order, are scheduled to enroll in 4 previously all-white schools. Under Virginia State law these schools are supposed to close automatically to avoid any mixing of the races among schoolchildren. Let us hope that even though the Eisenhower administration did not enter the Little Rock appeal, it is planning a course of constructive, helpful action at Arlington, which after all, is just across the Potomac from the National Capital.

To Guarantee Security Is To Guarantee Slavery

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 12, 1958

Mr. ROBERTSON. Mr. President, as one who has attempted to chart my course as a legislator by the guides planted by the Founding Fathers, I read with particular interest an editorial in the August issue of the Virginia Farm Bureau News entitled "A Generation That Knew Not Joseph."

I heartily commend this reminder of the dangers faced by a generation of Americans that knows not Jefferson, Washington, and Henry, and has forgotten their warning that to guarantee security is to guarantee slavery.

I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A GENERATION THAT KNEW NOT JOSEPH

When Joseph was sold into slavery and taken into Egypt, he suffered imprisonment and persecution. But through his ability to interpret dreams and warn the leadership of fomenting food shortages, he gained favor with Pharoah and rose in the government to become the world's first food administrator.

Through a series of events he sent for his family and eventually thousands of his brethren came into the new country. There they lived with the Egyptians for many years in harmony and prosperity. But, the Bible reports, there arose a generation that knew not Joseph. Long after Joseph's death a new generation forgot the events of the past and became fearful of the Jews living in Egypt. The Jews were enslaved and the long struggle for freedom and the return to the promised land began.

Today, in our country, there lives a generation that knows not Jefferson, Washington, and Henry, nor the history of the prosperity and progress which these and other leaders bred for us.

If we know the dreams of our ancestors, we do not heed their interpretative warnings. On the contrary, we're more inclined to believe in the pipedream interpreters whose gossamer songs lull us into the pursuit of life on the basis that it is more blessed to receive than give. We no longer wage the battle for opportunity, but for security.

We have become fearful of those who insist that it is just as important to have the freedom to go broke as it is to have the freedom to earn more. We would supplant guaranteed security for the freedom to go broke.

We do not heed the warning of our ancestors that to guarantee security is to guarantee slavery. To ignore this axiom and accept such friendly and harmless appearing ideas can enslave us. Any idea that chips at the four main foundation stones of the private competitive system can enslave us.

In order for our system to work there must be privately owned property, privately managed, operated for a profit in a competitive situation.

These are the yardsticks we must use to measure the soothsayings of our modern pipedreamers.

Carmen-Smith Project on McKenzie River in State of Oregon

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 12, 1958

Mr. NEUBERGER. Mr. President, the history of water resource development in the West is checkered with events of controversy; but it is not often that these conflicts are finally settled on such amicable terms as has occurred recently over development of the upper McKenzie River in my State of Oregon.

In 1954 the Eugene Water and Electric Board, municipally owned public utility serving the city of Eugene, filed a license application with the Federal Power Commission to construct hydroelectric dam facilities at a site on the McKenzie River described as the Beaver Marsh location. Because of the unique scenic attractions of this area, the plans to desecrate this section of the river with a water impoundment and reservoir which would destroy the famous Koosah and Sahalie Falls were strongly resisted by local residents. They formed an organization called the Save the McKenzie River Association, which was supported in its efforts by leading sportsmen's and outdoor organizations. Despite this local opposition, the FPC licensed the project and cleared the way for construction of a dam which would do great harm to scenic, wildlife, and recreational values. I joined in objections to construction plans, and introduced a bill to revoke the FPC license. Hearings were held on my proposal, and the public opinion against Beaver Marsh continued to grow.

The Eugene utility had to go to the voters with the bond issue to finance construction costs. The bond issue was soundly defeated at the polls; thus the election served as a plebiscite for local opinion on the controversial project. After this rejection by Eugene voters, the board reconsidered its power requirements, and decided that equivalent

results could be obtained by locating the power facilities at another site. Thus, a compromise was worked out between those seeking power development and those who wished to retain the scenic grandeur of the McKenzie, untouched by commercial development. Perhaps not all individuals on either side are entirely satisfied with the compromise, but at least an agreement has been made which will permit both worthwhile power and genuine recreational development in this area of the McKenzie.

I am proud to have had a part in the fight to save the unique beauty of the McKenzie, and am pleased that an agreement has been reached between the various local interests. Here is one case where the checks and balances of the democratic process have served the long-run public interest. I ask consent to include in the Appendix an able editorial from the Eugene (Oreg.) Register-Guard of August 6, 1958, entitled "New Plans for Upper McKenzie Are Sound."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEW PLANS FOR UPPER MCKENZIE ARE SOUND

Eugene Water & Electric Board's proposition to build the Carmen-Smith hydroelectric project on the upper McKenzie River has not, and probably will not, produce the bitterness the Beaver Marsh project did.

This lack of fighting mood does not indicate a lack of interest. On the contrary, the same groups which fought and licked the Beaver Marsh project are just as interested in this project.

The change of location for the project to an area considerably downstream from the Beaver Marsh project, which would have affected all of the McKenzie Falls as well as Clear Lake, has brought on an atmosphere of cooperation, with both sides willing to please the other.

This good will has been built up both by board policy and by Byron Price, the superintendent of Eugene Water & Electric Board who has been the salesman for the project. "Reasonable" is the word for Eugene Water & Electric Board in this project.

And, to be equally commended for their attitude in seeking a reasonable compromise on McKenzie development plans are those who formerly were bitter opponents of Beaver Marsh.

The fruits of such attitudes have already been seen, and two recent developments indicate that the Carmen-Smith project is viewed favorably by the public:

After long months of intensive study, the State water resources board approved the river section by hydroeletcric use, thereby saying, in effect, "go ahead" to the Eugene Water & Electric Board.

Both the State fish and game commissions have now approved the project, changing their previous position of protest to one of approval.

Both of these are victories for Price and the board, for these State agencies are, by legislation, powerful voices in the determination of how the State's streams are to be used.

And approval was gained by the ability of Eugene Water and Electric Board to meet protests and deal with them, frankly and honestly.

The agreement signed by L. W. Trommitz, president of Eugene Water and Electric Board; Phil Schneider, of the game commission; and R. W. Shoning, acting State fisheries director, to protect and encourage salmon reproduction in the Carmen-Smith area is of far-reaching significance, for it may well set the pattern for Oregon in dealing with the problems of fish and dams. An artificial channel will be built by Eugene Water and Electric Board on a plan similar to a successful venture in British Columbia, where man demonstrated he can actually improve on nature by providing even better reproduction facilities than are naturally present.

The next few weeks will see even more compromises on the part of Eugene Water and Electric Board. Objections to having no overnight camping facilities at the lakeshores of the three reservoirs in the project are being met, with Eugene Water and Electric Board presently drawing up plans for such areas as well as for some trailways around the project.

In this latter problem, Eugene Water and Electric Board sought out the objections voiced by experts in the field, asked them to sit around the conference table, then produced a plan to get what the objectors wanted. (Eugene Water and Electric Board was opposed, at first, to having any facilities except day-use picnic layouts similar to the popular one at Leaburg Dam.)

This newspaper has watched this project quite closely, for it was opposed to the Beaver Marsh project, but, like other opponents to the earlier projects, we are impressed with the reasonableness present in the current planning.

There are other hurdles yet, decisions by the Federal Power Commission, and, finally, by the people of Eugene who will be asked to approve the financing of the project, but these factors should win out:

Carmen-Smith is a sound approach to supply electricity which will be sorely needed by Eugene by 1962.

Not only is the public interest being protected, but it is the paramount factor in the thinking of Eugene Water and Electric Board as plans are drawn for the project.

Possible Diversion of Columbia River

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, August 12, 1958

Mr. WILEY. Mr. President, I was pleased to read, in yesterday's Christian Science Monitor a most informative article, by its Portland, Oreg., correspondent, on the subject of United States-Canadian differences over the use of the waters of the mighty Columbia River and its tributaries.

I do not presume to be an expert on the water problems of the Pacific Northwest; but I do know the Golden Rule, of all religions, teaches us that if we would expect our neighbor to be good to us, we must be good to him. That applies, of course, to anyone, neighbor or not, but it applies especially to those who, like our Canadian friends, are so close to us, not only in geography, but also in ways of life, in common ideals, in common efforts, either in war or in peace, for a better world.

So, Mr. President, I have said to my friends who live in the Pacific Northwest:

Beware, lest some day you see the waters of the Columbia, which are so precious to you, diverted, because of an unneighborly action which our country might take by diverting Great Lakes water down the Chicago Sanitary Canal.

If we expect Canada to be a good neighbor to us, we must certainly be a good neighbor to her.

One of the ways by which we can be a good neighbor is by stepping up our research, so as to cope with the portion of sewage which remains as an untreated residue after present treatment methods. If we can find the answer to the problem caused by the final 10 percent of untreated residue, we may be able to solve Chicago's sanitary problem in such a way as to help her and help all other American municipalities, without doing the slightest damage to our good-neighbor relations. That, to me, is the statesmanlike approach.

Let us, therefore, join in research efforts which help everyone, and hurt no one, rather than in any action which would hurt a good neighbor and also would hurt the good name of the United States, in addition to hurting the Great Lakes States.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the article published in the Christian Science Monitor; and also a letter, with an enclosure, which I wrote to the distinguished Senator from Oklahoma [Mr. KERR], the chairman of the Subcommittee on Rivers and Harbors, of the Senate Committee on Public Works. I wrote the letter for the purpose of securing an authorization of research funds to be used in connection with the effort to cope with the problem caused by untreated sewage residue.

There being no objection, the article, letter, and enclosure were ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor of August 11, 1958]

AGREEMENT SOUGHT FOR COLUMBIA RIVER PROGRAM—UNITED STATES AND CANADA TACKLE DIFFERENCES

(By Malcolm Bauer)

PORTLAND OREG.—The one tributary of the Columbia River that flows from Canada into the United States and then back again into Canada is called by Canadians the Kootenay. South of the border it is spelled Kootenai.

The difference is symbolic. It reflects the lack of agreement between Canada and the United States on the development of the Columbia River system, which is shared by the two. As in Kootenay-Kootenai, these differences are not so fundamental as to be insurmountable.

This was the encouraging consensus among those officials who participated recently in a field exploration of the Columbia system, including both United States and Canadian members of the International Joint Commission, which has been seeking a bilateral agreement on the hydroelectric development of the upper Columbia and its tributaries.

"Our first consideration," said the United States cochairman of the Commission, Douglas McKay, former United States Secretary of the Interior, on arrival of the party in Portland after the journey down the river, "is to find out what is right for the river, what is the best use of the water resources, without regard to any international boundaries. Then we will consider the equities of both nations in determining our recommendations."

FACTS SOUGHT

The Canadian cochairman, Gen. Andrew G. L. McNaughton, nodded agreement. "We want to get the facts," General McNaughton said. "There may be disagreement as to the effect of those facts on each nation. There may be different points of view, but we must find a common denominator between the two nations."

These conciliatory words are not in the character of recent past developments within the International Joint Commission, which is deeply involved in one of the most controversial issues separating Canadians and their neighbors to the south, the exploitation of a great, international river system.

The United States got the jump on Canada more than 20 years ago when it began the systematic development of the Columbia to wring from the mighty river its last kilowatt. Only in the past few years has Canada, sensing the promise of economic prosperity in the harnessing of the white waters of its western rivers, insisted on having a major voice in the development of the river whose headwaters rise within its borders.

General McNaughton has led the vigorous offensive for Canada. His name has been identified with a plan to divert the waters of the Kootenay into the Columbia, in Canada, and from the Columbia to the Fraser to bring a powerful new hydroelectric-producing flow to the latter. He has been accused of proposing this billion-dollar Columbia diversion scheme as a wooden horse to improve Canada's bargaining position with respect to United States projects, such as the proposed Libby Dam in Montana, which would back the United States Kootenai into the Kootenay of Canada.

A joint board of engineers is making a study for the IJC of the diversion plan, of the Libby water impoundment problem, and of a compromise proposal including some aspects of both the diversion and the Libby projects.

But some informed and influential United States engineers already have some strong opinions on the revolutionary diversion project.

Maj. Gen. Emerson C. Itschner, who once supervised dam construction on the lower Columbia River as north Pacific division engineer in Portland and who is now Chief of Army Engineers, told a congressional committee this spring that the diversion of the Columbia to the Fraser, if carried out, would eventually cost the United States an annual 15,700 million kilowatt-hours of energy. This is roughly half the current production capacity of the Federal hydroelectric system in the Pacific Northwest.

General Itschner estimated that the value of the power that would be lost to the United States would be slightly more than $50 million annually.

These estimates did not include the effect of the additional diversion of the Kootenay into the Columbia, which would add several million more dollars to the United States loss.

Canada, which has already spent about $4 million on diversion engineering studies, would presumably reap a comparable gain by turning Columbia waters through Canadian rather than United States generators.

The magnitude of this problem is just one reason why both Senator RICHARD L. NEUBERGER, Democrat, of Oregon, and Senator HENRY M. JACKSON, Democrat, of Washington, have suggested that an entirely new international commission be formed to deal exclusively with the issues growing out of the development of the Columbia system. The IJC must concern itself with such issues all along the international border.

"The IJC has too many problems," Senator JACKSON observed recently. "This one alone, the problem of the Columbia River, could keep it busy morning, noon, and night."

A complication in the international dispute has been the attitude of Provincial officials in British Columbia, which harbors both the Columbia headwaters and the Fraser River. They have been cool to the McNaughton proposal because it would raise the vital question of the survival of salmon in the Fraser, one of the major fisheries of the world.

SALMON PROBLEM

The Fraser drains the bulk of the interior of British Columbia, crashing through the coastal range at Hells Gate. From its origins to the sea, the distance is 750 miles—miles of sharp fall and rushing current, features which well serve the requirements both of hydroelectric production and fish propagation.

The Fraser's potential salmon production is many times the present one, according to the testimony of biologists who took part in a recent seminar on fish and power problems at the University of British Columbia.

"The innumerable streams provide conditions for the adults and for the incubation of the eggs," said W. A. Clemens, director of the Institute of Oceanography, at the University of British Columbia. "The great array of lakes constitutes a vast rearing area for the young fish."

But the progress of salmon to the streams and the lakes and of fingerlings downstream would be hampered, at least to some extent, by the erection of hydroelectric dams in the Fraser, as they have been hampered in the United States reaches of the Columbia system.

Thus, if Canada is to benefit from the diversion, it must deal with a threat to the Fraser River salmon fishery.

From all the above it is not difficult to understand why, despite the optimism of the IJC cochairman during and after their tour of the Columbia, few informed people in the Pacific Northwest, on either side of the border, expect an early resolution of the United States and Canadian differences over the future of the Columbia River.

AUGUST 8, 1958.

The Honorable ROBERT S. KERR,
Chairman, Senate Subcommittee on Rivers and Harbors, 412 Senate Office Building, Washington, D. C.

MY DEAR SENATOR: In connection with the sewage aspects of Senator DOUGLAS' remarks to which you kindly gave me an opportunity to reply, I note that the Chicago proponents of the H. R. 2 make much of the Chicago Sanitary District's alleged inability to purify more than 90 percent of the city's sewage.

As I understand it, they maintain that, scientifically speaking, it is impossible to purify the last 10 percent by any known sewage purification methods.

It has come to my attention that scientists, inside the Department of Health, Education, and Welfare, and in some universities, believe that they could conduct successful research upon this problem.

If Chicago's point is correct that no presently known method can purify the remaining 10 percent, the scientific breakthrough of developing a method to purify practically 100 percent of Chicago's sewage would solve that great city's problem and remove Chicago's need for diverting water from Lake Michigan.

As you will recall, Mr. Milton P. Adams, executive secretary of the Michigan Water Resources Commission proposed such research by the Federal Government or the only thorough solution.

This would not only relieve all the other Great Lakes States from the loss they contemplate if H. R. 2 is enacted; but it would also help other great metropolises to cope with their own sewage problems more easily.

Of course, research is not always successful, so that there is no guaranty that the Department of Health, Education, and Welfare could find a solution.

However, I hope that while Chicago's sanitary problem is fresh in your mind and before your subcommittee, you will give serious consideration to authorizing and requesting the Department of Health, Education, and Welfare to conduct scientific research into the more complete purification of sewage and industrial waste so that we can all support that authorization and the necessary appropriation to carry it out.

Enclosed is some data I obtained from Mr. Gordon McCallum of Health, Education, and Welfare.

With kindest personal regards, I remain,
Sincerely yours,

ALEXANDER WILEY.

To develop new and presently unknown methods of purifying waste waters, basic as well as developmental research must be initiated along every conceivable line. This research would include chemical, physical, biological, and other approaches utilizing skills of teams of scientists in these fields. This team approach is now employed on a very small scale at the Robert A. Taft Sanitary Engineering Center of the Public Health Service at Cincinnati, Ohio.

The time has come to stop evaluating waste treatment in terms of efficiency and start considering it in terms of residues. Clearly, we need waste treatment processes with an efficiency of 100 percent to maintain the necessary quality in many of the Nation's waters.

Scientific talents can be brought to bear on this problem through intramural research within the Taft Sanitary Engineering Center and through contractual arrangements with universities and other research institutions. Some aspects of the water cleansing problem are more significant in some areas of the country than in others and could be approached most effectively by drawing upon the research talents of these areas. Thus, the universities and other research institutions could be utilized significantly in both basic research and in the subsequent field testing of promising methods.

Funds in the amount of $1 million for this specific research at the Taft Sanitary Engineering Center of the Public Health Service and $1 million for contract research at universities for the initial year of an intensive 5–10 year effort are believed necessary as a minimum.

Integration in Arkansas

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 12, 1958

Mr. DOUGLAS. Mr. President, in the differing reports that have come out of Arkansas about the dispute on school desegregation there, a statement by a former Arkansas teacher addressed in a letter to the Washington Post on June 28 seems to me not to have had adequate attention. Prof. Daniel H. Pollitt, now associate professor of law at the University of North Carolina, pointed out in that letter that the first steps toward desegregation in Arkansas were taken 11 years ago, and that there is a substantial body of opinion which not only supported those steps, but will sup-

port law and order in the present situation.

If the political reasons for resistance to the court's order are now somewhat diminished, it would seem worthwhile once again to emphasize the underlying dedication to law and order that Professor Pollitt finds among the people of Arkansas.

I therefore ask unanimous consent to have printed in the Appendix of the RECORD his letter which was printed in the Washington Post on June 28, 1958.

There being no objections, the letter to the editor was ordered to be printed in the RECORD, as follows:

INTEGRATION IN ARKANSAS

Walter Lippmann's June 26 column on Little Rock Again spurs me, as a former faculty member of the University of Arkansas Law School, to come to the defense of that State.

Mr. Lippmann suggests that the Little Rock problem is caused by insistence on integration in a high school for adolescents which is coeducational, and supports the idea that integration in Arkansas should begin at the upper levels of education.

He thereby overlooks the fact that the University of Arkansas Law School voluntarily integrated in 1946–47, the medical school in Little Rock shortly thereafter, and for at least 10 years integration has been an accomplished fact at all levels of the State University. The coeducational high school in Fayetteville has been integrated for at least 8 years, and the student body voted almost unanimously to drop any scheduled football games if the opponents objected to playing against Negro members of the squad (none did).

The coeducational high school in the delta community of Hoxie has proceeded with its integration without mishap since outsiders were enjoined from interference over 2 years ago. Hearings 2 years ago on the proposed integration of the coeducational high school in Hot Springs drew only two spectators—both in favor of integration and there have been no problems there. Last fall the cities of Van Buren (home of Bob Burns) and Fort Smith integrated their coeducational high schools—again without mishap.

In short, the Little Rock problems cannot be blamed on the level at which integration occurred, but solely on the resistance of Governor Faubus to the court decree ending enforced segregration.

Mr. Lippmann says we are damned if we do and damned if we don't. Judge Lemley's decision establishes the precedent that mob nullification of the law is tolerable. Thus we are damned if the appeal is unsuccessful. On the other hand, continues Mr. Lippmann, we are damned if a successful appeal is taken, for a reversal condemns it (the Federal Government) to use troops to compel integration. I take exception to Mr. Lippmann's equating mob nullification with executive enforcement of the law. I would take the latter at any time and in any event.

Nor do I accept the dilemma in which Mr. Lippmann places us—no integration on the one hand, integration under armed guard on the other. I can visualize integration of the Little Rock school without armed guard as in other schools within the State. If, as has been widely reported, Governor Faubus' action was prompted by the desire to secure a third term of office, he will have no necessity to create a situation requiring the use of the Army after the gubernatorial primaries end this summer.

His end achieved, there is no reason to conclude he will continue to follow a policy condemned by every major religious body within his State, a policy condemned by his erstwhile stanch political allies including former Gov. Sid McMath, a policy condemned by his appointed board to entice northern industry into the State, a policy condemned by the President of the United States, a policy which has made his name known throughout the world as a bigoted racist.

Moreover, though the people of Arkansas did not like integration, even less do they like the role of die-hard obstructionists to law and order. I would hope that Judge Lemley's order is reversed and that the people of Arkansas are given opportunity to prove that the peaceful June graduation ceremonies at Little Rock's Central High School can be matched at next fall's matriculation.

DANIEL H. POLLITT.

WASHINGTON.

Integration at Little Rock

EXTENSION OF REMARKS

OF

HON. RICHARD B. RUSSELL

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 12, 1958

Mr. RUSSELL. Mr. President, in the New Bedford (Mass.) Standard-Times of July 21 through July 25, 1958, there appeared a series of articles dealing with the tragic incident at Little Rock, Ark., entitled "Little Rock—Here Are Its Origin and Its Aftermath." I ask unanimous consent that there may be printed in the Appendix of the RECORD the statement of the editors of the New Bedford Standard-Times and articles entitled "Forced Integration Fails To Promote Harmony," and "Communists' Basic Goal: To Incite Racial Strife."

There being no objection, the statement and articles were ordered to be printed in the RECORD, as follows:

No domestic problem is more important to the people of this country than relations between white and Negro Americans.

An issue in which the extremist views are so widely separated is a natural for exploration by the Communist Party.

In this series of articles the Standard-Times documents and reviews the Communist campaign to promote racial unrest in the South and the influence of that campaign in the origin of, and the aftermath to, the impasse at Little Rock.

This series was written by Edward B. Simmons of the Standard-Times staff. Mr. Simmons received the award of Sigma Delta Chi, national professional journalism fraternity, in 1957 for outstanding general reporting.

He gathered material for these articles in trips along the eastern seaboard, to the Midwest, in discussions with Members of Congress and from study of United States Senate and House committee files.

Based on experience in New Bedford, where diversity lives in the highest harmony, the editors believe that the material in these articles will make for better understanding of a most difficult and trying issue.

NO. 1—FORCED INTEGRATION FAILS TO PROMOTE HARMONY

WASHINGTON.—The luster is wearing thin at Little Rock, Ark., where bayonets were used last fall to enforce integration in a public school. Some of the trailblazers appear to have washed their hands of the cause of Negro rights. Others have been seen in roles considerably less flattering than those they played last fall.

Ernest Green's observation, "I'm glad that's all over," is perhaps not untypical. Ernest, 18, was 1 of the 9 Negro youths admitted to Little Rock's Central High School under the guns of federalized National Guard men and United States paratroopers.

Last month Ernest was graduated. One of the 9 was expelled; the other 7 may never return to Central.

If the experiment continues at Central, it will have to do so without the assistance of many persons who were instrumental in launching it.

Mayor Woodrow Wilson Mann of Little Rock, who made the daily telephone calls to the White House that led to Federal intervention, has left town.

He is now a resident of Denver, Colo., working in an investment banking firm.

Max Rabb, the presidential assistant who was at the White House end of the Mayor Mann calls and was a key man in the decision to send Federal troops, has left Washington.

He is now a partner in a big New York law firm.

Despite apparent success in its part in obtaining the Little Rock test, the National Association for the Advancement of Colored People has experiencd a sharp drop in membership.

Federal Judge Ronald Davies, whose ruling that integration must begin forthwith in Little Rock was the foundation for what followed, has long since left Little Rock.

He is now back in his court in North Dakota, where there are but 257 Negroes in the entire State. Arkansas has 462,000.

Harry Ashmore, the Little Rock editor whose editorials in behalf of integration stirred the controversy and brought him a Pulitzer prize, has conceded he will not employ a Negro on his newspaper.

Mrs. Grace Lorch, the Little Rock housewife who attracted national attention by befriending 1 of the 9 students, has since refused to declare whether she is a Communist.

Herbert Brownell, whose United States Justice Department gave the orders for dispatch of troops, is no longer Attorney General.

He has taken up the more lucrative private practice of law.

The Justice Department, itself, has had a change of heart. Under its new Chief, William P. Rogers, the word is "never again" on the use of Federal troops to enforce integration.

The Little Rock School Board, which had worked out a gradual integration program that Judge Davies' ruling nullified, has thrown in the sponge on any integration in the near future.

Central High School has claimed that the educational program for its 2,000 students was so badly dislocated by the 1-year experiment the school could not survive another year without complete disintegration of morale.

This was a major consideration in Federal Judge Harry J. Lemley's approval of a 2½-year stay of integration for the Little Rock high school, a decision that may have made the best of a very unfortunate situation.

MAJORITY NEEDS CONSIDERATION

Judge Lemley, while acknowledging the interest of Negroes in obtaining equal rights, said the public interest of the majority rated consideration, too. The burden placed on other Central High students and the racial tension and unrest created in Little Rock itself demanded a delay in integration, he said.

The ruling led to another example of apparent change in viewpoint among those who had been insistent on an immediate end of segregation.

When Judge Lemley's decision was taken to the United States Supreme Court, whose 1954 sociological and subsequent decrees had started the ferment in the South, that body declined to break up its summer vacation for a special sitting.

The court, in effect, passed the buck to a lower court with an admonition to act fast.

Little Rock, the morning after, appears to have been a venture that has not served racial harmony or promoted integration. As such, its origin, its leaders, and its original objectives invited inquiry.

No. II—COMMUNISTS' BASIC GOAL: TO INCITE RACIAL STRIFE

WASHINGTON.—To incite racial strife is one of the oldest objectives in the Communist program for getting world domination. "We must realize that our party's most powerful weapon is racial tension," states a Communist Party handbook of 1912, well before a few hundred Bolsheviks seized control of Russia.

"By propounding into the consciousness of the dark races that for centuries they have been oppressed by the whites, we can mold them to the program of the Communist Party," the handbook continues.

"In America, we will aim for subtle victory. While inflaming the Negro minority against the whites, we will endeavor to instill in the whites a guilt complex for their exploitation of the Negroes. Thus will begin a process which will deliver America to our cause."

COINCIDENCE OR STRATEGY?

Is it coincidence or the result of strategy that, some 45 years later, racial unrest in an outstanding southern city, Little Rock, Ark., has increased so sharply that a Federal judge called for a 2½-year delay in any integration?

Again, is it coincidence or the result of Communist strategy that one of the most influential of all southern Negro leaders, the Rev. Martin Luther King, exhorts his followers with these words:

"It (the Montgomery, Ala., bus boycott) is a part of something that is happening all over the world. The oppressed people are rising up. They are revolting against colonialism and imperialism and all other systems of oppression."

When Mr. King draws a parallel between the situation of the American Negro and oppressed peoples rising against colonialism and imperialism, he is following exactly, to the word, the Communist line.

DIRECT APPROACH FAILED

At first, the Communist drive for creation of racial strife called for a direct approach to Negroes, using labor unions and Communist fronts like the American Negro Labor Congress and the League for Struggle for Negro Rights.

This approach was brazenly direct, and it failed. Former Communist Joseph Kornfeider, one of the party founders in the United States and its first director of southern operations, has described what happened:

"The South to the Communists was always one of the most vexing problems," Kornfeider told a joint legislative committee of the State of Louisiana in March 1957. "Moscow could never understand it. * * * According to Marx' theory, the South should be leading the United States in Communist development.

"It just didn't work out that way.

"It was just to the contrary. The South proved to be a hard nut and it didn't conform to the doctrine."

BLOCKED BY RELIGION

"They decided that the big block against penetration of the South is religion. The Negroes believed in religion; the hillbillies believed in religion; nearly everybody is religious. The South is more religious than the North.

"Therefore, they decided maybe they should get at them under the auspices of the Cross."

Kornfeider and two Negro former Communist leaders, Manning Johnson and Leonard Patterson, told the Louisiana committee that the new tactics included, besides use of the church, penetration of reputable Negro organizations and the founding, but not obvious control, of others.

World War II, with its migrations and general dislocation of living habits, produced what Kornfeider described as a "sort of honeymoon situation" between the Communist organizers and Negro organizations.

FOUR AGENCIES INFILTRATED

"It seems the intellectuals during that time had shown a remarkable weakness," he testified. "They were bigger suckers for the Communist propaganda than many others were, apparently because they sort of led a life apart from the daily troubles and toil of the population.

"They were the ivory tower boys who picked up the theories of the Communists, not looking at what is behind the theories."

The results of this honeymoon were vital Communist infiltration of the most important agencies in the South dealing in Negro issues. The Communists infiltrated 4 of these organizations and actually helped found 3 of them.

They are the Southern Conference Educational Fund, the Southern Regional Council, the Highlander Folk School in Tennessee, and the National Association for the Advancement of Colored People.

An almost incredible maze of interlocking officials, ideas, and publications linked the three first-named agencies with the Communist Party.

COUNCIL GOT FORD GRANT

The Regional Council and the Educational Fund were both offshoots of the old Southern Conference for Human Welfare, which was dissolved in 1948 after twice being described by the Federal Government as "a Communist front serving the Soviet Union and its subservient Communist Party."

Former directors and officers of the Conference for Human Welfare became directors and officers of the Regional Council and the Educational Fund and of the Highlander School. The Communist Daily Worker openly boasted that James E. Jackson, chief of the Southern branch of the United States Communist Party, was a cofounder of the Regional Council.

Although the Regional Council is not widely known in the North, its influence in the South is attested by its receiving a $497,000 grant from the Ford Foundation's Fund for the Republic.

Likewise, the Highlander School plays an important role in southern civil rights developments, although it is scarcely known in the North. The school, according to testimony before the Senate Internal Security Subcommittee, was cofounded by a Communist and by a man who refused to testify on his beliefs.

NAACP INFILTRATED

During these organizing years by the Communist Party, the NAACP was extensively infiltrated, although not dominated by Communist sympathizers. Many of its leading officials were members of Communist fronts.

In fact, by 1954 and the crucial Supreme Court decision, the Communist Party was so confident it had set the stage for developments in its favor that the party's national convention in the winter of 1953 declared, "The next period ahead will witness momentous struggles of the Negroes * * * given the vanguard leadership of the Communist Party, we may be confident that the Negro liberation movement will ally itself more fully with the camp of peace and democracy."

The Communist Party was in a position to follow its long-proved doctrine:

To get a sociological or pro-Communist book on the reading list of influential persons, like a Supreme Court justice;

To persuade a Negro to violate a civil rights statute, in the cause of civil disobedience;

To inject a fellow-traveler in the forefront of a civil rights dispute;

To support the program of the NAACP.

These objectives were attained in the year to come.

New Federal-State Relationship in Developing California's Water Resources

---

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1958

Mr. ENGLE. Mr. Speaker, in recent years water has become a nationwide concern, and in California particularly our rapidly growing population and expanding agriculture and industry have placed a severe drain on our developed water resources. We have enough water in the State to meet all our foreseeable needs but our problem is development and distribution of this water. It is more a legal and financial problem than it is an engineering problem. I believe that the present impasse on water in California stems primarily from trying to divide too little water among too many people and that we must develop additional supplies. One new approach to the problem of further development is joint Federal-State projects where the major purpose is municipal and industrial water supply. I proposed some time ago such a new Federal-State relationship and introduced legislation to implement it—H. R. 11544. I am including as part of these remarks excerpts from a talk I made recently in California on this new approach to water development:

NEW FEDERAL-STATE RELATIONSHIP IN DEVELOPING CALIFORNIA'S WATER RESOURCES

(Excerpts of speech by Congressman CLAIR ENGLE before the annual convention of the California Municipal Utilities Association, Disneyland, Calif.)

You will recall that in 1951 I brought a subcommittee to California which sat jointly with the State water committee for the purpose of studying the water problems in the Central Valley project area. We came to the conclusion then that the developed water supplies in the Central Valley project area were overcommitted. We recommended immediate construction of the Trinity River project, and that project has since been authorized and is under construction. However, the water contribution of the Trinity is specifically dedicated to Central Valley project operation. It is contended, as you know, that the Feather River project will not produce sufficient water to permit water deliveries to southern California with adequate margins of safety for future water demands in the north. At the hearings in 1951, serious legal questions were raised as to whether or not the applications made on the Feather River were in conflict with the

applications already assigned to the Bureau of Reclamation for operation of the Central Valley project. I am informed there are interests in California that are prepared to litigate this matter—if water deliveries outside of the Central Valley project area are authorized by the State legislature or by constitutional amendment.

I am not saying which side of this argument is right, but with this state of affairs any strictly legal approach will, in my opinion, wind up in the courts for years. There may or may not be a surplus which is physically and legally exportable, but I am sure that unless new water supplies are developed, the whole proposition will end up in court, delaying water progress in California for as much as a decade. It seems to me imperative that action be taken now to avoid creating a legal Frankenstein that will paralyze water development. The answer is more water—not litigating over what we have.

* * * * *

The impasse on California water developments results from trying to divide too little water among too many people. Southern California is not going to put up its cash money in taxes to build water projects in northern California unless there is a reasonably firm assurance that southern California will receive some of the water made available by the projects. In other words, southern California is not going to buy a pig in a poke. On the other hand, northern California is not willing to promise water to southern California which may leave them literally high and dry. Since the Feather River project is the only one currently proposed for construction, each section is eyeing the amount of water available and measuring it against their prospective needs. Considering the shortages of developed water, each section thinks that it is defending its claims on the last waterhold.

What we need, therefore, is enough water development programed and in early prospect so that all claimants for the water can feel a reasonable assurance that the water will be available when needed. We currently have a State water plan which is an excellent plan but it involves over 350 projects and would take between 50 and 100 years to build. The State water plan has to be broken down into an action program of limited years, with the specific objective of producing sufficient developed water to meet the predictable needs. I suggest that a specific program for 15 or 20 years should be set up. It must be geared to the financial capability of the State, including such Federal help as can be secured, and it must provide sufficient water so that northern California as an area of origin will feel safe in making commitments to southern California, and southern California will feel safe in putting up its money to build projects to supply the water promised. Although this is primarily a State problem, I suggest that when the total quantities are finally figured and the allocations made to the various sections to benefit from the water development, a provision be included which would provide for a pro rata reduction, northern and southern, in the event of short water years. This will have the effect of continuing pressure on all hands to build the additional projects to make adequate water available at all times and under all conditions.

When this program is worked out in specific terms we then can take up the crucial item of financing.

* * * * *

I propose the joint financing of Federal-State projects where the major cost is for industrial and municipal water, as follows:

First, that the Federal Government contribute to such projects on a nonreimbursable basis an amount equal to the portion of the project allocated to flood-control benefits. This is a recognition of the traditional responsibility of the Federal Government for flood control and follows the precedent established in H. R. 8677, which, as you know, is the bill I introduced providing for the Federal contribution for the flood-control benefits from the Oroville Dam on the Feather River project. This principle has since been merged in the omnibus public-works bill which passed the House 2 years ago and was vetoed (for other reasons) by the President, and is currently embodied in last year's omnibus public-works bill (S. 497) which passed the Senate and which was voted out of the House Committee on Public Works. Congress has therefore indicated that this is an acceptable principle for Federal-State cooperation in the building of multiple-purpose projects.

Second, that the Federal Government provide a non-interest-bearing loan for the amount of the project cost allocated to irrigation. This procedure would apply the principles of the 50-year-old reclamation law under which non-interest-bearing money is provided by the Federal Government for the development of irrigation projects. It is an expansion of the principle laid down in the small projects legislation, but, of course, in this instance is limited to multiple-purpose projects primarily for industrial and municipal water where irrigation water is developed incidental to the main purpose. It is my feeling that Congress would not approve the advance of non-interest-bearing money for construction by the State of a large project primarily for irrigation, but would insist that such a project be built under the present reclamation law if it is to be financed by the Federal Government. I think it important that the traditional function of the Federal Government in building projects under the reclamation law not be invaded. However, I believe there is a good chance of getting Congress to authorize a non-interest-bearing loan to a State for incidental irrigation features of a major project primarily built for industrial and municipal water.

Third, the Federal Government will require a contract to be executed under which the State would agree that the project should be managed in such a fashion as to produce the benefits for which the Federal contribution is made. This follows the present provision for the Federal contribution for the flood-control benefits on the Oroville Dam. As to irrigation, Congress, I am sure would require that the non-interest-bearing loan for irrigation be subject to the general provisions of reclamation law. However, I expect to propose with reference to the operation of the 160-acre limitation that the same formula be applied as is set forth in the small-projects legislation, namely, that the non-interest-bearing loan apply only to lands in compliance with the 160- or 320-acre limitation and that excess acreage be required to pay an interest charge on the capital cost of supplying those lands with water.

This proposal is intended to be the basis of establishing under general law the character and extent of Federal participation in projects primarily devoted to the supplying of municipal and industrial water. However, I would like to try it for size in the State of California which, so far as I know, is the only State capable of major financing of its own projects and with water plans of large magnitude already drawn and planned primarily for supplying municipal and industrial water. I have in mind particularly the possible application of this proposal to the financing of the Feather River project, the Biemond plan for the North Bay aqueduct, and construction of all or part of the projects planned in the north coastal area on the Klamath, Trinity, and Eel Rivers. However, the priority of projects for construction under the State water plan is a matter that rests with State officials and the legislature. Some projects such as the Auburn project are logical and proper extensions of the Central Valley project and should be reserved for construction as part of that project.

It is easy to stand up and suggest that the Federal Government help by putting some cash into these major water developments. It is difficult to suggest a program for doing it that is legislatively and politically feasible. My suggestion meets these requirements. It is a logical and practical extension of the historic pattern of Federal participation in the construction of water projects. Flood control has been an accepted responsibility of the Federal Government for over 100 years, and for more than a half century Congress has encouraged irrigation development by providing money for such projects without interest.

If the State builds a project mainly for the development of industrial and municipal water which also provides some flood control and irrigation, isn't it logical to suggest that the Federal Government participate to the extent of the flood control and irrigation on the same financial basis as if the Federal Government built projects for those purposes? That is the basic logic behind my proposal—and it can make the difference between the State or some other public agency being able to build the project and not being able to carry the financial load.

Politically, the proposal makes sense because it applies with equal benefit to the East as well as to the West. For years the Eastern States have frowned on western reclamation development because reclamation law applies only to States lying wholly or partly west of the 98th meridian. Solving eastern water problems requires the development of industrial and municipal water, with incidental flood control and irrigation. The suggested Federal-State relationship fits the eastern situation like a glove. I do not believe we could get the votes to enlarge the Federal Government's activities in water programs just for the West, but the suggestion I have made will, in my opinion, get strong support, both in the mid-West and the East, where water supplies are crucial in many areas. It is my intention, of course, to make my proposal national rather than regional in scope.

The program which I suggest for the development of water resources in the United States, on the basis of Federal participation with the States, will be of vital importance to us in California for two reasons.

In the first place, it will strike at the major problem we face—financing our water projects. The Federal Government will participate on its traditional and historic basis of supplying funds for those parts of a project which are concerned with irrigation and flood control. The State can then proceed to help itself with its own tax resources to pay for the part of a project which provides water and power for municipal and industrial use.

In the second place, the plan I have in mind will broaden the base of water development so that the people of southern California will be reasonably certain that when they put up tax money they will get a supply of water. The people of northern California will feel that with future water development in prospect and with Federal assistance guaranteed, they can afford to make commitments to southern California without fearing that at some time in the future they may be left short of water.

In conclusion, let me say that we are not short of water in California; we are short of developed water—water which is caught for useful purposes. We have a great surplus of undeveloped water, and we are in difficulty only because we are now dealing with a water program which has too narrow a base. As a result, people are in-

clined to litigate and fight over the last bucketful. The bottleneck is in financing a broader base for water development. My proposal would bring Federal assistance to a new field of water development. It has legislative feasibility because it is of interest to all the States. It presupposes that our own State will bear a substantial responsibility through its own tax resources. With such a plan, we can move ahead and need only to make plans as big as California's future warrants.

The International Development Association

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 12, 1958

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the St. Petersburg Times, dealing with the proposal made by the junior Senator from Oklahoma [Mr. MONRONEY].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A PARTIAL ANSWER TO PROPAGANDA—MONRONEY'S WORLD CREDIT PLAN A BIG STEP FORWARD

(By Henrietta and Nelson Poynter)

WASHINGTON.—There is great frustration on Capitol Hill these days, while Congressmen complain about the lack of new, original thinking in world affairs and futility of our foreign policy, or lack of it.

You go to the Senate, or a dinner party, or sit by a swimming pool on Sunday afternoon and in this election year, no one is talking politics. The arguments and conversation are all about, not only the Middle East, but the vital need for reorientation of our attitudes and actions in world affairs.

Last week, the Senate tried to do somethin about it. It passed Senator MIKE MONRONEY'S (Democrat of Oklahoma) resolution urging an international credit union to meet the Russian economic penetration without making the burden on the United States Treasury intolerable.

MIKE MONRONEY is a vital, intelligent exnewspaperman, who still has the police reporter's zeal for digging into a story. He has been working on this plan for 2 years since he attended the Interparliamentary Union meeting in Bangkok.

FIRST SIGN OF NEW IDEA

Readers of the Times may remember, that early in March, when Senator MONRONEY was encountering what looked like formidable opposition to his plan, we called attention, in an editorial, to the fact that this was one of the first signs of new ideas in foreign policy. By the time debate started in the Senate last week, the International Development Association resolution had the endorsement of the State and Treasury Departments and the World Bank, as well as strong bipartisan support on the floor.

Based on the fact that we cannot afford hard currency loans on the terms offered by the Soviets and that some of the countries which need economic development most are not eligible to borrow from the World Bank, the Monroney plan proposes an International Development Association which would be able to use the counterpart funds now piling up all over the world to fill in on dollar credits.

"The answer," he says, "does not lie in a greater degree of haphazard loans and grants solely from the United States. What is needed is a program of sustained activity in the field of international development which can draw on many nations so that loans can be extended on a multilateral basis."

COUNTERPART FUNDS

In almost all the have-not countries, money has piled up from the sale of such things as American agricultural surpluses, which remains in that country in its own currency. These are called "counterpart funds," and we usually only hear about them when junketing Congressmen spend them recklessly on wine and song. If these local currencies are made available as part of the proposed fund, the countries could help each other and the United States could accomplish more without spending hard dollars forever.

As an example of how the plan could work, Senator MONRONEY used a proposed dam in Asia, where the development association "could loan engineering funds in German deutschmarks. For earthmoving equipment, it could provide funds in French francs, with certain dollar or hard currency additions. Cement could come from some 10 countries and could be purchased in large part, with local currencies. Thus, with a worldwide shopping list and a vault filled with many local currencies, for the first time wise banking administration could make full use of local currencies, including those from the sale of our agricultural surpluses."

A TRIPLE ADVANTAGE

Emphasizing the fact that if the United States continues to accumulate bales of lira, yen, rupees and francs, the inbalance will grow to staggering proportions, the dynamic exnewspaperman from Oklahoma said: "Sooner or later these currencies must be forgiven or written off, or they must be used. If they are used injudiciously, then there will be an impact on the country of issue which could cause inflation and could destroy instead of help, the country to whom we have sold surpluses.

"The IDA would have the triple advantage of ultimately lessening the need for direct economic aid by making more effective use of local currencies; promoting the sale of agricultural surpluses tnd promoting international trade and economic well-being."

It will take work and time to iron out the various technical angles of such cooperative aid, but certainly many Congressmen and many citizens would agree with the Senator's indictment of our present program, which he called "old, tired, weary, haggard and worn out. No football coach could use the same plays year after year, in the same conference, without a certainty of winding up in the cellar position. What is true with football is also true with foreign policy."

MEETING IN RIO

We talked to an ebullient MIKE MONRONEY, whose plan had gone through the Senate with surprising ease, 62–25, as he got ready to board a plane for Rio de Janeiro, Brazil, for the meeting of the Interparliamentary Union.

In this world trade union of Congressmen, legislators from 54 countries are meeting in South America this week to discuss critical issues and for shop talk about the trials and tribulations of being a legislator. The largest delegation with votes are from the U. S. S. R., United States, India, and Japan. Officially they seldom deflect from their Government's foreign office line—but they can say "let's talk it over" at a tea or a cocktail party.

Founded in Paris in 1889, the group is now a nongovernmental agency in the Economic and Social Council of the U. N. Although it has no powers of enforcement, it has a representation of legislators from all over the world, with the size of the delegations based on population and the size of the national parliaments. It is, therefore, particularly in time of crisis, a forum for the exchange of ideas and has, on occasion, influenced opinion through its debates.

ANSWER THE ATTACKS

The agenda at Rio this week includes such vital subjects as foreign investment, atomic tests, an international police force, colonies, and freedom of the press. With the volume of business on Capitol Hill and the insistence of the leadership on maximum attendance for rollcalls, the American group is about half the size of that at earlier meetings. Add to this the fact that some of the Senators and Representatives formerly most active in this international body, are faced with tough primary fights, we will have a handful of Americans to answer the attacks on our Middle Eastern policy, which are sure to come from the Soviets and the satellites.

What is said in Rio may have more impact on the world than some of the other international conferences which make more headlines. Certainly, the fact that the American delegation arrives with the Monroney resolution in hand, will give some hope to our friends and some answer to the Soviet propaganda.

For there can be new ideas, and a breath of fresh air in discussions among legislators from many countries, rather than among world leaders or career Foreign Service officers, who do not have to run for election and who do not have to be aware constantly of the reaction of the people back home.

The potential importance of such meetings as the Interparliamentary Union, was pointed out to us by a Republican Senator who regretted the press of business on the Hill prevented LYNDON JOHNSON and WILLIAM F. KNOWLAND from going to Rio to meet and talk with their opposite numbers from around the world.

What Does Cause Heart Attacks?

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 12, 1958

Mr. HILL. Mr. President, there appears in the current issue of the Atlantic Monthly an article entitled, "What Does Cause Heart Attacks?" by Dr. Fredrick J. Stare, head of the department of nutrition at the Harvard School of Public Health.

Dr. Stare is a recognized authority in the field of nutrition, and his presentations on the subject before the Senate Appropriations Subcommittee which handles funds for our health and medical research programs have been most helpful. As the editor notes in connection with the article, Dr. Stare directs one of the most active programs of research on heart disease in the country.

I feel certain that the nature of Dr. Stare's article is of interest to everyone, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT DOES CAUSE HEART ATTACKS?

(By Frederick J. Stare, M. D.)

(As head of the department of nutrition at the Harvard School of Public Health, Frederick J. Stare, M. D., directs one of the most active programs of research on heart disease in the country. Dr. Stare is also editor of Nutrition Reviews, a monthly scientific publication.)

The two commonest types of heart disease—hypertensive heart disease and arteriosclerotic or coronary artery disease—are not caused by any single factor, but by many, each with varying degrees of importance in different individuals.

Hypertensive heart disease is caused by an increase in blood pressure, which is the result of constriction throughout the body of the very small blood vessels known as arterioles. They become contricted—first temporarily, later permanently—and the heart must pump harder to produce sufficient pressure to push the blood through them. This additional work for the heart will in time cause it to enlarge and to develop what is known as hypertensive heart disease. Thus a part of the chain of events which leads to hypertensive heart disease is the change that takes place in these very small blood vessels. Recent researches have suggested that these changes are due in part to the formation by the kidney of a specific substance called angiotonin.

For some unknown reason, greatly restricting the intake of sodium tends to reduce the blood pressure in a fair number of individuals with the common type of high blood pressure. Thus, the reason for the use of low sodium diets, frequently but incorrectly referred to as low salt diets. Numerous drugs have also been found in the past 10 years to be helpful in reducing and controlling high blood pressure.

The most prevalent type of heart disease and the greatest killer of all is arteriosclerotic coronary artery disease, the type of heart disease which one has heard so much of since President Eisenhower had his coronary. Deposits, called atheroma, are formed in the inner lining of the blood vessels. They contain cholesterol and fat. When they get large enough, they impede the flow of blood, something like rust in a pipe. They interfere with the normal elasticity of the blood vessel wall. They may cause small or large hemorrhages within the wall of the blood vessel itself, and these further reduce the inside opening of the vessel. They may greatly weaken the wall of the vessel.

When this process takes place in the arteries of the brain, it is termed cerebral arteriosclerosis, the common clinical manifestation of which is a stroke or a CVA (cerebral vascular accident). Thus strokes and coronaries have much in common; in fact, they are basically the same disease: arteriosclerosis. In one, the arteries of the brain are primarily involved; in the other, the arteries of the heart; but most individuals who have had manifestations in one of these organs are apt to have a fair degree of arteriosclerosis in the other organ.

These are dangerous conditions. A blood clot (thrombus) is more likely to form in a vessel narrowed by atheroma. Should this happen so that the flow of blood is completely blocked, a portion of heart muscle (or brain tissue) just beyond this block will die because of a lack of blood to supply it with nutrients and oxygen. This dead heart tissue just beyond the blockage is called an infarct. Thus, a typical coronary involves the development, usually over a period of years, of narrowed blood vessels in the heart due to cholesterol and fat deposits, then the process of thrombosis, which is the formation of a blood clot in these narrowed vessels, and finally, the development of an area of infarction (dead heart muscle) beyond the clot. Whether death ensues from the coronary depends on its location in the heart, its size, and whether it is developed suddenly or slowly.

If the arteriosclerosis develops rather slowly, it is likely that a substitute or collateral circulation may be formed to take over the nourishment of the heart muscle in the involved area. This may be lifesaving when the complete stoppage of an arteriosclerotic vessel occurs by the clot.

Infarcted areas of heart muscle may be identified by means of the electrocardiograph. In fact, this is one of the chief uses of this diagnostic instrument, to determine if one has had a coronary. Further, it gives some idea of the location of the infarcted area.

What does cause a heart attack? In most cases, when speaking of a heart attack, one is referring to a coronary. Heredity, diet, and nutrition, fat content of the blood, body weight and changes in weight, exercise (lack of it), defects in the blood vessel wall, elevated blood pressure, smoking, and sex are factors known to be involved. Undoubtedly others will be discovered in the near future, as this is currently a very active area of research.

Heredity patterns of most diseases are not well understood, but they certainly exist, and strongly so in many diseases, especially in most of the noninfectious diseases of the heart and blood vessels. Just why these diseases have a strong hereditary background, or what is the nature of the defect in the germ plasm of the genes, remains for future research to find out. But without question heredity is a factor. A recent study mentions that coronary artery disease is four times more prevalent in the children of affected parents than in those of parents without this disease.

Diet and nutrition are significant factors in heart disease. Many investigators have noted that large groups of people throughout the world who consume diets low in fat have less coronary artery disease than those consuming diets high in fat. Such observations have come from Guatemala, southern Italy, Japan, parts of Africa, and elsewhere. Low fat content generally means a diet in which 10 to 20 percent of the daily caloric intake is provided by fat as compared to 40 to 50 percent in the diet with high fat content.

But in addition to the differences in the total amount of fats consumed, there are marked differences in the type of fat. The primitive and nonindustrialized societies consume what little fat they do eat largely in the form of vegetable fats—the oils of palm, coconut, corn—with smallish quantities of fish and animal fats. The high-fat diets characteristic of industrialized areas are rich in animal and dairy fats as well as vegetable fats.

During World War II, and during various famines, a rough correlation has been observed between the fat intake and incidence of heart disease. As the fat intake decreased, so did the incidence of heart disease, and when fats became plentiful, the heart disease rate increased.

However, fats are not the only dietary differences between those regions with a low and a high incidence of coronary artery disease. The former are usually low in sugar and animal protein and high in starch and fiber. The vitamin and mineral content may also differ appreciably from that in American diets.

Probably the strongest evidence linking diet and nutrition to arteriosclerosis has come from animal experimentation. In the past decade it has been possible to produce this disease experimentally in a number of different species, ranging from rabbits and chicks to dogs and monkeys. The last—being primates, as is man—may have special significance. With animal experimentation, it is usually possible to plan the study so that a single change in diet is the major variable. This is seldom possible in observations on man. While there are major dietary differences between the South African Bantu and the urban citizen of Johannesburg or Boston, so too are there a hundred other environmental differences.

Animal experimentation has emphasized the importance of the cholesterol and fat content of the blood in the production of arteriosclerosis, including coronary arteriosclerosis. Usually it is only when the cholesterol level of the blood is elevated that this disease can be produced experimentally. The amount of fat and type of fat in the animals' diets are important in this respect. Other nutrients have also been shown to be involved under certain experimental conditions. These include protein, sugar, two or three of the B vitamins, and recently even the mineral magnesium.

Because of the interest in cholesterol, it might be well to comment further about it. Cholesterol is a normal constituent of all animal tissues. One of its functions is to serve as a building block for some of the hormones. It is present in almost all foods of animal origin, but more so in some than in others. Egg yolk and milk fat are rich sources in common foods. But in addition to ingesting cholesterol, our bodies make cholesterol, mainly in the liver. Fats in the diet seem to be the food component from which the body prefers to make cholesterol. Actually it has been shown repeatedly that the cholesterol content of the diet has very little to do with the cholesterol content of the blood. It is the level of cholesterol in the blood that is of concern in coronary artery disease and not the cholesterol content of the diet.

Some researchers claim to have shown that blood clots more quickly when the fat content is elevated. This may explain why a fair number of coronary heart attacks take place late at night, 4 to 5 hours after a large meal rich in fat. Were it possible to change our food habits appreciably, many workers in this field think it would be desirable to have the large meal of the day in the morning or at noon and have the evening meal be a light snack or supper. On the other hand, there are competent hematologists who dispute the belief that high blood-fat levels favor blood clotting. This is an important aspect of the problem, on which research is continuing.

Extra body weight means extra work for the heart and extra body tissue to be nourished, but these are probably unimportant as far as coronary artery disease is concerned. Frequently during periods of rapid gain in weight the cholesterol and fat level of the blood is increased. It is during such periods that cholesterol deposits may be laid down in the walls of the blood vessels and thus form atheroma. When the weight reaches a plateau, the cholesterol in the blood may decrease somewhat, but the damage in the form of cholesterol deposits has already occurred. The hazards of overweight may not be the extra pounds, but the chemical changes in the blood which accompany the gain in weight. Thus, those who reduce should certainly make up their minds to stay reduced.

Can cholesterol once deposited in blood vessel walls be removed? This is another problem currently under investigation. There is some evidence to suggest that if the deposits are not too extensive and have not been present for too long, they may be reduced in size, possibly removed. This may be acomplished if one is successful in appreciably lowering blood cholesterol and keeping it down. Weight reduction and then keeping one's weight down are about the most useful procedure in this respect for the average person.

Exercise is important in its effect on body weight. There is only one way to use up extra calories, and that is to burn them up by exercise. The beginning of obesity in adolescence is frequently due to lack of exercise rather than excessive caloric intake. The same applies to weight gain experienced in the forties. Exercise is also important in keeping the muscles of the blood vessel wall in good tone. It is thought that a heart well exercised is better able to develop a substitute or collateral circulation should this become necessary because of the formation of a thrombus.

The important thing about exercise is that it be daily and moderate in degree. Exercise has often been ridiculed as a means of helping to control weight. This is based on two misconceptions, that most common types of exercise require only a little energy, and that increase in exercise always gives rise to an increase in appetite. The first misconception can be avoided if one will take the trouble to look at any table of energy expenditures of various activities: walking for a man of 150 pounds uses up 200 to 400 calories per hour depending on speed, running 800 to 1,000 calories. Further, the calories used up are proportional to body weight; thus a person of 200 pounds uses more calories in exercise than one of 150 pounds.

Whether exercise increases appetite depends on the extent of the exercise and whether one is usually active or sedentary. If the exercise is mild to moderate and is done by a sedentary individual, it will not increase appetite.

Most people gradually become overweight because they consume a few more calories each day. If each day they would take a little more exercise they would burn up the extra calories. One does not become overweight between Christmas and New Year's, rather between New Year's and Christmas. Hence, the practical importance of daily minimum to moderate extra physical activity. Walking still remains the most available and inexpensive type of exercise.

Coronary artery disease in this country is usually more common and severe in patients who have elevated blood pressure or hypertension, and smoking usually elevates the blood pressure. Increased pressure within the blood vessels favors development of coronary heart disease in a number of ways, one of them, for example, being the occurrence of small hemorrhages within the blood vessel wall itself with further narrowing of the vessel. A sustained or a sudden increase in blood pressure may also cause an aneurysm (weak spot) to blow out with sudden loss of blood into the brain (cerebral hemorrhage or stroke); or if the aneurysm is in the abdominal aorta, as is common in severe arteriosclerosis, into the abdominal cavity.

It is well established that coronary artery disease is more prevalent among cigarette smokers than nonsmokers and that it occurs at an earlier age in smokers. This does not prove that smoking causes coronary artery disease, but it's not much of an inducement to smoke.

What does sex have to do with heart attacks—that is, real heart attacks? It has long been known that coronary artery disease is 4 to 5 times more prevalent in the male than in the female. But this discrepancy begins to disappear after the menopause, and by the middle fifties to sixties the disease is of equal prevalence in both sexes. Attempts have been made to treat the disease in men by giving them some of the female sex hormones. But so far these studies are purely in the research stage and have little practical application.

Experimentally, a sex difference in the susceptibility to the development of arteriosclerosis has also been found in a number of different types of animals. But for some unknown reason it is frequently in the opposite direction to that found in man. Thus, female rabbits and chickens are more susceptible to arteriosclerosis than males, and their susceptibility can be lessen by giving them large doses of the male sex hormones. Likewise the susceptibility of the male rabbit or chick can be increased by giving it female hormones.

A most interesting finding in sex as it relates to coronary artery disease is the observation from a group of pathologists from Washington University School of Medicine and Barnes Hospital in St. Louis that since the 1940's there has been a marked shift in the distribution of fatal coronary artery disease. They claim that the disease is now almost as prevalent in women as in men, even as early as the forties. No real explanation is available for this startling finding, though numerous speculations are possible: increased smoking of women, less exercise because of pushbutton housekeeping, gain in weight; but let me emphasize, these are all speculations.

No mention has been made so far of stress and strain. Are they involved in heart attacks? Stress and strain are difficult to measure and evaluate. Most of us are apt to think that many Americans, particularly ourselves, are under considerable stress and strain. Stress and strain certainly exist among those people in other parts of the world where coronary artery disease is rare, though it is mostly likely caused by different events. Primitive Africans, highly superstitious and in frequent fear of their lives, are under stress—yet coronary artery disease among them is rear.

The war dances, chants, and witch doctors of primitive societies may all serve a useful purpose in exteriorizing stress—getting rid of it. Too many of us keep our stress within us.

Stress and strain are likely to be highly individualized. What may be stress and strain for one person are not for another. It is entirely possible that the stress and strain of today's civilization are in certain individuals important in bringing about, along with other factors, the changes that result in a heart attack. While there is today no objective evidence to support this idea, it should be pointed out that few serious attempts have been made to study it.

Now what does cause heart attacks? Certainly a number of factors are involved, as has been mentioned. Undoubtedly they work together, and some are of more importance in certain individuals than in others. There is nothing one can do about one's heredity. But if you have parents or grandparents who died early from coronary or cerebral arteriosclerosis, it is most important that you minimize the other factors that contribute to these diseases. Thus, you should really keep your weight within bounds, get regular exercise, eat a well-balanced diet and not too much of it, and eliminate smoking. If, in addition, your doctor finds that you consistently have an elevated blood cholesterol, there are certain things he can suggest which may lower it.

The factors which cause heart attacks are additive. This was pointed out in a recent study of the United States Public Health Service, where it was shown that men who were overweight and also had an elevated blood cholesterol and an elevated blood pressure suffered a higher incidence of heart attack than those who had any two of these findings. Those with any 2 findings had a higher rate than those who had only 1. Our heredity and sex we can do nothing to change; we can do something to minimize the other factors if we really want to.

Arteriosclerosis is a serious condition, the main cause of death in Western civilization. Your doctor is the one who should handle this problem for you, an individual patient. Do not depend on a magazine article, like this or any other one, to solve your personal medical problems. At best it can only point out current concepts and trends in generalities, but to apply these findings to you as an individual requires the skill and knowledge of a trained physician.

Reds Goad NAACP To End Moderation

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 12, 1958

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles dealing with the tragic incident at Little Rock, published in the New Bedford (Mass.) Standard-Times.

There being no objection, the articles were ordered to be printed in the RECORD, as follows.

NO. III—REDS GOAD NAACP TO END MODERATION

WASHINGTON.—The success of Communist efforts to exploit the southern Negro under the guise of democratization became fully evident in 1954 and the three subsequent years. The Supreme Court's historic 1954 ruling on school segregation was in judgment on four cases brought before it by the National Association of Advancement for Colored People, which for years had been a priority objective of Communist infiltration.

The NAACP charged that Negro children in Delaware, Kansas, South Carolina, and Virginia were being denied their rights under the 14th amendment.

The Court did not rule on this aspect. Instead, Chief Justice Earl Warren in the written opinion declared that the Court found for the NAACP because segregated schools induced a feeling of inferiority among Negro children.

SIX BOOKS CITED

This sociological view, the Justice stated, is amply supported by modern authority. He cited six books by such modern authority.

Two of the six authorities were Theodore Brameld and E. Franklin Frazier. Between them, they have been members of or identified with 28 organizations listed as Communist, Communist-fronts or Communist-dominated.

A third authority was K. B. Clark. While arguments were being heard by the Court on the four cases, Clark was on the payroll of the NAACP as a social science expert.

A fourth authority cited by Justice Warren was the book An American Dilemma, edited by Gunnar Myrdal, a Swedish Socialst. The Chief Justice emphasized the importance of this book in the Court's deliberations by saying it was depended on generally, that is from cover to cover.

RECORDS NOTED

Sixteen of the contributors to Myrdal's book have long records of pro-Communist affiliation and activity. One, W. E. B. Dubois, identified by the Communist Party as the honorary chairman of the NAACP, had a hand in 82 parts of the book. Dubois has been identified with 80 Communist fronts, reportedly more than any other American citizen.

Dubois intervened in behalf of executed Communist spies Julius and Ethel Rosenberg and sent the Kremlin a message of condolence on the death of Stalin.

Myrdal himself has written that the United States Constitution is impractical and unsuited to modern conditions. Its adoption was nearly a plot against the common people, said this foreign authority on American Negro problems.

The Court's decision gave new influence to the NAACP. Its officers hailed the decision but indicated that it would not change the organization's plan for calm and orderly progress in race relations.

"We accept the decision quietly, unless there is deliberately fomented trouble," said the late Walter White, then executive secretary of NAACP.

WANTED STRUGGLES

Thurgood Marshall, chief NAACP counsel, who had argued the school cases before the Court, said, "The people will get together and work this thing out."

The Communist Party, however, wanted no part of moderation. It wanted the big, sharp struggles its leaders had forecasted, and racial unrest. Communist publications and officials shrilled for immediate implementation of the Supreme Court decision, immediate abolition of segregation, and discrimination from every facet of American life, immediate enforcement, etc.

The record from the Supreme Court decision until the climax at Little Rock makes it plain which philosophy was the dominant one.

Moderation was forgotten.

The next 3 years brought unprecedented civil disobedience and violence in the South's racial affairs. There were all-out incidents of long duration in Tuskegee, Ala., Charleston, S. C., Tallahassee, Fla., Montgomery, Ala., Americus, Ga., and Clinton, Tenn., to name only the major ones.

COMMUNISTS BLAMED

The NAACP played a prominent role in each, but the atmosphere was not the moderate one ostensibly espoused by the NAACP.

"In my opinion, every major racial disturbance in the South since 1954 has been incited and directed by the Communist Party," Mrs. Paul Crouch, widow of a former Communist leader, told the Standard-Times. Her husband was a top Communist functionary in the South for 13 years, and she was his aid throughout the period.

Communist exploitation of the Negro through the NAACP is attested by the proceedings of the 1957 national convention of the Communist Party. That convention adopted as its main resolution, "the question of Negro freedom * * * the crucial domestic issue of the day * * * requiring support of the program of the National Association for the Advancement of Colored People."

Communist penetration of the NAACP in these important years is conceded by the NAACP itself.

ALL CHAPTERS WARNED

On February 14, 1956, Leroy Watkins, who succeeded White as NAACP executive secretary, warned all chapters to guard against the intensive efforts of Communists to infiltrate.

At that very time, however, the NAACP's official publication, The Crisis, was recommending as must background reading for Negroes, books by Claude Lightfoot, chairman of the Illinois Communist Party, and Doxey E. Wilkerson, member of the party's national committee. Both have written extensively in behalf of racial unrest.

Communist dominance of Negro civil rights developments after the Supreme Court decision is illustrated, also, in the activities of the Highlander School, influential sociological workshop in the South. Highlander, according to testimony before a congressional committee, was founded by a Communist and by a man who refused to state his beliefs.

IS PROGRAM SINCERE?

Since 1954, Highlander has held a series of workshops to develop plans for an orderly transition from segregated to integrated schols. At the last workship, held over the Labor Day weekend just before the trouble at Little Rock, the leaders of every important racial strife incident in the South since 1954 were present.

How sincere is the Highlander program for orderly transition in desegregation?

The actual curriculum at Highlander, its pamphlet statement in behalf of orderly transition notwithstanding, preached that "desegregation is more effectively accomplished in a single step than in a series of steps with delays in between."

This is fellow-traveler vernacular for the straight-out Communist program of immediate desegregation.

Among those attending the important Highlander workshop was the Rev. Martin Luther King, leader of the Montgomery, Ala., bus boycott. King was to be at Little Rock, and, in 1958, at the White House, protesting integration delay.

By the time Central High School in Little Rock was to open for its 1957–58 school year, the Communist Party was marching step by step with the NAACP, whether the good element in the NAACP liked it or not.

No. IV—DAILY WORKER LED THE CRY FOR FEDERAL INTERVENTION

WASHINGTON.—"The honor of our country requires Federal intervention now, to end the organized defiance of decency and justice in the South." These words were not spoken by Mayor Mann, of Little Rock, nor by Maxwell Rabb, White House assistant to whom the mayor talked daily by telephone in the hectic days preceding intervention by the National Guard and paratroopers.

They were not spoken by an official for the National Association for the Advancement of Colored People, the dominant United States Negro organization.

The words were an official pronouncement of the Communist Party of the United States, issued 2 years before Little Rock, and printed in the party's official political guide, Political Affairs, issue of October 1955.

UTTERED BY COMMUNIST

"The Federal Government has the power and the duty to use troops and whatever other constitutional means are available to enforce the law of the land."

Use of the word "constitutional" in the above might lead someone to think a good American had said those words.

They were uttered 18 months before Little Rock's Federal troop intervention by Benjamin J. Davis, chairman of the Negro Commission of the United States Communist Party.

"The Federal Government hasn't hesitated to use the force of jail and seizures in trying to destroy the Communists and other foes of Jim Crow," said Davis, who like other Communists, has been able to predict the future in civil-rights matters.

PRESSED FOR TROOPS

"It should not hesitate to use whatever force—troops if necessary—to put down violent defiance of the law of the land, and murderous terror against peaceful citizens seeking to exercise their constitutional rights."

From the very beginning of the Little Rock incident, the Communists pressed for dispatch of Federal troops to keep order in the South.

The Communist Daily Worker shrilled a demand for action on September 5, the day after Governor Faubus stationed National Guardsmen around Central High School.

"The insurrection in Arkansas" must be put down, strummed the Worker the next day.

"G-men must be sent," said another edition, blasting FBI Director Hoover for refusing to do so.

OTHER PHRASES

"Every prerogative" must be used by the President, was another phrase in the daily demands for use of the military.

"Threats of blood running in the streets" were cited by the Worker, without identifying the source.

Southern whites were charged with being immune to education, cajolery, and pleas of moderation, so that troops were the only recourse.

"Why wait?" asked one Worker editorial.

"Patience," scoffed another.

"Nothing is to be gained by handling Faubus with kid gloves," stated another diatribe.

Shilly-shallying was laid to the President.

And so it came to pass. On September 24, paratroopers were airborne to Little Rock. Exactly the methods advocated by the Communist ace-agitators—speed and force—were used in a civil-rights dispute.

A tremendous victory for the American people, rejointed the next day's Daily Worker.

Use of armed troops climaxed years of incitement by violence and distortion of truth by the Communists and their sympathizers. Again a helping hand came from the Supreme Court that had opened the way to Negro freedom, as the Communist Party observed, and from the misled NAACP.

Mrs. Daisy Bates, president of the Arkansas Conference of NAACP branches, had a key role at Little Rock.

MRS. BATES LAUDED

In an adulatory interview with Mrs. Bates, the New York Post's reporter Ted Poston stated, "both sides in this embattled Southern town agreed on one thing: If there had been no Daisy Bates, there would have been no 101st Airborne Division patrolling the halls of Central High School.

"And no 9 Negro children in the one all-white high school."

Mrs. Bates' husband, Lucious C. Bates, is a director of the Southern Conference Educational Fund, which former Communists have indicted as a Communist transmission agency, for inculcating and carrying out Communist doctrine.

The Southern Conference Educational Fund took over many of the officers and all of the publications of the old Southern Conference for Human Welfare, twice listed as a Communist front, "doing the work of the Communist Party," by the United States Government.

Mrs. Bates is listed as a sponsor of the Southern Conference Educational Fund.

ANOTHER WOMAN INFLUENTIAL

Mr. Bates was a member of the organization known as Negroes for Wallace, a Communist rallying point. He was a sponsor of the Bill of Rights Congress, a Communist Party front.

Also influential at Little Rock was Mrs. Grace Lorch, white woman who befriended one of the Negro students refused admission to Central High.

Widely published press dispatches described Mrs. Lorch as "a white housewife who protected a Negro girl before a jeering mob," and as "having defied an angry crowd of whites to offer sympathy."

It was not reported, however, that Mrs. Lorch, according to Senate Internal Security Subcommittee records, has a thorough Communist Party background.

HUSBAND INDICTED

She has been identified as a one-time Communist Party organizer in Boston, as having attended a Communist Party convention, as a member of the New England District of the Communist Party, as former vice president of the Teachers Union, and as a director of the Samuel Adams School for Social Studies, both Communist fronts.

At the time Mrs. Lorch was active in Little Rock, her husband, Lee Lorch, was under Federal indictment on eight counts of refusing to answer questions on his alleged Communist background put to him by the House Un-American Activities Committee.

Here, too, the Supreme Court rendered an assist. The charges against Lorch later were dismissed by a Federal judge on the basis of the Supreme Court's freeing of John T. Watkins, United Auto Workers official who refused to name Communists he knew while he was one himself.

Little Rock found the United States Supreme Court, the NAACP, and the Communist Party teammates.

It was a dazzling demonstration of what can happen, to quote former Communist Joseph Kornfelder, when "the ivory tower boys picked up the theories of the Communists, not looking at what is behind the theories."

A Suggestion From a Constitutent

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. MUMMA. Mr. Speaker, during a Congresman's term of office he receives many suggestions from constituents on many different subjects. This you know. I was very happy to receive a letter from Mrs. Helen E. Bolton, of Highspire, Pa., in which she makes a very good religious suggestion that could be applied by a Congressman, especially in contemplating history-making legislation. I trust the Members may adopt the idea advanced by Mrs. Bolton. Her letter follows:

HIGH SPIRE, PA., *August 7, 1958.*
Hon. WALTER M. MUMMA,
House of Representatives.

DEAR SIR: I am just one of your constituents who feels that the voice of the people who want our country to stay the way our forefather's planned it to be. They laid down a wonderful outline in the preamble and the Constitution which is the closest to God's way of thinking on the face of this earth. Now, I am only one person, but I will try to do my best to keep that same spirit strong in my opportunities that are open to me and you being in your position, I would love to see you do the same, we can all help one another to keep that true light bright and shinning. There has never been another country that has had the blessing and love of God poured on it in so much abundance as the United States of America, and unless we keep our faith strong in the same light as our forefathers did, God may see fit to give His blessing elsewhere. Personally, if I were to be in your shoes and I voted on any bill I would first say to myself, "Would, Jesus vote yes or no on this bill," instead of would my party approve of a yes or no on this bill and I am sure that if all Congressmen thought in that way we would really have life more abundantly than we have even now and it would truly be the voice of the people then, and not this party or that party. I personally think President Eisenhower has done a wonderful job in this respect but I am sure also, many times the party has tried to swing his will to their way instead of the common people.

My voice may seem very strange to you, but believe me that it is exactly what our younger generation is looking for. They want religion and the way to live it in every day living as well as on Sunday in church.

Your opportunity for the benefit of these children is very great and it can be done.

I would like if you would show this letter to some of your fellow Congressmen and all pull together for the same purpose and then we need fear no Red aggression.

I hope I may be of help to you in finding out what it is your constituents really want and need.

HELEN E. BOLTON,
One of the Voice of the People.

The Real Russia—Open the Border

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. HIESTAND. Mr. Speaker, two letters from a resident of the district I represent are most enlightening. Certainly, they were to me and I believe they will be to the public. From the background of the writer, I believe I can guarantee their authenticity:

DEAR CONGRESSMAN: I have been interested in the problem of the activities of the Soviet Union for the last 10 years and consider that I know the subject quite well. Because of this, I feel that Mr. Hearst (returned twice from the U. S. S. R.) is completely wrong in glorifying the Soviet Union. He has apparently seen only the decorative aspect. First, the real fact is that about 70 percent of the families in the Soviet Union live in one single room with the necessity of the mother of the family to do hard physical work 8 hours daily and more. Children of such families can have only a minimum comfort in order to study after school.

Secondly, all this glorification of scientific methods there is completely exaggerated. The Soviet Union would not hesitate a moment to attack the United States if they were as powerful as this stupid propaganda has been telling us for years. The miserable situation in general there in regards to food, clothing, and lodging will prevent for many years ahead the possibility of their possessing even half of our strength. The danger is in exaggerating the decorative part of the Soviet Union here which has already convinced part of the newspapers in the United States. If they succeed to convince half of Congress then we are sunk.

In order to beat it we have only one means: To request of any commission discussing and deciding question of approaching or cooperating with Soviet Russia to make only one demand. Ask the Soviet officials directly to show their faces. Open the border. Allow our citizens, newspapermen, photographers to go there freely and bring us news about the facts of their peoples lives. Allow their people to come here in the same way. Also we should convince all sympathizers and glorifiers of the Soviet Union to join with this request to open their borders. Then all this silly talk about cultural superiority, military achievement, and other socialistic progress will evaporate like a myth.

With such a knowledge (as I said, about opening the border) and left only with the exchange of selected people will only increase the deception and increase the present fear. The request of open the border would convince the confused people here who are really American and misled by clever propaganda. At the same time it would stop the talk of the admirers of the Soviet Union as they would be unable to give us a proper answer as to why such a simple and logical request cannot be fulfilled.

In addition to my previous statement, I would like to mention this: Our present struggle properly consists of winning the human mind to the side of truth. The Communists and their admirers here have succeeded in winning the human mind by lies. We have not succeeded having even used the truthful facts. Such a simple request as open the border for our travelers would serve the main purpose for thousands and thousands of American travelers to see the dreadful life over there in unquestionable detail. The true facts from a multitude of our people would act considerably better than a semiglorification of the Hearst staff (for instance) who, not long ago, visited the Soviet Union. Or a very doubtful report from the candidate for future president, Mr. Stevenson, who is traveling there now. The true facts of how the people of present Russia eat, dress, and are lodged—not only in a big city but in the country at large would expose the real pulse of life—especially in the Sovchos (Soviet farm) and Kolhos (collective farm).

Many thousands of American people saw the film Russia Today. In this picture there is an endless line of people who are waiting to see Lenin's tomb. Apparently this line is maintained in snow or rain. Are the people standing there voluntarily or compulsorily? Why cannot this subject be openly discussed and demonstrated to the Soviet sympathizers here as mental torture endured by the people of Moscow who must stand in line or be punished by the removal of their bread ration book. This process of punishment has been in existence for the last 40 years.

Boalsburg, Pa., Retains Atmosphere of Pioneer America as It Celebrates Its Sesquicentennial

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. VAN ZANDT. Mr. Speaker, in the heart of Pennsylvania some years ago, pioneer settlers established the community of Boalsburg. Recently the residents of Boalsburg launched an observance of the community's sesquicentennial. Mr. Robert W. Boyer, a member of the staff of the Altoona (Pa.) Mirror, wrote the following article about Boalsburg which appeared in the August 2, 1958, edition of the Altoona Mirror:

BOALSBURG RETAINS ATMOSPHERE OF PIONEER AMERICA

(By Robert W. Boyer)

It is probable that few of the motorists who speed along the busy concrete highway, Route 322, to and from the teeming and modern university town of State College are aware, in their fleeting glance at Boalsburg, that just a village block away from the main highway lies a rare and lovely but tiny remnant of early Americana.

The traveler's eye is caught and held by the wide expanse of the impressive beauty and dignity of the 28th Division National Shrine and Memorial Park, along the highway, certainly one of this country's finest tributes to our war dead. But, the wayfarer who pauses may see the road sign, "Boalsburg. An American Village. Birthplace of

Memorial Day." And, if he turns off the roaring road and into the village, and looks with seeing eyes, he cannot escape the thrill of looking upon a street in a hamlet just as it was long ago.

AN AMERICAN VILLAGE

It is not, of course, spectacular, nor are there flashing signboards or coruscating electric signs to mark points of historic interest. It is, in truth, a quiet American village, whose flavor of the past is dispelled only by an occasional automobile, and the modern dress of its people.

THE ANCIENT STREET

The visitor who has an awareness of the past can see it come briefly to life as he stands in the diamond and looks down the tree-shaded street, lined with neat houses of weathered wood and the deep reddish brown of ancient brick. They are built directly upon the narrow sidewalk, and are obviously living monuments from the day when America was young. Fronting the diamond is a house of standing in the small community, but it is of much later construction than many of the others, late 19th century, with somewhat flamboyant carved woodwork and huge porch surrounding two sides of the house.

Today the people of Boalsburg are inviting visitors to come to them, as they observe their sesquicentennial celebration, and to live again briefly in the days when America was a new nation and the savage Shawness of the great Indian Confederacy, the Six Nations, were just giving up reluctantly this portion of their favorite hunting grounds.

The record of white men in this area extends back to 1759, when James Potter, a captain of British provincial troops defending the frontier against the French and Indians, set out on a scouting expedition from Fort August, now Sunbury.

Following along Bald Eagle Creek to its confluence with Spring Creek near what is now Milesburg, Captain Potter crossed Nittany Mountain and saw before him a beautiful country, of lush meadows, watered by a cold stream, and shaded by tall trees, and over all the heart-lifting grandeur of the mountain walls.

PENNS VALLEY

He called it Penns Valley, in honor of William Penn and his sons, the proprietaries who held title to it from the King, and also through a treaty negotiated with the Shawnees.

Nearly 10 years later, Captain Potter acquired several thousand acres in the valley, and built a fortified log house, in 1777, at what is now called Old Fort, a few miles from Boalsburg.

The Revolution now was raging, and Captain Potter laid aside his British allegiance and became a major general of Pennsylvania troops in the Continental Army. But, the valley was opened to settlers and the first town plan in the region was laid out at Aaronsburg in 1786.

Among these hardy pioneers was one David Boal in whom was mixed the passionate blood of Spain and the bold blood of the Irish. Captain Boal was a soldier in the Revolutionary War, and in 1789, received a military land grant for his service.

BUILT TAVERN

He built a tavern in 1804 along one of the main stage routes between Lewisburg and Spruce Creek, leading west to Fort Pitt, now Pittsburgh. A portion of this tavern, containing a wide stone fireplace, still stands, attached, by a short weathered wooden passageway to the home of Miss Cathryn Dale, a member of the sesquicentennial committee.

Miss Dale's family settled in the area about 1790. Her present brick home was built in 1868. Her home and the Boal tavern are opened to visitors during the sesquicentennial observance. Built against a wall of the tavern is an ancient wood cupboard, still sturdy, with tight doors, that Miss Dale uses for her stone chinaware.

Captain Boal, built, but never occupied, the central section of the present Boal Mansion. His son, David, returned to Ireland long enough to take a wife, and returned with his wife and child to Boalsburg in 1798, lived in his father's unused mansion, and built a big stone addition to it.

Young David Boal was a man of vision and varied talents, and he founded the family which has had such an important place in not only building the community, but winning for it and his family a distinguished place in American history.

The romance of old Europe and the bold adventure of America are blended in the history of the Boal family. A century later, the family estate and history were given new impetus by Theodore Davis Boal, great-grandson of David, who went abroad to study architecture, and there married the beautiful Mathilde de Lagarde, daughter of a wealthy French family and related through her mother to the family in Spain of Christopher Columbus.

ORGANIZES TROOP

Colonel Boal organized the Boalsburg Troop of the Pennsylvania National Guard in 1916, which went overseas as a unit of the 28th Division, and is believed to be the first to mechanize its machineguns on motorized carriages, Ford cars. Colonel Boal gave the land for the division's national shrine.

His son, Pierre, served as a captain in the French cavalry in World War I, and later was with the famed Lafayette Escadrille.

In 1917, Colonel Boal designed a small building on the mansion grounds to house the furnishings of the Columbus family chapel, of his wife's family, and preserved here is all the impressive beauty of this old family shrine.

COLUMBUS CHAPEL

This Columbus Family Chapel is one of the points of interest in Boalsburg. It is entered through the original hand-carved, 16th-century door, protected from the weather by an outer door. Inside are preserved the altar, gallery, railings, carved chests, religious accessories, ancient documents, and letters of the Columbus family.

Outstanding in the chapel collection are two pieces from the left arm of the true cross in the silver reliquary in which they were given to the Columbus family by the Bishop of Leon in 1817.

The museum displays early American antiques and many war souvenirs.

The mansion has been restored since Colonel Boal's death in 1938, this work being in charge of the curator, Mrs. Lillian Dickson, who has renewed the beauty of this noble old building.

On a corner of the square swings a sign typical of the American colonial period. Upon it are painted the words, "Duffy's Tavern," and over the main doorway of this stone building, which is still in operation, are the carved letters, "J and H L J," and the date, 1819. It was built in that year by Col. James and Hanna Bethesda Johnston, who had a store and lived nearby. It was ruined by fire in 1934, and later restored, from records and documents as a guide. It retains much of the atmosphere of those long-gone days when it was a favorite resting place of the gentry along the King's Highway west.

MEMORIAL DAY

But Boalsburg has another claim to fame. On May 30, 1865, there was established, so the people of the village say, the custom that grew into the Memorial Day observance.

On that day, by chance, three women of the community went to the old cemetery, to place flowers upon the graves of their war dead. Mrs. Elizabeth Meyer went to weep over the new grave of her 19-year-old son, Joe, a private, fatally wounded at Gettysburg. Nearby, Emma Hunter Stuart was placing flowers on the grave of her father, Dr. Reuben Hunter, surgeon of the 54th Regiment, Pennsylvania Volunteers, who died of wounds.

Still another woman grieving for her war dead was Sophia Keller Hall.

The three met, told one another of their grief, and agreed to meet at the cemetery every year at the same time to place flowers on the graves of their dead. Later, they began to decorate the graves of other soldiers, and thus, so the townspeople say, developed the honored observance of Memorial Day.

Today, Mount Nittany stands, an eternal guard of honor for the graves of veterans of 6 wars and the hallowed ground of the 28th Division Shrine, the last resting place and the memorial to men who died for the kind of life typified by that ancient tree-shaded street of Boalsburg.

A Resolution Honoring Thomas A. Jenkins

EXTENSION OF REMARKS
OF
HON. WILLIAM E. HESS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. HESS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following resolution:

RESOLUTION OF FELICITATION AND GOOD WISHES TO THE HONORABLE THOMAS A. JENKINS, BY THE OFFICERS AND TRUSTEES OF THE OHIO VALLEY IMPROVEMENT ASSOCIATION, INC., JUNE 13, 1958

Whereas for many, many years, the Honorable THOMAS A. JENKINS has been and is today the most loyal and devoted friend of the Ohio River and its proper development, and

Whereas his energy, leadership, and influence as a Congressman of the United States has never failed the people of the Ohio Valley, and

Whereas his counsel and cooperation have always been an inspiration to the officers, trustees, members, and friends of the Ohio Valley Improvement Association, and

Whereas the friends of Congressman TOM JENKINS learn with great regret of his illness: Now be it therefore

Resolved, That the officers and trustees of the Ohio Valley Improvement Association, Inc., at an official board meeting held in Nashville, Tenn., on June 13, 1958, do now and hereby unanimously express their felicitations and best wishes, with all the words of encouragement at their command, to their good friend, whom they like to affectionately call "Old Man River," and be it further

Resolved, That we hope and pray for his early recovery and restoration to good health, and to his return among us, again participating in the things he liked so well to do for his beloved Ohio River, and be it further

Resolved, That a copy of this document be forwarded direct to Congressman THOMAS A. JENKINS and that another copy be spread upon the records of this association.

Unanimously adopted by the board of trustees, Ohio Valley Improvement Association, June 13, 1958.

HARRY M. MACK, *President*,

Attest:

KENNETH M. LLOYD, *Secretary*.

Appendix

Report of National Projects Committee to the Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. SID SIMPSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD, the report of the National Projects Committee, which was unanimously adopted by the recent 45th national convention of the National Rivers and Harbors Congress held in Washington on May 14–16, 1958.

The permanent national projects committee of the congress consists of an outstanding expert on water-resource problems from each of the major drainage basins of the United States. They serve without compensation of any kind whatsoever and bear all of their own expenses when coming to Washington and while here serving on this committee.

The committee's purpose is to assist the sponsors of projects in preparing and presenting their data, so that they may be placed in line for approval. The projects recommended by the committee and endorsed by the congress are vigorously pressed for inclusion in the Government's public-works program, and appropriations or allocation of funds sought therefor.

We are grateful to the members of this committee for their public-spirited service in an effort to assist the Congress of the United States and the governmental agencies charged with the responsibility for these public works, as well as the people in the areas to be served thereby.

The members of the committee who served at its recent session follow:

PROJECTS COMMITTEE

Representative SID SIMPSON, of Illinois, chairman.

New England division: Member: William S. Wise, executive secretary, Flood Control and Water Policy Commission, State of Connecticut, Hartford, Conn.

North Atlantic division: Member: Brig. Gen. James H. Stratton, United States Army (retired), consulting engineer, New York, N. Y.

South Atlantic division: Member: H. H. Buckman, consulting engineer, Jacksonville, Fla.; vice chairman.

Southwestern division: Member: Dale Miller, executive vice president, Intercoastal Canal Association of Louisiana and Texas, Houston, Tex.

Lower Mississippi Valley division: Member: W. L. Sibley, president, Caddo Levee Board, Shreveport, La.

North Central division: Member: Al Hansen, comptroller, city of Minneapolis, Minneapolis, Minn.

Missouri River division: Member: John B. Quinn, executive vice chairman, National Resources Development Association, Inc., Lincoln, Nebr.

Ohio River division: Member: J. I. Perrey, chief engineer, Indiana Flood Control and Water Resources Commission, Indianapolis, Ind.

North Pacific division: Member: Herbert G. West, executive vice president, Inland Empire Waterways Association, Walla Walla, Wash.

South Pacific division: Member: Vice Adm. Murray L. Royar, United States Navy (retired), Washington representative, Oakland, Calif., Chamber of Commerce.

Western Inter-Mountain region: Member: E. W. Rising, Washington representative, State Water Conservation Board of Montana, Helena, Mont.

REPORT OF THE PROJECTS COMMITTEE TO THE 45TH NATIONAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS

MAY 16, 1958.

HON. OVERTON BROOKS,
President, National Rivers and Harbors Congress, Washington, D. C.

DEAR MR. PRESIDENT: In pursuance of the call of the president, your projects committee met on May 14, 1958, to consider the projects submitted since the last session of the National Rivers and Harbors Congress. Hearings were afforded all who made appearance.

The committee at this session has examined 54 proposals embracing all resource improvements with which this congress is concerned, including navigable waterways, harbors, flood control, hurricane protection, soil conservation, reclamation, and water conservation.

Of the proopsals examined, this committee is convinced that four constitute projects sound in conception, needful, and sufficiently advanced in status to warrant endorsement, involving a total estimated cost of $651,048,000. Nineteen proposals appear to be without sufficiently advanced development to warrant project endorsement at this time, but are believed to be meritorious and entitled to further consideration by this committee, if and when additional information may be adequate to warrant an endorsed status. We find that on 27 proposals, surveys have been authorized but the reports of said surveys have not been completed and we therefore recommend in these cases that the congress request the appropriate authority to complete reports of its investigations and surveys as soon as practicable in order that action may be taken toward classification by this congress.

We find four proposals which on preliminary examination appear to be desirable and needful, and we accordingly recommend that engineering and economic investigations of survey scope be made in these cases with a view to developing projects for subsequent authorization.

Appendix A of this report sets forth in detail a list of all proposals and projects examined and the action taken thereon.

At the time of our national convention last year, the Congress of the United States was considering the omnibus rivers and harbors and flood control bill, S. 497. As the members of this Congress know, S. 497 was vetoed by the President on April 15, 1958, generally on the basis that authorization of 28 of the items included would destroy some of the most important governmental policies in the field of water resource development. No action has been taken by the Congress on the veto.

A total of 137 projects, exclusive of basin authorizations, covering all parts of the country and the Territories were included in the vetoed bill. The monetary and report breakdown of S. 497 as passed by the Congress is as follows:

Type of improvements	Number of reports or items	Monetary authorization
Navigation and beach erosion	70	$202,430,300
Flood control and multiple purpose including Mississippi River	67	566,649,500
Basin authorizations (flood control general)	12	608,300,000
Department of Interior (Missouri River)	1	200,000,000
Total	150	1,577,379,800

In addition to the above authorizations, the bill contained several general provisions, including a section on water supply which would liberalize policy applicable to advance provision of facilities needed to meet future needs. Most of the projects have been found economically justified and many of the recommended projects included in S. 497 are of high importance to the Nation's expanding economy and should be provided as soon as possible. Your projects committee, therefore, recommends that the Congress of the United States be requested to give consideration to early authorization of these projects and to the appropriation of funds for construction. The section on water supply is particularly appropriate to the future planning of reservoirs in order to serve the expanding industrial economy in an orderly manner.

Since our last meeting, there has been much activity in connection with the Federal civil-works construction and investigation program and in the field of water-resource development. Floods are once again taking their toll of destruction in Texas and Louisiana and in the triangle of Kentucky, Virginia, and West Virginia in the Big Sandy River Basin. Last spring during the disastrous floods in the Southwest the 34 reservoirs and other flood-control works of the Corps of Engineers in operation in this region, which cost $476 million to construct prevented some $140 million of flood damages. Flood control became a major part of the national water resource investment program when in 1928 the Congress declared a national interest in preventing human suffering and economic losses from floods in the Mississippi Valley, and authorized the Alluvial Valley project. This project has yielded $6 in benefits for every dollar invested. In 1936 flood control was authorized on a nationwide basis. The 500 flood-control projects of the corps completed or placed in partial operation have been in operation for an average of about 15 years. They have already prevented flood damages totaling $8⅔ billion, which is about twice the amount invested. The reservoir system of the Corps of Engineers with millions of acre-feet of storage capacity are mitigating the damaging effects of floodwaters and are bene-

fiting water supplies, pollution abatement, recreation, and fish and wildlife. However, construction of authorized projects and additional authorizations are necessary to alleviate flood conditions in other parts of the country. The devastating floods in the Pacific Northwest and the floods and hurricane losses along the Atlantic and Gulf States during the past few years are fresh in our minds and show that much remains to be done in the field of flood control, particularly in the determination of the feasibility of projects for the prevention of these flood damages and the loss of human lives. Where and when another great flood may strike is not known but it could be in any river basin at any time.

The inland waterways which now total 22,600 miles handled an alltime high of 220 billion ton-miles of cargo in the calendar year 1956. There are over 400 improved harbors and the Great Lakes system, in addition.

The hydroelectric power production facilities of the Corps of Engineers are contributing greatly to alleviating power shortages, particularly in the critically deficient Northwest region. During the fiscal year 1957, 22 billion kilowatts were generated at projects operated by the corps, representing 18 percent of the total hydroelectric power produced by all sources in the Nation.

As we all know, the Corps of Engineers survey program is nationwide and it includes investigations called for by Congress to determine the practical means of reduction of loss of human lives and damages to property. Reports recommending flood-control works on the most severely damaged areas in New England and in other parts of the country have been completed and submitted to Congress by the Chief of Engineers and are included in the omnibus bill. As a result of hurricane damage to our coastal and tidal areas, three projects for New Bedford-Fairhaven, Narragansett Bay, and Texas City are included in the bill.

Many other areas severely damaged have been designated for detailed study and a number of these investigations are well advanced. Congress has also authorized investigations to study hurricanes including the securing of data on hurricane frequency and behavior and the establishment of means to prevent the loss of lives and property that have been experienced. It is evident, therefore, that the development of plans for the control of floods and minimizing the destructive force of hurricane are of paramount importance. In this connection, we must never for one moment lose sight of the objectives of the National Rivers and Harbors Congress in supporting this great program of water resource development.

The need for funds for carrying out investigations for flood control, hurricanes, navigation, and related uses is as urgent at this time as any time in the history of this program. The investigations should go forward in order that a well planned construction program can be made for the time that construction funds will be available for those projects which may be recommended as a result of these studies and that are authorized by Congress. We have watched with concern the gradual retardation of the navigation and flood control program of the Corps of Engineers, not only for new work but also for maintenance and investigations. For example, there are over 1,000 outstanding reports in the Corps of Engineers program which will cost over $20 million to complete. Although much work remains to be done in the field of water resource development throughout the country, we feel that the problem is being expertly handled by the Federal agencies in cooperation with the States concerned. The need for full scale development of our water resource program is greater today than ever before. The projects committee, therefore, considers it highly important that sufficient funds be provided in order that the Federal agencies can carry out their respective water resource program in an orderly fashion. Your committee is concerned over the large backlog of investigations authorized by Congress to be carried out by the various Federal agencies and recommends that appropriations be increased at this time in order that the backlog be reduced and that an adequate reserve of current projects may be built up for activation particularly at this time when the economy of the Nation appears to warrant construction of worthwhile public works.

We wish to commend the various Federal agencies involved in the investigations and provisions of water resource projects on their improvements in development of sound procedures of project analysis and formulation, and the increased cooperation among agencies and with the States and local interests. We believe that true partnership between the Federal Government and its citizens lies not only in the sharing of costs, but also from the common sharing of problems and their development and solution. An example is the pending hurricane studies being made along the eastern and southern seaboards, in which, the States, local municipalities and many of the Federal agencies are cooperating in making these studies.

We renew our previous recommendations that existing and proposed channels for inland navigation be studied with a view to developing a practical and rational method for evaluating their strategic importance. In 1950 President Truman appointed a Water Resources Policy Commission to study the entire field of water resource development. In its report of December 11, 1950 that Commission gave exhaustive consideration to navigation improvements, including their military and defense value, and quoted the following statement of the Office of Defense Transportation:

"If our waterways rendered no service beyond that of transporting petroleum and its products during the war they would have amply justified their improved existence."

The committee is now developing procedures under which, when specifically requested by the proponents, it may assign to navigation projects and to the navigation feature of multiple purpose projects a strategic value rating in addition to and aside from their peace time economic value. These ratings express the committee's judgment as to the relative strategic value of any project for inland navigation according to the standards, considerations and definitions which the committee has developed. The purpose of assigning such ratings is to evaluate our strategic reserve of inland water transport facilities and the coordination of these with facilities for other means of transport in order to aid local, State and Federal Governments to assess the value of the contribution by a project to such reserve so that it may have weight in the overall justification of the project. A high strategic value rating is not at all necessary to the complete economic justification of a project but such rating may serve to justify a project not justified by the application of strictly economic criteria alone. In general, the committee icludes in its definition of strategic value any existing or potential use, device or feature of a project which may be reasonably expected to importantly and specifically contribute to the defense potential of the United States, either military or civilian, with respect to its overall rail, highway, waterway and air-transport network.

The committee recommends that the executive vice president be authorized to issue to proponents, when requested by them, an appropriate certificate of classification with respect to any project classified by the committee.

Attention is called to the fact that new rules have been promulgated after last year's meeting. These rules have been furnished to the applicants of the 45th national convention and have formed the basis for current action by the projects committee.

Respectfully submitted.

SID SIMPSON, *Chairman.*

(NOTE A.—A project which has been placed in class II, III, IV, or V by the committee may be reexamined from time to time upon due appplication and the submission of material supplementary information, with a view to advancing its classification; but no project will be reported upon by the committee more than once in each year.)

(NOTE B.—Attention is called to the fact that when a project is once put in class I—Endorsed, such status continues and it is unnecessary to follow up at subsequent sessions with new applications. All projects endorsed by the congress, upon the recommendations of the committee, retain their status until finally constructed, unless such atcion is rescinded by the congress, and the congress stands pledged to do everything possible to assist in reaching that goal.)

APPLICATIONS FOR APPROVAL OF PROJECTS RECEIVED BY THE PROJECTS COMMITTEE

Appendix A

(Letter "R" following the project number indicates revision of a previous application)

DIVISION I—ENDORSED

Endorsed: This means that it is the judgment of the committee that the project is sound, needful, and sufficiently advanced in status; and that its construction is justified by the public interest it will serve.

Docket No.	Name of project	State	Division
1081	Toledo Harbor	Ohio	North Central.
1089	Buttermilk Channel (by dredging)	New York	N. A.
1098	Miami Harbor	Florida	S. A.
1105	Garrison diversion unit, Garrison division, Missouri River Basin	North and South Dakota	Missouri River Basin, Garrison Division.

DIVISION II—MERITORIOUS

Meritorious: This means that the committee believes that although the project is not sufficiently advanced in status to warrant its present endorsement, it is meritorious and that the committee is willing to consider in due course, its advancement to division I upon presentation by its sponsors of additional evidence justifying such action.

Docket No.	Name of project	State	Division
793-R5	Flood protection, cleves	Ohio	O. R.
890-R4	Kahului Harbor	Maui, T. H.	P. O.
1079	Turtle Creek Basin flood control	Pennsylvania	O. R.
1091	Improvement Oakland inner harbor	California	S. P.
1093	Jim Ned Creek, Pecan Bayou, general survey	Texas	S. W.
1097	Turkey Creek Reservoir	Kansas	M. R.
1097-A	Sutphen Mills Reservoir	do	M. R.
1097-B	Woodbine Reservoir	do	M. R.
1097-C	Humboldt Reservoir	do	M. R.
1097-D	Camp Creek Reservoir	do	M. R.
1097-E	Onaga Reservoir	do	M. R.
1097-F	Grove Reservoir	do	M. R.
1097-G	Clinton Reservoir	do	M. R.
1102	Trinity River and tributaries	Texas	S. W.
1106	Siuslaw River and bar	Oregon	N. P.
1107	Pollution abatement works for District of Columbia	District of Columbia	N. A.
1115	Mad River Dam	Connecticut	N. E.
1117	Newfield Dam, Naugatuck River, East Branch	do	N. E.
1118	Hall Meadow Dam, Naugatuck River, West Branch	do	N. E.

DIVISION III—EXPEDITIOUS REPORT ON AUTHORIZED SURVEY REQUESTED

Expeditious report on authorized survey requested: This means that the committee believes that the National Rivers and Harbors Congress should request the engineering authority to expedite any report on any authorized investigation or survey of the project to the end that appropriate further action may be had thereon in regard to its classification.

Docket No.	Name of project	State	Division
843-R5	Levees east of Chandlerville (Sangamon River)	Illinois	N.C.
922-R	Atchafalaya Bay ship channel	Louisiana	L.M.V.
1008-R2	Calcasieu River, low-level dam-sea brine barrier	do	L.M.V.
1058-R	Breakwater, Monhegan Island	Maine	N.E.
1059-R	Portland Harbor	do	N.E.
1080	Toledo Harbor (by deepening)	Ohio	N.C.
1083	Southern Branch, Elizabeth River, Norfolk Harbor	Virginia	N.A.
1084	Additional anchorages, Norfolk Harbor	do	N. A.
1085	Channel to Newport News	do	N. A.
1087	Study Passaic River, Newark Bay Channel	New Jersey	N. A.
1088	Review Buttermilk Channel	New York	N. A.
1090	Hurricane flood protection of Pawcatuck	Connecticut	N. E.
1092	Passaic River Basin flood control	New Jersey	N. A.
1094	Rend Lake	Illinois	L. M. V.
1096	Port San Luis Harbor development	California	S. P.
1099	Michigan City Harbor	Indiana	N. C.
1100	Wilmington Harbor	North Carolina	S. A.
1103	Pembilier Dam	North Dakota	North Central.
1104	Bowman-Haley municipal water study	do	Missouri Basin.
1105	Survey review report on Potomac River and tributaries	Maryland, Virginia, West Virginia, Pennsylvania, District of Columbia.	N. A.
1109	Columbia and Lower Willamette River deep-draft ship channel	Oregon and Washington	N. P.
1110	Bayfield Harbor	Wisconsin	North Central.
1111	Menominee Harbor and River	Michigan and Wisconsin	Do.
1112	Kewaunee Harbor	Wisconsin	Do.
1113	Sturgeon Bay and Lake Michigan ship canal	do	Do.
1114	Flint River channelization, flood control of hydroelectric power, water conservation.	Georgia	South Atlantic.
1116	Apponaug Cove	Rhode Island	Northeast.

DIVISION IV—PROJECTS RECOMMENDED FOR SURVEY

Recommended for survey: This means that the committee believes that sufficient showing on behalf of the project has been made to warrant further examination in the form of an adequate survey by an appropriate agency of the Federal Government.

Docket No.	Name of project	State	Division
1082	Toledo Harbor (for anchorage area)	Ohio	N. C.
1086	Port of New York to St. Lawrence River Waterway	New York, Vermont, Quebec	N. A.
1095	Prospect Harbor, breakwater	Maine	N. E.
1101	Cold River Dam	New Hampshire	N. E.

Testimony of Kansas Corporation Commission Before the Federal Power Commission Pertaining to Natural Gas

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1958

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of this body the following testimony by the State Corporation Commission of Kansas:

PRELIMINARY STATEMENT OF THE STATE CORPORATION COMMISSION OF KANSAS

The concern of the State Corporation Commission of Kansas with rulemaking of the Federal Power Commission in relation to rate filings reflecting the influence of State minimum price orders is necessarily different from that of the individual concerns of producers, transmission companies, distributors, or ultimate consumers. This presentation is confined to comments and suggestions directly affecting the statutory duties of the Kansas Corporation Commission, as a regulatory body, in relation to the Kansas Hugoton Field.

STATEMENT OF MARION BEATTY, CHAIRMAN, KANSAS CORPORATION COMMISSION

Mr. BEATTY. If the commission please, I am Marion Beatty, chairman of the Kansas Corporation Commission. With me today are the two other members of the commission, Harry G. Wiles and Richard C. Byrd. Our arguments today will be presented by our chief counsel, Clyde Milligan, and special counsel, Dale Stucky.

Before turning the matter over to them, I wish to make one general statement. The Kansas Corporation Commission as well as the Oklahoma Commission, has a duty to perform and we of Kansas interpret that duty to be to conserve and do everything possible to assure an adequate supply of gas at reasonable prices.

We do not believe it is in the public interest to permit gas to be taken out of Kansas at the lowest possible prices, cheap and wasteful prices, to the ultimate detriment of everyone, including consumers.

We earnestly request that the rule or policy to be promulgated by this honorable Commission be one that will permit us rather than prevent us from performing our duty

to conserve gas and assure an adequate supply for as long into the future as possible.

This kind of cooperation between this Commission and our commission will enure to the long-time benefit of millions of Americans who will want this ideal fuel, natural gas, for as long as our reserves will last.

ORAL ARGUMENT OF CLYDE E. MILLIGAN—RESUMED

Mr. MILLIGAN. If it please the Commission, the Kansas Commission, of course, as has been indicated by the chairman of the Commission, appreciates this opportunity to orally present to you our comments and our views on this very important matter. It is a matter of tremendous interest to the people of Kansas, both consumers as well as producers and landowners.

The concern of the Kansas Commission is, of necessity, different from the concern and interest of the producers, the transmission companies, the distributing companies, or the consumer. The Kansas Commission, of course, is interested in the conservation of this natural resource of the State of Kansas. However, before we get into the duties and responsibilities of the Kansas Commission, I think it might be well to review the history of the Kansas Hugoton Field, so that you can see the problems that had grown up in the Kansas Hugoton Field due to the manner and method in which it was developed—because then it gives you an understanding of what the Kansas Commission had to do.

Of course, as we all know, the Kansas Hugoton Field, which is a part of the Hugoton Field extending on into Oklahoma and Texas, is one extremely large common source of natural gas. Gas, of course, as we all know, cannot be transported as most other fuels. It has to be transported by pipelines. Pipelines can only be built at tremendous cost. Due to this character of gas and the necessity of transporting it by pipelines, it allowed a very monopolistic situation to develop in the Kansas Hugoton Field. We had actually, in the Kansas Hugoton Field, a situation where you had many producers or suppliers, and only a very limited number of purchasers. By considering that statement just a minute, you can see that actually you have there a situation which is just the reverse of the usual utility situation, where you have 1, perhaps 2, sellers of, say, gas, and many purchasers. Here we have many purchasers and extremely limited number of producers, rather, and an extremely limited number of purchasers. Actually, what we had were captive producers and suppliers. I don't think it can be interpreted in any other way. I think that from the facts which we set out in our brief, and from the facts which I hope to call your attention to here, it can be very quickly and readily seen that the producers and suppliers in the Kansas Hugoton Field were much more captive than the consumer ever has been in this country. It was a case where the producer either had to sell his gas or, in many cases, sell his well or be drained and lose everything. He had no choice, actually. The facts which I point out here are facts which have been taken from many hearings before the Kansas Commission, and they are price hearings, primarily.

I would like to call your attention to some specific testimony presented in these Kansas hearings, so that you can get a very first-hand view of the conditions that did exist in those early days in the Kansas Hugoton Field.

Mr. Conrad Ohm, who was secretary-treasurer and general manager of the Trees Oil Co., testified at these price hearings, and I would like to quote what he had to say as it does summarize the situation that existed there:

"As to the comparative position of our company and that of the pipeline company in so far as bargaining power in negotiations in which we sought connections for wells during this period of time, we offered to lay lines to their systems, and offered to sell gas at their price, which is 4 cents. This, in effect, gave us no bargaining power whatsoever. We could not market our gas, because there were not pipeline systems or distribution systems. We could not develop wells because of the small amount of acreage held by us. It was not economically practical. The pipeline companies gave no particular reason for not making connections. They said they were just not interested. They were drilling on acreage they owned at the time—that is both Northern Natural and Panhandle Eastern. We finally agreed to the contract we did because it was either that or nothing, with the possibility of losing what little acreage we had left."

Mr. Ohm testified in this hearing further, and stated that the first well they drilled in Kansas Hugoton Field was in 1929. I believe the discovery of gas in the Kansas Hugoton Field was in 1927, so this was 2 years later. They drilled seven additional wells to prove out the acreage surrounding the first well they had drilled. It was not until 1936 that they could get a market for that gas. At the same time, there were leases being drilled and gas being taken near or next to this acreage which had been proven, and no gas being sold. They were finally forced to sell to Panhandle Eastern for 3 cents per thousand cubic feet.

He stated that in 1937 they drilled 7 additional wells and it took them 9 years before they could find a market for this gas, so they have the same situation there as they did with the wells they drilled in 1927, or soon thereafter. Then they had to take 4 cents for their gas, either that or get it drained out for nothing.

The Trees Oil Co. is not a large company; it is just a small oil and gas company.

Also, in the same hearing, we had the testimony of Mr. Walter Kuhn, who is an individual having some gas holdings in the Kansas Hugoton Field. He stated:

"I'm familiar with the bargaining position of both sellers and buyers of Hugoton gas. There has not been any bargaining position. You take what they offer, or you take nothing."

He stated that they drilled their first well in 1931, in Haskell County, and it was 9 years before he could get a market. Then he had to sell for 4 cents per Mcf, and, in addition to that, he had to install 13,000 feet of pipeline. In addition to that, he drilled two additional wells. He had to sell those for $10 cash and $50,000 additional, for both wells, to be paid to him at the rate of 2 cents per Mcf.

I have just one more example I would like to give you.

Mr. William Broadhurst of White Eagle Oil Co., which is a small oil and gas company, testified:

"There is an instance where we were compelled to pay the royalty owners more than we got from the pipeline company in order to keep the leases."

He stated that the prices they were able to get were prices obtained under distress conditions.

I think that probably sums it up clearly and concisely.

These were distress conditions. There was no bargaining in Hugoton Field at this time. They took what they could get, or lost everything.

This does constitute only a small portion of the testimony and facts which were developed at the hearing before the Kansas Commission. The hearings lasted many days, and the testimony was voluminous.

As we see, we did have here a situation which is the reverse of the usual situation: a situation which actually led to the waste of natural gas.

There was a situation that the Kansas Commission had to meet. They had to do something about it in order to conserve this valuable natural resource.

Commissioner STUECK. May I interrupt you there for just a moment?

Mr. MILLIGAN. Surely.

Commissioner STUECK. Is there somewhere available a report and order of your Commission, which would summarize why you arrived at this 11-cent price?

Mr. MILLIGAN. There is a great deal of testimony——

Commissioner STUECK. Your brief sets out what was considered, but I wondered if there was made up a summary of evidence as to why you arrived at that price level.

Mr. MILLIGAN. At this hearing I speak of, they did consider all the evidence, and the evidence considered was abstracted at the time it went to the Supreme Court. The order and opinion which was issued does, to a great extent, summarize that, and we could furnish that to you.

Commissioner STUECK. I believe that would be helpful.

Mr. MILLIGAN. I would be glad to do that. I don't believe I have a copy of that opinion and order with me today, but I would be glad to furnish it to you. That is the action which the Kansas Commission took, which was made clear to them at the time of these hearings.

It was perhaps the best way they could achieve the goals and aims which appeared desirable, to enact a minimum price for gas at the wellhead or, as we call it, a minimum value to be attributed to gas before being withdrawn.

This Hugoton field was a different situation than the other gas fields in Kansas. It is the only gas field the Kansas Commission has jurisdiction of that they ever considered setting a minimum price. The conditions out there were so much different from the other gas fields that they had to take this action. They have numerous gas fields under their jurisdiction, and it has never been necessary in these other instances to institute such an order. This is just a unique situation that developed due to the early development of the Hugoton field, where monopolies existed that have not been present in the other gas fields.

The Kansas Commission, according to the statutes of Kansas, which were set out in the general statutes of Kansas, 1949, sections 55701 to 55713, do set out the basic duties and responsibilities of the Kansas Commission, which are the prevention of waste and the conservation of gas and the protection of the correlative rights.

This prevention of waste in Kansas, perhaps due to the definition of waste by statute, is somewhat different than in other States, in that it includes within the waste economic waste as well as physical waste.

Just what the commission—how far they can go in considering economic waste is a problem which they have before them at the present time.

Of course, by statute, the Kansas commission must set for hearing every request for an allowable to a gas well in the regulated fields of the State of Kansas.

They have had recently several applications—a good many, as a matter of fact—for allowables, where the price of gas seems to be unreasonably low. If they approve the allowable, it will quite possibly contribute to instead of preventing economic waste. Just what action they can take or what action they will take, I don't know at this time. But they are charged with the prevention of waste in production of natural gas and the protection of correlative rights.

The Commission, in setting a price order, did set these orders to prevent waste and to agree or, rather, to protect the correlative rights of the producers and landowners in the field.

As I stated, they did take many days for hearings on this, and the testimony is quite voluminous.

The minimum prices did achieve what they were attempting to do, to a great extent. It did cut out the inefficient use of gas in carbon black plants, of which we had several in the Hugoton Field at that time.

It did help the companies to take better care of the wells, in that they would seek out the leaks which were in existence and repair the pipes. They would not blow to the atmosphere the excessive quantities of gas in cleaning up the wells that they had in the past, and in all ways, it seemed to be achieving that which the Kansas commission had sought to achieve.

It did help, to a great extent, the Kansas Commission in performing their duties as they are required by law to do.

However, we do recognize that the United States Supreme Court has stated that we cannot any longer use price as a tool to effect these conservation measures. But I don't think it can be disputed by anyone that they were achieving that which the Kansas Commission hoped to achieve—reduction in use of gas for low-grade purposes, encouraging the addition development in the Hugoton field, encouraging the development of marginal and peripheral acreage, which they could not have developed with the prices, 3 or 4 cents per thousand cubic feet.

At the same time, at the time the 8-cent order went into effect, there were approximately 800 wells in existence at that time.

Today, there are 3,800, which is a tremendous increase, as you can see.

Greater care was exercised in the conservation of gas, because they didn't believe they could blow 8- and 11-cent gas to the atmosphere like they could 3- and 4-cent gas.

The Kansas commission did accomplish much by these measures.

Of course, they do not wish to go back to the chaotic situation that existed before these orders were in effect. We hope we can work together and achieve the results that seem to be desirable, both for Kansas and for the Nation as a whole.

The Kansas Commission is of the opinion that 11 cents is not at all exorbitant. As a matter of fact, it is probably too cheap.

The Kansas Commission wasn't attempting to set a true value on gas but was only attempting to set a value that would effect their conservation purposes.

The only strictly intrastate gas which we have in the State is selling for 15.55 cents per thousand cubic feet, 4½ cents above the minimum price set by the Kansas Commission.

Another pipeline getting gas in Texas runs a pipeline right through the Hugoton Field, and is paying 20 cents for it in Texas. The rate has been approved by the Federal Power Commission, as the Commission has approved other rates.

Gas is being purchased up at the Canadian border for 21 cents. That is the West Coast Transmission Co., for sale to Northwest.

Down at the Mexican border, gas is being purchased for 14 cents per thousand cubic feet. That is gas being purchased from Pe Mex company by the Texas Transmission Co.

Therefore, we feel that the Kansas Commission is not setting an unreasonably high price. That wasn't the purpose.

Commissioner CONNOLE. Mr. Milligan, when the Commission set its price, did it consider such factors as those you have now mentioned?

Mr. MILLIGAN. They did take evidence, of course, as to the price of gas in the area, which, in practically all instances, was higher, because I think they needed to—insofar as possible—to determine how the gas might be used if it were selling at a higher price; to they did consider those factors as well as the other.

I think it is only one of the elements, however, of course, that were considered by the Commission.

Commissioner CONNOLE. The prices in the gulf coast area and the other areas?

Mr. MILLIGAN. No, they didn't consider those.

No. I was only calling those to your attention to show that 11 cents isn't an exorbitant price, which, of course, you know better than I, by the prices that have been approved by your Commission.

They did not consider, to any great extent, that they were considering the prices in the area near the Hugoton Field.

As an instance, at the present time, the gas in Greenwood Field, in Sparks Field, and Rich Field, and others within a stone's throw of the Hugoton Gas Field, are now selling for 15 cents, initial filing, I think, was 15 cents per Mcf, which compares very well with the price of intrastate gas from the Kansas Hugoton Field.

I would like to make this statement, too.

Of course, the records of the Federal Power Commission will show that practically every purchaser from the Kansas Hugoton Field relied on the 11-cent price for rates they were requesting from the Federal Power Commission. But in addition to this, I know it is true that the producers, the suppliers, relied on this minimum price, too, in carrying out their additional exploration. They were counting on a certain return or profit in order to develop additional acreage, in order to go down for deeper gas, in order to develop this peripheral acreage, the marginal acreage, which they could not afford to do for 3 or 4 cents.

They did this relying—their contracts have been filed and they have been accepted, with the price attached to it, and it was thought by everyone, as a matter of fact, that the price was 11 cents.

I do not think, as a matter of fact, the Federal Power Commission stated at any time that they were not. The price was not protested, with the exception of the Magnolia case, which was a little different from all the others.

So I think they had a right to rely on the 11 cents and make their case based on that, which will lead into legal arguments, which I will not take up here.

After the price order was knocked out, there developed instances where gas was being produced from a well and being sold for 3 or 4 different prices.

As an instance, an owner may have a well on a piece of land 640 acres, and there may be 4 quarter-sections attributed to this well. One landowner sold his gas for 3 cents, and another one for 11 cents. Therefore, he had 3 cents, 5 cents, and 11-cent gas coming out of the same well.

When you try to explain that to the land or royalty owner, that he is getting 3 cents and somebody else with gas out of the same well is getting 11 cents, it is doggone near impossible to explain it to him, and the Commission is being asked that question, and we don't know what to say.

We get many complaints about situations like that.

It is also hard to explain why intrastate gas is selling for 15½ cents and interstate gas is selling for 3 and 4 cents.

I think I have probably covered quite adequately the reason why the Kansas Commission is interested in this matter before the Federal Power Commission today.

To summarize:

We want to prevent the early abandonment of wells in the Kansas Hugoton Field, because they have gone bad. By that I mean the porosity of water has eaten up the pipe. If they are getting a fair return, they will go back and complete those wells and drill new wells, if that seems to be indicated.

Testimony before the Kansas Commission indicated that in 70 to 80 percent of the wells in the Hugoton Field, the life of the well was 20 to 30 years. The first well was drilled in 1929, and subsequent wells in the early thirties, so you can see that a lot of wells are now going to have to be redrilled or recompleted, and they are going to have to plug those wells and turn the lease back. They can't afford to go in and do this work. It costs $21,000 to $50,000 to redrill a well out there, and $15,000 or $20,000, perhaps more, to recomplete a well. They can't afford that on the price of the old contracts as set out.

The only thing they can do is plug the well and let the lease go.

Of course, the landowner is going to lease this ground again for more money, and the person to whom he leases it is going to drill that well and set a price higher than the initial 3- or 4-cent rate.

Actually, it is going to work to the great detriment both of the producer out there and to—and of the ultimate consumer.

The Kansas Commission wasn't concerned only with the producer and the royalty owners out there. Their concern goes to the consumer, and I think their facts justify a retention of a stable price in the Hugoton Field in order that these conservation measures can be carried out.

Also, these old contracts, in some instances, while it is in dispute, in some instances, these old contracts cover gas from deep pays as well as from the Hugoton pays.

If they can't afford to go down to the Hugoton pays, they can't come back and drill to the deeper pays and prove up reserves that are undoubtedly there. And I think you all will agree that it is very desirable to add to the reserves of gas in this country, both for the benefit of the people in the State of Kansas and for the benefit of the people in the Nation.

I would like to just comment a couple of minutes on the refund situation.

It appears to us that little if any benefit will run to the ultimate consumer.

While I admit that we didn't have the complete facts to reach a definite conclusion, however, our estimate indicates that probably there will be $60 million that would be subject to refund, $60 million that the producers and royalty owners would be required to refund to the purchaser.

But it is our opinion, from the information that we have, that the Federal Power Commission probably has jurisdiction to compel the refund of only approximately $12 million of this to the distributing companies.

Of this $12 million, it is very doubtful that little or any of it will ever reach the ultimate consumer. It depends on the rate situations that exist, as far as these dis-distributing companies are concerned.

Even if the entire $12 million were to ultimately reach the consumer, the ultimate consumer, we probably would have a situation that is parallel to that set out in the *FPC* v. *Interstate Natural Gas Co.*, 336 United States Code, section 577, where a sum of $1,484,000 was collected under bond. Refunds to the customers averaged only 15 cents, and the actual cost of refunding was more than the average refund to the consumer.

I think we would probably have a situation here that is practically identical to that.

We are of the opinion that this small advantage, if there is an advantage, is greatly outweighed by the disadvantages of compelling a rollback.

I am of the opinion that had not the suppliers relied on the rates of the Federal Power Commission, of course, they would have not—they would have, in many instances, started proceedings to get the rate up to where they could perform and earn the lowest reasonable return on their money.

But I do think the Kansas Commission was achieving their conservation goals, and these goals and aims were quite similar to those which were set out in a report to the President on Resources for Freedom, the President's Material Policy Committee, in June 1952, where they stated in there that there are four important challenges to our natural gas economy:

One was to stimulate natural gas discovery of our resources. Two was to avoid waste in the production of natural gas, which they were doing. Three, to improve the pattern of use so that relatively more gas goes to those uses in which it has a special advantage, and relatively less to those than could be served just as well by other fuels. That, they were also achieving.

In regard to that, they had a little more to say, such as that much can still be done in improving the pattern of use so that greater benefits will be derived to the Nation from its natural gas resources.

I think that the goals are actually those which the Kansas Commission was achieving, and that which we all here today want to achieve.

In seeking the assistance of the Federal Power Commission, the Kansas Commission does not want to ask the Federal Power Commission to disregard any of its own statutory obligations. We are not asking you to do that in aiding us, but we have in our brief set out many legal principles which we feel do and will allow the Federal Power Commission to help us solve these problems.

We believe that cooperation between the State Commissions and the Federal Power Commission is desirable, and I believe this is one of the major objectives of the Natural Gas Act, as set out in section 17.

Mr. Stucky wants to take over now. Thank you.

ORAL ARGUMENT OF DALE STUCKY, IN BEHALF OF THE KANSAS CORPORATION COMMISSION

Mr. STUCKY. May it please the Commission, in the time we have allotted to us, it may not be possible for me to cover all of the points that were presented in our brief, which is the yellow brief which has been on file with the Secretary of the Commission. I should like to devote the first part of my time to the proposition that the order of the Kansas Commission was valid until conflict between the Federal Power Commission—between Federal and State Authorities arose as a result of the exercise by the Federal Power Commission of jurisdictional indepndent producers on July 16, 1954, and prices conforming to such minimum price order were both effective and legal rates on June 7, 1954.

Now, just briefly, a little chronology. Minimum price orders are not new in this country. The first one that reached the attention of the Supreme Court of the United States was a Louisiana minimum price order for conservation purposes in 1923, which was approved by the Supreme Court as a conservation measure. The next date is 1938, when the Natural Gas Act was passed. Some 10 years after this, the State of Oklahoma used price attribution as a conservation tool in the Oklahoma Hugoton Field. The FPC had not, by that time, exercised its jurisdiction over independent producers, although it had exercised its jurisdiction over the pipeline companies. As a matter of fact, it claimed that it had no power to do so, and had the Kansas commission requested such jurisdiction by the Federal Power Commission, they would have been denied. Had any independent producer requested that its rates be approved by the Federal Power Commission, that rate filing would have been denied.

Now, it is important to remember that the act did not require rate filings—was not self-executing with respect to rate filing by the independent producers. The act provided that this Commission could require rate filings within such time and in such form as the Federal Power Commission should designate, provided they couldn't do it until 60 days have elapsed from the time of the enactment of the statute. So the time within which these filings were required was within the discretion of the Federal Power Commission. It turned out that it was 16 years before the Federal Power Commission exercised the jurisdiction which it could exercise. That was a situation when the Peerless case was decided. The Supreme Court of the United States held, in connection with the Oklahoma price order, that minimum wellhead price orders, value attribution, however you want to describe them, was a proper conservation tool to be used by the States. It also held that this was an area in which the State and Federal Governments had concurrent jurisdiction.

At that time, the FPC had not yet exercised its jurisdiction over the independent producers, so at that time, there was no possible conflict.

Now, the next date I want to call to your mind is June 7, 1954, and the Phillips case, which I am sure you are all familiar with. On July 16, 1954, the Federal Power Commission for the first time under the statute designated a time within which and the manner in which independent producers would be required to comply with other rules and regulations promulgated by the Federal Power Commission in connection with its regulation. It entered its order requiring filings to set forth rates and charges effective on June 7, 1954.

Now, on that date, all the gas purchasers and producers who had some kind of contractual relations for a price than 11 cents were complying with the 11-cent order. That was the price being paid to them. Now, the Commission, in making its 174 order here did not inquire into the illegality or the legality of any contracts. It did not inquire into the reasonableness or unreasonableness of any contractual arrangements made by independent producers. It did not examine any of these contracts to see whether they were fraudulent or illegal in any other regard. It simply said that the rates effective June 7, 1954, were the rates which were to be filed, regardless of whether they were fraudulent rates, unreasonable rates, rates resulting from deceit, lack of armslength bargaining—they were regarded as initial rate filings by this Commission. Because freedom of contract or freedom to contract, under this Commission's view, existed prior to the time it issued its order of July 16, 1954.

Now, in that connection, I want to say that it is our opinion, and we have set out authorities in support of it, that freedom to contract expired at the same time that State regulation, the power to regulate by the State, expired. The Federal Power Commission did not reexamine all the contractual relations and changes that existed since 1938. It didn't go back to determine what the original 1930 rates were. That would have been a monumental task. It accepted as initial filings the unregulated contractual rates, or the unregulated effective state of facts on June 7, 1954.

Now, by reason of acquiescence in some instances, and by reason of voluntary payments in others, the 11-cent price provision of the Kansas order was and became an integral part of the relationship between the buyer and seller in every instance. It has become a part of the contractual relationship, free of Government regulation, both so far as private negotiation was concerned and so far as State regulation was concerned, until June 7, 1954.

Commissioner CONNOLE. Mr. Stucky, did you say the order of the Kansas Commission became part of those contracts by Government order?

Mr. STUCKY. No.

Commissioner CONNOLE. Then perhaps I missed it.

Mr. STUCKY. No, I didn't say that. I think that is true, also. The point I am trying to make also is that by reason of the acquiescence on the part of both parties, and by reason of voluntary payments, and by reason of the equitable doctrines of the stop order which was set out in our brief, this 11-cent rate filing was not a rate based on a price order as such. It was a contractual rate. It may have been an illegal contract, in the sense that it was filed or was made at a time after 1938, when the Federal Power Commission could have exercised jurisdiction, but if it was illegal, every other contract that was filed as an initial filing was illegal. It was the actual arrangement. There are no filings before this Commission that are based solely on any principal price order and if you strike out, if you conceive of these orders as being made up of component parts, and strike out that portion which you conceive attributable to an 11-cent minimum order, you would have to strike out all the other portions, too. Because for the same reasons they were illegal, because they were entered into at a time when under the first assumption the parties had no right to bargain privately——

Commissioner CONNOLE. In other words, you feel that these prices are the result of bargaining between the parties?

Mr. STUCKY. Yes.

Commissioner CONNOLE. And the minimum price order may have been the stimulus or the thing which caused the parties to reach the agreement, but it wasn't the agreement itself?

Mr. STUCKY. No; it wasn't the agreement. It was part of the relationship which existed between the parties.

Now, getting back just a minute to chronology, after the order of 174, Panoma was decided. The Supreme Court held in that case that after regulation of sale of production and gathering had entered by the State of Oklahoma, a conservation order could not stand. Justice Douglas dissented in that case. He was of the view that even though the Federal Power Commission had issued order 174, still the State had the power until the Federal Power Commission actually established a maximum price which conflicted with the Oklahoma minimum price. That today has not yet occurred.

But Justice Douglas did not prevail, and the majority view was that the conflict had occurred. The order 174 was down. The situation was different from Peerless.

Then we had our Kansas case, and that case applied the Panoma doctrine to a wellhead situation.

Now the question is—I might say that in our case, the question was never determined by the Supreme Court as to when this conflict arose. The question was whether it arose.

Cities Service Gas Co. had never claimed there was any conflict between the Kansas order and the jurisdiction of the Federal Power Commission under the Natural Gas Act. They filed a petition for review, which languished in the district court of Finney County, Kans.

Then the Federal Power Commission issued its order 175. Two years later, in March of 1956, Cities Service suddenly claimed there was a conflict between the jurisdiction of the Federal Power Commission and the Kansas order. Before that they were claiming the price was too high, there was no evidence, the Kansas Commission had no jurisdiction under the general Kansas statutes, and that sort of thing.

But there was never any claim in this case, in our Kansas case—and the record is clear on it—no specific claim that there was any conflict between the Federal Power Com-

mission and the State Commission until after order 174.

As a matter of fact—and I don't have time to point this out in any great detail—but I do want to refer the Commission to what the Cities Service Gas Co. was telling this Commission during this period of time. It is set out on page 63 of our brief. I understand that Mr. Littman was counsel for Cities Service.

Where there is a State law, he said, that State law would become a part of the contract. On the bottom of page 63:

"I am also advised further by the Federal Power Commission that there is on file with the Commission at this time this 11-cent rate. For example, in the case of Stanolind, and I think some very few exceptions, which he mentioned yesterday, of all presently effective field rates of these vendors."

He says: "We consider the issuance of the Kansas order as constituting a subsequent agreement which we have with the Stanolind Co."

The witness says: "We agreed to pay Stanolind the Kansas price order."

"Question. Where did you agree to pay Stanolind the Kansas price order?"

I think that must have been "when."

"Answer. As of the date which we started making such payment."

Mind you, this was Cities Service Gas Co.—page 65 of our brief.

"There is an agreement with them to pay the minimum price of Kansas."

The witness says: "If an agreement to pay them that money is a contract, yes, sir, there is a contract."

That is what Cities Service was telling this commission while its appeal was languishing out in the District Court of Finney County, Kans. They said that was true of every contract they had. Every gas purchaser of gas from the Hugoton Field in Kansas had sought rate increases based on such agreements or similar testimony. We don't have it all, but I am sure they have appeared here. Three of them have appeared before the Kansas commission in support of rate agreements on the theory that these were agreements or the order was binding.

We set out in our brief the doctrine of estoppel, which prevents them now from complaining that this order was invalid, taking a position inconsistent with the position they eventually took.

Commissioner CONNOLE. Mr. Stucky, without giving you the impression that I agree or disagree with what you are saying, now, just answer me whether you feel this testimony and representations that you read to us represent an agreement by Cities Service or any other to pay 11 cents, or is it an agreement to pay the Kansas minimum price order, whatever that may be?

Mr. STUCKY. I think it is an agreement to pay 11 cents.

Commissioner CONNOLE. That is your understanding?

Mr. STUCKY. Yes.

Commissioner CONNOLE. If it were an agreement to pay the minimum price order, whatever that may be, would it make a difference to you if there were no such thing as a minimum price order?

Mr. STUCKY. I'm not sure I understand your question.

Commissioner CONNOLE. What I am getting at is:

Is there a difference, in your judgment, between agreeing to pay 11 cents, wherever that may be found, or, on the other hand, agreeing to pay the minimum price order, whatever that may be?

Mr. STUCKY. I think there is a difference.

In one case, you know what you are agreeing to; in the other case, you don't.

They were agreeing to pay 11 cents. That is what they told the Commissions they were paying. That is what they got their rate increases on.

Commissioner CONNOLE. That is certainly your understanding of what the contractual agreement was?

Mr. STUCKY. Yes.

I'm not saying they have a written agreement to that.

Commissioner CONNOLE. I understand.

Mr. STUCKY. But I am saying the agreements established a contractual duty, which was the effective rate in July, on July 16, 1954, and which was the effective rate from that day.

I haven't tried to touch the other arguments. They are in our brief, where we deal with them exhaustively.

Thank you.

The complete view of the Kansas Commission was set out in the brief filed with the Federal Power Commission. Time did not permit a full presentation of all these views. The position of the Kansas Commission as to applicable principles of law may be summarized as follows:

1. Until changed pursuant to the act the filed rate is the legal rate for all purposes. Neither the commission nor the courts can go behind the filed rate as to the past. Reduction of the rate for the future by action of the commission can be ordered only after a hearing and a finding that the rate is unjust, unreasonable, discriminatory, or preferential.

2. The order of the Kansas commission was valid until conflict between Federal and State authority arose as a result of exercise by the FPC of jurisdiction over independent producers on July 16, 1954, and prices conforming to such minimum price order were both effective and legal rates on June 7, 1954.

3. If the Natural Gas Act was self-executing with the effect of rendering the Kansas order void ab initio, all contracts entered into between purchasers and producers who had not received certificates of convenience and necessity were utterly void. The filed rate became the first legal rate and it cannot be abrogated in favor of an illegal rate, whether fixed by a void order or by a void contract.

4. All purchasers from Kansas Hugoton field are estopped to assert invalidity of rates based upon the Kansas order for the following reasons:

(a) All purchasers except Cities Service Gas Co. are estopped by failure to file or prosecute petitions for review of the Kansas order.

(b) All purchasers, including Cities Service Gas Co., are estopped by reliance upon validity of the Kansas order in seeking rate increases.

(c) All payments pursuant to the Kansas order were voluntary and are not recoverable.

General Gavin Cites United States Unpreparedness: "We Are in Mortal Danger"

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the first of two articles by Lt. Gen. James M. Gavin which appeared in the August 4, 1958, issue of Life magazine:

GENERAL GAVIN CITES UNITED STATES UNPREPAREDNESS

(By Lt. Gen. James M. Gavin)

(When Lt. Gen. James M. Gavin announced his retirement last winter, he touched off a blazing controversy over the state of United States defenses. As wartime commander of the 82d Airborne Division, and later chief of the Army's research and development, General Gavin proved himself both an audacious combat soldier and an imaginative military thinker. Now a vice president of Arthur D. Little, Inc. in Cambridge, Mass., he states his views in a new book, War and Peace in the Space Age.

(General Gavin's comments on limited war are particularly timely today. Last week he pointed out that the landings in Lebanon, successful as they were, may have sharply reduced our reserves elsewhere. And he cautioned, "We have got to be able to do better than that. It took us 4 days to get 3 battalion combat teams there, and they had no opposition. And if missiles had been used against the marines and the Sixth Fleet they could have been in bad shape.")

December 13, 1957, was a cold and wintry day in Washington. As I looked from my office in the Pentagon toward Arlington National Cemetery, I could barely make out the white grave markers through the swirling snowflakes. On just such a day as this the 82d Airborne Division in early 1945 had, under my command, launched its counteroffensive in the Battle of the Bulge. Near me, hanging on the wall of my office, was a picture of a soldier in that battle. He was running forward, wearing little equipment, carrying a submachinegun in one hand and ammunition magazines in the other. It was a moment of loneliness for him. He was doing what he knew had to be done and he was on his own.

I felt then as he must have, for momentarily I expected the phone to ring summoning me to appear before the Senate committee that was investigating our missile-satellite readiness. For the preceding 4 years I had been closely associated with both our missile and our satellite programs. I knew what we had done, and also what we had not but should have done. It was in the Nation's interest that military officers be honest with ourselves and that we be frank with Congress. I was aware that the risks in being forthright were great, but the stakes were high. If, in a sense, it was to be a moment of no return, then the moment was to be welcomed for its challenge, and not avoided.

The phone rang. I was told that the committee was waiting for me at the Capitol. I called to my colleague, Maj. Gen. Jack Daley, to accompany me, and I remember saying to him as we went up the hall:

"Jack, this is just like going into combat. We have searched our souls for answers to our problems, and we have made all of our preparations. Now we are going in."

For more than 3 hours I was before the Johnson committee. As the Senators listened intently I outlined the Army's position in the nationwide argument over our country's defense, an argument which had been raging ever since the launching of the first Soviet satellite. Less than a month later—in January of this year—I asked to be retired from the United States Army. My decision was prompted partly by the serious implications of my testimony before the committee that day, but it had been on my mind for months. After much soul searching I had decided that the time had come when I could serve my country better by releasing myself from the restrictions necessarily imposed on the military and telling the American people directly what I thought was wrong with the United States defense picture. And there was a great deal that was wrong.

No longer does any nation enjoy the luxury of a shield of space or time. Take, for example, the missile lag situation. The missile-lag period, which we are now entering, is one in which our own offensive and defensive capabilities will lag so far behind those of the Soviets as to place us in a position of great peril.

For quite a few years the manned bomber has been the basis of our retaliatory policy. We have assumed that it has also been the main striking weapon of the Soviets. Now, however, the manned bomber is facing early obsolescence; it will become obsolete when surface-to-air missiles carrying nuclear warheads are on site in large numbers. Furthermore, while Russia even now has an intercontinental ballistic missile, several years will have passed before we have an ICBM capability of any significance. In short, we are now entering a missile-lag period in which the Soviets will have a steadily increasing ICBM striking capability which we will be unable to match for several years. We are in mortal danger, and the missile-lag portends trouble of a serious nature.

Not just the missile situation but errors in our overall military policy portend trouble for the United States, for they bring into question of our very ability to wage war, particularly the kind of limited war that will confront us increasingly in the future. When I began my 4-year tour of duty in the Pentagon in March 1954 as Assistant Chief of Staff for Plans and Operations, G–3, I looked forward eagerly to the opportunity that my new assignment offered. The Army was on the threshold of a revolution in tactics, weapons, and organization. I did not know how much time the Soviets would give us, but if past history had meaning I knew that it was going to take a long time to reorganize the Army.

That such a reorganization was overdue had been painfully demonstrated by the Korean war. All our military thinking during the postwar period had been overshadowed by the atomic bomb. Because of this, Korea was for the Army a bitter and costly experience. When the North Koreans invaded, General MacArthur scraped together two companies of infantry and a battery of artillery and some supporting weapons and had the force flown to Korea. It was all that our limited airlift could transport. Thus the great might of this industrial nation, 5 years after the defeat of the Axis powers, could airlift no more than two rifle companies and a battery of artillery to meet six aggressor divisions. Of the United States' casualties in Korea, more than 96% were ground troops. Thus our well-known slogans about using machines to save manpower were brought to a paradoxical conclusion: our casualties were once again in the ground forces who were not expected to have to do much of the fighting. Neither our imagination nor vision in the years since World War II had given us a combat capability that would provide the technical margin of advantage that we needed in land warfare to win decisively and quickly. That we could have gained this margin of advantage is clear now. That we did not is the real tragedy of Korea.

There has probably been more critical comment, both oral and written, about Korea than any war in our history. Somehow the violence of the argument and the strong personalties involved have combined to obscure the fundamental problem. It was not whether or not the war should have been allowed to expand as our commanders in the field sought victory. The problem was that only total war could bring us victory because we had neglected to develop and provide the technical means of winning anything but a total war, a total nuclear war. Korea was not that kind of war, nor were we willing to make it that kind of war.

One frequently hears the expression: "We don't want another Korea." I do not know what the speakers mean by such a statement nor am I sure that they do themselves. I once heard Secretary of Defense Charles E. Wilson say, "We can't afford to fight limited wars. We can only afford to fight a big war, and if there is one, that is the kind it will be." If we cannot afford to fight limited wars then we cannot afford to survive, for that is the only kind of war we can afford to fight.

Both Korea and the Indochina crisis after it had one fundamental characteristic in common, one challenge that we must learn to meet if we expect to survive. They were both limited wars, in a limited area, so located as to make it difficult for either side to support military operations profusely. In neither was there a question of the war spreading, unless we had to make it larger because of our inability to win any other way. We should have had the tactical means to strike and win, swiftly and severely. And if in the postwar years even a small part of what we spent in preparing for a one-strategy general war had been spent in developing and procuring the means of dealing with limited war, we could have settled Korea and Dienbienphu quickly in our favor. Tactical nuclear missiles, sky-cavalry (highly mobile reconnaissance and shock troops) and increased assault airlift can contribute decisively to that kind of operation. And as long as we neglect such developments we will be incapable of dealing with limited wars and we will be nibbled to death.

Limited war is a more highly specialized form of combat than global nuclear war, and we had better realize it and do something about it. It makes little sense to assume that, if you have the power to wage general war successfuly, you can, by using a little bit of that capability, ipso facto, wage a little war. A thermonuclear-equipped B–52 can contribute little more to the solution of a limited local war than a 155-mm gun can contribute to the apprehension of a traffic violator.

To some, limited war differs from general war only in that general war lasts longer. This is not true. Limited war is limited in the objectives sought, the means employed and, usually, the area in which it is fought. Limited war may be of such protracted nature as to go on for many years, as Mao demonstrated in China. Furthermore, there may be several limited wars all going on at the same time. In fact, this is the most probable nature of future war. It will start with a slow, almost imperceptible transition from a bad economic and political situation into internal disorder. Arms will be provided by the Communists to the side they choose, and sometimes which side they choose is not very important. They will throw out the original leaders and substitute their own, including their own revolution of the proletariat at a time of their choosing. Thereafter, sufficient force will be used until it no longer seems worth the West's effort to continue, or until the West is decisively defeated.

To cope with a Communist program of this nature requires good, imaginative strategic planning, as well as highly specialized tactical forces. The forces must be technically superior to anything that they encounter—decisively superior. Above all they must be highly mobile, but intelligence, communications, and missile firepower all require special consideration. All of these subjects, in their relationship to limited war, have been slighted at best, and grossly neglected at worst, in our defense planning in the past 10 years. Hence the dilemma—how to keep from losing limited wars without preparing to meet them. It simply cannot be done.

So much was clear when I reported to the Department of the Army in 1954 for duty. But, far from being able to carry out the much-needed modernizing of the Army, I was met at once with the New Look. The New Look was the Eisenhower administration's military policy based upon increasing emphasis on our strategic retaliatory power at the expense of our so-called conventional forces.

The New Look was something to be reckoned with. It seemed contrary to all of our experience in NATO, where tactical nuclear weapons would in the future be required as much and perhaps more than strategic weapons. And the tactical employment of nuclear weapons implied quite clearly increased manpower requirements rather than a decrease. The thesis upon which the New Look was based was entirely wrong, or so it appeared to the Army. It placed the Army staff at once in a very difficult position vis-a-vis the Chairman of the Joint Chiefs of Staff and the Secretary of Defense.

The question before us was whether or not, in defending the Army budget before Congress, we should agree to the basic philosophy of the New Look. To agree was to consent to many things other than the mere reduction of manpower and reliance upon strategic nuclear power that had brought us to the brink of disaster in 1950. It meant agreeing to less emphasis upon the development of tactical nuclear weapons. It meant closing our minds once again to the challenges of the land warfare of tomorrow with its implied need for long-range missiles, improved radar and communications, vertical take-off-and-landing air vehicles and an increased Air Force troop-carrier airlift. To disagree was to be insubordinate, and yet many of us were convinced that to agree would only start our Nation once again along the road to military disaster.

Whether or not we agreed personally, we had to defend the budget. An Army memorandum informs all prospective witnesses before congressional committees that "the budget as presented to the legislative body by the President is that decided upon by the Chief Executive. We, as subordinate elements, are bound to support it before the legislative body. * * * Under no circumstances should the witness voluntarily voice an opinion contrary to the Army position."

Another difficulty confronting a witness is that the administration's views may change. To keep in step with them, for instance, a senior officer will find himself charged with defending the point of view expressed by Mr. Dulles on the employment of nuclear weapons in January of 1954 and changing his point of view to support Mr. Dulles' changed point of view several years later.

In the Department of the Army staff in 1954 we were profoundly concerned with the implications of the New Look. We feared that it would result in failure to support our surface-to-surface and surface-to-air missile programs, inadequate funding to support a satellite program, inadequate funding for our research and development programs so essential to the development of land forces for the missile age, and finally in a serious reduction in manpower at a time when the trend should have been the opposite. That our concerns were well founded soon became manifest.

As of early 1954 the Army contained 20 divisions and 7 basic training organizations with divisional numbers. In accordance with the philosophy of the New Look, a critical cut in this division strength was undertaken at once. First, the Army was directed to include the training organizations in its overall division strength. The total number of divisions was then reduced in order to match the old number of combat-ready units, so that if you did not examine the numbers you would have the impression that no reduction had taken place.

As the cutback continued and Congress began to show concern, the Army was told to regroup its nondivision personnel and thus account for more divisions. For example, the forces at Fort Benning, Ga., were

grouped on paper with those in the Panama Canal Zone and called a division. Likewise, forces at Fort Lewis, Wash., were grouped with those in Alaska. To some segments of the press, these became known as Wilson divisions. At the same time Congress was assured, in the annual hearings, that our combat strength was not being reduced. We were simply cutting the fat and the nonessential service and support units. That the contrary was the case few outside the Department of the Army seemed willing to admit.

More important than manpower cuts, however, was our inability to obtain adequate funding for the missile program. In late 1954 I decided that it was in the Nation's interest that we develop, as a matter of high priority, an intermediate range ballistic missile, and that we should undertake a satellite program. After considerable staff discussions I personally recommended to the Army's Chief of Staff, Gen. Matthew B. Ridgway, in March 1955 that the IRBM program be undertaken at a cost of $25 million. A week later he told me he could not possibly obtain money on that scale from the Department of Defense. If the Army were to undertake the program, he said, we would have to finance it out of the money then available to us. Since our budget was critically inadequate we decided not to start an IRBM but to advance the proposed range of the new Redstone missile from 200 miles to 500 miles. We hoped that when a range of 500 miles was achieved the Department of Defense would be aware of the national need and authorize a longer range.

We were, at the time, in a most interesting situation in missile development. In 1951 the Army had undertaken the development of a 450-mile-range ballistic missile. Then, at the direction of our missile czar, Mr. K. T. Keller, a heavy thermonuclear warhead was programed for the missile and its range of necessity was reduced to 200 miles. This was a good change since it at least assured the country of an early surface-to-surface thermonuclear missile. At the time, however, there was no interest in the Army's missile program because missiles were considered rather exotic and far in the distant future. In early 1955, therefore, when the Army decided once again to develop a missile of 500-mile range, few outside the Army staff showed any interest in it. The Joint Chiefs of Staff, in fact, had agreed to let the Army develop surface-to-surface missiles for tactical use, without any range limits at all.

It was not until the other services became aware of the combat potential of missiles that Secretary Wilson issued his now famous memorandum of November 26, 1956, restricting the Army to missiles with a range of 200 miles or less. Thus the lack of awareness of the importance of missiles in 1954 had two facets: money could not be obtained for them, and there were no limits on the surface-to-surface technical missiles to be developed and used by the Army. And so the country's missile-satellite programs awaited a more favorable attitude on the part of the Defense Department. In the meantime Congress was being assured that all was well and that we were ahead of the Russians in all our military programs. As we now know, the United States was already falling behind.

General Ridgway had come to the Pentagon as one of the "good new chiefs" when all of the "bad old chiefs" left in the summer of 1953. He brought to the office of Chief of Staff a background and breadth of experience unique to that office. I had known him to be a man of extreme courage, moral and physical, and soon I was to see his resources taxed to the utmost in his efforts to maintain a combat-ready army.

Somehow, despite Secretary Wilson and the Chairman of the Joint Chiefs of Staff, General Ridgway managed to hold together an army and to continue to ready that army for the nuclear-missile-space age. And he did so despite a constantly shrinking budget. Yet from what I saw as one of his senior staff officers it was plainly not the shrinking budget that was bothersome—for the Army traditionally suffers from fiscal malnutrition in peacetime. It was the deception and duplicity of those with whom he had to work in the Department of Defense.

Mr. Wilson tended to deal with his Chiefs of Staff as though they were recalcitrant union bosses. The thought struck me a number of times that Walter Reuther, under the circumstances, would have been a more effective Chief of Staff than a professional soldier could ever be. I have known General Ridgway, after weeks of painstaking preparation, to brief Mr. Wilson on a problem with lucidity and thoroughness. At the conclusion Mr. Wilson would gaze out of the window and ask a question that had no relevance whatsoever to the subject of the briefing. Among his aides it was known as taking a briefer "on a trip around the world." It was a studied technique that he used when he had his mind already made up about what you were going to talk to him about. As I heard another Chief of Staff say, "He was the most uninformed man, and the most determined to remain so, that has ever been Secretary."

As the situation deteriorated in the Pacific after the fall of Dienbienphu and the siege of Quemoy and Matsu, we became concerned about the defense of Formosa. General Ridgway sent a general officer to Formosa to look into the situation. Upon his return he recommended that the United States provide Formosa with a sizable increase in its logistical and air defense units. This was particularly important in view of the proposed plan to base United States Air Force fighter aircraft on the island on a rotational basis. Because of the Army's reduction in strength, General Ridgway was extremely reluctant to go along with the recomendation, but he finally felt that he had to. At the same time, however, the Secretary of Defense and the Chairman of the Joint Chiefs of Staff were assuring Congress, in reply to specific questions, that additional Army units would not be required and none were under consideration.

On a later occasion—in his memorandum of November 26, 1956—Secretary Wilson stated flatly that our airlift capability was adequate. We in the Army knew that the United States could not at that time airlift a single division, either tactically or strategically.

The Defense Department had an especially annoying method of suggesting to the services that another cut in funds, say 10 percent across the board, was due. When the critical harm that would result from such a cut was pointed out, the reply was polite

"The Department of Defense understands how serious the situation is, and we realize that you couldn't stand a further cut in either funds or personnel and still meet your obligations. But suppose you go back and think the thing over. Suppose you did have to take a cut, just suppose, how would you do it?"

A week later, or perhaps a few days, you would return with an outline of the implications of such a cut. After explaining it, you would be greeted with:

"That is very good. I am glad to see you think that way. The program that you have recommended is approved."

Thus the burden of cutting was shifted to the Chief of Staff. If later there were occasion for a congressional query, and there always is, Congress would be assured that the Chiefs of Staff recommended or concurred in the reduction. I am happy to note that Secretary McElroy is trying hard to put an end to this practice, and if he continues in his present methods he will succeed.

It would be well to say at this point a word about the decisionmaking processes in our National Government that ultimately find reflection in weapons systems, adequate or not as they may be. For it is the decisionmaking processes that have been at fault. We have not lacked resources. The decisions have not only been in error but they have also been late. It is imperative for the United States to accelerate and improve the quality of its decisionmaking processes.

National defense is today the biggest industry in the United States. Furthermore, it is by far the most complicated. Each of the services deals with highly technical weapons systems, which only our topflight scientists understand in detail, and the interplay between the services and the weapons systems pose problems beyond the management capabilities of the average individual American, no matter how skilled he is in making and selling automobiles, or oatmeal, or shoes, or airplanes. As a consequence, the Secretary of Defense must rely especially heavily on the advice of those closest to him.

The time-honored principle of civilian control of defense matters is sound and absolutely fundamental in our democracy. It worked particularly well through World War II. At the time the Secretaries of the separate services had competent military staffs to advise them. The civilian Secretaries made the decisions, defended their programs before Congress and assumed full responsibility for the exercise of civilian control over their departments.

With the establishment of the Department of Defense in 1947 an additional layer of civilian management was placed above the services. Furthermore, by the law, military officers were forbidden to hold executive positions in the Department of Defense. As a result the Assistant Secretaries of Defense rely heavily on hundreds of civil-service employees, who probably have more impact on decision making in the Department of Defence than any other group of individuals, military or civilian.

Often it develops that two Assistant Secretaries differ as to the missile's essentiality. Or perhaps neither one of them desires to act upon it. Then they can refer it to the Joint Chiefs of Staff. Here it enters an arena where 2 Chiefs against 1 is the law. How two of them line up on an issue depends on many intangibles. A proposed missile program may remain in the Joint Chiefs of Staff for many months, and some have. By the time a final decision is made in the Department of Defense, many months, and in some cases years, have elapsed. All of the pleading and urging of those in uniform, who see national survival almost slipping through their fingers, can be of little avail if the Department of Defense declines to act. Its inability to act, in the last analysis, stems directly from the fact that hundreds of civilians, many of them lacking competence in their assigned fields, have now imposed themselves between the senior civilian Secretaries of the services, and Congress and the Executive.

Many people believe that each service develops and follows a party line, requiring its members to adhere to that line, and that this colors the process of decision-making in the Pentagon. As a friend of mine said not long ago, "Scratch a member of the Air Force and out comes an airman. They all have the same point of view and say the same things." This is not so. Within each service there are strong differences of opinion on many of the fundamental issues. With few exceptions, men in uniform think for themselves and in the higher staffs they give you their best objective judgments.

If I were to place our military spokesmen in categories, I would group them as liberals and conservatives, for it is quite evident that the differences of opinion tend to polar-

ize into such schools of thought. If, for example, one were to question an individual of any service on 1 or 2 of the following points, one could without difficulty put him in his proper place regarding military policy. Generally speaking the points of view are as follows:

LIBERAL

War, if it does occur, will begin first by Russian economic and political penetration. This will be accompanied by appropriate diplomatic maneuvers to place us in a position from which it would be difficult to respond with force. Thereafter, force would be used by the Soviets to the degree necessary to achieve their objectives, and these will normally be limited.

Our nuclear resources should be fabricated into weapons which are in such size as to be useful against tactical targets in precise military application.

Our country's military policy should reflect our national diplomatic policy. NATO, SEATO, and our other commitments should be supported fully by us with forces in being.

The control of the seas must be maintained and our Navy must be fully supported in this effort. If this means bigger and more aircraft carriers, then it is up to the Navy to judge, and if the Navy believes it needs them they should be provided.

The Nation must have an adequate Reserve force and National Guard and an effective industrial mobilization plan. War, if and when it comes, may extend over a long period of time and we should be prepared in every respect for war of long duration.

CONSERVATIVE

War, if it does come, will start with an all-out and devastating air strike at the source of strength of the Western World—the United States. With the advantage that surprise affords for a ruthless aggressor, the war could be won by the Soviets in minutes if we are not prepared for it, or if we did not launch an anticipatory attack of our own.

Our nuclear resources should be fabricated into weapons of the largest yield possible. Thus in one blow we can maximize the damage inflicted on any potential aggressor, or aggressors.

Major investment should be made in our atomic retaliatory forces. We cannot afford to squander our limited resources in packets all over the world. We should provide the necessary retaliatory forces and let our allies provide conventional forces.

Aircraft carriers, in particular supercarriers, are a waste of our national resources and duplicate the land-based atomic retaliatory forces. Our only real naval need is for submarines which can deal with the Soviet submarine menace that may threaten our commercial shipping and threaten the United States with missiles.

Only the forces in being will be effective in future war, which will be over too quickly for the participation of large reserves. There is little value, therefore, in maintaining such an establishment and in paying for an industrial mobilization program.

Officers of all services are represented in both these schools of thought. However, the Army and Navy generally associate with the liberal school and the Air Force with the conservative school. It is interesting to note also that in general the two political parties side with opposing groups—the Democrats with the liberal group and the Republicans with the conservative.

Such alinements are far more meaningful, in my opinion, than those signified by the term "interservice rivalry." It has always seemed strange to me that so many experienced businessmen, new to the Department of Defense, are horrified by evidence of rivalry between the services. It would be a very poor Army or Navy that was not fiercely proud of its own service and, with that, just as proud of its ability to serve as a team player with its sister services. Most interservice rivalry that I have become aware of has been productive of good results in the Nation's interest.

There is one aspect of interservice competition that is unquestionably harmful, however, and there is little that the services can do about it. This is industrial competition. Industry, through extravagant advertising claims and lobbying pressures on Congress and civilian members of the Department of Defense, can place members of the Armed Forces in a difficult position. If a service will go along with an industry's claims for its products it can often obtain an increased budget, sometimes for things not even directly associated with the industry-supported product. It is difficult for a service to resist such pressures, since by going along it can rationalize its postion in terms of the overall good that can be accomplished with more money. The amount of money that industry spends on nationwide advertising for hardware that is obsolete is sizable and the lobbying pressure that industry can bring to bear on Congress in terms of employment, payrolls, and effect upon constituents is impressive. Finally, when such forces come into play in the committee system that presently characterizes the decision-making processes of the Department of Defense, they can become very harmful. It is at this stage that they assume the appearance of interservice differences although fundamentally the problem is industrial and not a service one.

No organzational arrangement, no matter how skillfully conceived, can by itself solve our defense problems. It takes people and resources to solve them. But the best of people, regardless of the resources made available to them, can be thwarted and frustrated, and finally made ineffective, by a poor organization. Some of the most able and intelligent Americans in public life have in the past 10 years sought to bring order out of the decision-making maze of the Department of Defense, only to fail.

I am convinced that the most serious problem lies in the present setup of the Joint Chiefs of Staff. Civilian control means civilian decision-making. But the Secretary of Defense needs the best possible military advice on which to base his decisions. How is he to get it?

The answer might appear to be that the Secretary can obtain professional military advice from the Joint Chiefs of Staff. But the Joint Chiefs do not work like that. As long as a Chief of Staff is responsible for the leadership and morale of a particular service, he cannot be expected to be party to decisions in the Department of Defense that deleteriously affect his own service.

Recently I heard a distinguished Member of the United States Senate describe in a few words the evils of the modus operandi of the Joint Chiefs of Staff. He was speaking to a senior general:

"The trouble with the Joint Chiefs of Staff system, General, is that it simply doesn't work. If Congress sends the Defense Department $5 billion, the Chiefs may decide to buy 5 more supercarriers and 5 more B–52 wings."

I intervened and said, "Nothing for the Army?"

And the Senator replied, "Yes, that is right. Nothing for the Army." Which tells the story tersely and well. Of course the Army could combine with the Navy against the Air Force or the Air Force with the Army against the Navy.

In effect the Chiefs occupy an impossible position. Each is supposed to wear two hats; he speaks both as the head of a service and as a member of the Defense Department. But the former cannot be disassociated from the latter. And, in fact, the record will show that interest in the former usually prevails, although entirely in a patriotic sense, since a Chief's background, loyalties and responsibilities are best served when he supports his own service.

ABOLISH THE JOINT CHIEFS SYSTEM

It is obvious, therefore, that the two functions must be separated. The Joint Chiefs of Staffs organization as such should be abolished. One solution would be to appoint the Chiefs of Staff to a senior military advisory group upon the termination of their tour of military service. As members of such a group they would advise the Secretary of Defense and fill a role comparable to what was originally intended for the Joint Chiefs of Staff. Thus their military background and valuable counsel could be brought to bear on our national defense problems without their having to serve a simultaneous and often conflicting obligation of leadership to their own particular branch of service. With the separation of the Joint Chiefs from the Joint Staff that had been created to serve them, the Joint Staff, numbering over 200 officers of all services, could be made available to serve the Secretary of Defense. It would then, in effect, become the military staff of the Department of Defense, serving both the Secretary and the Assistant Secretaries of Defense.

Considerable opposition exists today to a military staff for the Secretary of Defense. There is frequent reference to the horrors of a Prussian General Staff. I am not sure that those who use that expression know what they mean by it. The fact is that in the last two World Wars Germany did not have a German general staff in the true sense. In World War I the German Army and Navy were completely independent of each other and no staff existed to coordinate their efforts. In World War II Germany's inability to achieve a quick victory has been attributed to its failure to coordinate its army and navy efforts.

On the other hand, the Staff system developed in the United States is far more efficient than anything created by any nation, to my knowledge, in military history. Good Staff organization exists now under Admiral Stump in the Pacific and General Norstad in Europe. There is no comparable Staq in the Department of Defense today.

Reforms will help, but they will not solve the Nation's problem. With each month that passes, the missile lag puts the United States in an increasingly dangerous position. How long will this last? For at least 3 and more likely for 5 years, depending entirely upon the effort we are willing to make to reduce it. The Soviets have already announced their intention of increasing their present margin of lead over us. We are in for a hard pull, and no sugar-coated reassurances of our superiority will save us. Only hard work and courage will help.

MEMORIES OF A SOLDIER: A HAPPY, DEVOUT BOYHOOD, A RIGOROUS ARMY TRAINING

"Be kitchin' with the treacle, Shamus," my mother said. For we were a poor family—perhaps not exactly poor, but certainly not far from it. And syrup was not too often on the table. When it was, it was molasses.

My mother, Mary Gavin, was typically Irish, given all too frequently to invoking the intercession of the entire Holy Family and all the saints while she lambasted me for some not too minor misdemeanor.

"Holy Mary, mother of God, where have you been, Shamus?"

"Oh, out."

"May the Lord have mercy on our souls, out where?"

"Oh, nowhere."

"Glory be to God, nowhere he says." Wham, and a resounding blow would descend on my anatomy.

The Gavins, my adopted parents (Gavin's mother and father died before he was two.—Editor), and their relatives were settled in two small villages on the edge of Mt. Car-

mel, Pa., Dooleysville and Connorsville. As a group they were idealistic and emotional, and they took their patriotism for granted. They had strong views about most things and expected other people to have too. One of my earliest memories is of being impressed with the need to work.

I loved school, for there I had a chance to read books, and I somehow could not get enough. A real windfall came when I found an entire bookcase full of books in the back rooms of the First Presbyterian Church.

I was taken to the church by a friend, and as I looked at the bookcase, I hesitated for a moment. I had been brought up as a strict Catholic and I knew very well that God would strike me dead for even going into a Protestant church. It took a few minutes to decide that my curiosity had to be satisfied. The books were very good, and just what I wanted—boys' books, and they had nothing to do with religion.

After leaving high school, I enlisted in the regular Army at the age of 17 and was assigned to Panama, where my first sergeant encouraged me to bone up for the West Point exams. After several months of hard study, I was admitted to West Point as a cadet on July 1, 1925. The first semester was a nightmare of work. The only way that I could keep up with it was to get up at 4:30 in the morning and study in the basement latrines. In December I passed my first semester' "writs" with a margin of safety. That was the turning point.

The United States Military Academy at West Point can make a tremendous impression upon a young man. Cadets use the rooms once occupied by Grant and Lee, Pershing, Patton, and MacArthur. The old chapel with the British colors taken in the Revolution, the statutes, the forts and redoubts of the surrounding hills, all burn into the young minds and hearts one thing: Patriotism.

Cadets are taught to be honest and there is a resoluteness about their honesty. Once a matter is resolved into right or wrong, the right must be chosen, and always the harder right rather than the easier wrong.

It is no wonder that I loved the place as I did. I left determined to repay her, my Spartan mother, for what she had given to me. I went forth to seek the challenge, to move toward the sound of the guns, to go where danger was the greatest, for there was where issues would be resolved and decisions made.

Resolution of American Federation of Hosiery Workers To Repeal the Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the resolution of the American Federation of Hosiery Workers to repeal the Taft-Hartley Act:

RESOLUTION ADOPTED BY THE NATIONAL EXECUTIVE BOARD OF THE AMERICAN FEDERATION OF HOSIERY WORKERS, AFL–CIO, AT ITS QUARTERLY MEETING AUGUST 9 AND 10, 1958, READING, PA.

Whereas since September 1947 until September 1957 the American Federation of Hosiery Workers shrunk in membership by 76.5 percent; and

Whereas while there has always been failures and closings in the hosiery industry, the Federation prior to Taft-Hartley had continued to make membership gains and protect the economic interest of all workers through the continuing organization of non-union mills; and

Whereas this is no longer the case under Taft-Hartley; and

Whereas the union has worked terrifically hard to try to organize the unorganized; and

Whereas its organizational efforts have been met by employers protected by Taft-Hartley, and its antiunion administration with a defense-in-depth against union organization; and

Whereas the employers are protected in creating at once a climate of fear among the workers, by name calling, pressure and implied and open threats; and

Whereas workers are harangued individually and in groups with antiunion propaganda by the employers; and

Whereas the implication of reprisal against those who join the union is made clear; and

Whereas the threat that the plant will move away is sounded time and again; and

Whereas all of this antiunion activity is considered legal by the present Eisenhower board in its interpretation of the act; and

Whereas employers are given license to discharge known union leaders under the guise of discharge for cause; and

Whereas it is almost impossible to obtain reinstatement of a worker fired during an organizing or election campaign even when his discharge resulted very obviously from activity on behalf of the union; and

Whereas employers may send antiunion letters to workers predicting dire consequences if the union is voted in; and

Whereas tactics such as these have been employed against the union with increasing vigor since Taft-Hartley with immunity to the employers; and

Whereas all kinds of delaying tactics are employed by the employers who receive only a slap on the wrist from the NLRB and in most cases nothing if they promise to not violate the act; and

Whereas simply to meet with the union and collectively argue is considered bargaining in good faith by the present Board; and

Whereas this has had a disastrous effect upon the wages, working conditions, and fringe benefits of the hosiery workers: Now, therefore, be it

Resolved by this executive board of the American Federation of Hosiery Workers, That a copy of this resolution be sent to the President and Members of Congress asking for their assistance in bringing about the repeal of the Taft-Hartley Act in its entirety; and be it further

Resolved, That they be asked that Taft-Hartley Act be replaced by legislation based upon the Wagner Act which would truly protect the right of workers to organize and which would encourage collective bargaining between unions and employers.

Continental Air Lines Leads the Way

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. ROGERS of Colorado. Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD a proposal by Mr. Robert Six, president of the Continental Air Lines, whose base operation is at Denver, Colo. Mr. Robert Six, a dynamic aviation leader and president of the Continental Air Lines, has taken the initiative and proposed to the Civil Aeronautics Board a fare reduction in certain cases. A newspaper item from Denver, Colo., adequately explains the proposal which is as follows:

DENVER, COLO., August 11.—Continental Air Lines today proposed higher first-class fares and an experimental economy fare to provide needed additional revenue and to stimulate business.

President Robert F. Six said the Civil Aeronautics Board has been asked to let the new fares go into effect October 1.

The new rates, he noted, "are designed to bring benefits of air transportation to a much broader segment of the public" and to provide Continental with extra revenue.

The air-line plan, pending CAB approval includes: a 6-percent increase in basic first-class and coach fares; an experimental 20-percent reduction for DC–7B nonstop coach flight each day "without frills" between Chicago and Los Angeles and a 25-percent cut in winter excursion coach fares for family groups between Chicago-Kansas City-Denver-Los Angeles.

The Needed Sense of Urgency

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include a fine editorial, The Needed Sense of Urgency, appearing in the Boston Globe of August 4, 1958:

THE NEEDED SENSE OF URGENCY

For the successful testing of the Atlas intercontinental ballistic missile, the Air Force can take legitimate satisfaction. This achievement, following many failures, is a real step forward.

But certain loose talk about the test, which deceives neither military staffs nor foreign offices abroad, tends to create in the American people an illusion of security. The Atlas, it is said, was sent up a year ahead of schedule. That is to the good, but how far behind were American ICBM's 12 months ago?

The Atlas, according to one comment, could now go into production. Possibly, for the missile's booster and sustainer engines both functioned for the first time. But the test was limited.

The Atlas did not travel its 5,000 miles.

"We are now entering a missile lag period in which the Soviets will have steadily increasing ICBM striking capability, which we will be unable to match for several years. We are in mortal danger."

This statement comes from Lt. Gen. James M. Gavin, commander of the famous 82d Airborne Division in World War II. Until recently he headed the Army's research and development, but he has resigned from the service so that he may speak frankly. Life magazine has just published the first installment of his forthcoming book.

The truth of what he says should be obvious from the greater weight of Soviet sput-

niks, which make plain the fact that Russian rockets have a far more powerful thrust than ours possess. Knowledge of what this country faces is beginning to have its effect. That the Atlas has successfully undergone even a limited test a year ahead of schedule is evidence that a sense of urgency has penetrated the Pentagon.

This feeling can be most fruitful, in terms of results, if it leads to successful improvisation. Americans have not lost their ingenuity. The Army, which had been limited to missiles capable of only 200 miles, produced the Jupiter, the first rocket to put an American satellite in orbit.

Improvisation has won many a contest that had seemed to be lost. But new ideas, to be productive, must be received by authority with an open mind. The most valid criticism of former Defense Secretary Wilson is that he would not listen. General Gavin thinks he tended to deal with his Chiefs of Staff as if they were recalcitrant union bosses.

The Defense Department faces a difficult task in recapturing the confidence of the American people. They have long taxed themselves heavily to make the country secure. Many of them now have much the feeling experienced by Frenchmen in 1940, when they remembered the billions that had gone into the Maginot line.

Efforts to rebuild past illusions about the situation can only make matters worse. The only hope lies in a policy of straightforwardness. Give the people double talk, and they will remain confused. But if officialdom presents the true facts, soberly and without sensationalism, Americans will respond with a sense of urgency. They have always done so, whenever the need has arisen.

UNCLE DUDLEY.

Our Federal Investigating Structure

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. AYRES. Mr. Speaker, last week I received a call from Mr. Clyde Mann, Akron Beacon Journal writer, asking me to confirm a figure of 40,000 full-time investigators on the Federal payroll. I was amazed to learn that his figure was correct.

In view of the investigations that we in the Congress have been conducting, I wonder if it is not time that we took a look at our whole investigating structure.

Is the Congress abusing its investigative powers? Millions of citizens think so. Are congressional investigations being used for political purposes. The temptation is great.

The article by the internationally known writer, David Lawrence, printed below, makes some very interesting points regarding congressional investigations:

[From the Washington Evening Star of August 8, 1958]

DIRTY HANDS IN THE GOLDFINE CASE—BUGGING ISSUE SEEN CAUSING ACQUITTAL SHOULD CONTEMPT CASE GO TO COURT

(By David Lawrence)

There is an old principle of law that a prosecutor must come into court with clean hands. There must be no taint on the way the indictment was obtained.

It looks, therefore, almost like a 100-to-1 shot that Bernard Goldfine will be acquitted of contempt if a recommendation by the House Commerce Committee that he be tried for refusing to answer certain questions is adopted by the full House and later goes to court.

For there was a palpable interference in the confidential relations between client and lawyer. It came about when the chief staff investigator for the House subcommittee listened in, through a planted microphone, on the conversations in a hotel room where Mr. Goldfine was conferring with his attorney.

The fact that the chief investigator testified later that he did not hear anything of importance does not alter the legal issue. The courts do not weigh merely whether the interference was effective. There was an instance in the District of Columbia in which a confidential informant for the prosecution in a criminal case became chummy with one of the defense lawyers and obtained information for the prosecutor. The United States circuit court of appeals reversed conviction on the ground there had been interference by the prosecution.

One prominent lawyer here—who is not in any way connected with the Goldfine case but who has had considerable experience with contempt cases—told this correspondent today that, if he had been Mr. Goldfine's attorney, he would have advised the textile manufacturer not to answer a single question after the episode of the hidden microphone had come to light. He said the legal right of the House committee to continue its questioning had, from that moment, become impaired.

Mr. Goldfine has testified under oath that there was absolutely no connection between Sherman Adams and any of the financial transactions of the different textile companies on which the House committee solicited information, and that the question related to private matters not relevant to the committee's hearings.

But the chances are this particular issue will never be resolved. For the House of Representatives, itself, thus far has not fully investigated the procedure of its subcommittee in failing to make public all the testimony concerning the hidden microphone or to investigate the circumstances under which a witness was subjected to virtual espionage.

It is true the House committee dismissed its chief investigator, but there has been no investigation ordered by the House of Representatives to ascertain whether any other information or data brought before its special subcommittee in the Goldfine case was obtained by improper methods.

Representative THOMAS B. CURTIS, Republican, of Missouri, warned the House of Representatives on August 4 that the committee had failed to do its duty. He asked whether the House is to be governed by "the rules which prevail in our equity courts to the effect that 'he who asks equity must come into equity with clean hands.'" He said:

"In the process of the subcommittee investigation, it was found that the chief investigator of the subcommittee violated one of the most sacred relationships existing in Anglo-American jurisprudence, that is, the privilege of confidential consultation between attorney and client. It did so by bugging one of the rooms where the witness Goldfine conferred from time to time with his attorneys. Furthermore, the charge has been made that a member or members of the subcommittee staff were involved in the theft of papers from the hotel rooms of witness Goldfine during the subcommittee's investigation.

"The subcommittee has not reported to the House on these matters nor are these matters contained in the report the House will receive. The House needs to know some basic things:

"First, how much authority did the subcommittee give to its chief investigator to do what he did? What other improper actions was he guilty of? The mere firing of the man after he was caught does not clear the matter up.

"Second, how long did this bugging go on, and who received any information so obtained?

"Third, what is the answer to the allegation of implication in the theft of the witness' papers?

"These matters unanswered badly damage the reputation of the Congress."

It seems certain as things look now that, if the Goldfine contempt case ever gets into court, all members of the subcommittee and the entire staff of investigators will be subpenaed and required to testify in detail as to their methods of getting testimony and exactly how they obtained every piece of data which they made the basis for their questioning of Mr. Goldfine. This whole procedure doubtless will become pertinent to the court proceeding in the contempt case, which probably will be unprecedented because, in a sense, both the Members of Congress and Mr. Goldfine will be on trial.

Mr. Mann's disclosure that we are already spending $500 million a year in the investigation field, exclusive of congressional investigations certainly deserves our thoughtful consideration:

[From the Akron Beacon Journal]

SNOOPERS BY THOUSANDS—WASHINGTON CHECKERS A $500 MILLION GAME

(By Clyde Mann)

Don't try to pull a fast one on Uncle Sam. The odds are great that one of his investigators will nab you.

A check of the United States Civil Service Commission rolls reveals the Federal Government has snoopers snooping on snoopers.

There are 40,000 full-time Federal investigators probing into every phase of a person's life. In addition, there are that many part-time checkers employed by Federal agencies and about 90,000 farmers work part time policing acreage planting.

Uncle Sam's detective bill runs more than $500 million a year. Investigators for executive agencies check everything from imports on rhinoceros feet from Africa to the surveillance of Communists.

And congressional investigators include foot-and-mouth disease, paper wastage, purchase of "natural pastel" mink coats and glamour schools conducted by the Government for its girl workers.

Congress is going investigation happy more and more each session. The Senate expenditures for official investigations has increased tremendously the last 20 years. The Senate probably will spend close to $2 million on investigations this fiscal year. In 1940, it used up only $170,000 of the taxpayers' money to probe.

The House's bill for probing will run even more. During the two sessions of the 81st Congress the House spent $1,192,836 for investigations and studies.

"Sometimes persons come into your office asking the darnest questions about the craziest things," says Representative AYRES. I believe we have investigators checking on ourselves but we don't know who they are or when they are snooping.

On several occasions Congressmen have been known to work secretly with Government investigators to check on political enemies.

The Treasury Department has the most investigators—15,836—on its payroll, followed by the Department of Criminal Investigation—10,024.

There are 8,508 investigators eyeing things for the Justice Department and 5,932 regular checkers for the Department of Agriculture.

A total of 5,846 persons investigate for tax collection and 3,836 "handy men" are

available for just "general investigating" when needed.

Fresh fruit and vegetables require only 230 inspectors, dairy and poultry, 532, and wool only 1.

The Small Business Administration has 2 investigators; the Civil Aeronautics Board, 4; General Printing Office, 3; and the Tennessee Valley Authority, 1.

The Central Intelligence Agency (CIA) is a "hush-hush" organization which does much of its sleuthing outside the country. The number of CIA agents is secret.

There is an "Information Agency" which has 12 investigators who dig for information for Congressmen and investigators who become mired in Washington confusion.

There are 48 "general investigators" whose job is to administer, supervise and perform investigative work not specified or included in other groups in general schedule.

Here is a list of the departments and the number of investigators listed on the United States Civil Service Commission:

Government Security, 10; General Accounting, 194; Printing Office, 3; State Department, 249; Treasury, 15,836; Army, 1,577; Navy, 327; Air Force, 1,322; Justice, 8,508; Post Office, 981; Interior, 471; Agriculture, 5,932; Commerce, 367; Labor, 894; Health, Education and Welfare, 665.

Atomic Energy Commission, 84; Canal Zone Government, 51; Civil Aeronautics Board, 4; Civil Service Commission, 1,100; Federal Trade Commission, 13; General Service Administration, 48; Housing and Home Finance Agency, 36; Information Agency, 12; Interstate Commerce Commission, 283.

National Advisory Committee for Aeronautics, 5; National Labor Relations Board, 214; Panama Canal Co., 32; Securities and Exchange Commission, 107; Small Business Administration, 2; Tennessee Valley Authority, 1; Veterans' Administration, 109.

General investigating, 3,836; criminal investigating, 10,024; game-law enforcement, 159; wage-and-hour law enforcement, 881; safety inspection, 665; airworthiness inspection, 343; coal-mine inspection, 228; cotton classing, 130; dairy and poultry inspection and grading, 532.

Fresh fruit and vegetable inspection, 230; grain inspection supervising, 324; meat grading, 452; processed fruit and vegetable inspection, 382; tobacco inspecting and grading, 423; wool classing, 1; tax collection, 5,846; alcohol-tax inspection, 533.

Storekeeper: Gauger, 866; public health inspection, 103; food and drug inspection, 290; imported food and drug examining, 15; food inspection, 2,722; public health quarantine inspection, 286; transportation utilities inspection, 8; customs inspection, 2,647; customs patrol, 637.

Customs examining and appraising, 665; customs marine officer, 117; customs entry and liquidating, 734; customs warehouse officer, 196; immigration patrol inspection, 1,389; weights and measures inspection, 1; admeasurement, 55; and miscellaneous, 3,717.

A Bone To Pick With Congress

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1958

Mr. AVERY. Mr. Speaker, on July 18, 1958, I delivered remarks regarding what appears to be unwarranted action by the Senate Appropriation Committee in the appropriation of funds for the Office of Area Development in the Department of Commerce. At that time I stated the committee reduced the budget request 49.9 percent but at the same time, every other office in the Department either received more funds or the same amount as received in the 1958 appropriation.

Recently, a delegation representing the Chamber of Commerce of the City of Clay Center, Kans., held a conference with Office of Area Development officials. Clay Center was interested in information and advice for improving their efforts to promote industrial and community development. A member of this delegation was Harry Valentine, editor of the Clay Center Dispatch. Mr. Valentine speaks out in his newspaper on the matter of funds for this important agency. His comments certainly are worth of attention since he has personal and first-hand knowledge regarding the activities of the Office of Area Development.

I recommend that every Member of Congress read Mr. Valentine's constructive observations.

The editorial which appeared in the Tuesday, July 29, 1958, issue of the Clay Center Dispatch follows:

A BONE TO PICK WITH CONGRESS

The thousands and thousands of cities over the Nation interested in industrial development, and that includes Clay Center, will certainly take issue with Congress, especially the Senate, for making a drastic cut in the budget of the Office of Area Development in the Department of Commerce.

It is this Government agency which collects and channels information on such development to the interested cities.

Industrial development is of such vital importance to so many cities that they will do most anything to assist themselves. Our Federal Government—and the Office of Area Development—is the only agency in a position to collect valuable data from over the Nation and make it available to the various cities.

For some reason, the Senate cut the budget of this department nearly 50 percent. That might not be so bad except that every other division in the Department of Commerce got an increase, or at least no cut.

It would have been much more reasonable, if the Senate is interested in the growth of the cities, to have increased the budget for the development office. In doing so, the office could have increased its assistance and thus helped even more the cities represented by the various Senators.

It is our belief that too few cities of the Nation know of the Office of Area Development, but any local chamber of commerce office who does know of it would certainly endorse its work and ask that it be increased. If the office could be continued on its past basis, it wouldn't surprise us if Clay Center men make an effort to visit the office in Washington at least once a year to keep abreast of industrial development work. That is, if Congress will back up and take a more realistic view at the office.

Captive Nations Days

EXTENSION OF REMARKS

OF

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1958

Mr. CRETELLA. Mr. Speaker, last month I submitted for consideration by the Committee on the Judiciary a concurrent resolution calling for observance of Captive Nations Days. This resolution, House Concurrent Resolution 347, has evoked considerable popular interest. I feel confident that as the significance of this resolution becomes more generally understood and appreciated, the measure will receive the considered attention it deserves.

An illustration of its significance has recently been brought to my attention by Dr. Lev E. Dobriansky, who is a professor at Georgetown University and also national chairman of the Ukrainian Congress Committee of America. The idea of a summit meeting will continue to be discussed in the months ahead, and the cause of the eventual liberation and independence of the captive nations will be closely tied up with it. This close connection is exemplified by a letter recently sent by Dr. Dobriansky, in behalf of his committee, to President Eisenhower. The letter even indicates that a full and intelligent discussion of the Middle East situation is not possible without consideration being given to Russia's colonial exploitation of the resources of the captive nations, both within and outside the Soviet Union, to further its indirect aggressions in the Middle East.

House Concurrent Resolution 347 is based on this fundamental fact of Russian colonial imperialism which materially permits Moscow to engage in indirect aggressions beyond its present empire. The resolution aims to solidify our stand on the primacy of the captive nations in any dealings with Moscow. The contents of Dr. Dobriansky's letter to the President will illustrate the basic importance of this. As an illustration of the significance of House Concurrent Resolution 347, I include this letter for printing in the RECORD:

JULY 29, 1958.

His Excellency THE PRESIDENT OF THE UNITED STATES,

The White House,

Washington, D. C.

DEAR MR. PRESIDENT: The most recent developments which have led to the blunt prospect of the Russian political criminal, Mr. Nikita S. Khrushchev, to appear on American soil for a summit meeting, fill the hearts and minds of countless Americans with sadness and apprehension. Those who are closely familiar with the criminal record of Mr. Khrushchev and the machinations of the imperialist Russian Communist regime cannot but view this forced development as a major and perhaps transient victory for traditionally deceitful Russian diplomacy and propaganda.

However, despite this grounded view, this committee feels that such a meeting, should it come to pass, can be fruitfully converted into an opportunity of gainful advantage to our Nation if with singular determination and courage our Government accomplishes those things which objective reality and firm leadership necessitate. It is regrettable that for the second time in 3 years our actions toward the Russian Moscow regime have been allowed to be conditioned by the domestic considerations of one of our allies. It is even more unfortunate that a situation has arisen to formalize in this manner imperialist Russian interest in the Middle East. Yet it is comforting to us, as we are sure to most Americans, that proverbial Russian bluff and bluster will not goad your administration into a hastily contrived summit circus.

In the more rational phase of exploratory preparation for a summit meeting this past spring, this committee, along with others, contributed to a memorandum entitled "The Prospect of Another Summit Conference." In behalf of its signatories, four distinguished Members of Congress submitted the memorandum to our Secretary of State, who approvingly, discussed its contents with them (CONGRESSIONAL RECORD, July 16, p. A6375–6376). We earnestly urge that the recommendations set forth in this memorandum be applied at any forthcoming summit meeting which definitely should not be restricted to the Middle East situation. This situation is largely the effect of more fundamental causes of world tension found particularly in Russian imperialist and colonial domination of the captive countries in eastern Europe and central Asia. Your allusion to this in your recent letter to Mr. Khrushchev is most laudable.

In true conformity with historical fact we should not hesitate in present circumstances to confront the Russian imperialist regime with an agenda point covering its long list of conquests dating back to 1920 rather than just to 1940. For surely its earlier colonial conquests in the Caucasus, Ukraine, Turkestan, White Ruthenia laid the basis for the expansion of its empire in the Baltic area and to the Danube. Obivously this extended Russian Empire is now the basis, in captive resources, of Moscow's subversive infiltration of the Middle East. A complete cause and effect discussion requires that these facts be aired openly. Its impact upon the nationally conscious and newly independent countries of Asia and Africa would be tremendously favorable to us.

At the time of the NATO meeting last December we submitted another memorandum to you, dealing with our defenses about the Russian Communist empire (CONGRESSIONAL RECORD, April 2, p. A3181–3182). In it we strongly recommended that "Because of unprecedented Russian Communist penetrations in the Middle East, the United States should formally join the Middle East Treaty Organization." In the light of recent events we underscore again this view and urge a real concatenation of NATO with METO, SETO, and our alliances in the Far East. The many problems peculiar to the Middle East and Asia, well antedating the prime global problem facing us, should not be allowed to becloud our primary interest in these regions, namely to defend independent nations against further Russian aggressions and conquests. Russian threats and blackmail, long typical of Russian diplomacy, should scarcely deter us in achieving these ends.

With every measure of support for your courageous undertakings, I am,

Sincerely yours,

LEV E. DOBRIANSKY,
Chairman, The Ukrainian Congress Committee of America.

The United States Navy Band

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article on the United States Navy Band, the world's finest, whose leader is Comdr. Charles Brendler; assistant leader, Lt. Harold Fultz; and third leader is W. O. Anthony Mitchell:

THE UNITED STATES NAVY BAND

On Inauguration Day, March 4, 1925, President Coolidge signed a special act of Congress, which designated the Washington Navy Yard Band as the permanent official band of the United States Navy; on that day its name was changed to the United States Navy Band. Thus honored, the band abandoned its bell-bottom trousers and adopted the smart-looking regulation uniform of the Navy chief petty officer.

In the years that followed—under Presidents Coolidge, Hoover, Roosevelt, Truman, and Eisenhower—the United States Navy Band has played before appreciative audiences in all 48 States, as well as in Canada, Alaska, Puerto Rico, Panama, Jamaica, Haiti, and the Virgin Islands.

Today the United States Navy Band is composed of 134 individual artists, many of whom could take his place with the greatest of the world's symphony orchestras. The duties assigned to the band require unlimited versatility, its renditions of compositions from the pens of world-renowned composers have been acclaimed by critics and music lovers everywhere.

The Navy Band contains within itself a complete symphony orchestra which presents the work of the great masters as skillfully as any group in the country. On the other hand, its "Swingphonette" adds sparkling personality to light operas, and the latest Broadway show tunes. Countless weary, lonesome servicemen find relaxation in dancing or listening to the Navy Band's melodious dance orchestra and combos in USO centers and hospitals throughout the District of Columbia area. Those who desire more restful harmony can hear one of the band's soloists, trios, quartets, quintets, or the entire string ensemble in Washington's National Gallery of Art, the Phillips Memorial Gallery, or the Pan American Union.

The Navy Band's summer concert series is an institution to concert-goers of Washington and visitors alike. These concerts, beneath the imposing dome of the Capitol, and at the Potomac Watergate with the magestic Lincoln Memorial in the background, continuously draw capacity audiences of music lovers who relax on the lawns or find space on the crowded marble steps to hear this famous organization. The winter concert series at the Departmental Auditorium is considered one of the highlights of Washington's concert season. The finest music is presented at these concerts with no admission charge to the general public.

The Navy Band traditionally appears at funeral services for Navy men in Arlington National Cemetery; but by and large its duties are of a more festive nature: It is an indispensable part of Washington's colorful parades, inaugurations, ceremonies of state, and often it is the center of attraction at the White House.

As you listen to the Navy Band's glorious blending of woodwinds and brass, its mastery of strings and percussion instruments, and swell with pride as you watch its colorful parade formations, you will realize that this is the proud representative of your Navy, speaking to you and to all the people in the universal language of music. Although its fame extends the world over, the Navy Band finds its greatest pleasure in playing for Americans in their cities and towns, large and small, throughout the country. This is your United States Navy Band, the world's finest.

COMDR. CHARLES BRENDLER

The story of Commander Brendler's rise to the coveted position as leader of the United States Navy Band is synonymous with the history of the band itself. The two "grew up together". A member of the Navy Band since its inception (as clarinet soloist), he became the assistant leader in 1937, and was advanced to leader in 1942.

In tribute to his excellent leadership and outstanding ability, he became the first Navy musician to attain the rank of commander. He holds a doctor of music degree and is the one and only honorary member of the exclusive White House Correspondents Club. For his notable contributions to his art he was honored with the election to the presidency of the famous American Bandmasters' Association (1954–55).

As leader of the world's finest military band, he conducts the greatest of classical composition; but, because he is first and foremost a true musician, he endeavors to bring to the public the best in band literature. As a result, the Navy Band repertoire numbers more than 20,000, ranging in variety from the classics to the popular melodies of today, all of which he conducts without use of a written score. He is a complete master of his art.

In addition to the foregoing, Commander Brendler is listed in Who's Who in America. He holds a life membership in the Modern Music Society and the Kappa Kappa Psi, as well as membership in Phi Beta Mu. He recently was awarded the National Guard of Honor Gold Medal by the American Legion for his accomplishments in the field of music.

LT. HAROLD FULTZ

Since his entrance into the Navy in 1935, Lieutenant Fultz has distinguished himself in every imaginable musical capacity, contributing as a soloist, conductor, composer, and administrator.

He has attended West Virginia Wesleyan College, George Washington University, taught at Jackson College of Music, and graduated at the top of his class at the then newly formed Navy School of Music (1935).

Extended trips with two Presidents evoked Presidential commendation. He is also the recipient of a Medal of Commendation.

In the spring of 1956, he returned to the United States Naval School of Music as warrant officer in charge of band training, where he organized the Navy Sea Chanters, which today constitute an integral part of the Navy Band. Lieutenant Fultz was instrumental in establishing the All Eastern Band and Instrumental Clinic, serving as its chairman for the first 2 years. He is a participating member of ASCAP and a newly elected member of the American Bandmasters' Association.

For his many faithful and dedicated years of service to the Navy and its music program, he was honored with the appointment to assistant leader of the United States Navy Band with the rank of lieutenant on July 2, 1956.

W. O. ANTHONY MITCHELL

A brilliant clarinet virtuoso who has been hailed by critics and audiences alike, through every State of the Union, Warrant Officer Mitchell is one of those rare talented individuals who is equally facile with the jazz or the classical idiom. Performing in the dual capacity of solo clarinetist with the United States Navy Band and conductor of the Navy Dance Band, he became one of the original pioneers in television broadcasting, appearing as conductor and musical director of a weekly TV series that featured some of the leading artists of the day.

Warrant Officer Mitchell graduated with honors from the United States Naval School of Music, and was awarded a bachelor of music degree from the Catholic University of America.

In recognition of his ability and many years of distinguished service, he was appointed third leader of the United States Navy Band with the rank of warrant officer on July 15, 1956.

Let the States Act as Agents for Collecting the Federal Tax on Gasoline

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. SCHWENGEL. Mr. Speaker, these are the days when all Members of Congress should be seeking ways and means to reduce the growing costs of Government. In my research into the problems of small business, I have had occasion to work with the independent oil jobbers and have become aware of some of the inequities this group of small businessmen faces with respect to the payment of taxes. The research has also led me to discover some ways in which we could reduce the costs of Government by elimination of some duplications in the collection process.

All States collect State gasoline, diesel oil, and lubricating oil taxes. A Federal tax on these items is also collected in every State. It would be no extra burden for the States to act as agents for the Federal Government and collect the Federal taxes at the same time the State taxes are collected.

My research indicates to me that the collection activity in this Department of the Internal Revenue Service costs over $141 million per year. Gasoline and lubricating oil taxes constitute one-sixth of the total revenue from all excise taxes. By permitting the States to perform these collection duties, it is reasonable to assume that we might reduce the cost of the collection activity by one-sixth. That will enable us to save some $20 million per year.

The same is true of gasoline tax refunds to farmers and nonhighway users. There is a State refund and a Federal refund. These could be processed and paid at the same time by the States and considerable administrative costs would be saved.

I have introduced legislation—H. R. 13669—which would authorize the States to act as agents for the Federal Government in the collection of gasoline, diesel oil, and lubricating oil taxes. I have also introduced legislation—H. R. 3005—which would permit the States to make Federal gasoline-tax refunds. This legislation is still pending in committee. So that all Members will know why I feel that it is feasible to make these changes and save administrative costs, I would like to outline why the collection of these Federal taxes at the State level would be advantageous:

First. The gasoline tax collecting agencies of the various States do a highly proficient job of policing gasoline sales to insure a maximum collection of taxes on gasoline. This is in contrast to the hit-or-miss job of policing performed by the Treasury Department with the result that the Treasury quite probably does not collect all taxes on gasoline properly due. If all gasoline-tax collections—both State and Federal—were made at the State level, the benefit of State policing would inure to the Treasury and possibly produce more revenues and minimize the opportunity for evasion of Federal taxes on this and other petroleum products.

Second. Instead of the Treasury Department being compelled to administer tax reports from thousands of petroleum product taxpayers they would, under this bill, be required to police only 49 reports—such being the reports from each of the 49 States. This would relieve the Treasury of considerable administrative burden, and even though some allowance might be made to the States for the handling of such taxes, in all probability the States could perform this duty at considerably less expense than that incurred by the Treasury since the States would simply be duplicating functions which they already perform.

Third. From the standpoint of most taxpayers this would relieve them of administrative burden since they could file the same for State purposes as would be used for Federal purposes, the only variation being the amount of tax per gallon. In the case of bonds required of taxpayers, a single bond could be used with the amount increased to include obligations to the Federal Government. This would be much simpler for the taxpayer; would relieve the Treasury of the administrative burden of policing such bonds, and would also work to the advantage of the taxpayer since better premiums could be obtained on the single bond than in the case of filing 2 bonds—1 for Federal and 1 for State.

Fourth. While State and Federal laws with reference to liens, extension of time for payment, provisions relating to levy on property for collection of unpaid taxes, and other regulatory provisions might differ, these could be adjusted to more uniform standards and in such a manner as to provide a cheaper means of tax collection on petroleum products with less administrative burden for the Treasury Department as well as the taxpayer involved. In those instances where laws and regulations could not be reconciled, then the State could refer such matters to the Treasury Department for further handling—a matter which they now already handle—or to the district attorney in the appropriate area. It is believed that most differences could be reconciled by conferences between Representatives of the Treasury Department and the North American Gasoline Tax Conference, the latter being a group of State officials engaged in the handling of gasoline tax collections of the various States of the Union. This latter group has done some very significant work in producing more uniform laws, better policing of gasoline tax collections, and better administration for handling of gasoline tax collections.

Fifth. Since the Treasury Department's pet objection to most changes in excise tax laws is that "it will create undue administrative burdens" it would appear that they would welcome the opportunity to work out a means whereby they would be relieved of some of the administrative burden incident to petroleum product tax collections that they now are faced with.

Sixth. Most of the States are fairly uniform with reference to tax refunds to farmers for gasoline used for farming purposes. If the States could handle the Federal gasoline tax refunds to farmers this would relieve the Treasury Department of one of the worst administrative burdens imposed on it in the past several years. Certainly the Treasury should welcome an opportunity to be relieved of this burden as well as the expense incident thereto.

Federal Scholarship Program

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. BERRY. Mr. Speaker, I feel sure my colleagues will be interested in a letter I received today from Fred E. Owen, president of the Paxton & Vierling Steel, Co., Omaha, Nebr.

Mr. Owen explains how many of these bright young people are taken care of without the Federal Government taking tax money away from the parents and the loaning it back to the children. Sometime Congress is going to realize that if it would stop some of this foolish spending and provide some tax relief so that the parents could keep some of their own money, they could send their children to college, and that would include all of them, not just the bright young people.

Mr. Owen's letter is as follows:

PAXTON & VIERLING STEEL CO.,
Omaha, Nebr., August 8, 1958.

Representative E. Y. BERRY,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE BERRY: We strongly urge your opposition to the Federal college scholarship and school-aid program that is now before congressional committees.

Our company sponsors four $2,000 scholarships in engineering each year (2 at Iowa State College at Ames, Iowa, and 2 at the University of Nebraska at Lincoln, Nebr.). This scholarship program was started in 1954 and we are pleased to state that we have many fine boys now enjoying college educations as a result of our program. However, we do want to point out to you that we still have five scholarships that we have been unable to fill since the inception of the program. We know of many companies that have discontinued their scholarship programs because like us, they have been unable to secure needy applicants with university entrance qualifications.

We have just finished interviewing 9 boys for our University of Nebraska scholarships and each of these applicants had already been awarded scholarships at the university of from $80 to $100 per year under different scholarships that were available. We were able to award only 1 scholarship this year instead of the 2 as we would have liked, as we were unable to find qualified applicants with any real need for financial assistance.

This condition of lack of qualified applicants will continue until the high schools provide proper training courses to meet entrance requirements to the universities. If the Government goes into scholarship and school programs you can rest assured that

companies such as ours will promptly discontinue any such aid as we are providing in the form of scholarships. If we are legislated into a socialistic school program you can be certain that industry will withdraw its support from the wonderful scholarship programs that they are now sponsoring.

Very truly yours,

FRED E. OWEN.

Utilization Research Has Benefited Agriculture

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. DIXON. Mr. Speaker, the House Agriculture Committee held hearings on utilization research. Although the committee will not get out a bill this year, I am hopeful that they will report out a bill next year along the lines of H. R. 6800, which I introduced and which I believe represents the latest and best thinking on the type of legislation that is needed. It has become widely recognized that our past artificial high price support legislation has dried up markets for farm crops causing radical dislocation of the supply and demand relationship. It is my deep and sincere belief that utilization research to find and commercialize new crops and new industrial uses for crops will create many new markets and provide part of a permanent cure for this serious maladjustment.

UTILIZATION RESEARCH HAS BENEFITED AGRICULTURE

The record of achievement of utilization research in the Department is long and impressive. This can be illustrated most dramatically by the accomplishments of utilization research for several of our major commodities.

Utilization research is responsible for the markets that cotton now enjoys. Faced with formidable competition from synthetic fibers, the cotton industry moved to machine harvesting and drying at the gin. These processes, designed to reduce cost and thus help cotton compete with synthetics, introduced foreign materials and brought about changes in the cotton fiber, thus placing markets for these products in further jeopardy. Utilization research solved the problem of efficient, low-cost cleaning of machine-harvested cotton and of avoiding quality damage at the gin. More recently, utilization research has developed the wash-and-wear cotton fabrics now on the market. These are so much superior to synthetics or blends that consumers are turning more and more to all cotton in the wash-and-wear field. These developments have literally saved the cotton industry.

Utilization research has made possible the development of the soybean as a food and industrial crop in the United States. Extensive soybean farming and utilization research began at about the same time. Utilization research solved the problems that permitted soybean oil to become the primary food oil, and soybean meal the primary protein feedstuff in the United States. It developed industrial chemicals from soybean oil that now form the basis of paints and other formulations that are providing outlets for millions of bushels of soybeans annually. The soybean industry has grown rapidly but only as rapidly as research has permitted it. There is no better example of the value of research in agriculture today.

Inedible animal fats—tallows and greases—formerly used by the millions of pounds to produce soap, were thrown out of this market almost overnight by public acceptance of synthetic detergents. Utilization research has provided alternative markets for these fats that have converted this situation from one of crisis to the livestock industry to one where animal fats now enjoy substantial acceptance on the domestic market. Utilization research has already provided markets for 380 million pounds of animal fats annually in plastics and in animal feed. Current research is adding regularly to the annual demand for animal fats as industrial raw materials.

Utilization research, in cooperation with the Florida Citrus Commission, developed frozen, concentrated orange juice, a product that may well have been the salvation of the Florida citrus industry. As a result of this research, larger crops can now be processed and marketed efficiently to provide the consumer with a stable, high-quality product in all seasons. Frozen concentrated orange juice has absorbed over 350 million boxes of fruit worth over a billion dollars to growers.

Cottonseed meal, for decades used almost entirely as a cattle feed, is now being used extensively in mixed feeds for poultry and swine. Utilization research, spearheading a vast cooperative program with Federal, State, and commercial groups, discovered the causes of toxicity of cottonseed meal for poultry and swine and prescribed means for overcoming them. This achievement removed the handicap that prevented cottonseed meal from sharing fully in the tremendous mixed feed market. As a result, more than 1¼ million tons of cottonseed meal, having a value of $50 million, were used in broiler and swine rations up to January 1958, and the rate of use now exceeds one-fourth million tons annually.

Dehydrated foods were essential in feeding our Armed Forces overseas during wartime. Utilization research solved many of the problems associated with production of nutritious, palatable, stable, dried foods for the Quartermaster Corps. Noteworthy in this respect was solution of the problem of storage stability of dried egg. The research was not only successful in solving the problem for the military but it has placed dried egg on the pantry shelf in the form of stable, egg-containing prepared cake and pastry mixes. More than 25 million pounds of dried egg are used annually for this purpose and their use is expanding rapidly.

Many other significant accomplishments of utilization research can be mentioned.

The 50 million pound annual market for animal fats as emulsifiers for the production of synthetic rubber was saved.

Wartime research on cereals made important contributions to the alcohol-from-wheat program which utilized 258 million bushels, and to wheat wet milling which produced starch and syrup from 3 million bushels.

Our penicilin process, growing steadily in application from the beginning, has required steep liquor from 15 million bushels of corn, and the dextran process has required 3 million pounds of sugar.

Soft grit blasting has utilized 5 million tons of corn cobs. Pulp and paper have consumed 7 million tons of straw.

The value of dehydrated fruits and vegetables to which we made substantial contributions, rose to $140 million per year during the war. While it subsided immediately afterward, there is a flourishing industry today whose product is worth 65 million annually and is increasing steadily. A substantial part of this production is exported.

Our new belt-trough dryer should save the fruit and vegetable dehydration industry $500,000 annually.

The dehydrated mashed potato industry, to which our research has contributed greatly, paid $4 million to growers in 1957 and will grow steadily. Our new potato flakes will increase this outlet substantially.

Research on frozen poultry has made it possible to realize the important economies of high-temperature scalding and has brought under control the post mortem development of toughness. Annual worth to the industry is estimated at $8 million.

As a result of Department research, 35,000 tons of feathers per year are processed into meal selling at $90 per ton for feed.

These are but a few examples, taken from the list of 150 developments, illustrating the effect of Department research on the utilization of farm commodities. And these 150, representing as they do developments that are now in commercial use, do not include many that may soon become commercial realities, nor do they reflect fully the vast intangible benefits that utilization research findings have brought to those who produce, process, and consume our Nation's crops. Each is making a significant contribution to improved agriculture. Each year sees major additions to the list.

We are confident that an expanded program will accelerate the development of additional new and expanded uses, and thus more rapidly achieve the objective of full, profitable utilization of our agricultural output.

United States and Ghana Exchange Views

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mrs. BOLTON. Mr. Speaker, last week the Honorable Kwame Nkrumah, Prime Minister of Ghana, concluded an official 10-day visit to the United States. During his all-too-short stay in this country the prime minister frequently expressed appreciation for the cordiality of his reception and the frankness of his talks with the President, the Secretary of State and other ranking Government officials. These conversations were aimed at strengthening the close ties of friendship between our two countries through an exchange of views on subjects of mutual interest and concern.

Believing the White House statement on the outcome of these talks will be of interest, I ask unanimous consent that it be inserted at this point in the RECORD together with the welcoming remarks made upon the arrival of Dr. Nkrumah in this country.

JOINT STATEMENT OF THE PRESIDENT AND THE PRIME MINISTER OF GHANA

The visit to Washington of the Prime Minister of Ghana has afforded the opportunity for a full and friendly exchange of views between the Prime Minister and the President, the Secretary of State and other high Government officials. These conversations have had as their objective the further strengthening of the close ties of friendship and mutual respect which have characterized the relationship between the two countries since Ghana attained its independence last year.

The Prime Minister explained the importance that his government attaches to the Volta River project and also to the development plan which is being drawn up for the further economic and social development of Ghana. He hoped the Government of the United States would find it possible to assist the Government of Ghana with respect to both programs.

In subsequent conversations, representatives of the two governments explored the types and scope of assistance which the United States Government might be able to extend to the Government of Ghana. With regard to the Volta River project, the United States expressed its appreciation of the contribution this project could make to the economic development of Ghana. It agreed to continue to explore with private American interests the aluminum manufacturing phase of the project and to consider how it might assist with loans if the required private financing were assured. The United States also expressed willingness to examine any proposals which the Government of Ghana might advance for the use of power from the Volta River for purposes other than the manufacture of aluminum. The two governments agreed that it would be desirable to bring up to date the engineering reports which were prepared in 1955 and to share the cost of this undertaking.

With respect to the new development plan now in the course of preparation, the Government of the United States indicated willingness to examine the plan with the Government of Ghana and to consider particular fields in which it might be able to cooperate through development loans. The United States Government further agreed to continue and expand its technical cooperation with the Government of Ghana through programs designed to aid in the gradual diversification and strengthening of the economy of that country.

The conversations included an exchange of views concerning the situation in the Middle East. The two governments were in agreement that the solution for the urgent problems of that area should be found within the framework of the United Nations in a manner which will preserve the independence and territorial integrity of all member nations, whether large or small. With respect to the particular situation in Lebanon, the United States emphasized its desire to withdraw its forces just as soon as the United Nations can act effectively to assure the independence and territorial integrity of that State. The Prime Minister noted that this position coincided with the views of his Government.

The representatives of the two Governments emphasized their determination to work for the strengthening of the United Nations in the interests of establishment of world peace, prosperity, and stability based upon international justice. It was apparent that both countries share the same beliefs with respect to mutual respect for the sovereignty and independence of nations, noninterference in the internal affairs of other nations, social and economic progress for all peoples, and the rights and dignity of the individual.

The two Governments also exchanged views on the emergence of new African states and the growing importance of the African Continent in the realm of international affairs. The Prime Minister took the opportunity to explain the aspirations of the African states as they were expressed at the recent meeting of those nations at Accra and in his subsequent visits to each of the capitals of the states concerned. The President noted with deep interest the Prime Minister's explanations regarding the development of a distinctive African personality, emphasizing in this connection the sincere interest of the Government of the United States in the orderly political, economic, and social advancement of the peoples of the African Continent.

KWAME NKRUMAH.
DWIGHT D. EISENHOWER.

WELCOMING REMARKS UPON ARRIVAL OF DR. KWAME NKRUMAH, PRIME MINISTER OF GHANA, JULY 23, 1958

Vice President NIXON. Mr. Prime Minister, Your Excellencies, and ladies and gentlemen, it is a very great honor for me to represent the President of the United States and the American people as we welcome you to Washington, D. C. And in welcoming you, I have memories of a visit to your country just a little over a year ago. It was a great event. It was the birth of a nation. The birth of a nation, in which you played such an important and decisive part. And, as you come to the United States, you are going to find among our people every place that you visit, tremendous interest, both in you individually and also in your country.

This interest will exist because yours is a new nation that has entered into a period now of self-government and independence, just as our own country went through this same process many years ago. There will be interest also because this has occurred in the heart of Africa and it is an indication of a great trend that is developing in that part of the world in this exciting new continent.

There will be a special interest in you in the United States for another reason which I would like to mention. We feel that we, at least, have a part of you in our country—at least in spirit. We are proud of the fact that you studied in the United States and that here you had the opportunity to know us through the students from this country with whom you came in contact at that time.

So Mr. Prime Minister, may I say, you will find every place you go I am sure the warmest and the most friendly welcome. You will find esteem for yourself, you will find affection for your people, and the best wishes for your country in the years ahead.

Prime Minister NKRUMAH. Mr. Vice President, I am most grateful to you for your kind words of welcome. I truly appreciate the gracious invitation from President Eisenhower which has brought me here today and I bring greetings from the Government and people of Ghana to the Government and people of the United States of America.

We were delighted, sir, to welcome you to Ghana during our independence ceremonies. It gives me equally great pleasure today to renew my friendship with you. I have, of course, in addition, personal and sentimental reasons for being so happy to return to this country. My visit here is a manifestation of the warm feeling of friendship that exists between the United States of America and Ghana and between our respective countrymen. We remember with gratitude the encouragement we have received from your Government in our first efforts to consolidate our independence. We are anxious to retain your friendliness and good will.

I have arrived here, Mr. Vice President, at a time of great international tension. I represent only one African state but we are in the uniquen position of being a member, both of the United Nations and of the Commonwealth, as well as having active and direct links with the seven other independent African states. We also have a direct interest in the Middle Eastern situation. I sincerely hope that it will be possible to reach agreement to hold a very early meeting within the framework of the United Nations of the heads of government of those states best able to contribute to a solution. I look forward to having fruitful discussions with your leaders. I hope that these discussions will result in greater understanding of our respective problems and policies and that they will contribute to the store of human good will and world peace. I thank you again, Mr. Vice President.

Now They Know

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Camden News, Camden, S. C., of August 7, 1958:

NOW THEY KNOW

Governor Orval Faubus, of Arkansas, commenting on his reelection told a group of reporters:

"I remember that when all of the out-of-State reporters were questioning me and I would tell them that I was doing what the people wanted me to do, they would give me that look of doubt. Now they have the answer from the people themselves".

There is no one now who can argue with him. The people spoke and they spoke emphatically. And they spoke not only for Arkansas, but for South Carolina, Georgia, Virginia, Florida, Texas, Mississippi, Louisiana, and other Southern States.

Governor Faubus' victory was all the more outstanding when you analyze the situation. First of all we would remind you that he polled 255,000 votes while his 2 opponents polled a combined vote of 114,712. The governor thus polled more than twice as many votes as his two opponents combined.

Now, let's analyze the situation. First, we would point out that Mr. Faubus was seeking a third term. There is sort of an unwritten law in Arkansas against a third term for a governor. Next, we would point out that Mr. Faubus, as governor, had used his influence to raise virtually every tax in Arkansas, notably the sales and the income taxes. And he had advocated a property reassessment program. He had been quite critical of the powerful State highway department.

All of this would have been sufficient to have killed the chances of any ordinary candidate and would probably have killed the chances of Governor Faubus had it not been for the strong stand he had taken on integration in the public schools.

The people of Arkansas forgot about tax raises, property reassessment, highway rows, and everything else when the dark cloud of integration began to hang over the State. They recognized that the gallant stand taken by their Governor had probably effectually stopped integration moves not only in Arkansas, but all over the South. They knew that if they backed their Governor up in his stand that the whole Nation would be alerted to the fact that it is going to be impossible to integrate the schools in the deep South.

Too often the general public is led to forget the main issue and be fooled into voting against the public interest by some side issue. This was not the case in this election.

Both of Governor Faubus' opponents professed to be for segregation, but the voters knew that a vote for Governor Faubus would show where they stood.

Before the election Faubus' opponents had expressed the hope that the silent vote would

be against him. The silent vote did not materialize; neither did the opposition from organized labor that the labor leaders talked about but that the rank-and-file union men apparently ignored.

The comment of the liberal press on the election has been humorous. Their chief concern is that the vote will intimidate those Southern people who favor integration so that they will not voice their views any more. Well, there were not enough of them to count and their views carried no weight when they did express them.

Small Business Barred From Capehart Housing

EXTENSION OF REMARKS
OF
HON. J. T. RUTHERFORD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. RUTHERFORD. Mr. Speaker, it appears that during recent months an increasing number of complaints have been directed at the Capehart housing programs of the Departments of the Army, Navy, and Air Force, due to the fact that small-business members of the construction industry, in effect, are precluded from bidding for this work.

As we all know, the Capehart housing program identifies dwellings constructed on Government property, usually at or near military installations, for occupancy by families of those engaged in defense activities. Literally thousands upon thousands of these houses have been constructed throughout the entire United States under this program. Indications are that the program has been administered efficiently and economically but unfortunately, the invitations to bid that are issued to contractors usually require the bidder to agree to undertake to construct all of the units in any single project. Since several hundred dwellings are usually included in each project, the contracts are too large for the smaller contractors to handle.

In most cases on these projects the Government receives but a single bid due to the elimination of many able but limited funded builders.

In order for the construction work to be performed under the Capehart housing programs, the project must include at least 20 units. I would believe that a small contractor could handle such a project but it is my information that projects of this size are rarely scheduled. The average project, I understand, consists of several hundred units. At this time there are 2 or 3 projects in process, each of which calls for 1,000 dwellings. Another single project calls for 2,000 houses. Within the past week the Congress adopted the conference report on military construction (H. R. 13015). This bill authorizes the Secretary of the Air Force to construct the following family housing—Capehart housing:

Camp Adair Air Force Station, Oreg., 150 units.
Amarillo Air Force Base, Tex., 500 units.
Beale Air Force Base, Calif., 970 units.
Bunker Hill Air Force Base, Ind., 250 units.
Chanute Air Force Base, Ill., 450 units.
Clinton County Air Force Base, Ohio, 536 units.
Clinton-Sherman Air Force Base, Okla., 50 units.
Custer Air Force Station, Mich., 169 units.
Donaldson Air Force Base, S. C., 275 units.
Cooke Air Force Base, Calif., 525 units.
Dover Air Force Base, Del., 500 units.
Dow Air Force Base, Maine, 530 units.
Duluth Municipal Airport, Minn., 365 units.
Edwards Air Force Base, Calif., 778 units.
Ellsworth Air Force Base, S. Dak., 220 units.
Forbes Air Force Base, Kans., 414 units.
Fort Lee Air Force Station, Va., 154 units.
Geiger Field, Wash., 168 units.
Glasgow Air Force Base, Mont., 460 units.
Grand Forks Air Force Base, N. Dak., 744 units.
Griffiss Air Force Base, N. Y., 270 units.
Hamilton Air Force Base, Calif., 550 units.
Holloman Air Force Base, N. Mex., 400 units.
James Connally Air Force Base, Tex., 366 units.
Keesler Air Force Base, Miss., 290 units.
Kinross Air Force Base, Mich., 475 units.
K. I. Sawyer Airport, Mich.. 595 units.
Kirtland Air Force Base, N. Mex., 490 units.
Lakes Charles Air Force Base, La., 300 units.
Langley Air Force Base, Va., 500 units.
Larson Air Force Base, Wash., 200 units.
Lockbourne Air Force Base, Ohio, 400 units.
Malmstrom Air Force Base, Mont., 150 units.
Mather Air Force Base, Calif., 220 units.
McChord Air Force Base, Wash., 1,000 units.
McClellan Air Force Base, Calif., 540 units.
McCoy Air Force Base, Fla., 668 units.
McGuire Air Force Base, N. J., 1,450 units.
Minot Air Force Base, N. Dak., 932 units.
Mountain Home Air Force Base, Idaho, 270 units.
Nellis Air Force Base, Nev., 200 units.
Niagara Falls Municipal Airport, N. Y., 290 units.
Offutt Air Force Base, Nebr., 616 units.
Oxnard Air Force Base, Calif., 315 units.
Pease Air Force Base, N. H., 483 units.
Presque Isle Air Force Base, Maine, 114 units.
Richard Bong Air Force Base, Wis., 900 units.
Richards-Gebaur Air Force Base, Mo., 610 units.
Robins Air Force Base, Ga., 150 units.
Selfridge Air Force Base, Mich., 580 units.
Sheppard Air Force Base, Tex., 500 units.
Sioux City Municipal Airport, Iowa, 235 units.
Stewart Air Force Base, N. Y., 300 units.
Suffolk County Air Force Base, N. Y., 220 units.
Syracuse Air Force Station, N. Y., 216 units.
Topsham Air Force Station, Maine, 177 units.
Truax Field, Wis., 280 units.
Turner Air Force Base, Ga., 200 units.
United States Air Force Academy, Colo., 300 units.
Vance Air Force Base, Okla., 230 units.
Westover Air Force Base, Mass., 310 units.
Whiteman Air Force Base, Mo., 154 units.
Williams Air Force Base, Ariz., 150 units.
Wurtsmith Air Force Base, Mich., 618 units.

As mentioned previously, the construction contracts are awarded to a single bidder who is required to construct all of the units in the entire project. It is obvious that under any such policy small business concerns are barred.

In explanation of this situation, I am told that the Government is able to obtain a lower price from the contractors when they are permitted to bid upon the entire project; that it would be difficult to permit several different builders to participate in a single project because the sewerage and plumbing connections must serve all of the houses; that vexing problems would arise if portions of the project were allocated to different builders.

I do not doubt for a minute but that it would be more difficult to deal with 10, 15, or 20 different builders in connection with a given project than it would be to deal with only one. But, in a sense, this argument could be utilized in connection with all Government procurements and if it were applied, big business soon would monopolize Government procurements.

Big business already appears to have a monopoly in Capehart housing and I am not convinced that it is necessary. Small builders can construct houses just as good as big builders. Some method must be found whereby small business will be given an opportunity to obtain its proportionate share.

Within the past month the Congress made the Small Business Administration a permanent agency and for the first time gave that agency authority to assist small business concerns in their efforts to obtain a fair proportion of Government construction contracts. I understand that the SBA is taking advantage of this broadened power by taking action designed to bring about some improvements in the Capehart housing policies. If it finds it is unable to do so, I would expect it to suggest and submit proposed legislation for consideration during the early days of the 86th Congress. The present situation must not be permitted to continue and I shall be waiting eagerly to see the results of the efforts of the Small Business Administration along this line.

Design of the 49-Star Flag

EXTENSION OF REMARKS
OF
HON. W. R. HULL, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. HULL. Mr. Speaker, widespread interest in the American flag has been stimulated by a contest held under the auspices of the News-Press and the Gazette of St. Joseph, Mo.

The contest began 11 years ago, when statehood for Hawaii appeared to be imminent. Now, with statehood won for Alaska, certain important details of the contest are in the news again. And again interest in the American flag is stirred.

Contest rules were announced July 6, 1947. A careful study made at that time disclosed no other newspaper in the Nation holding a similar contest.

The St. Joseph newspaper stated:

The probable admission of Hawaii as the 49th State of the Union has Congress and the flagmakers of the country in a dither.

How should the 49 stars in the field of blue be arranged? The News-Press and the Gazette are asking their readers to make a suggestion.

Judges will select from the entries the five best arrangements, which in turn, will be sent as suggested to the national committee selected by Congress to pick the design.

All winners will be awarded an American flag of the new design when it is finally officially approved. Selections will be made of the best arrangement of the 49 stars in the blue field. Art ability is not necessary.

Three judges were chosen. They were I. R. Bundy, St. Joseph public librarian; H. D. Allison, mayor of the city, and George L. Blackwell, superintendent of St. Joseph public schools.

Entries closed at 6 p. m. July 19, 1947, under the contest rules. Long before that hour was reached the News-Press and the Gazette had received piles of letters and drawings.

Some of the contestants tried diligently to keep the plan of the stars pretty much as they found it; others spelled out letters and words with the stars or produced star pictures.

The judges preferred the arrangements that made the least changes in the flag. They chose 5 designs and announced 6 winners, finding it necessary to make a duplicate award in 1 case.

The winners:

1. Miss Mabel White, 2607 Faraon Street, St. Joseph. Her flag bore 6 stars in the top row, 7 in the second row, 8 in the third row, 7 in the fourth row, 8 in the fifth row, and so on to the bottom.

2. Mr. and Mrs. R. W. Liss, Kirwin, Kans. This couple planned a flag with 7 stars across and 7 down.

3. Mrs. Lue Scott, Pickering, Mo. Duplicate award for 7 stars across and 7 down.

4. Mrs. Paul Spaulding, 611 South 14th Street, St. Joseph. Her flag divided the stars into three groups.

5. Mrs. Henry Snider, Mound City, Mo. Mrs. Snider suggested 7 rows of 7 stars each, but every other row indented rather than being flush with the one above.

Sixth. Mrs. Berthan Boone, Wheeling, Mo. Mrs. Boone arranged the stars in 7 rows: 8 for the first, 7 for the the second, 6 for the third, 7 for the fourth, 6 for the fifth, 7 for the sixth, and 8 for the seventh.

A friendly letter was sent to the winners by Arthur V. Burrowes, editor of the News-Press and the Gazette. The one to Miss White stated in part:

It is indeed a pleasure and a privilege to congratulate you on being 1 of the winners in the recent contest for designing a new flag of 49 stars. The contest sponsored by the St. Joseph News-Press and the St. Joseph Gazette has drawn considerable interest far and wide and we are very grateful to all who took part in working out the designs.

That your design was so good gives us of the News-Press and Gazette staffs pleasure and I want you to know that your flag will be forwarded to you as soon as the final selection is made.

Hawaii, however, did not make the grade as a State. The News-Press and the Gazette told their readers that contest awards would be presented when a 49th State came into the Union and the national flag was changed.

Eleven years went by. Then came victory for Alaska in its campaign for statehood. The News-Press and the Gazette announced that their contest could be concluded.

It now will be possible to send the winning suggestions to a flag designing committee. And when that committee chooses its design and the new flag is produced, that flag can be sent to the contest winners.

The newspapers pointed out, however, that it may not be long before the congressional committee named to select a new design is thinking in terms of 50 stars rather than 49.

Fortunately, some of the winning designs in the News-Press and Gazette contest are easily adaptable for use in a 50-star flag. These will be called to the attention of the committee.

Judge Florence E. Allen, Distinguished Woman Jurist, Seeking International Law To Regulate Navigation and Transactions in Outer Space

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mrs. BOLTON. Mr. Speaker, one of Ohio's most distinguished women who has served for many years as a United States circuit judge has just announced that she will present a six-point declaration of principles for the regulation of navigation and transactions in outer space to the 10th convention of the International Federation of Women Lawyers in Los Angeles this month.

With the exploration of new horizons comes the need for new concepts of international law. I therefore believe, Mr. Speaker, that the proposals of this eminent jurist are worthy of the consideration of us all. Judge Allen is to be congratulated for her significant contribution in this vast new area. I ask unanimous consent that the report of an interview with Judge Allen appearing in the Cleveland Plain Dealer of August 7 be included in my remarks.

JUDGE ALLEN URGING SPACE LAW

To most persons, the question of a boundary between space and outer space, those ungovernable twins of modern science, is equal in importance to the condition of the madder plant in earthbound Afghanistan.

United States Circuit Judge Florence E. Allen of Cleveland, who has been much around this world (Afghanistan excepted), is concerned vitally with the vast areas of the galaxies—but simply as a woman of the law.

The judge, in an interview yesterday in her office in the Federal Building, said she was seeking an international law, through the United Nations, to regulate navigation and transactions in outer space.

Week after next, in Los Angeles, she will present a basic declaration of principles on this matter to the 10th convention of the International Federation of Women Lawyers. She is chairman of a committee on outer space.

NO TRESPASSING

The declaration lists these principles:

1. Neither outer space nor any part thereof shall be subject to appropriation by any nation.

2. Exploration of outer space shall be jointly undertaken under the auspices of the United Nations.

3. Outer space shall be reserved under international control for the promotion of the well-being of mankind exclusively through peaceful means.

4. Flight instrumentalities shall not be used in any part of outer space for any military purpose.

5. All nonmilitary flight instrumentalities shall have the right of transit through contiguous space, whether ascending or descending.

6. All space above contiguous space shall be declared free for the passage of all flight instrumentalities.

"We've got to have a definite boundary between space and outer space," said Judge Allen, "if we are going to have any law or agreements of any kind."

International lawyers talk of territorial space, that area above a nation where aircraft, as defined today, may operate. Then there is contiguous space, the area above this height.

But, as the judge said, the indispensable prerequisite for the declaration of basic law to govern exploration and use of outer space is the establishment of a practical boundary between the atmosphere (territorial space) and outer space. The definition of territorial and contiguous space, if adopted by the nations, would set such a boundary.

"You can find in 'American Jurisprudence' that we own the air way up forever, up through the galaxies," said Judge Allen. "But now, there's sputnik up there, passing over our territory. And there is Explorer up there, going over their countries.

"Nobody protested about this. No one in the world objected. There were no claims of any violation. So we kind of admitted that the law no longer obtains. All of us have waived any laws or rights."

WHOSE MOON OVER MIAMI?

What about Russia? She did not join the United States and 57 other nations in the Chicago meeting, in 1944, of the International Civil Aviation Organization, when territorial space was set up. She probably would not join in this declaration, either. Suppose she should go ahead and make it to the moon and claim it?

"Well," said Judge Allen, "she would have the moral declaration of the world against her."

She said an international convention should be formed soon, investing the International Court of Justice with jurisdiction in controversies in this field. And the International Civil Aviation Organization might be handed the task of making the principles effective.

"This is fascinating study," said Judge Allen, who has been a jurist since 1920, in common pleas court, in the Ohio Supreme Court, and now in Cincinnati. "Simply fascinating."

Hon. William E. McVey

SPEECH
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. CHIPERFIELD. Mr. Speaker, I was deeply saddened to learn of the

passing of our esteemed colleague, Hon. WILLIAM E. MCVEY.

During his 8 years of service in Congress he enriched the lives of every Member of this Chamber, and contributed much to the people of Illinois and the country.

His interests were diversified and he was widely known not only in the field of education but also as an author. He was an able member of the Banking and Currency Committee and always had the courage of his convictions.

Mr. MCVEY was a sincere man of simple dignity and devoted to his work. Personally I have lost a warm friend, one for whom I had great regard and affection. I join with my colleagues in expressing sympathy to his devoted wife and family.

Dr. William M. Hudson, a Great Educator

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. MACK of Illinois. Mr. Speaker, it was Pennsylvania's loss and Illinois' gain when Dr. William Mestrezat Hudson left the presidency of Waynesburg College in 1912 to become president of Blackburn College in Carlinville, Ill. As a former student of Dr. Hudson, who served as Blackburn's president for 33 years, I consider it a privilege to include here a biographical sketch of this great educator which appeared in a recent publication of the Carlinville Rotary Club.

WILLIAM MESTREZAT HUDSON
(By W. L. Schmitt)

Few residents of Carlinville and Macoupin County have had a more satisfying career than William Mestrezat Hudson, president emeritus of Blackburn College, distinguished educator, religious leader and all-American citizen. Liberal in his educational philosophy, conscientious and capable in his devotion to the public good, strong and alert in mind and body, temperate in all things, a man of unusual strength in intellect and character, Dr. William M. Hudson looms today among the great citizens of the community.

Born February 26, 1872, near Waynesburg, Greene County, Pa., Will Hudson, at the age of 10, following the death of his father, moved with his mother, 2 brothers and a sister, to Waynesburg.

He was graduated from Waynesburg College in 1892, first in a class of 16. He entered Princeton that fall and was graduated cum laude in 1893. In 1896 he was graduated from Princeton Theological Seminary and was ordained to the ministry of the Presbyterian Church that fall, going immediately to the pastorate of the New Providence Presbyterian Church at Carmichaels, Pa.

In 1900 he spent 7 months abroad, including a month in Egypt and Palestine.

From Carmichaels he moved to the pastorate of First Presbyterian Church at Clarksburg, W. Va.

In 1905 Will Hudson married Miss Florence Ronald Barclay, of Louisville, Ky. They have 3 daughters; Mrs. A. W. Meyer, Upper Montclair, N. J.; Mrs. J. B. Callaway, South Pasadena, Calif.; and Miss Harriet, academic dean of Randolph-Macon Woman's College, Lynchburg, Va. The Meyers have 4 children and the Callaways 5.

In 1908 Dr. Hudson became president of Waynesburg College. After 3 years he retired to his father's old farm from which he was called in 1912 to the presidency of Blackburn College, where he served for 33 years. Resigning in 1945, he has been engaged in farming, business, and preaching, spending several winters in Florida where he served as supply pastor. He seems to be the only man we know who can spend his winters in Florida and get paid for it.

Along the way, Dr. Hudson has received honorary degrees from Princeton and Tulsa Universities, and from Illinois, Waynesburg, and Blackburn Colleges.

Probably Dr. Hudson's greatest honor came in 1950 when he was elected a Pennsylvania ambassador by the Pennsylvania Chamber of Commerce, the first man from his county to receive that honor. A scroll given him, signed by the Governor and secretary of State, reads: "For outstanding achievement in the best traditions of the Commonwealth, this citation is awarded to William M. Hudson, a former resident of Greene County, Pennsylvania, who has won distinction as a college president and devoted friend of financially needy students."

In 1923 the Hudson family lived abroad, the daughters attending French lycees, while Dr. and Mrs. Hudson traveled over Egypt, Palestine, and the continent.

Bear Lake County Citizens Can Take Pride in Election Voting Record

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1958

Mr. BUDGE. Mr. Speaker, I am justly proud of my State of Idaho and its high turnout at the polls. Particularly am I proud of the citizens of Bear Lake County, in the southeast corner of my district.

Idahoans do not regard their franchise lightly, consistently exceeding the national average, percentagewise, in voting. And my costituents in Bear Lake County regularly exceed the Idaho average.

They are to be commended for their good citizenship, and I believe their record is such that it should be called to the attention of the Congress.

Following is an editorial from the August 7, 1958, Montpelier, Idaho, News-Examiner in which that record is pointed up:

BEAR LAKE COUNTY CITIZENS CAN TAKE PRIDE IN ELECTION VOTING RECORD

Remember to set aside a few minutes Tuesady next, August 12, between the hours of 12 noon and 8 p. m. to go to the polls and vote. Mathematically and otherwise your vote is mighty inportant. Byt the mere act of voting you translate privilege into action, and fulfill a trust and responsibility due yourself, your party and country.

In a preface to the 1958 digest of primary and general election laws, James H. Young, secretary of state, has this to say about our obligation to vote:

"This Republic has given the citizens of these United States a degree of freedom and a plan of self-government that is the outstanding achievement of all time.

"Here the individual is sovereign, and here government is with the consent of the governed.

"But it presupposes two things. The first is that the voters have the intelligence to inform themselves about the men and the issues to be voted upon, and the second is that they will be enough concerned to perform every citizen's duty of voting.

"To whatever extent we fail in either of these two things, we jeopardize our rights, our freedom, and the privileges we have in this land we love.

"Self-government is a priceless heritage, and it can be lost."

At the presidential election in 1956 Idaho ranked first among all States in the ratio of votes to total voting population, 77.3 percent, and in 1952 held a similar position with 81.4 percent. Nationally the average in 1956 was 60.4 and in 1952, 62.7 percent.

Although open for improvement, Bear Lake County ctizens can take pride in their voting record with respect to the high percentage of qualified electors registering, nearly 100 percent, as well as the number voting at elections.

Out of 4,017 registered electors in 1952, 3,608, or 90 percent voted; in 1954 there were 4,023 registered electors of which 3,320 or 83 percent voted; and in 1956, 3,446 or 85 percent out of the 4,057 registered cast votes. This places Bear Lake considerably above the State and national averages.

For a number of reasons the primary vote is considerably less than that at general elections. The primary is conceived on the principle that the elector will have the drive and intelligence to directly participate in choosing candidates, as opposed to the delegation of this important function to a few as practiced by the nominating convention procedure. Choosing the entry can be more important than the November showdown race itself.

The reader will observe on the sample ballot appearing elsewhere in this issue of the News-Examiner that there are a number of State contests, and that in Bear Lake County there are 3 contests for offices on the Democratic ticket and 2 on the Republican.

Following is a table showing the number voting at the last 10 biennial primaries, the number voting at corresponding general elections, and the percentage of primary votes in comparison with the number voting at respective general elections:

Year	Voted at primary	Voted at general	Percent voting at primary
1938	2,200	3,397	6
1940	2,021	3,898	5
1942	1,305	2,985	4
1944	1,346	3,400	3
1946	1,419	3,125	4
1948	1,522	3,375	4
1950	1,862	3,229	5
1952	2,434	3,608	6
1954	2,393	3,320	7
1956	2,164	3,446	6

Congressman McVey, a Real Public Servant

SPEECH
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. HILLINGS. Mr. Speaker, I learned with great regret of the passing

of my good friend and colleague, the gentleman from Illinois [Mr. McVEY].

BILL MCVEY and I came to Congress together in January 1951. His office was only a few doors from mine and I recall the many occasions when we walked to the floor of the House of Representatives together in response to the bells for a roll or quorum call. We served together as Members of the 82d Congress.

I have lost a good and trusted friend and the country has lost a great public servant. I extend my deepest sympathy to Mrs. McVey and her family.

Exit From Great Lakes Waters: The Lamprey Eel

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mrs. BOLTON. Mr. Speaker, from time to time I have had occasion to speak of the depredations of the lamprey—a loathsome, bloodsucking eel—on fresh-water fish in the Great Lakes. The eel entered the regions early in the 1920's and all but wiped out lake trout in Lakes Michigan, Huron, and Superior.

My attention was first called to this by our colleague, the Honorable John Rankin of Mississippi, who was very much stirred over the situation and thought those of us who live on the Lakes should do something about it.

A great deal was done about it, and now it appears that the lamphrey's days of supremacy are over, thanks to chemicals and tireless research on the part of United States and Canadian officials of the lamphrey control program. Recent tests have been unbelievably successful.

A dramatic account of a new poisonous chemical known as Dowlap which affects only the lamprey and was developed by the Dow Chemical Co., appeared in the Cleveland Plain Dealer of August 7. I ask unanimous consent to include this article with my remarks, believing it will be of particular interest to my colleagues in the Great Lakes region.

PETROMYZON MARINUS GIVES UP THE GHOST

This is a happy fish story where the big one didn't get away.

Petromyzon marinus, more familiarly known as the loathsome lamprey eel, has at last been conquered.

In language rarely used by scientists, the head of the lamprey-control program has just reported unconditionally successful results with a selective chemical larvicide.

A poison now can be used which hits only the lamprey and leaves game fish, animals drinking treated water and plant life completely untouched.

Lampreys are little salt-water bloodsuckers which first entered Lake Erie via the Welland Canal (without paying tolls, yet) in 1921. They never flourished here, due perhaps to warm streams along our shores.

The story was different in Lakes Huron, Michigan, and Superior. There the lampreys adapted to fresh water life and proceeded gradually to wipe out the lake trout in Michigan and Huron. Superior's remaining trout population has almost vanished too from their depredations.

Right after World War II the United States and Canada initiated a lamprey-control program which went into high gear in 1954. Electric fences at stream entrances first were tried. They work but are expensive and allow too many generations of lamprey to live which have already escaped into the lakes.

Two years ago Dr. Vernon C. Applegate, director of the lamprey experimental station at Rogers City, Mich., together with Dr. James W. Moffett, began chemical studies.

Somewhere along the way, as they plowed through 6,000 different poisons, Dr. Clarence L. Moyle, of the Dow Chemical Co., Midland, Mich., came into the picture. He introduced a substance now called Dowlap, a fungicide discovered back in 1941 but set aside.

In October of 1957 a test stream, Little Billie's Creek, near Cheboygan, Mich., was picked for a trial. Four hours after the chemical was introduced in the water windrows of dead lamprey larvae grew larger and larger and attracted gulls and sandpiers by the hungry hundreds, reports the latest Dow house organ, the Brinewell.

Dowlap killed 95 percent of the lamprey larvae. A second test in April of this year worked even better on another river. Dr. Applegate, who called the research "unconditionally successful," now proposes to treat 65 lamprey-infested streams feeding Lake Superior. Later Lakes Michigan and Huron will get the poison applications.

While it may be 20 years before lake trout can recover (because of their slow life cycle), this represents a magnificent victory. Industry and government have teamed in what once seemed a completely hopeless endeavor. To all we say "good fishing" and heartiest thanks.

Reds Ready To Paint Latin America Red

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 14, 1958

Mr. HILLINGS. Mr. Speaker, an enlightening report on the designs of Communist Russia in Latin America has been written by Mr. William Giandoni, Latin American editor for the Copley newspapers.

This article appeared in the Alhambra, Calif., Post-Advocate and other Copley newspapers, and it is worthy of reading for its shows the Communist ambitions in the Western Hemisphere.

I was extremely interested in Mr. Giandoni's report because, in 1954, I was chairman of a subcommittee of the Select Committee on Communist Aggression that exposed the first Communist beachhead in the Western Hemisphere—that which occurred under the administration of Jacobo Arbenz in Guatemala.

The Arbenz regime in Guatemala was overthrown by the late patriot, Col. Castillo Armas, reestablishing the toehold of democracy for the heel of communism in an important area of our hemisphere.

I wish to remind my colleagues in the House that the subcommittee, of which I was chairman and which consisted of the Honorable ALVIN M. BENTLEY, of Michigan, and the Honorable Thomas J. Dodd, of Connecticut, and which was bolstered by the Honorable MICHAEL A. FEIGHAN, of Ohio, found in 1954 that the Communists were extremely active throughout Latin America and that the Armas victory in Guatemala was by no means a final one.

There was no dispute within either the subcommittee or the full committee on Communist aggression of 1954 that the Reds would continue their relentless campaign to control the United States through intervention in Latin America unless this country awakened to the need and ambitions of our good neighbors to the south.

Mr. Giandoni's recent report for the Copley newspapers almost 4 years later is ample proof of the prospectus gathered by the subcommittee that the Communist leaders in the Kremlin and Peiping are dedicated to the domination of Latin America as a major goal toward the ultimate conquest of the United States.

Mr. Giandoni's informative report on the current situation in Latin America as related to the boasts of Khrushchev and Mao Tse-tung follows:

Mao Tze-tung and Nikita Khrushchev have confirmed widely-held suspicions that Communist agitation is on the upswing in Latin America.

The Chinese Communist party chief and the Soviet premier said in their long communique issued in Peiping Sunday that "China and the Soviet Union give firm support * * * to the national independence movements of the peoples in Asia, Africa, and Latin America."

The statement appeared to constitute formal admission by the Communist big two that Reds are behind much of the trouble in the American Republics. It was also noted that one of the other participants in Communist summit conferences Vassily V. Kuznetsov, acting foreign minister of the Soviet Union, recently completed a quiet tour of Latin America.

These are the trouble spots where competent observers say the hand of world communism is most evident:

MEXICO

Mexico: Another wildcat strike on government-run national railways of Mexico is causing serious damage to the country's economy. Ostensibly, the tieup was the result of a squabble within the railroad union itself but, Government spokesmen say, the Communist-led dissidents refuse to use normal, peaceful means to solve the problem. The Reds are seeking to pressure the Government into giving them control of the union, without bothering with the formality of a union election. Threats of similar situations exist in the national teachers union, in the union covering employees of the Government oil company, and in the telegraphers union.

Venezuela: Communists and leftists are taking advantage of the freedom they found after overthrow of the Perez Jimenez dictatorship in January to increase a situation of lawlessness and disregard for authority.

Already there has been an army attempt, led by defense minister Gen. J. M. Castro Leon, since exiled, to replace the ruling 5-man junta with a tougher government. Castro Leon also wanted press and radio censorship and the outlawing of both the Communists and the leftist Democratic Action party. An additional stake in Venezuela is the multibillion dollar United States investment in oil and iron ore deposits there.

ARGENTINA

Argentina: The Soviet Union has offered Argentine President Arturo Frondizi a long-term, low interest government-to-government loan for oil development. The Red offer came just before Frondizi announced that his government was concluding a billion dollars worth of contracts with private American and other foreign oil companies. If nothing else, the Soviet offer may be used by Frondizi's critics as proof that he might have obtained better terms had he dealt with Communists rather than Western capitalists.

Other nations with economic problems the Communists have been trying to nettle against the United States include Brazil, Chile, Peru, Colombia, and even little Bolivia.

Bolivia, like Argentina, has been the recipient of a Soviet offer to finance additional development of its petroleum resources.

The other nations are chiefly troubled with overproduction of coffee or copper. And, while the United States is promising relief in the future or studies of ways of easing the situations, the Soviet is reaping propaganda advantage with well-timed and highly publicized offers to buy surpluses.

Panama is the last important trouble spot. There the Reds have long been cheering on the nationalists who would like to take the Panama Canal away from the United States or, at least, receive more than the $1,930,000 a year the United States now pays for use of the Canal Zone.

Lake Springfield: Municipally Owned Paradise

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks, I include a very interesting article from Public Power Magazine, the official publication of the American Public Power Association.

This article, by Mary Meyer, describes the highly successful municipally operated water, light, and power development in Springfield, Ill.

LAKE IS MUNICIPAL UTILITY DIVIDEND—LAKE SPRINGFIELD, PLAYGROUND OF CENTRAL ILLINOIS, BOOSTS MUNICIPAL OWNERSHIP

(By Mary Meyer)

Lake Springfield, the playground of central Illinois, is a big dividend of municipal ownership of Springfield's water and electric utilities.

The idea of municipal ownership of the utilities is unquestionably strengthened in many ways because of the close association of the city's water, light, and power department to the lake.

Bond issues for construction of the lake, a lakeside filter plant, and powerplant were all approved by voters of Springfield during the years from 1930 to 1933. The lake was the answer to a longstanding problem of an adequate water supply for the city. Construction of the lakeside municipal powerplant more firmly established the future of the up-to-then shaky fortuned municipal electric power system.

Approval of the bond issue by the voters in 1930 followed a long and colorful fight by former Commissioner Willis J. Spaulding to establish an adequate water supply for the city.

Mr. Spaulding's crusade began during the campaign for mayor in 1909, when he organized a torchlight parade in which a banner was carried with the words "Clean Water and Clean Politics." After this election, Mr. Spaulding was appointed superintendent of waterworks. With the adoption of the commission form of government in 1911, Mr. Spaulding became the first commissioner of public property.

Many improvements in the treatment of the water supply and service were initiated by Commissioner Spaulding; however, it became apparent in the late 1920's that the well-water supply at the city's old river plant was not adequate for the growing city. After various studies, a lake supply was considered the surest and cheapest in the long run.

The amount of the original bond issue for the construction of the lake was $2,500,000. This investment gave the people of Springfield a water supply rated among the finest in the United States for taste, purity, and softness; in addition, the people have received many other benefits almost equally important.

The Department of Public Property, under whose domain fall the utilities and the lake property, has been quick to point out to the public the jewel they possess as a bonus of municipal ownership.

During the 22 years since the lake was built, operation and maintenance of Lake Springfield has come entirely from operating revenues of the water and electric utilities, not from any kind of taxation. At the same time both water and electric rates of the City Water, Light, and Power Department are among the lowest in the United States.

Moreover, when the lake was first built it was planned that the taxpayers would pay 50 percent of the cost and the water and light systems would pay the other half.

To make a good thing even better, the water department has been able to assume the entire obligation out of operating revenues. The people of Springfield have not paid 1 cent in taxes for the construction or maintenance of their pride and joy, Lake Springfield.

The lake contains 21.4 billion gallons of water under normal conditions, with 57 miles of shoreline. Average depth is 15.4 feet. Greatest depth is 40 feet.

In developing the lake area, great consideration was given by the Department to control of marginal land. A part of the land was leased for residential areas but with the city keeping 60 percent for public recreational purposes. This development of marginal land for recreational purposes is unique, and Lake Springfield is one of the few water supply reservoirs in the United States where recreational activities of any kind are permitted.

The biggest parcel of land provided by the department of public property to the citizens of Springfield was the 200 acres of rolling shoreline used for an 18-hole championship golf course. A long-time dream, the course opened last summer for the enjoyment of Springfield and central Illinois. Actual operation of the course was relinquished by the department to the Playground and Recreation Commission of Springfield.

Public areas operated by the department are seven parks equipped with playgrounds, picnic tables, ovens, running water and electric lights. There are two public sand beaches with water slides, high and low diving boards.

A 60-acre tract of shoreland, maintained by the Abraham Lincoln Memorial Garden Foundation, Inc., attracts State and national interest as the first and only living memorial to Lincoln. Wooded trails duplicating those of the north woods are to be found in the area known as the Wildlife Sanctuary. The department works closely with the State of Illinois Conservation Department on stocking fish and game.

Lake Springfield is one of the best fishing areas in the Middle West. The lake is well stocked with crappie, black bass, catfish, bluegill, ring perch, sunfish, white perch, and carp.

City Water, Light and Power, in cooperation with the Sportsmen's Club and the State conservation department, each year raises its own fingerlings in two rearing ponds located east of the dividing dam.

In addition to public recreation areas, certain land is set aside for club areas. There are a total of 14 clubs at the lake with a combined membership estimated at 2,000.

Six camps for boys and girls are located on the lake, operated by Boy and Girl Scouts, the YMCA, and various church groups. In addition, a 40-acre site is leased to the Springfield Municipal Opera Association for presentation of musical programs in the summer.

Future plans for the lake include the beginning of a music camp offering college credit in the fields of operatic and instrumental music and drama and play production.

There are more than 590 homes gracing the shoreline of Lake Springfield on leased sites.

The water purification plant, the electric steam generating plant, and lake area property are valued today at approximately $25 million.

Generating capacity of the Lakeside powerplant has grown from the original 10,000 kilowatts to 80,000 kilowatts. Plans are now underway to increase the installed capacity of the plant to 113,000 kilowatts before 1960, to meet the increasing demands of the community for city electricty.

The Lakeside filter plant can deliver 40 million gallons of water per day to the city as a result of a recent expansion of plant facilities.

In the words of former Commissioner Spaulding, under whose dynamic administration the lake and enlarged public utility system was conceived and born, "Lake Springfield is a monument to the ability of the people to serve themselves and build for posterity."

Old Vineyard Named Site

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. MILLER of California. Mr. Speaker, ghosts of the past flitted through the trees at the site of Leland Stanford's vineyard when the Historical Landmark Advisory Committee of the State of California designated it as a State historical landmark.

Viniculture is not new in California having been introduced by the early mission fathers. However, it was not until the late 1860's that vines were imported from Europe and California joined the ranks of the great wine producing areas of the world.

Today the Weible Champagne Vineyards operated by Mr. Rudloph Weibel carry on the tradition established by Leland Stanford in 1869.

The following newspaper announcement is taken from the Hayward Daily Review for August 5, 1958:

OLD VINEYARD NAMED SITE

FREEMONT.—The Weibel Champagne Vineyards at Warm Springs near Mission San Jose, site of wine growing pioneer Leland Stanford's famous vineyard, has been named a State historical landmark, it was announced today.

Sanford, who also was United States Senator and Governor of California and founder of Stanford University, founded the famed vineyards in 1869 and later grew grapes there which produced quality wine equal to great European vintages.

Notification of the selection of the site as a landmark was made by the Historical Landmark Advisory Committee, Sacramento, to Weibel, Inc.

Minshall Again Brings Traveling Office to District

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1958

Mr. MINSHALL. Mr. Speaker, for the past 4 years, it has been my privilege and honor to represent the people of the 23d Congressional District of Ohio in the Congress of the United States. As a representative of this outstanding district, I have considered it my duty not only to be well informed of the opinions of the people through personal contact and use of opinion polls, but also to be of the greatest possible service to persons having problems dealing with Federal agencies and departments. To help accomplish this, I maintain on a year-round basis a congressional office in room 525 of the Federal Building in downtown Cleveland where I can meet with people personally during trips back to the district when my official duties permit. While I am in Washington, a competent staff is in charge of the Cleveland office.

A further service to the people of the 23d District is my Washington Report which, in newsletter form, periodically presents a concise accounting of events and opinions on Capitol Hill.

During my service in the Congress, I have considered it of primary importance to be present at the Capitol whenever Congress is in session in order to participate in committee work and to vote on important legislation. This year with Congress in nearly continuous session, I have not been able with intervening committee work to return to Cleveland as much as I would have liked. Therefore, in accordance with the practice I initiated 4 years ago, I am bringing a traveling office to the various communities in the 23d District. This method of meeting wih the public has been tremendously popular and it gives me a wonderful opportunity to discuss and learn at firsthand the opinions and individual needs of the people.

With the understanding that Congress will not be in session during the early part of October, I will again this year from October 6 through October 17 follow the same procedure and have a series of conference meetings so that every resident of this suburban district can conveniently meet with me. These are not group meetings but office conferences for the individual which will enable them to discuss their views and problems personally. No appointments are necessary, and I urge individuals to meet with me on the date and at the place most convenient. Every resident of the 23d District is cordially invited to talk over problems of national concern, to discuss personal problems they might have with the Federal Government, or just to chat and get better acquainted. The knowledge thus obtained will better enable me to represent the residents of the 23d District in the Congress of the United States.

Following is the schedule for these office conferences:

Community	Location	Date	Time (p. m.)
Bay Village	Bay Village Townhall, mayor's office, 350 Dover Center Rd.	Monday, Oct. 6	2-4:30
Westlake	Westlake City Hall, 27216 Hilliard Blvd., rooms 10 and 11.	do	6:30-9
Lakewood	Lakewood City Hall, relief office, 14532 Lake Ave.	Tuesday, Oct. 7	2-4:30
Rocky River	Rocky River City Hall, mayor's office, 21012 Hilliard Blvd.	do	6:30-9

I am most appreciative of the fine cooperation of the many officials who have made these meeting places available as an aid in rendering this public service.

Remarks of New York State Supreme Court Justice John E. Cone, Chairman, Committee To Ban Teen-Age Weapons

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1958

Mrs. KELLY of New York. Mr. Speaker, as one of the members of the New York City Committee To Ban Teen-Age Weapons, of which John E. Cone, Justice of the New York State Supreme Court is the chairman, I am submitting the statement he made at the hearings before the United States Senate Committee on Interstate and Foreign Commerce, Wednesday, July 23, 1958.

The House of Representatives has passed during the session H. R. 12850 which prohibits traffic in switchblade knives. Led by Congressman JAMES J. DELANEY, who first introduced this legislation in 1953, many Members of Congress, particularly from the New York-New Jersey area, sponsored identical bills. Congressman DELANEY and I testified in favor of this legislation during the hearings before the Interstate and Foreign Commerce Committee in the House of Representatives. H. R. 12850 passed the Senate on July 31, 1958.

REMARKS OF NEW YORK STATE SUPREME COURT JUSTICE JOHN E. CONE, CHAIRMAN, COMMITTEE TO BAN TEEN-AGE WEAPONS, FOR DELIVERY AT HEARING OF UNITED STATES SENATE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, JULY 23, 1958

I am John E. Cone, justice of the New York State Supreme Court. I am appearing here today as chairman of the Committee to Ban Teen-Age Weapons.

Our group was formed last year in response to the sharp increase in juvenile delinquency experienced by New York City and State. Many public spirited citizens including 2 Congressmen, 3 district attorneys, 8 State legislators, many judges, members of the clergy, educators, and community minded citizens helped organize our committee.

Our purpose was to put more teeth in existing State, Federal, and city laws with the view of reducing the terrible incidence of youth crime. Our prime objective was to ban the switchblade knife and its successor the deadly gravity knife.

In 1954, through the efforts of a similar committee as I now represent, the switchblade knife was banned in New York State. As you now, these knives open upon the slight touch of a button. Certain knife manufacturers, seeking to circumvent the law, started to manufacture and advertise the gravity knife. This weapon opens and locks automatically at a quick flick of the wrist. Technically, they are not switchblade knives, but they are just as dangerous.

It is worthy of note that last year the Senate Subcommittee on Juvenile Delinquency instituted an extensive study and field investigation of the switchblade and gravity knife situation. The results of this survey fully supported and emphasized the need for this legislation.

The committee found that over 1 million switchblade and gravity knives are distributed and sold each year in this country. These knives are sold chiefly to juveniles. Some 200,000 are imported.

New York State and 11 other States took action in an attempt to halt the flow of these weapons into the hands of juveniles. This year New York outlawed the manufacture, sale, or possession of the gravity knife. The measure received overwhelming support in the State legislature.

Helping to spark our drive were several of the major metropolitan newspapers and radio station WMGM. We realized, however, that despite our State law, we were relatively helpless in fully meeting the challenge of the gravity and switchblade knives. Thousands of these weapons were being bootlegged into the State from other countries and other States. These weapons had become the symbol, as well as the weapon of the teen-age gang. And they are still easy to purchase.

Advertisements by mail-order houses, in sports magazines, in outdoor magazines, all offer these knives for sale.

The only way the individual State can effectively bar the switchblade and gravity knives and remove the handcuffs now binding law-enforcement officers, is for you to enact appropriate Federal legislation. You must prohibit their introduction into interstate commerce, close the mails to them and ban their importation.

Switchblade and gravity knives have no possible legitimate use. They can do nothing worth while that other types of knives cannot do better. A fish knife is more useful to a fisherman, a hunting knife to a hunter. Switchblades are good for just one thing—sneak attack.

They can be easily concealed and called into action at a moment's notice. Their blade, like the tongue of a deadly snake, darts forth with great speed and force.

You can see from the weapon that I hold in my hand that this is not the type of a knife we used when we were boys, or that the Boy Scouts used. This weapon is designed to be used exclusively for strong-armed purposes.

In support of our stand, I would like to present you with the signatures of 250,000 persons who have signed our petitions and have written post cards urging this legislation. These people represent all walks of lives. One woman wrote to us saying that her son lost an eye because of the brutal switchblade knife. Teen-agers backed the proposed legislation, too.

It was heartening to us to receive the support of the Camillus Cutlery Co., one of the Nation's foremost knife manufacturers. This group is represented here by Mr. Lewis A. Pinkussohn, Jr. This company has worked diligently to rid the market of the death dealing gravity and switchblade knives.

Other leading citizens, such as City Councilman Jack Kranis, State Senator Frank J. Pino, Albert M. Leavitt, president of the Youth Service League, Assemblyman Stanley Steingut, Representative EDNA F. KELLY, Captain Frederick Ludwig, to name a few, are largely responsible for calling the threat of this weapon to the attention of the public and for helping to pass the legislation in New York.

The rest is up to you. You can strike a deadly blow at teen-age gangs. You can wrest the gravity knife and switchblade knife from the hands of the young hoodlums. You must grant approval to the bill now under consideration, and ban the gravity and switchblade weapons. Thank you.

Failure To Extend Public Law 480 Is Bad News for Farmer

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1958

Mr. QUIE. Mr. Speaker, time and again I have called on the leadership of this Congress for extension of the surplus disposal law, Public Law 480. A prominent newspaper in the First Congressional District has done farmers a service by presenting an excellent editorial on the value of this legislation, and what the loss will mean to everyone—farmers and people who depend on a prosperous agriculture indirectly for their income.

The full impact of the failure to extend this law is admirably described in the following article which appeared in the Waseca Journal, Waseca, Minn., and which was reprinted in the Faribault Daily News.

This important law has been passed by both Houses of Congress. Since there is a difference in the two bills, they must go to conference. At this late date it is shocking to note that conferees have yet not been appointed:

BAD NEWS

Every day the Democrat-controlled Congress fails to reenact Public Law 480 spells more bad news for the farmer. And the farmer has had plenty of bad news since June 30 when the law passed by the 83d Republican-controlled Congress expired.

A few days ago the United States Department of Agriculture issued its report on the accomplishments of Public Law 480 during the fiscal year ending June 30. The 6.6 million metric tons exported under this law covers nearly every farm food and fiber commodity.

Acclaimed as one of the greatest pieces of all agricultural legislation in all time, this Republican-sponsored law was largely responsible for the increased export of farm products during the Eisenhower administration.

The increase was sizable, too, nearly double that of 1952—94 percent by volume, to be exact.

The law alone cannot take all of the credit for this outstanding Republican accomplishment. Secretary of Agriculture Ezra Taft Benson deserves much of the credit. His agricultural attachés, 50 of them, serving in over 100 foreign countries, negotiated readjustments of tariff barriers, ironed-out conflicts with producers abroad, and otherwise made possible the greatest export of farm products the world has ever known from any nation.

Dairymen in this part of Minnesota should be particularly grateful for this legislation and its accomplishments. During the year ending June 30 dairy exports totaled 84,365,000 pounds.

Soybeans, which have become Waseca County's major crop, were supported on the home market through Public Law 480 exports which totaled a staggering 402,814,000 pounds of soybean oil. Corn in the amount of 24 million bushels was sold abroad and the wheat surplus would be even worse were it not for the Public Law 480 export of 175,485,000 bushels, to say nothing of the nearly 37 million pounds of wheat flour.

The export of beef was more than 11 million pounds while that of tallow was nearly 5 times greater or 54,429,000 pounds.

First Minnesota District Congressman AL QUIE warned of the danger of letting the valuable farm legislation expire on June 26, 4 days before the June 30 deadline. Now the opposition has no one to blame but themselves for the great loss that is being suffered every day by First District farmers.

That loss will continue even beyond the day the law is reenacted, for it will take considerable time to get the massive export machinery in operation. In the meantime, foreign sales lost during the past several weeks show little chance of being recaptured.

National Defense Education Act of 1958

SPEECH
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. OSMERS. Mr. Speaker, the purposes of H. R. 13247, the National Defense Education Act of 1958, have my full support.

The greatest paradox in history is that here, in the world's richest country, thousands of gifted youngsters are not able to use their abilities to the fullest, due to a lack of funds. Many people feel that the Federal Government should not directly participate in education. While I strongly support local control of primary and secondary school education, we must, as a Nation, develop to the fullest our greatest natural resource—namely our youth.

The Education and Labor Committee deserves a great deal of credit for the comprehensive bill they have prepared. Ever since January 1954, when I introduced the first bill which provided for a system of scholarships for those with unusual scientific abilities, I have felt very strongly that we must aid those who are intellectually gifted but unable to attend a college or university due to the lack of funds. The first Russian sputnik was the catalyst which finally brought the full attention of the American people to our educational needs—particularly at the higher levels.

The purposes of this bill are to assist in the improvement and strengthening of our educational system at all levels and to encourage able students to continue their education beyond high school. It is designed to accomplish these objectives by, first, establishing loan programs for students at institutions of higher education; second, providing grants to States for strengthening science, mathematics, and modern foreign language instruction in public schools; third, establishing language institutes and area centers to expand and improve the teaching of lan-

guages; fourth, assisting in the expansion of graduate education; fifth, assisting in the improvement of guidance, counseling and testing programs; sixth, providing for research and experimentation in the use of television, radio, motion pictures, and related mediums for educational purposes; and, seventh, improvement of statistical services of State educational agencies.

America is confronted with a serious and continuing challenge in many fields. The challenge—in science, industry, government, military strength, international relations—stems from the forces of totalitarianism. This challenge, as well as our own goal of enlargement of life for each individual, requires the fullest possible development of the talents of our young people. American education, therefore, bears a grave responsiblity in our times.

It is no exaggeration to say that America's progress in many fields of endeavor in the years ahead—in fact, the very survival of our free country—may depend in large part upon the education we provide for our young people now.

A number of provisions in the bill are aimed specifically at reducing the waste of needed talent which results when students with great potential ability drop out of school or college too soon. Several other provisions are designed to encourage an improvement and expansion in the teaching of science, mathematics, and foreign languages. Another provision recognizes the need for more college teachers to prepare future scientists, teachers, and leaders in many fields.

Although our national security is handicapped by shortages of highly trained persons in all fields of endeavor, many thousands of young people with high ability drop out of high school before graduation or fail to attend college subsequent to graduation. This is a loss not only to these young people, but to the Nation as a whole. The bill provides grants to support improved State and local programs of counseling, guidance, and testing to help identify able students and encourage them to remain in school and achieve their optimum of performance based on their intelligence and aptitude. The bill also provides a program of loans to college and university students to help those who need financial assistance to continue and complete their education.

There are not many men such as Thomas Alva Edison who in spite of poverty and humble beginnings have made such tremendous contributions to mankind. What else might this genius have contributed to the world had he been able to take advantage of the loan provisions of this bill at the age of 18 in the year 1865? How many similarly brilliant intellects have been lost to mankind, and are being lost every day, because of the inability to finance further study? This bill is a great step toward a better educated America.

It is unfortunate that an amendment to the original bill struck out the provisions for a limited program of Federal scholarships. One of the chief criticisms of the scholarship provision seemed to be based on the fact that there are already private foundations as well as States offering scholarships. The main point these critics seemed to ignore is that in spite of this so-called abundance of scholarships, a large percentage of those high-school graduates qualified for college, and capable of contrbuting greatly to this Nation's welfare, do not attend college—mostly due to financial reasons. The vast majority of scholarships do not come anywhere near covering the cost of the individual's college course. This was well pointed out in the report of the President's Committee on Education Beyond High School:

A recent survey covering 147 representative public and private colleges and universities during the period 1950–54 showed that nearly two-thirds of all scholarships paid less than 20 percent of all the college expenses of the holders. Graduates reported a median total 4-year expenditure of $5,020, of which only 6.4 percent, or $320, came from scholarship funds.

Unfortunately, due to the lack of adequate scholarships, many extremely brilliant individuals are indiscriminately deterred from following the avenues in which they could make their greatest contributions—not because of lack of interest but because of the economic difficulties of their parents. It has been said that it is discriminatory to give one individual a scholarship and another a loan. But, is it not even more discriminatory—against our Nation as a whole—to deny an impoverished individual the right to make his contribution to society?

It is my fervent hope that in the near future we will make even greater strides toward a better educated America by giving each individual the opportunity to fully develop his skills, physical or mental, regardless of his financial status. In this way this Nation will always continue to lead the world in all forms of endeavor.

A Dulles Formula

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. UDALL. Mr. Speaker, probably the most perceptive and illuminating comments on the current Middle East crisis have been made by the noted columnist, Walter Lippmann. One of his recent articles clearly points out America's present position in this critical area, and I consider it well worth the attention of our colleagues. The article follows:

While we do not know much about the meeting at Peiping over the weekend between the Russians and the Chinese, we do know that it has added a new complication to a summit meeting. Khrushchev's original proposal had the great practical advantage that it looked to the Middle East without raising the problems of the Far East. On this essential point, Gen. de Gaulle's proposal took advantage of what really was an important concession, and offered to meet at the summit without Red China participating.

But our own counter proposal, which insisted upon imbedding a summit meeting in in the Security Council, meant not only that Mao was not to be present but that Chiang had the right to be present and in case there was any voting under the Council's procedure, to exercise a veto.

Now Mr. Dulles has missed the bus, and if there is to be a summit meeting at all, we must expect that in one way or another Mao will have a part in it.

In my own view I am unhappy and apprehensive about the way we are being pushed backward with our minds confused into a summit meeting. For judging by Mr. Dulles' press conference last week he has not cast himself in the role of a statesman who knows that to make progress toward stability in the Middle East he must give as well as take. He is playing the part of a litigating lawyer who hopes to win an argument. He is out to prove first, that the intervention in Lebanon and Jordan was legal. Having been done at the invitation of the legitimate governments, it is not, therefore, aggression. This is undoubtedly true. And second, he means to turn the table, and charge the Russians and the United Arabs with indirect aggression. If someone had tried to devise a formula most likely to set off a rhetorical explosion which will poison the air, he could not have found a more surefire mischiefmaker.

Someone to whom the President will listen should warn him that he will make a great mistake if he thinks that he can dominate the summit conference with charges of indirect aggression. For the truth is that indirect aggression—that is to say, propaganda, infiltration, bribery, subversion—is an old instrument of power politics, and in our time it is the way the cold war is fought. Both sides use it when they think they can do so to their own advantage. It would impair, not enhance, the President's moral credit if he were to become blindly self-righteous, and were to tell a knowing and skeptical world that we do not resort to what he calls indirect aggression and that only our adversaries do.

Panama will be sitting on the Security Council, a living reminder of how the United States obtained the Canal Zone in order to build the canal. Guatemala was only recently the scene of a successful coup, publicly applauded by Mr. Eisenhower himself, to oust an anti-American and fellow traveling government. The President will be reminded of what happened in Iran when Mossadegh was pushed out. Over the whole of the President's denunciation of external interference against existing governments will hang the Dulles theory of the liberation of eastern Europe, and the obvious fact that if we knew a way to overturn the existing governments without the enormous risks of war, we should be only too happy to use that way.

The central fact is that in the cold war today, the opportunities open to our adversaries are much greater than those open to us. For we are opposing three big revolutionary movements—the Russian, the Chinese, and the Arab—which has a potent appeal to the intellectual leaders and to the masses of backward countries. Not all countries are vulnerable to these revolutionary movements. But a great many countries are, and it is in them that indirect aggression works. Governments are not easily overthrown from abroad unless there is already within the country a strong disposition to encourage and to receive external aid.

The thesis, propounded by Mr. Dulles and accepted by Mr. Eisenhower, amounts to a demand that in the weapons of the cold war, our adversaries shall disarm, and in effect acquiesce in their own military containment, as for example, by the remaining members of the Baghdad Pact. Mr. Dulles is telling the President to demand the impossible, and

national policies based on impossible demands are very unwise indeed. They are likely to lead a country into a dilemma where it must choose between a retreat which is humiliating and an advance which may be disastrous.

Mr. Dulles is concerned, and rightly so, by the progress of the revolutionary movement in the Middle East. But he is indulging in a legal daydream, and is in the highest degree unrealistic, if he thinks the President can induce Mr. Khrushchev, or the United Nations, to agree to a legal prohibition that is more than a pious platitude. It is a startling footnote to Mr. Dulles' thesis that having announced his doctrine about indirect aggression on Thursday, he followed it up on Saturday by recognizing the revolutionary government of Iraq, presumably a product of indirect aggression.

The real problem of the western statesmen is to find the ground on which an accommodation can be reached with the revolutionary movements which now dominate so much of Asia, and are reaching into Africa. That ground is not easy to find. But Mr. Dulles, it appears, is not seriously looking for it. He is too busy, too tired, too discouraged, too stale. What Mr. Dulles is doing is to resist and then to retreat, as generals do when they have no better option than to fight a series of rearguard actions.

It is beginning to look as if the President, who has to be carried along by his advisers, needs the help of some fresher minds.

Goal for the Next Congress, Creation of a Commission on Country Life

EXTENSION OF REMARKS
OF

HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1958

Mr. QUIE. Mr. Speaker, as this Congress nears adjournment, it is apparent to me that a tremendously important piece of legislation for the rural communities of our Nation will not be enacted during this session.

This is H. R. 13505, which I was privileged to introduce along with my distinguished colleague from Arkansas, Congressman BROOKS HAYS, legislation which would establish a Commission on Country Life to study social and economic changes in rural communities.

I regard it as unfortunate that this Congress has not taken steps to establish a Commission on Country Life. In my remarks today, I intend to discuss at length the value of this proposed Commission, because I feel it should be one of the first orders of business for the next Congress.

One sure way to determine the value of such a commission is to study the trail-blazing accomplishments of a similar commission which existed in the past—a commission which made historic contributions to improved country living as we know it today.

PURPOSE OF THE FIRST COMMISSION

Fifty years ago, President Theodore Roosevelt created a commission of identical purpose and objective. In a special message to Congress transmitting the report of this commission, the President underscored the value and purpose of the group.

The President wrote that the objective of the commission of 1908 was to call the farmer's attention to the opportunities for better business and better living on the farm.

If country life is to become what it should be—

The President added—

and what I believe it ultimately will be—one of the most dignified, desirable and sought-after ways of earning a living—the farmer must take advantage not only of the agricultural knowledge which is at his disposal, but of the methods which have raised and continue to raise the standards of living and of intelligence in other callings.

Those engaged in all other industrial and commercial callings have found it necessary, under modern economic conditions, to organize themselves for mutual advantage and for the protection of their own particular interests in relation to other interests. The farmers of every progressive European country have realized this essential fact and have found in the cooperative system exactly the form of business combination they need.

Now whatever the State may do toward improving the practice of agriculture, it is not within the sphere of any government to recognize the farmers' business or reconstruct the social life of farming communities. It is, however, quite within its powers, which it can control for calling public atttention to the needs and the facts.

The President clearly assessed the accomplishments of the first Commission on Country Life in the same message.

He wrote:

The Commission has tried to help the farmers to see clearly their own problems and to see it as a whole; to distinguish clearly between what the Government can do and what the farmers must do for themselves; and it wishes to bring not only the farmers but the Nation as a whole to realize that the growing of crops, though an essential part, is only a part of country life.

Crop growing is the essential foundation; but it is no less essential that the farmer shall get an adequate return from what he grows; and it is no less essential—indeed it is literally vital—that he and his wife and his children shall lead the right kind of life.

President Roosevelt pointed out in that message that as a result of the Commission's findings—

The United States Department of Agriculture, through which as prime agent the ideas the Commission stands for reach the people, should become without delay in fact a Department of Country Life, fitted to deal not only with crops, but also with all the larger aspects of life in the open country.

The Chief Executive's philosophy in creating this Commission might well be considered as a guide for us who are encouraging a similar Commission to study today's needs.

Our object—

Wrote Theodore Roosevelt—

should be to develop in the country community the great ideals of community life as of personal character.

In listing the great general and immediate needs of country life which stood out in the report, the President said that they included—

Effective cooperation among farmers, to put them on a level with the organized interests with which they do business • • • (and) a better means of communication, including good roads and a parcels post which the country people are everywhere, and rightly, unanimous in demanding.

To these—

He said—

may be added better sanitation, for easily preventable diseases hold several million country people in the slavery of continuous ill health.

Years later, Gifford Pinchot wrote—

The report of the Country Life Commission was the first effective step ever taken in America toward the solution of the rural-life problem.

He pointed out some examples of the progress which came to pass as a direct result of the Commission—advances in farm cooperation, in better roads, better schools, sanitation, and in rural electrification.

Today, the student of rural life can see the enormous good the first Commission was responsible for. The Agricultural Extension Service was a direct outgrowth of the Commission's recommendations as was the movement for better libraries, highways, and more advanced social and cultural outlets.

THE NEED OF A COMMISSION TODAY

The tremendous contributions of Theodore Roosevelt's Commission Country Life serve to point up the need for a commission today. If 1908 country living needed a thorough study and exploration with a view to legislative action, certainly there is even a more urgent necessity for a commission in 1958.

Certainly no Member in this Chamber can deny that enormous changes and shifts in modes of living have occurred in country communities during the past half-century.

Now, what does this bill propose and what objectives would it set out to accomplish?

Under the terms of the bill, a commission on country life would consist of 25 members. Fifteen of these members would be appointed by the President of the United States—and of this number, not more than 9 would be affiliated with the same political party. From this group, the bill provides that the commission would select the Chairman and Vice Chairman of the Commission, from it's membership.

Five members would be appointed by the Vice President of the United States acting as Presiding Officer of the Senate and five by the Speaker of the House of Representatives. Of these groups of 5, 3 would be from the majority party and 2 from the minority party.

The duties of the Commission would be sixfold.

The Commission would collect data and statistics to illustrate the major trends affecting country community living today.

The Commission would then evaluate the data to isolate the major gaps between the problems of country residents and the organized means to handle their problems.

The Commission would—using interpretations drawn from the data—point out the need for cooperation between the

institutions, agencies, church groups and organizations serving country people.

The Commission would analyze the impact of technological developments on current modes of living—as well as the means of earning a living in the country community.

The Commission would assess the shifting composition of country community population from the basis of social and economic criteria.

Finally the Commission would develop an overall blueprint of approach to be used as a masterplan for legislation and work to improve country living in the future.

Within this framework, many current problems besetting rural communities can be classified and studied, problems such as bettering the standard of living for low-income farm families as well as new marketing techniques and cooperative efforts on the part of community and church agencies to develop solutions.

Mr. Speaker, the time was ripe during this session of Congress for the authorization of such a Commission. The need will even be more crucial by the time the 86th Congress convenes in January.

Support and enthusiastic work for the creation of such a Commission has been widespread.

The National Catholic Rural Life Conferences—an organization within the Roman Catholic Church which is dedicated to the bettering of the social and economic status of rural life has long been in the forefront of any effort to improve rural living.

The Reverend Michael P. Dineen, executive secretary of the NCRLC, wrote me recently stating:

On behalf of the officers and members of the National Catholic Rural Life Conference, may we commend you in your efforts to establish a second Presidential Country Life Commission. As you probably know, the NCRLC has supported its establishment from the very beginning and we are most pleased that you are cosponsoring the bill with Mr. HAYS.

Testimony before the House Family Farms Subcommittee shows that the National Council of Churches Committee on Rural Life Commission and the National Lutheran Council are in solid support of this measure.

Mr. E. W. Mueller, representing both organizations, testified that in his view—

This Commission could put into focus and give real stature to the importance of agriculture as a major industry and that the people would need to be concerned that our agricultural economy is sound and that life in the rural community is wholesome and complete.

A prominent and highly regarded daily newspaper in the First Congressional District of Minnesota has added its endorsement to this legislation.

The Albert Lea Daily Tribune commented editorially not long ago that the bill contains a plan from which the entire world could well profit.

The implications are enormous—

The Tribune said—

Out of such a study could come an agriculture prosperous beyond our wildest dreams.

This is a measure that deserves support of the entire United States—rich or poor, rural or urban, Republican or Democrat. It would appear the only loser would be the demagog who prospers from misinformation, distrust, and chaos.

According to the bill, the Commission's life would extend for 2 years—at the conclusion of which it would submit to the President and the Congress its final report which draws the entire body of data together and recommends certain legislation. The Congress and the President—as well as all the people of the Nation—would have, Mr. Speaker, the recommendations and considered thinking of a panel consisting of some of the most brilliant, incisive individuals in the country, representing spiritual, cultural, and economic areas of study.

OUR NATION: A BENEFICIARY

Our Nation would then be the beneficiary of this blueprint for legislation. Thus the work of the Commission would extend into the future—far beyond the time of its original expiration.

If there is a more eloquent argument for this Commission than one written by Theodore Roosevelt, then I have not seen it.

Fifty years ago, the President of the United States voiced the enduring need of the Commission in words that are just as meaningful today as when they were uttered.

I warn my countrymen—

Roosevelt said—

that the great recent progress made in city life is not a full measure of our civilization; for our civilization rests at bottom on the wholesomeness, the attractiveness, and the completeness as well as the prosperity of life in the country.

The men and women on farms stand for what is fundamentally best and most needed in our American life. Upon the development of country life rests ultimately our ability by methods of farming requiring the highest intelligence, to continue to feed and clothe the hungry nations; to supply the city with fresh blood; clean bodies and clear brains that can endure the terrific strain of modern life; we need the development of men in the open country who will be in the future, as in the past, the stay and strength of the Nation in time of war and its guiding and controlling spirit in time of peace.

Hemisphere Summit Meet Sought

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the New Orleans States of August 8, 1958, entitled "Hemisphere Summit Meet Sought," and an article from Editor & Publisher of July 26, 1958, entitled "Shop Talk at Thirty," as follows:

[From the New Orleans States of August 8, 1958]

HEMISPHERE SUMMIT MEET SOUGHT

Agreement between Secretary of State Dulles and Brazilian President Juscelino Kubitschek to seek a summit conference of American Presidents perhaps warrants a "this is where we came in" response.

Following the Dulles-Kubitschek talks, sources at the presidential palace in Brazil said the 21 American Ambassadors will meet in Washington next month. They will arrange the chiefs of state conference which will seek to bind the countries of this hemisphere closer both politically and economically.

It was just 2 years ago that 19 of the 21 American Presidents met in Panama and signed a document which, as we recall, established in principle the same intent.

Said the chiefs of state then:

"The full realization of the destiny of America is inseparable from the economic and social development of its peoples and therefore makes necessary the intensification of national and inter-American cooperative efforts to seek the solution of economic problems and to raise the standards of living of the continent."

Two years ago this month the Organization of American States, seeking to implement the principles of the declaration, met in Buenos Aires.

That conference, however, was an admitted failure. A discouraging pall was cast over hopes for closer harmony among the peoples of the hemisphere.

And that was a meeting which the United States entered with the realization that we had not done our utmost toward advancing hemispheric solidarity; that our surplus farm products disposal program was hurting South America on the world market; that the Latin nations were suffering mounting deficits in their trade with this country; that our neighbors were smarting over being practically disregarded in our aid program.

Those issues and problems were left unresolved in 1956 and, against the background of critical world conditions, we even lost sight of their existence. Consequently disharmony festered.

Now, once again, preparations are under way to convene another meeting of American heads of state.

There are differences this time, though, that may make the conference more productive:

A United States Vice President is mobbed in two South American countries. Communism realizes Latin gains through this country's default. A United States Secretary of State is greeted with "Dulles, go home" shouts in Rio de Janeiro.

The events of the past 2 years, and principally of the past few months, demand that the next American summit meeting bear fruits.

[From Editor & Publisher of July 26, 1958]

SHOP TALK AT 30

(By Robert U. Brown)

If newspapers were guilty of pursuing all the special interests with which they are charged from time to time, they wouldn't have space or time for anything else. They wouldn't be newspapers, they would be puff sheets.

The best defense newspapers have against these charges is to point out the number and variety of the complaints. If they were all justified no one would read a newspaper. If there is ever any justification for the charges they must apply to a small minority of newspapers. But those who criticize the press never give chapter and verse. It is easier to smear all with the same brush.

The latest blast against the press comes this week from the paid lobbyist of the protectionist tariff group. He is O. R. Strackbein, chairman of the Nationwide Committee on Import-Export Policy which is made up of diversified industries and trades which oppose free-trade fearing recriprocal trade agreements and resulting competition.

In a press release Tuesday, Mr. Strackbein charged that freedom of the press "has been sullied and subverted ignominously by the great metropolitan press in the battle over the reciprocal trade program." He said the predominant press has withheld from the public the facts and reasoning of the opposition, has played up the Government's side "after the manner of a subservient press in a dictatorship."

That's pretty strong language which he justifies by saying the press is a party in interest in the dispute.

"The importation free of duty of the many hundreds of millions of dollars worth of newsprint and woodpulp used by newspapers of this country is something that the newspapers owe, for its preservation, to a duty-free binding agreed to in two trade agreements; and the gratitude shown by the press for this favor engineered by the State Department 20 years ago is a wondrous tribute to the power that Government can gain over the souls of men, purportedly free and honorable, when it knows the chemistry and biology of gratitude."

This allegation is ridiculous. The importation of newsprint has been duty free since 1913. It is asinine to contend that newspapers are paying off a 45-year-old obligation in their treatment of news about the reciprocal trade program. There probably isn't 1 newspaperman in 10 that knows newsprint is duty-free, and there probably isn't 1 in 100 that knows it has been so for 45 years.

Hold That Camel

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1958

Mr. HENDERSON. Mr. Speaker, no more forceful picture of our Government can be conceived than that of the proverbial camel with its head in the tent. Experience has demonstrated that a program once begun, as an emergency, as an experiment, as a weak or compromise piece of legislation, seldom disappears, but rather, with the head of the beast once in the door of the tent, the camel soon has worked his way completely inside, and things become crowded indeed. Such is the promise of the TVA. The following editorial from the Times Recorder of Zanesville, Ohio, for August 7, 1958, asks Congress to act with caution:

HOLD THAT CAMEL

TVA, the socialistic camel that got its nose in the free enterprise tent awhile back, is doing some more shoving. Senate bill 1869, passed by that body last year, and recently approved by the House Public Works Committee, proposes to expand the service area of this tax-built, tax-consuming (but not tax-produced) power octopus by 25,000 square miles—so that it might logically be called the "Mississippi Valley Authority." Further, and perhaps more devastatingly, it proposes for the first time in the sad history of Government-operated businesses to sell bonds ($750 million worth) to the investing public and incidentally bypass congressional control.

With the passage of this bill, Uncle Sam would be giving the taxpayers the back of his hand, since it would wipe out the present requirement that TVA repay to the Treasury in 40 years the $1.2 billion of tax money now owed. Repayment would only be made after the bondholders' claims are paid, and TVA could use its power revenues (which should go to the Treasury) to build still more producing capacity without congressional approval.

It does not take much imagination to see this camel (which we might as well start calling the Mississippi Lower Authority) kicking the whole private tax-paying electric power industry out of the tent. With the continuance of such unbridled expansion there can be no other outcome. And yet, that is but the beginning of the end. With electric power generation completely in Federal hands, the "nationalization" (a nice word for seizure) of all industry and all business would logically follow. The planners doubtless have the details worked out now—a progression of control so gradual we would never be quite sure at what point, or on what day, we finally became slaves.

Congress, to save its own waning prestige and to check the erosion of its powers by the williwaws from the White House and the snows from the Supreme Court, should arise in whatever might it still possesses and reject legislation degrading to that body. But the Senate has already passed this bill. And unless there are cries of outrage from home, the House, stricken with adjournment fever, will pass it—and quickly.

But Americans who cherish any hopes for capitalism, to say nothing of ever getting the Government out of business, must not let this happen.

Retirement Eyed by Librarian

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. MILLER of California. Mr. Speaker, kindly, patient, and understanding, Mrs. Marie Tinsley Smith, who has served San Leandro so faithfully, will finish a chapter of her life when she goes into retirement.

Leona Ward, colorful and capable writer of the Hayward Daily Review, reports on the story of her life, service, and accomplishments in the following article published on August 5, 1958:

RETIREMENT EYED BY LIBRARIAN

(By Leona Ward)

SAN LEANDRO.—On November 1, just 20 years to the day since she came to San Leandro as city librarian, Mrs. Marie Tinsley Smith will retire.

Her term of service, marked by the city's phenomenal growth, has seen the library expand from a tiny reading room with a few hundred volumes and one librarian, to an institution with 67,000 volumes and a staff of 23.

Soon a $1.5 million modern community library and cultural center will replace the 40-year-old outworn and outgrown library structure on grounds that include the present site at 302 Estudillo Avenue.

"I am content to leave," says Mrs. Smith, "with a beautiful building to become a reality in 1960, with so many dreams come true in the matter of service and personnel, and with the city growing so rapidly and yet so well."

RICH HERITAGE

Behind her Mrs. Smith will leave a rich heritage of western lore—a collection of hundreds of volumes of what she calls California. Actually they cover all the Western States: Washington, Oregon, Nevada, New Mexico, Arizona, Colorado, Utah, Wyoming, Montana, Idaho, Alaska, and Hawaii.

The beautiful and rare books she loves, now crowded into makeshift shelves, will one day find themselves in the spacious California room of the new library.

"There they'll have ample space to preen themselves," she said.

"There people may browse and enjoy them, beautiful bindings, fine print, rare illustrations, and especially the contents—all the glamor and adventure of life in the thirties, forties, and fifties, when a new State was struggling to be born."

All California books are interesting to her, whether acquired through routine channels or discovered like a rare stone in a pile of rubble.

People moving away often call the library to come and get some books. Always, fingers crossed, Mrs. Smith has hastened to comply.

HISTORY BOOK

"Sometimes there has lurked among the boxes of old books a rare book on California history or an emigrant's journal, and we have rejoiced."

For example: When an old time residence was leveled to make room for the new Lucky Store, there was Harlan's "California '46 to '88"—a proud addition to the library collection.

A cherished part of the collection is William Heath Davis' Sixty Years in California and Seventy-five Years in California. Hence, when a young man doing research on Davis' life sought out Mrs. Smith for help, it was her pleasure to refer him to Davis' daughter, Miss Lilly Davis, then living across the street from the library.

When later, Andre F. Rolle released his book, William Heath Davis, Mrs. Smith made haste to acquire it—with a "strangely exciting feeling of having helped in a small way to produce it."

Big Oak Flat Road is another in which Mrs. Smith shared the authors' jubilation, having watched Mrs. Emil Schlichtmann of San Leandro (Mrs. Schlichtmann and Mrs. Paden, coauthors) through some of the preliminary research in the library.

R. R. Stuart, who wrote a history of San Leandro while she looked over his shoulder, helped her to acquire Mrs. Mae Helen Bacon Boggs' book "My Playhouse was a Concord Coach," an astounding collection of newspaper clippings and other material on those who made California history between 1822-88.

Excitement is a mild word for the feelings that beset her when she opened a parcel one day from the head of a historical society in the valley. Inside was a Thompson and West atlas of Alameda County containing a map of early San Leandro which the curator thought seemed more suitable in this vicinity.

Inherited from her predecessor was a rare set of leatherbound works of Hubert Howe Bancroft, a gift from A. B. Cary, son of J. K. Cary, donor of the library site.

One last gift that is particularly meaningful in the library collection came from Mr. and Mrs. George Helms (she's a 36-year veteran on the library board of trustees). It is the Pony Express published at Placerville, from the first copy of volume 1, June 1839.

Under the subject Good Topics To Browse In, Mrs. Smith has her Western Americana library cataloged as follows: Story of California's Constitution and Laws; Fun and Recreation in Early California; Entertainment in California; Beauty Spots; Big Trees, Oldest Things on Earth; Water and Power; Cable Cars in the San Francisco Hills; California's Medical Story; Agriculture; the Chinese in San Francisco; Vigilantes; Mormons; Pine Presses and Newspaper Men; Cattle Industry; Cattle Trails; Trappers and Trailblazers; Women as Pioneers; Early Doctors;

Outlaws and Crime; Hawaiian History; The Northwest and Its Opening; The Donner Party; Missions of California; Gold Rush Days; The Wine Industry; Architecture; International Expositions; Gardening; Pony Express; Overland Mail; Artists in the West; Early Transportation; Railroads and Their Builders; Santa Fe Trail; Sacajawea and the Lewis and Clark Party; Spanish Period in California History; Junipero Serra and the Padres; Educational Institutions; History of Banking in California; History of Bench and Bar in California; Russians in California; French; Chinese; Old Spanish Ranchos; San Francisco, Glamorous City; California Writers; Political Leaders; Intrepid Travelers.

Carrying the Mail

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the East Texas, the official publication of the East Texas Chamber of Commerce. The author, Hubert Harrison, was executive director for 30 years, serving tirelessly the East Texas community. His short graphic analysis of the meaning of a stamp is typical of his thoughtful understanding and expression, which his many friends will always remember:

CARRYING THE MAIL
(By Hubert M. Harrison, Dallas, Tex.)

American business has developed a pride in getting the job done well, which reflects itself in our marvelous progress.

In the oilfields the common expression for doing a good job is "carrying the mail." There is in this an implied compliment to the American postal system that is not usually recognized. In spite of storms, icy roads, broken wires, raging blizzards, or blazing heat, the mail must go through.

A stamp is the world's greatest bargain. It is an investment in a miracle of modern efficiency. One stamp commands the efforts of countless thousands of men and women throughout this Nation and other nations, who carry the mail to the ends of the earth, on foot, horseback, dogsleds, in automobiles, trucks, trains, ships, and airplanes. A stamp is the magic cachet that carries its message of love to the home circle from the absent one; it will rekindle celestial fires on the altar of a mother's heart; it will convey comfort and cheer to the sick; it will encourage the downhearted; it will inspire the slothful; it will cheer the almost forgotten friend; it will steal into the home where there is the hush of death and help to soften the blow of crushing sorrow; it will recall the absent son to the ideals learned at his mother's knee; it will bring laughter and joy to the saddened heart; it will carry your thoughtful message of congratulations in an eventful hour; it will start in motion a chain of human contacts that will promote projects and change the life of a community.

With a stamp you can conjure miracles and summon to your service a train of minions that march like an army with banners. With a stamp you can play upon the strings of some understanding heart with that priceless gift of congenial and sympathetic communion with an absent friend.

All this you can buy with a stamp.

You Can't Eat Integration

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 12, 1958

Mr. JOHNSTON of South Carolina. Mr. President, I send to the desk an editorial from the Anderson Independent of August 11, 1958, entitled "A Negro Leader Cites the Facts; Says 'You can't Eat Integration.'"

The editorial is based on writings of Davis Lee, a Negro newspaper publisher and editor, who says, among other things:

If the liberals and agitators are the Negro's friend and southern whites are his enemies, then someone needs to protect him from his friends.

In addition, Lee says that Negroes cannot eat integration.

The Anderson Independent sums up its editorial most appropriately with the comment that Lee's views are widely prevalent among the level-headed Negroes in all walks of life, contrary to the professional propagandizers and paid agitators of the NAACP.

Mr. President, no truer words were said regarding the situation in my State. Were it not so, then we would be having the same terrible riots and race problems that we have seen in other places in recent years.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A NEGRO LEADER CITES THE FACTS; SAYS "YOU CAN'T EAT INTEGRATION"

Davis Lee is the publisher of a number of Negro newspapers, including the Herald, which appears weekly in Anderson.

Recently he is reported to have spoken in Anderson at a meeting at Delia Street Holiness Church, and is quoted as saying:

"Better citizenship is more than registering and voting. You must become a part of the community in which you live and assume the responsibility of good citizenship."

And editorially he had timely comment on the integration-segregation issue which has threatened to destroy long standing friendships.

"The liberals who are frothing at the mouth and shedding crocodile tears over the plight of the poor Negro in the South, will gladly offer him integration, but won't give him a job or provide his family with clothing or bread.

"The southerners don't want him to have integration, but they will gladly give him a job, and help clothe and feed his family.

"The liberals will open their schools to Negro children, but they won't hire many Negroes as teachers. The South won't admit the Negro children to its schools, but they will give the Negro his own school manned by teachers of his own race. And all of this is given without cost.

"There are forms of segregation that are degrading and humiliating, but to have one's own school and teachers is not one of them. Giving the Negro his own school and teachers is more in keeping with that concept of freedom, just and equal opportunity that the Founding Fathers had in mind than an integrated system of education."

Publisher Lee continued:

"Not once during our existence has the South attempted to tell the people of the North, East, and West how to run their schools, churches, etc., and in no section of this country does the Negro enjoy the educational, employment and economic opportunities which he enjoys in the South.

"The labor unions are pouring thousands of dollars into this integration movement, yet southern Negroes are working at jobs that northern Negroes cannot get, because the unions will not accept them as members.

"There are more Negro carpenters, bricklayers and building contractors in North and South Carolina than there are in the 33 integrated States. Negroes can't eat integration. They need jobs. They need the opportunity to develop their talents, skills, and abilities in fields of their own choosing. The South is the only section in this Nation that offers such opportunities.

"If these liberals and agitators are the Negro's friend and southern whites are his enemies, then someone needs to protect him from his friends."

Lee's views prevail widely among level-headed Negroes in all walks of life, contrary to the professional propagandizers and paid agitators of the NAACP.

Why the United States Must Continue Its Nonrecognition of Red China

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. JUDD. Mr. Speaker, from time to time one hears various arguments being advanced that the United States Government would be more realistic and intelligent in serving its own long-range interests if it were to give official recognition to the Communist regime in Peiping and support its admission to the United Nations. The President and the Secretary of State have repeatedly stated the reasons why such action would, on the contrary, be completely unrealistic and a dangerous disservice to our interests to those of our allies in the Far East and to freedom-loving peoples everywhere.

A comprehensive reexamination of the arguments pro and con has just been released by the State Department. It makes crystal clear that our Government's position is not based on emotionalism over Korea, or blindness to facts, or sheer stubbornness, as sometimes charged; it is based on the most realistic recognition and hardheaded evaluation of all the facts, including the key fact of the behavior of the Chinese Communist government. It stubbornly refuses to change its international conduct so as to qualify for recognition or admission to the United Nations. It is its own actions, not ours, that keep it excluded.

Under leave to extend my remarks, the State Department memorandum is included:

Policy toward Communist China has been an important issue since the Communists came to power there, and it is of critical significance to the United States and the free world today. In the United States the

issue is a very real one to the vast majority of the people. As a result of Korean and Chinese Communist aggression in Korea, the United States suffered 142,000 casualties, bringing tragedy to communities all over the country. Nevertheless, despite the emotions thus engenered and the abhorrence of the American people for the brutality and utter lack of morality of Communist systems, the policy of the United States Government towards China has necessarily been based on objective considerations of national interest. It also reflects a continuing appraisal of all available facts.

Basically the United States policy of not extending diplomatic recognition to the Communist regime in China proceeds from the conviction that such recognition would produce no tangible benefits to the United States or to the free world as a whole and would be of material assistance to Chinese Communist attempts to extend Communist domination throughout Asia. It is not an inflexible policy which cannot be altered to meet changed conditions. If the situation in the Far East were so to change in its basic elements as to call for a radically different evaluation of the threat Chinese Communist policies pose to United States and free world security interests, the United States would of course readjust its present policies. However, the course of events in the Far East since the establishment of the Chinese Communist regime in 1949 has thus far confirmed the United States view that its interests and those of the free world are best served by withholding diplomatic recognition from the regime in Peiping.

The basic considerations on which United States policy toward China rests are twofold. First, the Soviet bloc, of which Communist China is an important part, is engaged in a long-range struggle to destroy the way of life of the free countries of the world and bring about the global dominion of communism. The Chinese Communist regime has made no secret of its fundamental hostility to the United States and the free world as a whole nor of its avowed intention to effect their downfall. Today its defiance of and attacks on the non-Communist world have reached a level of intensity that has not been witnessed since the Korean war. The second basic factor is that East Asia is peculiarly vulnerable to the Communist offensive because of the proximity of the free countries of that area to Communist China, the inexperience in self-government of those which have recently won their independence, their suspicions of the West inherited from their colonial past, and the social, political, and economic changes which inevitably accompany their drive toward modernization.

The Chinese Communists see the victory of communism in Asia as inevitable; and now that they control the vast population and territory of mainland China they are utilizing the advantages these give to encompass their ends. Chinese Communist leaders have shown by their words and their acts that they are not primarily interested in promoting the welfare of their people while living at peace with their neighbors. Their primary purpose is to extend the Communist resolution beyond their borders to the rest of Asia and thence to the rest of the world. Liu Shao-chi, the second-ranking member of the Chinese Communist Party has said: "The most fundamental and common duty of Communist Party members is to establish communism and transform the present world into a Communist world." Mao Tse-tung himself has said that his regime's policy is "to give active support to the national independence and liberation movements in countries in Asia, Africa, and Latin America." That these are not empty words was shown by Chinese Communist aggression in Korea and provision of arms and other assistance to the Communist rebels in Indochina.

United States policy in Asia, as elsewhere in the world, is to promote the domestic welfare and to strengthen the independence of free nations. Because of the proximity of many Asian nations to mainland China and the disparity in size and power between them and Communist China, this can be done only if the Communist threat is neutralized. The first need of United States policy in the Far East is to deter Communist aggression, else the free nations would be in grave danger of succumbing to Communist pressures before they had gathered the strength with which to resist them. The United States has sought to accomplish this by military assistance to the nations directly in the path of Chinese Communist expansion—Korea, Taiwan, and Vietnam—and by a system of mutual defense arrangements with other nations of the area. We have been successful in this effort and since 1954 the Chinese Communists have not been able to make further gains through the open use of military force.

The measures the United States and its allies in Asia have taken to preserve the security of the free nations of the area are of vital interest to the other free nations of the world. Loss of the rest of East Asia to communism could have a disastrous effect on the free world's ability to resist effectively the encroachments of communism elsewhere. The consequences for Australia and New Zealand would be especially serious. Loss of the islands of the West Pacific and of the Southeast Asian peninsula would isolate these countries and place them in a strategically exposed and dangerous position.

Efforts to halt further Communist expansion cannot be confined to military deterrence alone. Countermeasures against Chinese Communist subversion and political infiltration are equally necessary. This is especially so as, since 1955, Peiping has increasingly resorted to propaganda, subversion, "people's diplomacy," and political maneuvering in its dealings with its Asian neighbors. Pieping seeks to win by this means what it apparently does not dare attempt through military conquest. The United States therefore considers that in preserving the peace and security of Asia it is as important to be alert to the threat of subversion as to that of open military attack.

In the effort to block Peiping's attempts to extend Communist rule in Asia the withholding of diplomatic recognition is an important factor. The extension of diplomatic recognition by a great power normally carries with it not only increased access to international councils but enhanced international standing and prestige as well. Denial of recognition on the other hand is a positive handicap to the regime affected and one which makes it that much the more difficult for it to pursue its foreign policies with success. One basic purpose of United States nonrecognition of Communist China is to deny it these advantages and to that extent limit its ability to threaten the security of the area.

In the case of China there are special considerations which influence United States policy with regard to recognition. For one thing, although the Chinese Communists have seized the preponderant bulk of China, they have not completed their conquest of the country. The generally recognized legitimate Government of China continues to exist and in Taiwan is steadily developing its political, economic and military strength. The Government of the Republic of China controls the strategic island of Taiwan and through its possession of a sizable military force—one of the largest on the side of the free world in Asia—presents a significant deterrent to renewed Chinese Communist aggression. Recognition of Communist China by the United States would seriously cripple, if not destroy altogether, that Government On the other hand, continued United States recognition and support of the Republic of China enables it to challenge the claim of the Chinese Communists to represent the Chinese people and keeps alive the hopes of those Chinese who are determined eventually to free their country of Communist rule.

Recognition of Communist China by the United States would have an adverse effect on the other free governments of Asia which could be disastrous to the cause of the free world in that part of the world. Those nations which are closely allied to the United States and are striving to maintain their independence on the perimeter of Chinese Communist power, especially Korea and Vietnam, would be profoundly confused and demoralized. They would interpret such action as abandonment of their cause by the United States. They might reason that their only hope for survival lay in desperate measures, not caring whether these threatened the peace of the area and the world. Governments farther removed from the borders of China would see in American recognition of Communist China the first step in the withdrawal of the United States from the Far East. Without the support of the United States they would be unable long to defy the will of Peiping; and some would probably conclude that their wisest course would be speedily to seek the best terms obtainable from Peiping. Needless to say, these developments would place the entire free world position in Asia in the gravest peril.

Another special consideration in the case of China is that large and influential overseas Chinese communities exist in most of the countries of southeast Asia. The efforts of these countries to build healthy free societies and to develop their economies would be seriously retarded if these communities were to fall under the sway of the Chinese Communists; and a grave threat of Communist subversion through these overseas communities would arise. Recognition of Communist China by the United States and the decline in the fortunes of the Republic of China which would inevitably result would have such a profound psychological effect on the overseas Chinese that it would make inevitable the transfer of the loyalties of large numbers to the Communist side. This in turn would undermine the ability of the host countries to resist the pressures tending to promote the expansion of Chinese Communist influence and power.

Still another factor which must be considered in the case of China is the effect which recognition of the Communist regime would have on the United Nations. Recognition of Peiping by the United States would inevitably lead to the seating of Peiping in that body. In the view of the United States this would vitiate, if not destroy, the United Nations as an instrument for the maintenance of international peace. The Korean war was the first and most important effort to halt aggression through collective action in the United Nations. For Communist China, one of the parties against which the effort of the United Nations was directed, to be seated in the United Nations while still unpurged of its aggression and defying the will of the United Nations in Korea, would amount to a confession of failure on the part of the United Nations and would greatly reduce the prospects for future successful action by the United Nations against aggression. Moreover, the Republic of China is a charter member in good standing of the United Nations and its representatives there have contributed importantly to the constructive work of that organization. If the representatives of the Chinese Communist regime were to be seated in their place and given China's veto in the Security Council,

the ability of that body in the future to discharge the responsibility it has under the charter for the maintaining of international peace and security would be seriously impaired.

Those who advocate recognition of the Chinese Communists often assume that by the standards of international law applied to such cases the Peiping regime is entitled to diplomatic recognition. In the view of the United States diplomatic recognition is a privilege and not a right. Moreover, the United States considers that diplomatic recognition is an instrument of national policy which it is both its right and its duty to use in the enlightened self-interest of the Nation. However, there is reason to doubt that even by the tests often cited in international law the Chinese Communist regime qualifies for diplomatic recognition. It does not rule all China, and there is a substantial force in being which contests its claim to do so. The Chinese Communist Party, which holds mainland China in its grip, is a tiny minority comprising less than 2 percent of the Chinese people, and the regimentation, brutal repression, and forced sacrifices that have characterized its rule have resulted in extensive popular unrest. To paraphrase Thomas Jefferson's dictum, this regime certainly does not represent "the will of the populace, substantially declared." Finally, it has shown no intention to honor its international obligations. One of its first acts was to abrogate the treaties of the Republic of China except those it chose to continue. On assuming power it carried out a virtual confiscation without compensation of the properties of foreign nationals, including immense British investments notwithstanding the United Kingdom's prompt recognition of it. It has failed to honor various commitments entered into since, including various provisions of the Korean Armistice and the Geneva accord on Vietnam and Laos, as well as the "agreed announcement of September 1955," by which it pledged itself to permit all Americans in China to return home expeditiously.

The United States policy toward recognition of Communist China is then based on a carefully considered judgment of the national interest. Nonrecognition of Peiping, coupled with continued recognition and support of the Republic of China, facilitates the accomplishment of United States policy objectives in the Far East. Recognition of Peiping would seriously hinder accomplishment of these objectives and would facilitate the advance of Communist power in Asia.

In the process of determining its policy toward China the United States has taken into account the various statements and arguments advanced by proponents of extending diplomatic recognition to Peiping. One of the most commonly advanced reasons for recognition is that reality must be recognized and 600 million people cannot be ignored. While superficially appealing both statements themselves overlook the realities of the situation. United States policy is, of course, based on full appreciation of the fact that the Chinese Communist regime is currently in control of mainland China. However, it is not necessary to have diplomatic relations with a regime in order to deal with it. Without extending diplomatic recognition the United States has participated in extended negotiations with Chinese Communist representatives, in the Korean and Indochina armistice negotiations and more recently in the ambassadorial talks in Geneva. Similarly, United States policy in no sense ignores the existence and the aspirations of the Chinese people. Its attitude toward the people of China remains what it historically has been, one of friendship and sympathetic understanding. It is nonetheless clear that our friendship for the Chinese people must not be permitted to blind us to the threat to our security which the Communist regime in China now presents. Moreover, the United States is convinced that the Chinese Communist regime does not represent the true will or aspirations of the Chinese people and that our policy of withholding recognition from it is in actuality in their ultimate interest.

It is sometimes contended that by recognition of Communist China it would be possible to exert leverage on the Peiping regime which might ultimately be successful in weakening or even breaking the bond with Moscow. Unfortunately, there is no evidence to support this belief and there are important reasons why it is unlikely. The alliance between Moscow and Peiping is one of long standing; it traces its origin to the very founding of the Chinese Communist Party in 1921, in which representatives of the Comintern played an important role. It is based on a common ideology and on mutually-held objectives with respect to the non-Communist world. All recent evidence points to the closeness of the tie between the Chinese Communists and the U. S. S. R. rather than in the other direction. The Chinese Communists were outspoken in championing the armed intervention of the Soviets in Hungary and have given unqualified endorsement to the execution of Nagy and the other leaders of the Hungarian revolt. They were also leaders in the recent Communist bloc attack on Yugoslavia for its attempts to pursue national policies independent of Kremlin control. These and other facts make it apparent that the two partners in the Sino-Soviet alliance clearly realize their mutual dependence and attach great importance to bloc unity vis-a-vis the free world.

Furthermore, the alliance with the U. S. S. R. has a special importance for the Chinese Communists since it provides them with a dependable source of arms and military supplies. The Chinese Communist leaders, including Mao Tse-tung himself, came to power through their command of military force. They are therefore keenly conscious of the importance of military force to keep themselves in power against domestic and external opposition and to achieve the goals of their foreign policy. It is scarcely credible that they would dare risk any course of action which could lead to loss of their source of military supplies. For this reason alone, it would seem unrealistic to believe that recognition of Peiping by the United States or any other leading nation would have the effect of tempting the Chinese Communists to play a "Titoist" role.

In fact the opposite is quite likely to be the result. Were the United States to grant diplomatic recognition to Peiping—with all that this would entail by way of enhanced international prestige—its leaders would most likely feel confirmed in the correctness of their policies and the advantages of continued close cooperation with Moscow.

It is often alleged that recognition of Communist China is a necessary step in expanding trade relations with that country. For the United States this is, of course, not a consideration, since the United States embargoes trade with Peiping under the Trading With the Enemy Act as a result of the Korean war. But even for countries which so desire to expand trade with mainland China, the facts do not support the contention that trade is dependent on recognition. To the contrary, Great Britain, which recognized Communist China in 1950, has found that she buys more goods from Communist China than Communist China buys from her. West Germany on the other hand does not recognize Peiping and enjoys a favorable trade balance with the mainland China. In any case, trade opportunities with Communist China are severely limited by a shortage of foreign exchange which is likely to persist for many years to come. Moreover, such trade would always be at the mercy of Communist policies. Peiping uses trade as a means of exerting pressure on the trading partner whenever it deems this to be expedient. A striking example is the case of Japan, where the Chinese Communists recently retaliated against Japanese refusal to make certain political concessions by cutting off all trade and even canceling contracts which had already been entered into. It would therefore seem that over the long run the advantages of trade with Peiping will prove more ephemeral than real.

An argument often heard is that the Chinese Communists are here "to stay"; that they will have to be recognized sooner or later; and that it would be the course of wisdom to bow to the inevitable now rather than be forced to do so ungracefully at a later date. It is true that there is no reason to believe that the Chinese Communist regime is on the verge of collapse; but there is equally no reason to accept its present rule in mainland China as permanent. In fact unmistakable signs of dissatisfaction and unrest in Communist China have appeared in the "ideological remodeling" and the mass campaign against "rightists" which have been in progress during the past year. Dictatorships often create an illusion of permanence from the very fact that they suppress and still all opposition, and that of the Chinese Communists is no exception to this rule. The United States holds the view that communism's rule in China is not permanent and that it one day will pass. By withholding diplomatic recognition from Peiping it seeks to hasten that passing.

In public discussions of China policy one of the proposals that has attracted widest attention is that known as the "two China solution." Briefly, advocates of this arrangement propose that the Chinese Communist regime be recognized as the government of mainland China while the government of Taipei remains as the legal government of Taiwan. They argue that this approach to the Chinese problem has the merit of granting the Communist only what they already control while retaining for the free world the militarily strategic bastion of Taiwan. However, it overlooks or ignores certain facts of basic importance. The Republic of China would not accept any diminution of its sovereignty over China and could be expected to resist such an arrangement with all the means at its disposal. If a "two China solution" were to be forcefully imposed against its will, that government's effectiveness as a loyal ally to the free world cause would be destroyed. Peiping too would reject such an arrangement. In fact over the past year Chinese Communist propaganda has repeatedly and stridently denounced the "two Chinas" concept and, ironically, has been accusing the United States Government of attempting to put it into effect. Peiping attaches great importance to the eventual acquisition of Taiwan and has consistently reserved what it calls its "right" to seize Taiwan by force if other means fail. There is no prospect that it would ever acquiesce in any arrangement which would lead to the permanent detachment of Taiwan from China.

The "two Chinas" concept is bitterly opposed by both Peiping and Taipei. Hence, even if such a solution could be imposed by outside authority, it would not be a stable one. Constant policing would be required to avert its violent overthrow by one side or the other.

It is sometimes said that nonrecognition of Peiping tends to martyrize the Chinese Communists, thereby enabling them to pose, especially before Asian neutralists, as an innocent and injured party. It would be impossible to deny that there is some truth in this. But this disadvantage is far outweighed by the disadvantages that would result from following the opposite course. It

is surely better that some neutralists, who are either unable or unwilling to comprehend the threat inherent in Chinese Communist policies, mistakenly consider Peiping unjustly treated than that the allies of the United States in Asia, who are the first line of defense against Chinese Communist expansion, should be confused and demoralized by what to them could only appear to be a betrayal of the common cause.

Forty-five non-Communist countries recognize the Republic of China. Only 19 have recognized Peiping, and most of these did so before the Korean War in 1950. Recognition by a leading free world nation would therefore be interpreted as an important victory for the Chinese Communists, as a sign of free world reluctance to stand up to Communist pressures, and as damaging evidence of a serious difference of opinion within the free world concerning the problem of how to deal with the expansionist forces of international communism. It would have an especially serious effect in the Far East where the free world nations most directly exposed to Chinese Communist expansionist pressures would be dismayed and confused and some would no doubt be tempted to follow suit for fear of being left alone in the face of Communist power. Nations in other areas of the world whose governments are less conscious of the critical nature of the situation in the Far East and less immediately affected by developments in that area might follow the example thus set. The inevitable consequence of recognition of the Chinese Communist regime by other free nations would be greatly to enhance its prestige, influence, and power and to make more difficult the effort to maintain free world security interests in the Pacific area.

Private Development of Power in Sonoma County, Calif.

EXTENSION OF REMARKS

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1958

Mr. SCUDDER. Mr. Speaker, The Geysers of Sonoma County will soon be used to drive low pressure steam-driven electric generators to produce electric power.

This fact is covered in an excellent editorial in the Santa Rosa Press Democrat, which I submit for the information of my colleagues. This editorial very cogently points out:

While the politicians in Congress have effectively blocked President Eisenhower's partnership idea for private development of power through sale of the use of falling water at Government-owned dams, private enterprise has not been so reluctant. At the Vallecitos atomic plant, the utility company buys steam in an atomic reactor by General Electric. At The Geysers it will buy steam explored for and brought to the surface by a company formed by private risk capital.

This represents another first which has been pioneered, not by socialized power agencies, but by private companies. It won't please the self-appointed guardians of the peoples' resources whose Federal or nothing policy calls for only Federal development of our natural resources. They seem to say that only the Federal Government should develop power from Trinity falling water, from the atom, or probably even from steam that comes out of the ground.

But in their zeal to cater to the favored few they neglect to consider the interests of all the people.

In the case of Trinity, if the Federal Government builds the power facilities the favored few only will benefit and to the direct detriment of all the people.

The Sacramento Utility District is now getting almost three-fourths of the power generated by the Central Valley project in which all the people have invested some three-quarters of a billion dollars. Now these self-appointed guardians want the Federal Government to build the Trinity power facilities so that this same SMUD can get another slice of Federal power—and below its actual cost of production.

Testimony before the congressional committee on the Trinity partnership proposal, which is embodied in my bill, H. R. 6997, left no doubt that a big bulk of Federal Trinity power would go to SMUD at less than its cost of production. Under my bill the benefits from Trinity falling water would truly accrue to all the people—all the consumers of electric energy in northern California, not just SMUD—all the Federal taxpayers, all the water users of the Central Valley project, and all the State and local taxpayers.

Maybe it is time to unmask these Federal-or-nothing advocates and self-appointed guardians of all the people and see just what really motivates them.

Under leave to extend my remarks I include the following editorial of July 28 from the Santa Rosa Press Democrat:

P. G. & E.'s NEW PARTNER

Pacific Gas & Electric Co., first power company to commercially generate electricity using atomic power as a source of energy, will also be the first in the United States to utilize natural steam to drive generators.

The atomic plant at Vallecitos involved pushing through to new frontiers of science. The natural steam plant at The Geysers, Sonoma County, will, to some extent, resemble returning to the horse-and-buggy days of electric power. It's probably been a generation since a low-pressure steam-driven generator has been built in the United States. But that's the sort of steam nature originates at the Geysers and the generator will be tailored to fit the supply.

Power to drive electric generators, like gold, seems to be where you find it. And like gold, it's usually found by those who are not afraid to try something new. P. G. & E. variously uses falling water, steam generated by burning fuel oil, steam generated by burning gas, steam generated by atomic power, and now steam generated by Mother Nature.

While the politicians in Congress have effectively blocked President Eisenhower's partnership idea for private development of power through sale of the use of falling water at Government-owned dams, private enterprise has not been so reluctant. At the Vallecitos atomic plant, the utility company buys steam in an atomic reactor by General Electric. At the Geysers it will buy steam explored for and brought to the surface by a company formed by private risk-capital.

In all probability, when all the risks have been taken, politicians seeking office will start to yell loudly that electricity generated by atomic power should belong to all the people and be manufactured only by a Government agency—and that steam that comes out of the ground falls in the same category.

One fatal defect to progress under socialism lies in the fact that socialism is operated by bureaucrats—and a bureaucrat feels his job is safer if he sticks to routine and does no experimenting or seeking for improvement.

The only areas of major power shortages in this country are where Federal agencies own and operate the power generators. Every new and less costly development in the manufacture of power has been pioneered, not by the socialized power agencies, but by private companies.

But that won't keep the self-appointed guardians of the people's resources from trying to take over, once private enterprise has taken the risks, found the answers, and developed new types of power generation.

Equal Opportunity for All

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1958

Mr. DONOHUE. Mr. Speaker, we have indeed suffered many disastrous and discouraging diplomatic and propaganda defeats at the hands of Soviet Russia. These too-often-repeated disasters have seriously depreciated our prestige in and claim of leadership among the free nations. We call ill afford another major defeat by the Kremlin, particularly in the field of propaganda against our claim and desire for leadership in the areas of economic development and social justice. Unhappily, most authorities agree we are gravely threatened with such further defeat unless a federally encouraged effective program to alleviate national conditions of substantial unemployment in certain economically depressed areas is promptly initiated.

Over the past decade increasing evidence has developed to convincingly demonstrate that our vaunted boast of having the highest living standards anywhere is in danger of being exploded and exploited as another American capitalistic myth. May Divine Providence, a determined Congress, and a united people, forbid.

It is most unhappily apparent that substantial economic decline is visiting increasing hardship and lowering the living standards in large areas of the country, particularly in New England, along the eastern seaboard, and in certain southern sections. There are varied causes for this catastrophe but principal among them are the migration of industry from New England, technological changes, such as those affecting the coal industry, and the disjointed advantages, through our foreign trade program, given to foreign competitors of multitudinous domestic industries.

All of these causes add up to chronic unemployment and permanently distressed areas which present a double threat against our internal development and our external security. Our internal development has been based on a constantly growing domestic market and

that development will obviously be sabotaged if buying power is taken away from large numbers of our people. Faith in our external security has been based upon the idea of being always able to realize and utilize our full productive strength and resources and that security is obviously threatened if a great many willing wage workers can not engage in our national production effort.

Clearly then, chronic unemployment and permanent depression anywhere in our economy is a subject of national concern and primarily so in this emergency struggle with Russia.

Responding to this challenge, in patriotic thought and purpose, a great many Members, including myself, have filed legislative proposals designed to forestall and prevent this economic tragedy.

Substantially all these proposals provide for the creation of an Area Redevelopment Administration, to formulate and project an overall industrial rejuvenation program, in cooperation with local authorities, for those distressed areas suffering from persistent and enlarging unemployment.

In summary this program would include loans for industrial projects, grants for public facilities, and financial assistance, through the cooperation of the Labor and Health, Education, and Welfare Departments, to expand vocational training programs.

Most of these provisions, with added features, are contained in the Senate passed bill, S. 3683, now waiting upon our action in the House. At stake is our continuing national well-being and high morale, our world reputation of providing equal opportunity for all our citizens, and our ability to defend ourselves and assume the offensive in the vitally important propaganda battle with Russia. I most earnestly urge that this measure will be presented to and adopted by this House before any further idea of adjournment is entertained.

Invasions of Rights of Privacy

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mrs. GREEN of Oregon. Mr. Speaker, advances in the field of electronics in perfecting eavesdropping devices offer frightening possibilities for the invasion of our right of privacy. If permitted to continue unabated, it could bring about much sooner the situation predicted by Orwell for "1984".

Our constitutionally guaranteed freedoms leave no room for big brothers to watch our actions and to listen in on our every conversation.

The statement a short while ago by the Director of the Federal Bureau of Investigation that the Bureau had in operation 90 telephone taps was most disturbing. The Federal Communications Act specifically forbids such action on the part of anyone regardless of position or motive. If this country is to remain a government of laws and not of men then those sworn to uphold the law and engaged in its enforcement must themselves abide by the law.

We must be concerned with the example such illegal actions on the part of law enforcement officials may have on others. Recently, an investigator for one of the subcommittees of this body decided to emulate the FBI example and "bug" a private hotel room. While this action was immediately denounced by the subcommittee when it came to light, nevertheless, the incident does serve to show how debasing of moral values can be the example of lawlessness on the part of law enforcers.

I ask unanimous consent to have printed in the CONGRESSIONAL RECORD two editorials from the Washington Post with respect to both these matters.

THE LAW AND THE FBI

When FBI Director J. Edgar Hoover acknowledged in a filmed television interview on Sunday that his Bureau was operating 90 telephone wiretaps across the country, he in effect pleaded guilty to 90 violations of Federal law. The tapping of telephone wires is a crime. It is a crime whether done by private detectives for purposes of blackmail or by the FBI for purposes, as Mr. Hoover put it, of keeping tabs on internal security cases. Congress, in 1934, adopted the Federal Communications Act with a section 605, providing that:

"No person not being authorized by the sender shall intercept any communication and divulge or publish the existence, contents, substance, purport, effect, or meaning of such intercepted communication to any person."

And when the Department of Justice argued that this statute applied only to private persons, not to Government officers, the Supreme Court ruled unequivocally in 1937 that:

"The plain words of 605 forbid anyone, unless authorized by the sender, to intercept a telephone message, and direct in equally clear language that no person shall divulge or publish the message or its substance to any person."

The pretext on which the FBI has violated the Federal Communications Act ever since its adoption is that President Franklin Roosevelt, in 1941, when the country was on the brink of war, advocated legislation which would authorize wiretapping in cases involving espionage or sabotage against the United States. Such legislation has been advocated in session after session of Congress. But Congress has never adopted it. Unless or until Congress in its wisdom decides to change the clear stipulations of the Federal Communications Act, every wiretap will be a Federal crime; and it will remain a crime whether authorized by the Director of the FBI, by the Attorney General, or even by the President of the United States. This is a government of laws; and laws can be made only by legislatures.

BATTLE OF THE BUGS

"Thou shalt not nede to be afraid for eny bugges by night": such were the words chosen by Miles Coverdale to render the 5th verse of the 91st Psalm. Allowing for a considerable difference in connotation, they also pretty well express the purpose of the bill that Representative KEATING of New York intends to introduce and, if he can, to push through Congress.

For Coverdale and his contemporaries the noun "bug" seems to have suggested any kind of otherwise nameless terror, real or imagined, or as we might spell it nowadays, a "b-o-g-e-y." What Representative KEATING has in mind is something more tangible and familiar—a mechanical electronic contrivance that enables unauthorized persons to eavesdrop on private conversations. The danger, if not the device, however, seems to have been well known even in Coverdale's time, for it was then that the proverb about walls having ears came into the language and also the warning about eavesdroppers, meaning those who placed themselves like raingutters (eavesdrips) "vnder menes walles or windowes" to collect and carry away other persons' secrets.

What seems to have persuaded Mr. KEATING about the need for remedial legislation against mechanical eavesdropping was the recent episode involving Baron I. Shacklette, who in the course of collecting information for the Harris subcommittee is said to have planted a "bug," or microphone (a i. e. kind of electrical drip-catcher), in a hotel bedroom occupied by Jack Lotto, public relations consultant to the munificent Bernard Goldfine. This kind of electronical snoopery, said Mr. KEATING with an angry disdain of metaphorical congruity, "goes to the very marrow of our individual freedoms."

And so of course it does. But the penetration of privacy has been going on for a long time, with and without the aid of gadgets. It is unlikely that the problem can be solved by any remedy so simple as to prohibit the manufacture of such devices or their use except by such special sanctions as court orders, however desirable such restraints might be. It sometimes seems that our best hope is that the same human ingenuity which has produced these gadgets will presently produce the means of frustrating them.

We Just Don't See Eye to Eye—Exchange of Correspondence on Public Housing With Representatives of United States Chamber of Commerce

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mrs. SULLIVAN. Mr. Speaker, the Committee on Banking and Currency has approved a good housing bill, primarily intended to help private enterprise build and sell more homes and to help the average family to purchase a home. I am extremely hopeful that the parliamentary situation which now has this bill bottled up will change in the very near future so that we can get the bill before the House for a vote, and have the legislation enacted into law before adjournment.

There is very little in this bill dealing with public housing. All it would do on that score is to continue existing authorizations for new public housing until the presently authorized units are actually constructed.

Nevertheless, we did take extensive testimony in the Housing Subcommittee on public housing as well as on all other phases of national housing policy. After the conclusion of our hearings, I received a very interesting followup letter from a man who had testified as the

spokesman for the Chamber of Commerce of the United States, Mr. George W. West of Atlanta, Ga. I am inclined to think that as a member of the Housing Subcommittee, my reply to Mr. West might be of general interest to many of the Members of the House who are interested in housing problems, and for that reason, Mr. Speaker, I include as part of my remarks in the Appendix of the CONGRESSIONAL RECORD Mr. West's letter to me and my reply, as follows:

WEST LUMBER CO.,
Atlanta, Ga., August 1, 1958.

Congresswoman LEONOR (Mrs. JOHN B.) SULLIVAN,
Congressional Office Building,
Washington, D. C.

DEAR MRS. SULLIVAN: I feel that I am always indebted to the members of a congressional committee who will listen to me, and especially so I am indebted to you, Chairman RAINS, and the others for listening the other day as I appeared as a director and in behalf of the Chamber of Commerce of the United States.

I also have a feeling that your time is so precious and limited that every word spoken must be in haste and the statements incomplete.

I was interested in your question to me the other day as to the chamber's policy about Government housing and whether or not they had ever offered a substitute. Of course their substitute, as I attempted to explain, has simply been that this is a question so intimate and so local that the Federal Government should never have attempted to take part in it at all.

Shelter is one of the prime necessities of mankind and something he must use most of his life and from day to day. I am sure every person is willing to subscribe to a local family welfare society or agency to study all the poor families in the neighborhood and attempt to bring them up to standard. This is not an unusual occurrence. It has always happened automatically. As a matter of fact, the colored people in the South in my lifetime, and until recent years, have been their brother's keeper, and many of them have not only shared what they had with their poor relatives, but many of them have raised children unrelated without imposing the cost on the State. So it has always been in the rural areas.

I believe the difficulty of raising money for charities through community chests in recent years has been the attitude of the average giver and his belief that the Federal Government had plenty of money and intended to take care of all the poor people.

Certainly we will agree that the ideal situation in this country would be to have every family above substandard and to remain so always. Such will never be the case, but we should remember that the condition of people changes from day to day and time to time.

I recall one of my good friends in Washington who undertook to help a colored family in Virginia many years ago, with 11 children. After studying their problem and contributing to them for many years, it was his story that as these children became of working and earning age, they finally possessed a $400 to $500 a month income. Of course there is always a point of change. As these older ones marry off and leave the aged, they should be sold on their responsibility to take care of their parents and relatives, as the system in this country has always provided. Such, I believe, is part of the Mormon doctrine, if I understand it.

Anyway, the Chamber of Commerce of the United States does not believe that substandardness of families is a permanent status.

Government housing is in direct competition with everyone who desires to own more shelter than they themselves require, commonly called landlords. I am sure that you and I know people, and sometimes widows, with children to raise who rely on rents from a part of their shelter as income. I know of many, and yet Government housing competes with them and they, in turn, must become a ward of the State.

There is nothing in our social makeup in this country that calls for Government housing. The poorer people have, of necessity, ridden in second hand automobiles or walked with a thin soled pair of shoes. They have always occupied second hand shelter, which can be just as warm and dry as any other kind, and some of the finest people in this country have been raised from such surroundings. The man with such a home is not to be frowned upon nor should he be placed in competition with a $15,000 or $20,000 rental unit possessing, in the main, one-third the space of his shelter. Government shelter is of the kind and variety that no landlord can afford to build and to have and to hold and to rent.

The mere fact that housing authority bonds are income tax free, and intentionally so, leads me to believe the idea was not sold by well meaning people, because the moneyed class of people are caused to invest their funds in this socialistic enterprise, a sad and leveling situation in this country, which was never intended.

I appreciated your time and wish that on some of my visits to Washington that you could give me an hour or two to discuss in greater detail Government housing.

By the way, our president of the chamber is from St. Louis, and we are very proud, indeed, of his ability to represent us in this office. I believe he will agree with my opinions on the shelter subject.

Let's get the Federal Government simplified and out of debt. It had no business in the first place of engaging in such welfare work.

With best wishes, I am
Sincerely yours,

GEORGE W. WEST.

Mr. Speaker, my reply to Mr. West was as follows:

WASHINGTON, D. C., *August 12, 1958.*

Mr. GEORGE W. WEST,
West Lumber Co., Atlanta, Ga.

DEAR MR. WEST: Thank you for sending me your further thoughts in answer to the question I asked you when you testified last month as the representative of the Chamber of Commerce of the United States before the Housing Subcommittee of the Committee on Banking and Currency.

When you testified in opposition to public housing, it was my recollection that the chamber of commerce had always been against public housing but had never suggested any alternative plan for helping the lowest income groups to get out of the kind of slums which are completely unfit for human habitation. Your answer to the question I directed to you on this point confirmed my understanding of the chamber's position.

You made clear at the hearing, as you also do in your letter, that the chamber has taken this position because it simply does not believe the Federal Government should have any responsibility whatsoever in this field, maintaining that this is a matter solely for the localities to handle. And you deplore the deterioration of self-reliance which you find on the part of those the Government does help.

I suppose it's true that people are less self-reliant than they used to be in many respects. I can think back to my own childhood to bear that out. My parents reared nine children, and it was always a struggle for my father to make ends meet, to provide the absolute necessities. Many a time my mother fed us on a nourishing but austere diet consisting of soup made from soupbones and vegetables. We never owned a home, instead, we moved often from rented place to rented place as the size of the family changed or as reverses forced us into cheaper quarters. It was, for my parents, a hard struggle all of the time, a very hard struggle. But they never once asked for any charity or help of any kind, although I am sure the circumstances often might have suggested seeking help.

And, of course, I thank God I had a father and mother who were devoted to their home, to each other, and to their children, and that no matter how hard the times were, we managed to get along somehow. This is, of course, the kind of self-reliance which you and the chamber of commerce applaud, I am sure.

I mention all of this not to identify myself with the underprivileged, because, frankly, we never considered ourselves underprivileged in our family. Many, if not most, families in St. Louis in those days were in similar circumstances. Most were similarly self-reliant. Of course, they had little choice in the matter, however; there were few places to seek help and a sort of lasting shame in accepting it.

But it occurs to me that a family today going through the kind of economic troubles which beset my parents in rearing nine children would find itself far less able to cope with the situation than we were if only because times are different and standards are different, and relative conditions among the population are completely different. To deplore the passing of the old days and the old standards will not bring them back, and to my mind that's a good thing, too.

Certainly, families were far more self-reliant then without unemployment compensation, amortized and insured mortgages to make home purchases simple and easy, bank deposit insurance to prevent being wiped out in recession or panic, social security, and so many of the other economic reforms of the past 25 years. But thinking back on it, I can see where such programs—had they been in effect then—could have been a godsend to my family and to millions of other self-reliant families in deep financial traits years ago. And as a family of 11 persons, we could perhaps even have qualified from time to time for public housing, had such a thing been in existence.

Would these programs have destroyed our self-reliance and made us want to become career wards of a benevolent government? I am sure they would not. I am sure we have retained the determination to pull ourselves up by our own efforts the while being most appreciative of some needed help along the way. And I think you'll find the same thing true today of most of those families being helped by the various programs I mentioned, including public housing.

Of course, it is true that some tenants of public housing have been unwilling to help themselves. I'm afraid that in any group of human beings we will find some who are indolent or lazy or shiftless; but we have millions of others in this country—decent people—who are ill or disabled or widowed or orphaned or temporarily down on their luck for one reason or another who can and will build a better life for themselves if given the right help and encouragement. Thousands of such families have been helped to get out of the slums and to go forward on their own after having benefited from public housing. These are the ones for whom public housing is intended.

As one of the most confirmed friends of public housing in the Congress—because I have seen the tremendous good it has done and can do—I am still able to see its occasional shortcomings and faults and to want to try to correct them. I have been extremely critical of policies which have been brought to the attention of our subcommittee from time to time, in our investigations,

which show laxness on the part of some administrators in getting rid of undesirables. Also, I have made no secret of my opposition to the high-rise apartment buildings in the crowded centers of major cities for families with young children just because limitations on unit costs in the projects make it impossible to build the garden-type units. But when I am critical of public housing it is in the desire to make the program succeed.

On the other hand, I can see no merit in the position of the chamber of commerce that private enterprise should be left alone to provide housing, as best it can, for the lowest-income groups. We know that from a practical standpoint private enterprise can no longer provide—if it ever could provide—decent shelter for the lowest-income groups. Nor can cities rebuild and eliminate the festering sores of unimaginably abominable slums without Federal programs such as we now have. The two go hand in hand: Urban renewal and public housing. Neither can succeed without plans for meshing them together in a common objective: to eliminate the slums from the centers of our major cities so that they are once again attractive places in which to live.

I do not consider public housing as competition for private enterprise in this objective if we are administering public housing properly. True, the landlord of a broken-down, rat-infested, insect-ridden, heatless, bathroomless, tarpaper shack may find it difficult to rent it for exorbitant amounts to a family which could qualify for an available public-housing unit, but is it that kind of private enterprise we should hesitate to compete with? I should think that it is instead the kind of private enterprise which all of us, including the Chamber of Commerce of the United States, would want to join together enthusiastically to eliminate entirely from the housing scene. I am not referring to warm, dry, solid secondhand homes of the kind you mentioned; I mean the kind of wretched, miserable slums from which public housing gets most of its tenants. They are abominable. And they are frequently rented on unbelievably profitable terms by owners who are not the poor widows or orphans or small investors you mentioned, but big operators who know every possible means and loophole for getting around public-health requirements.

Frankly, Mr. West, while I appreciate the time and effort you have devoted to the legislation before our subcommittee and your concern to make sure that I received a full and complete answer to the question I asked you when you testified, I am afraid that on the issue of public housing we just don't see eye-to-eye. I think the chamber of commerce has pursued a coldhearted attitude on this issue as it has on most welfare issues, and while we can argue back and forth, we just don't seem to convince each other.

Nevertheless, it has been stimulating to read your letter; in fact, I should probably apologize for having been stimulated into such a long reply. But I did want to return the compliment by making clear why I feel as I do on this matter.

Sincerely yours,

LEONOR K. (Mrs. JOHN B.) SULLIVAN.

Putting the Geysers to Work

EXTENSION OF REMARKS

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1958

Mr. SCUDDER. Mr. Speaker, under leave to extend my remarks I include an editorial from the Healdsburg Tribune of July 31, 1958, entitled "Putting the Geysers To Work."

This is another first for this regulated California utility. It is another first for private enterprise and will dumfound those Federal-or-nothing advocates who keep yelling for Federal construction of hydroelectric plants for atomic power plants and yes, even of steam plants such as TVA.

Their glib talk about looking out for all the people when in effect they are solicitous only of the favored few should fool no one.

We have had a seige of investigations lately. Maybe we should investigate why these self-appointed guardians of all the people keep insisting that Trinity power facilities be built by the Federal Government so that Sacramento can buy the power at less than cost. Or why this same Sacramento can get a rural electrification loan of over $23 million at 2 percent interest. All the people are being taxed so that Sacramento can get a Federal loan at a lower interest rate than it costs Uncle Sam.

Yes, let us put The Geysers to work and let us all go to work and stop being misled by those who advocate taxing all the people for the benefit of the favored few.

PUTTING THE GEYSERS TO WORK

Old Faithful, probably the most famous geyser in the world, has been steadily at work for generation as an entertainer and a salesman of the wonders of nature. Now some of its California cousins are going to work for people who need electricity.

P. G. & E.'s plans for a $2 million generating plant at the geysers are the first American effort to harness the natural power-producing heat of geysers. The project also will be, as far as we know, the world's only privately financed geothermal installation. The Italian, Mexican, and New Zealand Governments have subsidized such plants, or are planning to, but no private concerns have until now.

It was only about a year ago that P. G. & E. started delivering electricity generated by the Nation's first privately financed commercial nuclear powerplant. Having harnessed the atom, it is now tapping another ancient but heretofore unused source of natural power. It seems that nature's bounty is endless, so long as man's ingenuity and inquisitiveness refuse to accept limits, too.

And the news of P. G. & E.'s plans must have been heartening to all those who had the faith in the geysers and the men who were trying to harness this power.

The Freight-Rate Differential

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1958

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the July 3, 1958, issue of the Cottage Grove (Oreg.) Sentinel and in which Editor and Publisher W. C. Martin points up problems related to the freight-rate differential.

NOT FAR ENOUGH

Congress has voted to eliminate the 3 percent transportation or freight tax, which has helped hamstring the Northwest since World War II and which was at the time considered as an emergency measure, but Congress did not go far enough; the freight-rate differential should also be eliminated.

Why should it cost more freight to ship a sack of potatoes from here to Chicago than it does to ship it from Chicago here? That's a puzzler that nobody has answered so far as we know, and it's a good project for our Senators and Representatives to work on if they want to do something for the economy of Oregon and help attract new industry into the State.

Or perhaps you were not aware a situation of this sort existed, but it's one of the sources of our present trouble, which it seems to us can not be cleared up until the situation is corrected. It has not been too long ago that we became interested in trying to do what we could to attract new industry into our locality. In so doing we realized that we would have lots of competition in our efforts and that practically every community would like to do the same thing. In talking to those who have had some experience in starting a new business or industry, it's been quite interesting.

For instance we talked with Mr. Troendly, who runs the Troendly Manufacturing Co. at Elkton. This manufacturing company has made, or has caused to be made, a number of small articles and gadgets. Mr. Troendly has lived in both the large and small communities and knows the advantages and disadvantages of both. While it's nice to live in the small community where things are not so crowded, being close to the source of supply and market is an advantage that is difficult to overcome. At the present time a flower pot holder of his design is being made in the Chicago area where a large market exists and where the raw materials cost about half of what they would here.

Mr. Troendly says he has never been able to understand why the freight rate from Cottage Grove to Chicago cost more than from Chicago to Cottage Grove nor has he been able to figure out why the freight on an article should be one price one time and the next time a different price. At any rate the problem of the manufacturer who would bring a new payroll into the community isn't as simple as making something the public wants. There are a lot of other factors which must be figured in in determining whether or not the project will be a success or failure.

The Steel Price Rise

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 12, 1958

Mr. DIRKSEN. Mr. President, a good many addresses have been made in the Senate concerning the steel prices. Having compiled the minority views, after a long investigation in that field by the Antitrust and Monopoly Subcommittee of the Committee on the Judiciary, I simply say that a good many of those statements will not stand up as a matter of fact. I think, therefore, that the RECORD should contain certain editorials which set forth the essential facts with respect to the recent increase in the price of steel.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Steel Price Rise: Misconceptions Are Many," published in the Iron Age magazine of August 7, 1958; an editorial entitled "Steel, Investigators, and Life," published in the Wall Street Journal of August 5, 1958; an editorial entitled "1959 Steel Strike Is Feared If Pay Raises Demand It," written by David Lawrence, and published in the New York Herald Tribune of August 6, 1958; and an editorial entitled "Suspicion Is Not Enough," published in the Journal of Commerce of August 7, 1958,

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Iron Age of August 7, 1958]

THE STEEL PRICE RISE: MISCONCEPTIONS ARE MANY

The steel price rise is a fact. But a lot of talk, reports, and rumors about it are far from the facts. It is charitable to call the backwash misconceptions.

This is no alibi or excuse for the steel industry. Steel firms made the price increases for reasons they thought were sound and businesslike.

They also studied the situation to death with the result that hikes were less than had been expected and came later than had been expected. That cost all steel firms a lot of money. And it puts the smaller companies in a tight squeeze.

Even some of the medium size firms are in a tight squeeze because of the size of the rise and the feet-dragging caused by the competitive situation.

The steel price rise was born in 1956 when the steel industry was clobbered with a fantastic wage bill following a 5-week strike—and back-door pressure from the administration to settle.

Pressures from customers and the market place have combined to force steel firms to limit their rise to direct labor cost increases. This means some steel firms are going to have a tough time meeting their plans for expansion, maintenance, and proper returns for their stockholders.

Had there been no wage increase in July there would have been no steel price increase last week. The President of the United States seems to be one of the few in Washington who knows this. Senator KEFAUVER is a good politician. But he appears a little hazy on steel industry problems and on labor's power. He seems to be more interested in personal publicity than in labeling the unions as more responsible for the steel price increases than are the steel firms themselves.

Then, too, there are the sideliners who argue that the way to run a business is to see what Washington thinks about it. It's about time we let Washington take care of its own troubles. If Congress wants to make an investigation, let it be made—but let it not be preceded by press conference threats and pressures not based on facts or commonsense.

And another thing: Why always pick on the steel industry for running its business in a manner it thinks is fair and honest?

TOM CAMPBELL.

[From the Wall Street Journal of August 5, 1958]

STEEL, INVESTIGATORS, AND LIFE

Major steel companies, after much backing and filling, finally are posting higher prices.

And Senator KEFAUVER, chairman of the Senate Antitrust Subcommittee, has announced an investigation.

Neither development is very startling. The steel companies' labor costs went up July 1, as a result of a contract negotiated with the United Steelworkers. The companies wanted to raise prices that date, and some said they would, but due to slower steel sales at that time there was no price increase.

Now, however, steel sales have been picking up. The mills are operating at some 60 percent of capacity, up modestly from recent weeks, while a deeper slump had been predicted for July. There is a widening belief by business that the recession generally has not only bottomed but is lessening. Against this background of a demand pickup and higher costs, the only startling thing would be if steel prices did not go up—granting, of course, a belief in a free market and the profit motive as the reason for being in business.

It is not surprising that Senator KEFAUVER has announced his investigation because he announced it once before—only when prices failed to go up he was left temporarily high and dry.

The Senator is a long-standing believer in the idea that steel prices are not subject to market forces, but rather can be raised at will by the big companies, and it was on this basis that he seemed set to conduct the first investigation. And while he has had a recent illustration that this is not always the case, we shouldn't be surprised if the administered price idea became a main one in the forthcoming investigation.

But that is life in a political world. Of course, if the investigators really want to look at an administered price system they might check into what brought the higher costs that made higher prices seem necessary as well as desirable to the steelmakers.

They would find those higher labor costs are truly administered—by the industrywide union monopoly.

[From the New York Herald Tribune of August 6, 1958]

NINETEEN HUNDRED AND FIFTY-NINE STEEL STRIKE IS FEARED IF PAY RAISE IS DEMANDED

(By David Lawrence)

WASHINGTON.—Next year may see the biggest steel strike in American history. For the steel industry, which has just absorbed about half of the automatic increase in wages—fixed by a previous contract made in boom times—cannot afford to do so again. In 1959, when the labor contracts are up for renewal, a strike seems certain unless there is an abandonment of demands for higher wages by the unions.

If the steel companies had put up their prices this time to offset entirely the full labor costs, the increase of $4.50 per ton announced recently would have had to rise to around $7 or $8 a ton.

The statisticians in one major steel compnay say that, if there had been no price increases since 1955, it would today be operating $30 million a year in the red.

The steel companies, moreover, have to find a way not only to meet the direct increases in wages imposed by the industrywide union in steel but to offset the price rises for the raw materials the steel companies buy which are themselves affected by the upward trend in steel wages.

AN EXTRA $1.50 A TON

Thus it is estimated that, apart from the $7 or $8 a ton of increased costs due to direct wage increases, another item of at least $1.50 a ton has to be absorbed which comes from the higher costs of wages in brick plants, alloy plants, acid plants, and in the purchase of such materials as aluminum, vanadium, nickel, and zinc.

What is the answer? It is to be found in greater productivity per man-hour by labor or in technological improvements through larger and larger capital expenditures. The latter course has thus far saved the steel companies from bankruptcy as they have introduced new mechanical gadgets and bigger and better powerplants. But to do this requires millions and millions of dollars of more capital, and the investor is not attracted to industries which don't give a substantial return on the money invested.

Since the steel industry recently raised its prices, a howl has gone up from spokesmen for a congressional committee. An assistant attorney general at the Department of Justice in charge of antitrust laws speaks of the possibility of an investigation to see if any statutes were violated.

But why is the obvious overlooked? Hasn't anybody heretofore ever heard of industrywide bargaining—the practice sanctioned by Federal law which imposes a uniform wage cost on the steel companies?

Senator KEFAUVER, chairman of a Senate Subcommittee on Monopoly Problems, asks:

"Why are identical price increases put into effect by all companies at the same time when each has different costs? This is the key question."

Of course, it is the key question, and it has been ever since the Congress permitted labor unions to group together in a single monopoly in each industry.

Each company has to base its prices on what kind of earnings and rate of return on the invested dollar must be obtained to attract the investor. This also means a rather uniform pattern. A company that thinks it can get larger volume by cutting prices is likely to find itself mistaken and also bankrupt. For the wage costs are such that if it were not for the price increases announced by the leaders in an industry, the others would put their own prices even higher.

So the effect is to bring about minimum rather than maximum price increases, and the answer to the key question about prices in big industries is to be found in the industrywide bargaining process which fixes the same wage rates for all companies.

There have been frequent demands that the President call a wage-price conference to exert a moral influence on economic groups. But the Chief Executive is powerless to bring about remedial legislation. The Congress, which could abolish monopolies and keep prices down, isn't doing anything about labor legislation designed to reduce the monopoly power of big unions in America. The Congress is dominated by the big labor unions which regularly make substantial campaign contributions to a large number of the candidates for Congress on the Democratic Party ticket. And the Democrats control what legislation shall be passed by Congress.

Under the American system of private enterprise there must be self-restraint on both sides—labor and management—if economic anarchy is to be avoided. The answer does not lie in a Government-subsidized or controlled industry but in the commonsense that inevitably must be applied when there is a full expositon of all the facts. A constructive result could be achieved if a statesmanlike approach were taken by a congressional committee of inquiry.

[From the Journal of Commerce of August 7, 1958]

SUSPICION IS NOT ENOUGH

We don't like to see a top prosecutor of the Federal Government team up with a congressional committee for the purpose of putting an industry group on the spot by helping to create bad publicity for it.

The latest phase of Senator KEFAUVER'S Antimonopoly Subcommittee hearings on steel prices was not an inspiring spectacle when the Justice Department's Antitrust Chief, Victor R. Hansen told the committee members that he was suspicious of the steel

industry's current pricing practices, but could not prove anything to make out a case against the industry for violation of the antitrust laws.

Nevertheless, he revealed that his agency is carefully scrutinizing current steel industry pricing methods in order to decide whether the matter should be bought before a grand jury.

Such investigations are, of course, perfectly proper. They are part of the Justice Department's responsibilities if there is suspicion of a law violation. But just as proceedings before a grand jury are guarded against premature publicity, deliberations even prior to the start of such grand jury proceedings should be guarded even more carefully.

We are amazed, therefore, that Mr. Hansen was willing to have this case—which really is not a case at all because he himself admitted the absence of proof—tried in the newspapers prior to a Justice Department decision to ask for an indictment or to drop the investigation.

We do not question Senator KEFAUVER's right to get the Justice Department's reaction to the latest increase in steel prices. But we would seriously question the propriety of conducting such an interrogation in a public hearing. We believe that an executive session would have been more appropriate for such a discussion. Such a session would have been fully adequate for the subcommittee's purposes and could not have been interpreted—rightly or wrongly—as an attempt to give the steel industry a bad press.

Trustbuster Hansen regretfully stated that finding evidence of companies getting together on prices remains the Justice Department's greatest problem.

The Department of Justice is looking into the latest round of steel-price increases to determine whether they are the result of a conspiracy to fix prices or are an indication of monopoly control over the industry.

This, we are afraid, is a typical closed-mind approach. Mr. Hansen sees two alternative explanations; both bad. He does not even mention the possibility that the steel companies were justified in making these price increases and that price competition being what it is, uniform prices are not evidence of conspiracy but of competition.

Instead, the antitrust chief came up with a new wrinkle in legal procedure which, we hope, any court in the land would throw out immediately as immaterial.

Fully aware of the fact that no industry will sit down around a conference table to cook up a price conspiracy—and then send a written report about the meeting to Mr. Hansen's office—he told Senator KEFAUVER that he is "intrigued by the way in which newspapers and trade press have been utilized to convey the news, so to speak, among the steel producers."

As an example, Mr. Hansen quoted statements by some steel company officials to the effect "that they must raise prices because of the recent wage boosts but that they had to wait and see what the big companies would do."

We commend to Mr. Hansen's attention the conduct of John W. Gwynne, chairman of the Federal Trade Commission, who in a subsequent appearance before the Senate Antimonopoly Subcommittee—as did Mr. Hansen—said that he knew of no price-fixing conspiracy by the steel industry. But unlike Mr. Hansen, the FTC head stopped right there and declined to indulge in a long list of witch-hunting suspicions.

The Hansen approach to the steel industry pricing problem not only is a demonstration of dubious tactics but also once again demonstrates the futility of using a purely legal approach to this kind of issue instead of putting it into its proper economic perspective.

As long as the economic significance of uniform prices is not recognized and the economic ties between wages, determined on the basis of industrywide collective bargaining, and prices ignored, social reformers will have a free field as champions of antitrust prosecutions to the detriment of the economy.

A Clarification of the Situation in Venezuela

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. PORTER. Mr. Speaker, the quality and extent of the Communist danger in Venezuela are imperfectly understood by many in the United States. In a letter by my friend, Eduardo A. Acosta H., the very able chargé d'affaires, Embassy of Venezuela, to the Washington Post, August 11, 1958, this situation is clarified. Under a previous consent I include the full text of this letter:

AUGUST 5, 1958.

Mr. PHILLIP L. GRAHAM,
President and Publisher, the Washington Post and Times Herald, Washington, D. C.

DEAR MR. GRAHAM: The Venezuelan Embassy has, of long, made a habit of reading with the greatest of pleasure the interesting news published in your important newspaper, the Washington Post and Times Herald.

We, for our part, have always received the best of attentions from your daily regarding matters of mutual interest to both the United States and Venezuela, involving the protection and furtherance of cordial neighborly relations between the two countries.

In your issue corresponding to Monday, August 4, 1958, it has come to our attention a report by Larry Allen transmitted by the Associated Press from Caracas, dated August 3, which possibly, due to information obtained from unreliable sources, contains erroneous concepts about the political situation in Venezuela and the activities of the Communist Party there.

It is stated in said report that "there are Communist Party members in all key trade unions, in businesses and industries, in civic and student organizations, and in offices of the Government." This leaves the impression that the Communist Party dominates labor, business, education, and government. This is far from being true. All Venezuelan political parties are represented in the labor movement and it is significant that there have been no strikes in Venezuela with the exception of a symbolic nationwide strike organized in protest against a possible military coup stirred by a minority of military men aimed at overthrowing the country's democratic government.

Among the students there may be some sympathizers of communism, but the party itself is far from having control of the student body. As far as the Government is concerned, it can be emphatically denied that there are any Communists holding important positions in any of its branches. The Junta itself is composed of 3 civilians and 3 military men who have no connections whatsoever with the Communist Party. The head of the Junta, Rear Adm. Wolfgang Larrazábal, has very recently made the statement that "as he is a Catholic and against Communist ideas, he is against outlawing the Communist, because no idea can be suppressed by law." He added in the same statement that ideas should be fought with ideas and complained that reports published by some United States publications regarding his position with respect to the Communists were not true. He said that "communism is aided by being outlawed, since it is in clandestine movements when it becomes dangerous and that the best way to curb communism is by developing a wide policy of social justice." What is remarked here of the Junta members is also true of cabinet members, of the State and Territorial Governors which comprise the Republic of Venezuela, of university heads and chiefs of diplomatic missions.

Mr. Allen, in his personal appreciation says that "outside Larrazábal's governing five-member military-civilian Junta, there is rising alarm over the Red riptide, particularly within the army, that might crystallize into action long before national elections expected in November." There are, of course, differences of opinion among Venezuelans with respect to the activities of the Communist Party. I can assure you that by far the majority of the people do not view with such alarm the activities of this small political faction and would dismiss as absurd the idea of a possible Red coup in Venezuela. The reasons in support of this are very abundant. First of all, the interests of the Venezuelan Nation lie with those of the free world, and our trade relations are exclusively with countries of the Western World, especially with the United States of America. Venezuela has no trade relations with Communist nations or with countries controlled by the Communists, although other Western countries do have this sort of relations. Venezuela is, as any other country of the free world, interested in defending democracy as the only form of government that would stand for dignity and justice; therefore, Venezuela is determined to reject any idea directed to destroy such a system. Venezuela knows that its national defense and national security are linked to those of the American countries and to the countries of the free world.

It seems as though Mr. Allen was highly impressed by the gathering of more than 100,000 Venezuelans to protest against demands made to the government by a minority headed by the former Defense Minister, whose feelings cannot be attributed to our whole Armed Forces where there are so many capable, honest, public spirited, and true citizens. That public demonstration of protest was not stirred or organized by the Communist, but by all of the Venezuelan political parties. Moreover, the symbolic strike not only took place in Caracas, but in all of the important cities of the country and is to be taken as a genuine expression of the Venezuelan people in all of its social classes, intellectuals, business men, bankers, workers, students, and a vast majority of the loyal members of the armed forces. The night of the 23d of July and the morning of the following day saw the announcement by our chambers of commerce, professional associations, student organizations, and labor unions of their public rejection of the absurd demands of the small group headed by the ex-Minister Castro-Leon.

Mr. Allen's ideas, as expressed in his report from Venezuela, are unrealistic and not altogether clear. The Communist Party in Venezuela is not new at all. In fact is the oldest party organized in the country and its foundation goes as far back as 1931 during the regime of Dictator Gómez. The party has shown a tendency to be favored in its development and growth under dictatorial regimes. During the iron hand dilapidating administration of Pérez Jiménez, the party became stronger, because its ideas and goals could not be fought in the progressive social field of a democracy.

In a democratic form of Government the Communist cannot offer social advantages

not already granted by that type of government. This point will in all probability be proved in Venezuela once a democracy is permanently established. To defend this democracy we Venezuelans have brushed aside all other minor problems. It is our main objective to elect a constitutional president and to start the country on the path of democratic life which means the recognition of everyone's duties and the respect of everyone's rights. We intend to form with the nations of the free world and, especially, with those of the Western Hemisphere, a strong bloc of nations united by a common ideal of peace and respect and progress. Venezuela is eager to help its sister nations with its human resources as well as with its natural resources. We are aware that we have an important role to play in the American continent but, for this we need a permanent democratic form of government. To achieve this type of government Venezuela cannot destroy its unity at this moment. A more important thing is at stake. Later, once a constitutional government is formed and the country goes back to the normal exercise of a democracy, the political struggle in the country will take care of any sharp edges that might be dangerous to the democratic life of the country or imperil its friendly relations with countries in the continent and in the free world.

On the other hand, the Communist Party in Venezuela is not as strong as Mr. Allen and others have presented it. During the 1946 elections the party, the oldest organized political body in existence, only obtained 50,000 votes against 150,000 votes favoring the Social Christian Party (Copei) which at the time was the youngest political fraction. We are positive that in the coming elections the Communists will have comparatively less votes than in 1946.

The world has witnessed in Venezuela, just a few days ago, a nationwide rejection of the policy of the coup d'etat. It means that the policy of the military push to overthrow a democratic government has become obsolete and old-fashioned and that Venezuela is decided to protect its democracy above all things. It stands to reason that if the Communist Party would plot against the Venezuelan democracy, the nation would again stand up and fight. Venezuela would not accept any kind of dictatorship.

Mr. Allen says that "even the Roman Catholic church, often the spearhead against communism, is highly cautious in Venezuela. Only occasionally is there the mildest reference to Venezuelan communism in the church's organ La Religion." Again this is not accurate. The newspaper known as La Religion has always given the Communist inside and outside the country the bitterest of attacks. In the past few months, after the defeat of the opprobrious regime of Pérez Jiménez, several editorials and articles have been published in said paper to combat Communist ideas and principles. If it is not done more often it is because the Communists are ultracautious to avoid criticism. It is to be remarked that the newspaper La Religion, through its editorials and articles, was the leading opposer of Pérez Jiménez' regime.

From Mr. Allen's report one is lead to think that the whole Venezuelan armed forces are plotting against the Government because of its disapproval of Communist influence and infiltration. This is absolutely erroneous as it is proved by the attitude of the Venezuelan Navy and Venezuelan Air Force during the last failed coup. As for the army, only a very small minority of officers had a hand in the attempted coup. It can be affirmed without the least of doubts that the armed forces in its totality are loyal to the cause of democracy. It is to be remembered that the Communist Party exists in other countries of the continent. Its ideas are best fought through public opinion. After all, the best way to do it is by making its members stay in the open where it is known what they do. Moreover, if something against the country stability is tried by them, then our laws and courts will take care of it as it is done in this great country of the United States.

Reports as this of Mr. Allen are in more than a way harmful to neighborly relations between countries of the American Continent. They create distrustfulness and are destructive. Economic relations are impaired and no one profits by it. It is really impossible to understand why anyone would not feel inclined to lend a hand to a country tenaceously and firmly decided to establish a permanent democracy.

Before closing, again may I express to you that the Venezuelan Embassy counts on you as one of its best friends and that your assistance in this matter will be highly appreciated.

With best regards and the deepest of feelings of sincere friendship, it is a pleasure to remain,

Very truly yours,

EDUARDO A. ACOSTA H.,
Chargé d'Affaires ad interim.

Largest Scholarship Fund Ever Received by University of North Dakota

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 12, 1958

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the Grand Forks Herald, of Grand Forks, N. Dak., regarding the largest scholarship fund ever received by the University of North Dakota. This contribution was made by the Honorable Maxwell Upson, a former North Dakota resident, who is now the chairman of the board of Raymond International, Inc., one of the world's largest construction firms.

As the senior Senator from the State of North Dakota, I am extremely grateful to learn of this significant contribution which will enable many deserving young people to attend the University of North Dakota, and on behalf of the State of North Dakota, I extend to the Honorable Maxwell Upson our sincerest thanks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LARGEST UNIVERSITY SCHOLARSHIP RECEIVED

The largest scholarship fund ever received by the University of North Dakota has been donated by Maxwell M. Upson, prominent New York construction engineer and university alumnus.

Upson, who grew up on a farm near Cummings, N. Dak., received a bachelor of arts degree from the University of North Dakota in 1896 and an honorary doctor of engineering degree from the University of North Dakota in 1931. He is chairman of the board of Raymond International, Inc., one of the world's largest construction firms.

A trust has been established with the United States Trust Co., of New York, the income from which will provide $8,000 a year in perpetuity. Consisting of 16 annual scholarships of $500 each, the program will begin this fall with grants for the 1958-59 academic year.

In announcing the gift, Upson said, "I hope this effort will stimulate a raising of standards for the student body and provide more good citizens to take the responsibilities of the coming generations."

FUTURE LEADERS SOUGHT

Stipulating that preference in selection be given to North Dakota residents, the trust agreement said "the grantor desires to initiate a program designed to search out, preferably in the schools of North Dakota, young men and women who possess the greatest overall promise of future leadership, and to provide a money award to attract them to the University of North Dakota and help defray the expense of their education and to secure for them the benefits which that university can confer upon them."

PRAISED BY STARCHER

The Upson scholarships will be granted on the basis of need, mental competence, dependability, character and motivation, acceptance by contemporaries, capacity for leadership and a sincere intention to complete 4 years of study at the University of North Dakota.

Dr. George W. Starcher, university president, in accepting the gift, said "this scholarship program is going to inspire new hope for many worthy youth of North Dakota, advance the quality of the work of the university and be a peak of excellence in our 75th anniversary year."

Gov. John E. Davis said, "this is a very significant gift to the people of the State of North Dakota. I am impressed by the vision which Dr. Upson has shown in establishing this living symbol of encouragement for worthy boys and girls throughout the years ahead."

J. Lloyd Stone, university alumni director, stated, "Intelligence, character, and resourcefulness are not distributed to our young people in accordance to the wealth of their parents. This belief of Dr. Upson's has been nobly demonstrated in the establishment of the scholarship fund. Alumni of the university express sincere thanks to one of their most loyal graduates."

MEETS REAL NEED

Dean D. J. Robertson, secretary of the university scholarships committee, said: "The gift meets a real need. Our committee knows from experience how many good students there are who need help and how deeply appreciative these students are of the help they get."

Loyde C. Thompson, Grand Forks, national chairman of the university development fund, said: "Dr. Upson's generosity will make it possible for many North Dakota young people to attend the university who might not otherwise be able to do so, and for the university to attract a higher type of student. In all the years to come the recipients of his scholarships, the university and people of our State will be grateful to Dr. Upson for his great gift to his alma mater."

Administration of the fund will be handled by the university scholarships committee. Inquiries should be sent to Robertson's office at the University of North Dakota.

BORN IN MILWAUKEE

Upson was born in Milwaukee, Wis., and at the age of 5 moved with his family to a North Dakota wheat farm north of Cummings. He received his early education from a minister who lived with his parents and at the age of 13 went to Grand Forks to continue his schooling.

After receiving his bachelor of arts degree at the University of North Dakota he went to Cornell University, where he received a mechanical engineering degree in 1899. He then became a managing engineer with Westinghouse, Church, Kerr & Co., of New York, and while there invented and patented an automatic gas producer, and designed and built

the first reinforced concrete industrial building.

In 1905 he joined Hockanum Mills Co., of Rockville, Conn., as chief engineer and assistant to the president. During his 2 years with the firm, he was responsible for the development of the first all-reinforced concrete textile mill.

JOINED CONCRETE FIRM

In 1907 Upson began his career with Raymond International, then known as Raymond Concrete Pile Co., serving as secretary-general manager and chief engineer. In 1917 he became vice president; in 1931, president; and since 1946 has been chairman of the board. He continues to devise new applications and equipment for concrete construction.

In 1957 the UND Alumni Association awarded Upson a distinguished service citation for "distinguished achievements as a construction engineer, inventor, administrator and humanitarian."

He is a member of several professional societies, including the American Society of Mechanical Engineers and American Society of Civil Engineers, and of various advisory groups, including the Committee for Economic Development. He has contributed several writings in the fields of engineering, economics and social science.

Upson is widely traveled, having represented his company in Europe, the Orient, and South America and other countries.

Missile Mobility

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES

Tuesday, August 12, 1958

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting article entitled "Missile Mobility," written by Maj. Patrick W. Powers, and published in the magazine Ordnance for July–August 1958. Major Powers is currently studying at the Army Command and General Staff College, Fort Leavenworth, Kans.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MISSILE MOBILITY

(By Maj. Patrick W. Powers)

Recent events have highlighted the vulnerability of our proposed bases for long-range ballistic guided missiles. Such large fixed installations will be constructed in overseas areas and within the continental United States for the intermediate-range and intercontinental ballistic missiles (IRBM's and ICBM's) which are rapidly approaching the troop-testing stage.

Several NATO nations already have expressed concern over establishing such prime atomic targets in their countries. A few military analysts, notably George Fielding Eliot, have commented on the susceptibility to attack of these bases when they become fixed structures as compared with the relative immunity of a mobile, shipboard missile base.

The problem is recognized, then, as one which influences the future effectiveness of this new weapon. Friendly nations do not want to risk nuclear attacks on these bases, and we may never be able to fire a missile in retaliation if its launcher is neutralized by a sudden surprise attack. A solution to this perplexing situation is to make the ballistic missile base mobile on land.

The present concept for these potent carriers of mass-destruction warheads is a true weapon system approach. This includes all the related equipment, materials, services, and personnel required solely for the operation of the weapon so that this instrument of combat becomes a self-sufficient unit of attacking power within its intended operational environment.

Specifically, the weapon system can be broken down into (1) a base of supporting equipment and facilities, (2) the firing platform or launcher and its integrated equipment, (3) the delivery means, or the missile in this case, and (4) the payload or warhead.

All these system components are to be concentrated in a large area of unusually complex installations and manned by technicians who will groom the missile for its destructive mission. The cost of such a base—some of it underground—has already been estimated by the Department of Defense to be over $100 million. This will include liquid-oxygen generators, fuel-storage tanks, check-out and electronic missile gear, and huge cranes and lifting devices.

Peculiar to the base itself will be thousands of tons of concrete, air-conditioning and heating units, hinged steel doors, self-sufficient, radiation-proof living quarters for the crew, Geiger counters, and automatic alarm systems.

Some of this equipment is absolutely necessary for the missile weapon system while the rest of it results strictly from the permanency of the installation—and the resulting invitation to attack by the enemy.

This is the ballistic missile system that represents the latest means of firepower designed to achieve mass destruction of targets. In the strictest sense it is still a weapon—and all weapons are subject to attack. The best enemy defense against such a threat—whether it be nuclear, chemical, biological, or high explosive—is the detection and destruction of the source. In this case, the source is the launcher and its base of supporting equipment.

There are several conventional military examples of this doctrine. Land forces strive to neutralize enemy artillery before a combat operation so that the maneuvering troops can assemble and launch the attack with the least amount of interference. The search for atomic delivery means will be especially vigorous on any future battlefield.

Naval forces must attack enemy ships, surface, or undersea, whose means of weapon delivery threaten the sea lines of communication. The Air Force is committed to aerial counterattack in the initial stages of a war before its aircraft can seek selected tactical targets. These attacks are directed against aircraft, which represent firing platforms, and airfields that are the supporting bases.

What are the means of attacking the missile launcher and its support base? First, there is the obvious type of attack by enemy missiles and aircraft. This might very well be accomplished by an atomic detonation in the installation area. Secondly, a covert attack by enemy agents or guerrillas could easily cripple the vital innards of the complex missile machinery. This would be a more subtle and equally effective method—just the right cable, severed in two, would insure that a missile would never leave the ground.

Security against these means of attack is difficult to devise. There is no problem of detecting the launcher and its base, because in this instance they are permanent. The location is widely known from news mediums and the knowledge of the local population harboring enemy agents or sympathizers. This same problem squarely faces the Strategic Air Command bases and the established military depots around the world. Active air defense including antiaircraft and antimissile elements for this type of installation is possible but costly in both critical materiel and money.

Protection against the covert threat of enemy agents is just as difficult. These bases will employ many foreign civilians, and screening of such personnel is always a problem. The presence of any civilian within a hand grenade's throw or even a mortar's range of the installation may be dangerous. Sabotage, then, will always be an eminent threat.

Normal passive security from enemy attack for any weapons system includes protection by terrain features, dispersion of equipment, camouflage, and the mobility of the firing platform. Mobility is the decisive ingredient of a weapons system that enhances its offensive combat capabilities while at the same time affords a positive defense against attack.

In military terms, weapon-system mobility is the rapid shifting of firepower. It has been a prime prerequisite of artillery through the centuries and is listed as one of the principles of war. Mobile firepower combined with the maneuver of troops has won battles from the time of Caesar to the war in Korea. But the mobility of firepower has also meant security (another principle of war) from attack for the particular weapon system used. This is the aspect of employment that will be so vital to the ballistic guided missile.

An analysis of the mobility of a weapon system discloses some interesting facts. The system has previously been defined in a general sense as composed of a base of support equipment, a firing platform, a delivery means, and a payload.

As an example, the infantry soldier is part of a weapon system. He is actually the firing platform supported by the base of supply facilities of his company. The delivery means is the rifle he carriers that shoots a payload of a quarter-ounce steel-jacketed chunk of lead.

The mobility of this weapon system depends on the firing platform which moves into battle at an average rate of 2½ miles an hour and which can take rather definite protective measures once its location is detected by enemy firepower.

A more sophisticated land weapon system for comparison is the Honest John rocket. It is supported by a mobile firing organization of battery or battalion size. The firing platform is a standard 5-ton Army truck on which is mounted a simple rail launcher. The delivery means—the 27-foot, 3-ton rocket—carries a payload of an atomic or conventional explosive warhead. The mobility of this system is that of the truck launcher which can easily negotiate most types of terrain and move rapidly from one firing point to another to prevent being located by the enemy.

Much attention has been focused lately on naval ships as a mobile component of a weapon system. Obviously, a ship can provide a sea-mobile supporting base for an aircraft that can be considered as the firing platform for a bomb type of delivery means. The bomb carries a payload of a wide variety of mass destruction elements.

The most widely heralded application of ballistic missiles by naval means is the submarine-fired missile. Here the firing platform and the supporting base are on the submarine itself, while the delivery means is the rocket, such as the Navy's Polaris, with a nuclear payload.

It is important to note that unusual mobility exists in the capabilities of the atomic submarine, giving this weapon system a definite tactical and strategic advantage over a surface ship, both offensively and for its own security from attack. However, the problem of precisely determining any location at sea must be solved before this weapon

system can accurately deliver a warhead on a land target.

While an aircraft has the greatest mobility of any manned vehicle, its land-based airfield has none. This is an important fact for this discussion because, for the first time, the supporting base of equipment is fixed while the firing platform is extremely mobile.

The aircraft by its mobility can deliver a tremendous assortment of payloads by dropping them on a target. If enemy firepower seeks to destroy it, the aircraft can escape through its control of the time and distance factors of speed and maneuver. In contrast, the airfield is fixed and as such can be accurately located by the enemy and attacked by any one of the methods outlined previously.

Three important points have been emphasized so far by this analysis: (1) In an offensive weapon system, the firing platform is always mobile and its support base is usually mobile; (2) An effective firing platform is mobile to accomplish its mission and for its own security from attack; and (3) A mobile support base has the best chance to survive enemy attack because it is difficult to locate.

Now how does this apply to the present ballistic missile concept? It simply means that the missile base and its launcher should be mobile to exist on the worldwide battlefield of the IRBM and the ICBM. However, this is not being planned for our Thor, Jupiter, Atlas, or Titan systems. These systems will be established in fixed installations, some of them partly underground.

To illustrate the point, the British have announced lately that their ballistic missile under development is superior in many respects to United States systems because theirs can be fired from an installation completely underground. These concepts seem to violate the aspects of mobility as applied to any weapon system.

Although the long-range ballistic rocket is 15 years old in the history of warfare, the German V–2 is still the only weapon of this type which can be examined for the principles of employment in combat. It was designed to be transportable over the German railway system, and consequently part of the support base was restricted to the supply of missiles by flatcar and the transport of propellants (which included liquid oxygen) by tank car. The rest of the support and handling equipment, including the missile transporter and launcher, was moved by truck. In this case the firing platform, and to a lesser degree the support base, were mobile.

This limited mobility, nevertheless, reduced the effectiveness of the countermeasures that the Allies employed against the V–2. Following established doctrine, they attempted to detect and destroy the launching sites. This was relatively ineffective because the launcher was mobile and could be set up on any hard stand of ground.

Once the rocket was fired, the firing unit moved to a new location, often in towns or woods. The radius of action was restricted somewhat by the proximity of a railhead although, fortunately for the Germans, Europe has an unusually dense railroad network.

Factories, laboratories, and assembly points were bombed, but the firings stopped only when the launching areas were seized by the advancing allied land forces. It is still an amazing fact that this weapon was successfully employed under conditions of overwhelming allied air superiority and in an occupied country hostile to the Germans.

The V–2 was a primary target because of its tremendous effectiveness against British cities and the British people, even with what is considered today to be an ineffective warhead—less than 1 ton of TNT.

Perhaps the most significant lesson learned from the history of the V–2 is how mobility played such a vital part in the security from attack for this weapon system. All suspected launching sites were attacked by all available means, but since the launcher and its support base were mobile, these countermeasures were ineffective.

The Germans had well learned their lesson from the employment of the V–2 after its initial launching sites were destroyed because they were permanent, easily located installations.

The corollary of this discussion is that security lies in mobility for any firing platform and its supporting base. It appears that this principle should apply equally well to any modern weapon system—which certainly includes the long-range ballistic missile. If this is the case, then our present concept of employment of this system needs to be reexamined.

Even a cursory investigation into the support equipment of a missile that, fully fueled, weighs from ten to one hundred tons discloses the requirement for large pieces of handling gear that can accommodate size as well as tonnage. Yet the empty missile weight seldom exceeds 10 percent of the firing weight in the case of a liquid-propellent rocket. In addition, the rocket body is often made in several sections that can be transported by vehicle or railroad car.

Thus most of the tonnage for any ballistic rocket is in the propellent, which can be shipped in suitable containers for liquids or possibly in sections for a solid propellent rocket. As a result, mobility can be achieved for the ballistic missile as far as tonnages are concerned.

Several ballistic missile systems have already been produced and employed using a mobile launcher and support base. The V–2 weighed about 14 tons fully fueled, and it used rather simple support equipment based on rail and truck transportation. The United States Army's Redstone missile is a more recent example of a mobile system. The missile body is broken down into 3 sections, each hauled by truck and trailer combinations.

The Redstone is assembled at a selected firing site, erected on its small launcher by a simple truck-mounted erection device, and fueled by several liquid oxygen (LOX) and alcohol tank trucks of conventional design. It is interesting to note that the LOX is manufactured by a portable generating plant that moves with the missile support base.

These examples of missile systems illustrate that they can be designed to be mobile. When the tonnage requirements exceed a feasible truck-trailer solution, a railroad-based concept is practical. Standard flatcars have a load capacity of as much as 100 tons, and their volume capacity can meet all requirements for complicated, heavily instrumented electronic and mechanical equipment. The construction of railroads is a normal, logistical function of large military forces which in World War II constructed and rehabilitated thousands of miles of railroad tracks throughout the world.

An almost forgotten example of a railroad-mobile weapon system is the railway gun. The 14-inch naval railway gun car weighed 267 tons, and it was used along the Allied front in World War I. The complete gun battery was made up into a train of 14 cars, and this unit was an efficient, self-contained weapon system. It passed from the military scene not because it was mounted on railroad cars but because more efficient guns were developed for truck transport, and bomber aircraft extended the range of firepower beyond the feasible capabilities of any gun.

Mobility also makes an important contribution to a reduction in the cost of a missile weapon system. The total capability of such a system with fixed launchers depends first upon a network of launching sites, the loss of any one of which reduces this capability.

Second, the density of the target complex that includes the fixed launchers also affects the system capability. This density determines the estimate of the priority of attack on such an area and the effect that such an attack will have.

A mobile launcher system allows a maximum capability in a desired area with a requirement of only a fraction of the number of launchers and support equipment needed for a fixed installation with a resulting decrease in overall cost.

The present ballistic missile systems should be evaluated not only as to cost, range, and accuracy but also as to their effectiveness under actual combat conditions. The missiles and their firing sites will be first-priority targets because any enemy must prevent their retaliatory blows.

The strategic airfields spotted around the world are vulnerable targets, but they achieve some mutual security in numbers. In addition, each airfield supports many mobile firing platforms in the form of the long-range bomber that can take off and land at another base if necessary.

The IRBM or ICBM fixed base enjoys no such advantage. It integrates a support base with a fixed firing platform and its output of delivery means or missiles per unit of time is drastically limited in number. These bases are so expensive that not more than a handful can be constructed. Each one will be easily located and designated for attack by the enemy if he decides to start a general war. Security against a surprise attack is almost nonexistent.

If the missile base is in an allied country, its continued utilization may depend on the political party in power. A change of government or an awkward incident might mean the loss of an expensive and vital installation of equipment to the free world. Likewise, any loss of military control of the missile-base area means the loss of that particular set of equipment.

This rather untenable military position can be avoided if our long-range ballistic-missile systems are mobile—to any degree. Even if the missile and its supporting equipment could be moved in a matter of days or if the system depended on a railway network, a large measure of security could be gained.

This security is absolutely necessary for this weapon system to survive an initial attack and be successfully employed in future operations.

On February 27, 1958, the New York Times stated that a new 500- to 5,500-mile missile system had been approved which envisages underground installations, harboring solid-fuel ballistic missiles, several miles apart to make them less vulnerable to enemy attack.

This latest missile concept also violates the principle of mobility for the support base and its launchers. It should be noted that being underground offers little more security than being above ground because a nuclear explosion can create tremendous overpressures against the installation, and it leaves large amounts of residual radiation in the area of ground zero.

But what can be done about this situation? Remember that none of these fixed bases have been constructed yet and no launching equipment has become operational. This would be the opportune time for industry and the services to take an objective look at our fine ballistic-missile sytems and consider the advantages of mobility as a positive security measure against enemy attack.

Appendix

The Moral Aspects of the Alcohol Problem

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 13, 1958

Mr. NEUBERGER. Mr. President, for me, personally, the nonuse of alcohol has added to my enjoyment and appreciation of life. I am a teetotaler, but I am not a prohibitionist.

The excessive or intemperate use of alcohol is one of the serious social, economic, and moral problems of our times. One of the most important and able leaders in this field of education is Dr. Titus A. Frazee, executive director of the Oregon Temperance League.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD portions of the inspirational and educational address by Dr. Titus Frazee entitled "The Moral Aspects of the Alcohol Problem," delivered to the ninth annual session of the Institute of Scientific Studies for the Prevention of Alcoholism at Loma Linda, Calif.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE MORAL ASPECTS OF THE ALCOHOL PROBLEM

(By Titus A. Frazee, executive director, Oregon Temperance League, Portland, Oreg.)

Four hundred years before Christ, Socrates may have passed judgment on the lecturers at the Institute of Scientific Studies for the Prevention of Alcoholism.

Said Socrates: "The partisan, when he is engaged in a dispute, cares nothing about the rights of the question, but is anxious only to convince his hearers of his own assertions."

We are not here for a debate, but each of us recognizes we are discussing, perhaps, the most controversial subject of the century. I'm also willing to freely admit, I want to convince my hearers.

* * * * *

So I plead guilty to a portion of the Socrates indictment, if indictment it be, and state that because I do care so very much about the rights of the question I would love to convince my hearers—or I would have stayed in Portland.

THE CURRENT MORAL CLIMATE

Kierkegaard has said: "To venture causes anxiety, but not to venture is to lose one's self * * * and to venture in the highest sense is precisely to become conscious of one's self."

Psychologists are in basic agreement that the chief problem of people in the middle decade of the twentieth cenutry is emptiness. So many people not only do not know what they want; they often do not have any clear idea of what they feel.

They lament their inability to make decisions; they feel swayed this way and that with painful feeling of powerlessness but their underlying problem is that they have no definite experience of their own desires or wants. One person put it: "I'm just a collection of mirrors, reflecting what everyone else expects of me."

* * * * *

Many people could say out of their own inner experience the prophetic words T. S. Eliot wrote in 1925:

"We are the hollow men
We are the stuffed men
Leaning together
Headpiece filled with straw. Alas.
Shape without form, shade without colour,
Paralyzed force, gesture without motion."

* * * * *

But this emptiness, this hollowness, is cropping out in many different ways in our society. David Riesman, in The Lonely Crowd, finds the same emptiness in his fascinating analysis of the present American character. * * *

But the present typical American character, Riesman goes on to say, is outer-directed. He seeks not to be outstanding but to fit in; he lives as though he were directed by a radar set fastened to his head perpetually telling him what other people expect of him. This radar type gets his motives and directions from others. * * *

WE START WITH OURSELVES

* * * * *

William James once remarked that those who are concerned with making the world more healthy had best start with themselves. We could go farther and point out that finding the center of strength within ourselves, which we can find only through a power above and beyond ourselves, is in the long run the best contribution we can make to our fellow men.

* * * This is what our society needs—not new ideas and inventions, important as these are, and not geniuses and supermen, but persons who can be, that is, persons who have a center of strength within themselves. It is our task, in this brief hour to sense this need if we are to successfully challenge the alcoholic and the alcohol problem. We should not attempt to delve into the moral aspects of the alcohol problem without some such minimal background.

THE SCAPEGOAT OF REHABILITATION

Dr. Selden D. Bacon, lecturing at the Yale University School of Alcohol Studies in 1948 said: "Both the ethical and the therapeutic approaches to the problem of alcoholism must be based on an understanding of alcohol, drinking, and the physiology and psychology of the human being. Many of those who attempt to control alcoholism are like those who attempted to control lightning without knowledge of electricity."

Dr. Bacon is correct. But in my concept of the real problem, Dr. Bacon has only half said it. * * *

* * * In dealing with the problem of alcoholism, we already know more than we do. Knowing is not our problem.

As I have traveled this Nation from coast to coast, both as a student and as a lecturer in this field, I have reached the conclusion that the number one moral aspect of the alcohol problem is the all-too-prevalent assumption that rehabilitation is the answer. * * *

ARTIFICIAL GULF

Nor do I accept the great gulf fixed between the problem of alcohol and the problem of alcoholism. Many do. I cannot join in that emphasis, believing it to be the most deceitfully dangerous doctrine with which men are being duped and damned.

* * * As I returned to my study I picked up the evening edition of the morning Oregonian. One of the standout headlines read "Man Dies on Curb in Crash." The man turned out to be a 17-year-old Portland boy who was standing on the curb in front of his home. A 63-year-old man struck the youth's parked car with his own, which then hit the victim, killing him instantly.

* * * * *

My point in breaking in on this dignified paper with this current drinking-driving tragedy is that it is of little consequence to the family of the boy who was killed by the unguided missile whether the man who killed their son was an alcoholic or not. The moral implications are just as clear and just as grave, whether the driver was "high" from an office party where men and women of distinction had had just a few drinks to limber up, as though he were an alcoholic with 20 years of binges to his credit.

THE MORAL PERIL OF PSEUDO-OBJECTIVITY

Ralph Daniel, executive director of the Michigan State Board of Alcoholism gave a highly informative lecture at a workshop-conference on alcohol education and alcoholic rehabilitation in March of this year. He was brilliant and witty in his portrayal of his client—Ethyl Alcohol. The lecture was presumed to be objective. Please listen to the pertinent paragraphs of his presentation, So This Is Ethyl. * * *

"Ethyl was a child of Mother Nature. Paternity was never established, and some believe that she is illegitimate. * * *

"Many of the events of her early life are documented. She had an affair with Noah. Following the great flood Noah cultivated her friendship in the form of a vineyard. On at least one occasion he partook too freely of the fruit of the vine which had been either blessed or cursed by Ethyl, and in a drunken condition he disgraced his family.

* * * * *

"* * * People came and went, but Ethyl carried on unchanged until about the 11th century when she met a young Frenchman by the name of De Still. The courtship was short and they were united in 'holy matrimony' with benefit of science if not with benefit of clergy. There are some people who insist that they were united in 'unholy matrimony' but the fact that their offspring were known as 'Spirits' makes me believe that it must have been 'holy matrimony.'

* * * * *

"And so society drank a new toast to the Ethyl-De Still combination and it was potent.

"The people of the world began to formulate definite attitudes toward Ethyl. It became apparent that she was here to stay, and there have evolved four classes of opinions. * * *

"The first class of opinion is made up of people who believe that Ethyl is all bad and has no good qualities. * * *

"There are others in this first class who are so convinced that Ethyl is exerting a dangerous effect on all who come in contact with her that they feel it their social responsibility to banish her from the lives of others as well as their own lives. These people have adopted a who-needs-you attitude toward Ethyl.

"The second general attitude in Ethyl's environment is one of social acceptance

within certain limits. These people invite Ethyl into their homes and to their parties and meetings. Still they have some rules for her conduct. * * *

"These people enjoy a social acquaintance with Ethyl. These people claim a right to associate with her. They, more than the other three groups, are responsibility for the availability, and accessibility of Ethyl. She owes her existince to this group.

"The third general attitude about Ethyl is held by people who were originally found in the second group. On certain occasions these folks get carried away with Ethyl. Most of the time these people associate with Ethyl in socially acceptable ways, but at times they become intoxicated with her charms. * * *

"These are the people who have an occasional affair with Ethyl.

"The fourth group of attitudes about Ethyl is made up of an estimated 4 million souls in this country who have become so involved with Ethyl that their whole lives revolve around her. * * * The experts label these people as sick people, because of their uncontrollable drives to be with Ethyl and their inability to see the catastrophe that is ruining their lives.

"And so we see the four most important factors in Ethyl's life. First are the people who say 'Who needs you?' Second, those who socially acquaint with Ethyl. Third, those who have an occasional affair with Ethyl. And last, those who try to keep going steady with Ethyl.

* * * * *

"Ever since Eve first convinced Adam that no harm would come from eating the forbidden fruit, we men have been having trouble with our women. We can't seem to get along with them and we can't get along without them. * * *

"Thus it is with Ethyl."

I have given you in this portion of our consideration of the Moral Aspects of the Alcohol Problem direct quotes from Ralph Daniel's lecture to which I referred earlier. It has not been taken out of context and would, I am sure, be considered a fair condensation of his total paper So This Is Ethyl?

We hear the word "objective" applied to many such speakers and writers. It has occurred to me that one of the most immoral aspects of the alcohol problem is to have passed off as objective that which is patently partisan.

Going back to Mr. Daniel's description of Noah's experience, he refers to "the fruit of the vine which had been either 'blessed' or 'cursed' by Ethyl," it isn't spelled out, but the thought is implanted: beveraged alcohol has been a curse but it can be a blessing.

Again in reference to the marriage of Ethyl to the Frenchman by the name of De Still, it is a marriage in "Holy Matrimony" because their offspring are known as "Spirits" and consequently he cannot go along with those who would call it "Unholy Matrimony." Objective?

Still another, "It became apparent that she was here to stay." Could this analysis possibly have a tinge of wishful thinking in it—any subtle planting of the germ of "we have it; we need it; we're going to have it; almost everybody wants it; it may do some damage but we must learn to live with it?"

Repeatedly this would-be objective authority uses the phrase "so satisfying are her charms," failing at any time to add the sequel, "At the last it biteth like a serpent, and stingeth like an adder." I shall never forget a cryptic comment made by Dr. Arthur Bietz at the second session of this Institute: "Danger is never in a lie; it is always in a half-truth."

We find such phrases as "the experts label these people as sick people"—with the implication that they have uncontrollable drives to be with Ethyl because they are sick—not because Ethyl is a drug.

Dr. Karen Horney warns, "Freud's discarding of moral values has contributed toward making the analyst just as blind as the patient."

And, finally, the analogy that "ever since Eve first convinced Adam no harm would come from eating the forbidden fruit we men have been having trouble with our women. We can't seem to get along with them and we can't get along without them. * * *"

The colossal effrontery, the unmitigated gall of a man making distilled liquors and my wife syonymous in our American culture. Could a public relations counsel for the distilleries do any more effective lobbying for the votes of the people than this man has done, not employed by the distilleries, but appearing as an objective authority? "Here are men" he tells us "who have found the burdens of life unbearable and glamorous Ethyl has soothed their fevered brow and made life bearable * * *."

* * * * *

SIN OR SICKNESS OR BOTH?

To the person concerned with the ethical dimension of living it is not satisfying to stop on the bold assertion that alcoholism is a sin, or that it is a sickness. Every personal and social problem is also a moral problem.

From the questionnaires returned by the ministers who attended the Yale University School of Alcohol Studies, Howard Clinebell, Jr., found not only a considerable variety of opinion but also some confusion regarding the nature of the ethical problems involved. Here is an evaluative summary of some of the more frequent conceptions:

1. Alcoholism is a sin and not a sickness. * * *

2. Alcoholism begins as a personal sin and ends as a sickness. This would seem from the questionnaires to be one of the most common views held by clergymen. * * *

3. Alcoholism is a sickness which involves the sin of abuse. This is among others the Roman Catholic point of view. The sin is the sin of excess involved in becoming and remaining an alcoholic.

4. Alcoholism is a sickness which is caused by a combination of factors involving both sin and sickness. This is the view of many ministers and of Alcoholics Anonymous, though Alcoholics Anonymous takes no sides in the matter and does not regard drinking as morally wrong.

5. Alcoholism involves sin in the sense that it has destructive consequences. One minister wrote: "It is a sin in the sense that it detracts from his relationship with God, his family, and his community." * * *

COMPULSIONS

In this summary, the opinion is also given that "the alcoholic is a compulsive person even before he becomes a compulsive drinker." In the thinking of your speaker today is another half-truth. This is not to deny the scientific fact that some alcoholics are compulsive persons, even before they become compulsive drinkers. It is to emphasize that some alcoholics are compulsive persons before becoming addicted and others become addictive drinkers through the process of drinking.

Outstanding in the field of psychologists who have devoted themselves to the study and treatment of alcoholism is Dr. Charles H. Durfee. Dr. Durfee is quite certain that "No one is born an alcoholic and there is no such thing as an alcoholic type." * * *

Dr. E. M. Jellinek, former director of the Yale School of Alcohol Studies and currently Director of World Health Organization, said "Neurotic or diseased personalities. * * * probably constitute 40 percent of the inebriate population; but 60 percent come to alcoholism from an entirely normal origin and only in the course of drink. They are not seeking release, they are conforming to certain habits of their set."

REPRESSIONS AND MORALS

There are authorities and millions of followers of those authorities who believe that man should not be repressed; that man, consequently, should take a drink if he desires a drink.

* * * * *

* * * Discipline and restraint are viewed as harmful to the character. "Be self-expressive; religion and morality are destroying your personality."

Bishop Fulton J. Sheen counteracts this school of thought when he says, "If a man is really made better and saner because he gives way to his sexual instincts and is uninhibited by the Christian law of life-long marriage, why should not a man be better because he gives way to other instincts, such as the hunting instinct? Why not organize a kill your enemy hunt, uninhibited by the moral taboo of a Fifth Commandment? * * *"

Fulton Sheen fails to make the application, but it is our considered opinion that the analysis the bishop has made regarding sexual instincts and morals must also be applied to men's attitudes and actions regarding alcohol and morals.

* * * * *

MORAL NOT DIVORCED FROM SPIRITUAL

* * * Everyone here, I suppose, has been greeted with the friendly salutation "What do you know for sure?" And its implication is that there is very little a man can be certain of, can know for sure. The psychologists write books telling us how to get washed without getting wet, while some preachers turn their pulpits into distributing centers for soothing syrup and aspirin.

* * * * *

"What do you know for sure?" I know that moral distinctions are real and I know that our labors must be rooted and grounded not merely in logic but in love.

* * * * *

I shall ask God to give us grace to hold before our eyes the broken body of our Lord and Master who throughout his ministry kept taking out the sin rather than taking it out on the sinner. I will add the prayer that we may be compelled by the compassion of Christ to come to Him in contrition with our carnal lives, not just to be corrected but to be conquered; that His redemptive power will be revealed in us that we may not only have some small part in the solution of the alcohol problem but in the overall problem of mankind itself which alcohol complicates.

Mr. Philadelphia Republican

EXTENSION OF REMARKS

OF

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1958

Mr. GREEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Sunday Bulletin dated August 10, 1958:

MR. PHILADELPHIA REPUBLICAN "AUS" MEEHAN ALWAYS KEEPS HIS WORD AND, IN POLITICS, THAT MAY BE BAD

(By John C. Calpin)

Speaking as an individual, we think that the honor being paid to Austin Meehan by

the Republicans on September 7 is long overdue.

The GOP city committee and a group called Friends of Aus Meehan are holding "Aus Meehan Day" at Willow Grove Park for "Mr. Philadelphia Republican."

This is the first time he has been so honored. Friends say he has turned thumbs down on past efforts to hold dinners and similar affairs for him. This year, they wouldn't take no for an answer.

If there is any gratitude and honor among the 3,100 committeemen and the other party workers and members, a huge crowd should be there.

For years, the openhanded "Sheriff" has been pouring out his own money for the party (or his faction of it in primaries) with little tangible reward.

THIRTY-FIVE YEARS IN POLITICS

He has held 2 offices in his 35 years in politics: a short tenure on the registration commission and a term as sheriff. While he was sheriff, he literally gave his salary away. The "payroll" and the sycophants were there on payday, waiting with palm outstretched for alms. Probably it cost him twice as much a year to be sheriff as his salary brought in. This was aside from his political campaigns.

As a paving contractor, Meehan has not needed the political jobs but took them as part of the game. And what may seem strange to some people, he has had as many paving contracts from the Democratic administrations as he had under the Republicans. Last week, he was low bidder on $589,000 work on Chestnut Street.

For several years now, Meehan has been the principal "angel" for the upkeep of the GOP city committee.

INDEPENDENT CRITICS

The GOP outsiders who sneer at him and what they consider his pretensions to the leadership never paid a dime, or as the boys say, in the vernacular, "a fishcake."

Because they had become infected with the poison spread by Democratic campaign orators of the past, these independents look down their noses at the man who made his money the hard way and spends it freely on his hobby. They would like to have a scapegoat.

These are the people who think that he should step aside as leader, because of recent GOP defeats. Others ask why that should be, and ask also whether or not the reason for the defeat doesn't lie elsewhere. They point out that Meehan was the original Eisenhower backer in the local GOP in 1952 and delivered his delegates early for the general.

Some of the State GOP leaders don't like it that Philadelphia has such a powerful voice in party affairs. They would like to keep it to their own clique of backwoods and rural leaders—a case of the tail wagging the GOP dog.

MANY IN HIS DEBT

Perhaps others should defend Meehan against these attacks. However, it can be stated that without the rotund "sheriff" there wouldn't be much of a GOP here.

Every committeeman who got his division money on past election days got it because Aus Meehan. Some estimate that he has put up $500,000 for the party over 25 years. The unpaid loans after elections pile up each year.

Perhaps he should not have been a big-time politician, for he has what seems to be a fatal weakness—he is too tenderhearted and forgiving. Also, he keeps his word. That's bad, in politics, according to some.

CHARGES UNPROVED

He has forgiven all but a few of those who have vilified him during his political days, when he was made a whipping boy by the Democrats, who, to this day, have never proved a single thing that they said about him.

Certainly, he was a politician, and certainly, he made deals, and certainly, he doled out patronage. But they never proved he profited thereby.

The committee in charge of the day has had 15,000 tickets printed, to be distributed to the various wards. These tickets are $5 a family, $3 for an individual.

A Momentous Journey: Latin American Tour of the New York Philharmonic Orchestra

---

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, August 13, 1958

Mr. JAVITS. Mr. President, from April 27 to June 16, 1958, the New York Philharmonic, under the sponsorship of the President's Special International Program for Cultural Presentations administered by the American National Theater and Academy—ANTA—gave 39 concerts in 21 cities in 12 Latin American countries. This program is made possible by congressional appropriations. The orchestra, conducted by Leonard Bernstein and Dimitri Mitropoulos, was received with acclaim wherever it played.

At each concert the Philharmonic included in its program at least one work by a United States composer and often a work by a Latin American composer. Music, it has often been stated, is an international language. The recent Latin American concert tour by the New York Philharmonic has served to reemphasize this fact by the genuine good will engendered in our sister republics to the south and the building up of their respect for our cultural achievement so important to them.

I ask unanimous consent to have printed in the RECORD a letter from President Eisenhower commenting on the tour, and a report of the tour by David M. Keiser, president, New York Philharmonic.

There being no objection, the letter and report were ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,
Washington, July 8, 1958.

Mr. DAVID M. KEISER,
President of the Board, the Philharmonic Symphony Society of New York, New York, N. Y.

DEAR MR. KEISER: The reports of the New York Philharmonic Orchestra's tour of Latin America have been very gratifying to me. It was heartwarming to learn that this splendid orchestra was received with acclaim wherever it performed.

By sharing with our neighbors to the south the skills of one of the great orchestras of our country, we have drawn closer to the ideal of mutual understanding and friendship which is our goal. I am especially glad to know that the success of the orchestra's mission, founded on the fine musicianship of each member of the orchestra and of the brilliance of the conductors, Dimitri Mitropoulos and Leonard Bernstein, was further enhanced by the personal friendliness and warmth of the conductors and musicians.

Please convey to the members of the orchestra and to Maestros Bernstein and Mitropoulos my hearty congratulations for their excellent accomplishment of an important undertaking.

Sincerely,

DWIGHT D. EISENHOWER.

NEW YORK PHILHARMONIC TOUR OF LATIN AMERICA

The 7-week tour of Latin America by the New York Philharmonic was greeted as a momentous happening by each of the 12 countries visited. In city after city the concerts were called the most important artistic events of recent times, and in several instances the most important in the history of the country. The orchestra's visit was also welcomed everywhere as an act of good will on the part of the United States Government and of the people of the United States.

Audiences in unprecedented numbers packed into theaters, open-air amphitheaters, and even great arenas heretofore dedicated to popular sports events. The Philharmonic's activities and its extraordinary successes were day after day reported on the front pages of the press. Ovations were described as delirious, frenetic, interminable, and without recall in our memory. The rapid sellout of tickets often created special public problems for local sponsors as literally thousands had to be turned away from box offices. In one capital city people brought food and mattresses and slept on the sidewalks 24 hours prior to the opening of the ticket sale; in another, crowds even tried to break down the doors of the overfilled theater and stop the concert if they were not allowed admission. Editorials calling for greater protection of public safety appeared in some cities after theater entrances, aisles, and backstage areas had been jammed with standees throughout a concert.

It was a highly moving experience to be present when thousands of students cheered and stamped in wild enthusiasm in Santiago's Madison Square Garden, the Caupolican; when the initial reserve of the musically sophisticated audience in the Colón in Buenos Aires turned into one of the memorable ovations in the history of that magnificent theater; when the United States national anthem was very notably applauded several days after the unfortunate demonstrations in Lima; when 18,000 people listened in intent silence in the enormous cavern of the Maracanazinho in Rio and exploded into a thunder of applause and cheering after each number, and when many of the audience openly wept as the crowds joined in singing of the national hymn of Brazil at its stirring repeat performance at the conclusion of the program; when great crowds surged about our conductors in the streets after concerts in almost each provincial city in which the Philharmonic played, expressing appreciation that their city had not been overlooked when the trip was planned. These are but a few moments from a tour rich in rewarding experiences.

From the nature, extent, warmth, and spontaneity of public attention and response, it became readily apparent that the impact of this tour would be deep and long-ranging. This was the first orchestra from abroad to visit many of the cities. Its quality of performance will be regarded as a new standard, it was often stated, and local orchestras will no doubt benefit by a stimulated public interest and the prospect of greater local support. Some cities expressed their delight that vast popular audiences had been discovered for symphonic concerts.

This tour came at a moment when evidences of strain in relations with our southern neighbors were being dramatically demonstrated. The welcome given to the or-

chestra was therefore not only gratifying but especially significant. I often heard it expressed that in sending the Philharmonic, the United States was sending its best, and for this symbol of our country's highest achievements there was only universal and heartwarming admiration. Representatives of local governments and of our own foreign missions, as well as private United States citizens living in our host countries, were outspoken in their pleasure at the flood of friendly feeling engendered by the orchestra's presence.

I feel that all who take pride in this Nation's artistic achievements will join me in paying grateful tribute to the officers of the Government and of ANTA who have shaped this international music program, and to the men of the Philharmonic, its two conductors and management who so brilliantly carried through this rewarding mission.

JUNE 23, 1958.

DAVID M. KEISER,
President, New York Philharmonic.

No Need for Panic

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 13, 1958

Mr. THURMOND. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial entitled "No Need for Panic," from the Anderson Free Press of Anderson, S. C., for August 7, 1958.

The editorial succinctly points out some facts which should be borne in mind by every Senator in considering the issue of Federal aid to education.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO NEED FOR PANIC

We have heard much of the alleged plight of the Nation's schools, ascribed to grossly inadequate pay for teachers, inadequate buildings of physical facilities, and other such neglects. The commonly proposed solution is Federal support of education.

Now, however, the Institute of Social Science Research has issued an exhaustive study which reaches very different conclusions. It is signed by Roger Freeman, an acknowledged authority in this field who, among other things, was consultant on school finance to the White House Conference on Education.

Here are some of the points Mr. Freeman makes and substantiates: In terms of cost, education is the largest public service in the country next to national defense. Between 1929–39 and 1955–56, personal consumption expenditures doubled, whereas public-school expenditures tripled. In 1956, we spent $103.94 per capita on education as against $34.17 in Russia. In late years, the number of certified teachers has increased materially more, on a percentage basis, than the number of pupils. In these years, in addition, college majors in education have increased by 33 percent where majors in other fields decreased by 28 percent. The classroom shortage has been greatly exaggerated and is rapidly decreasing.

Finally, in 1957 teachers' pay, on the average, was 94 percent above the 1929 level; earnings of all workers were 82 percent above.

The study certainly does not claim that everything is perfect in education. But it does show that our educational problems have been magnified out of all reason. There's no need to press any panic buttons.

The Development of Atomic Energy

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Wednesday, August 13, 1958

Mr. ANDERSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Congress Is Out in Front of Ike on A-Energy," published in the Louisville Times of August 6, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONGRESS IS OUT IN FRONT OF IKE ON A-ENERGY

Once again Congress has shown itself to be more realistic than the President regarding the Govenrment's proper role in the development of atomic energy. This is reflected in an enactment authorizing expenditure of $386,679,000 for this purpose, or nearly twice the amount Mr. Eisenhower had asked for.

Reluctantly he has signed the bill, but in doing so he has indicated that he may advise the Atomic Energy Commission against going ahead with some of the projects authorized. Biggest of these is a proposed $145 million plutonium-producing reactor which could be converted later to the production of electric power.

This feature of convertibility was fought in Congress by opponents of public power. They saw it as a step toward enlarging the Government's power-production program at some future date, contrary to the administration's so-called partnership policy that gives preference to private utilities. The congressional foes of public power tried unsuccessfully to amend the bill to provide for a reactor plant that could be used only for producing plutonium.

In his statement criticizing the bill, Mr. Eisenhower noted that such a single-purpose plant would cost $25 million less than the convertible type. Yet elsewhere in the same statement he gave what we consider the soundest of arguments for building the dual-purpose plant ordered by Congress, although that, of course, was not his purpose.

What he said was that the Defense Department had advised him that necessity for more plutonium for military purposes has not been established. He went on to say that until this has been done, "I consider it unsound to proceed."

Obviously, in the circumstances, it would be unsound to proceed with construction of a plant which could never be used for anything but the production of plutonium. That's exactly why the majority of Congress followed the advice of the Joint Committee on Atomic Energy and authorized a plant that could be converted to peacetime uses as a producer of electric power if and when military needs for plutonium have been fully met.

It would be worse than unsound, of course, to run any risk of underestimating present or future military needs for plutonium. The bill passed by Congress serves the double purpose of avoiding such risk and at the same time safeguarding taxpayers' investment in an additional plutonium plant by specifying that it be convertible. The additional cost over a single-purpose plant is small in comparison with the investment it would insure against premature obsolescence.

Moreover, there is—quite aside from military demands—an urgent need for this country to step up its development of atomic-generated electric power. We lag badly in this important new field and the reason we do is the administration overreliance on its partnership policy. As Congress has indicated, the Government must assume a bolder role.

Proposal To Ship Surplus Food Abroad

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, August 13, 1958

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Now the Food Out of Our Mouths," from the Manchester Union Leader of Manchester, N. H., of August 11, 1958, which I recommend to all the Members of the Senate and the general public.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NOW THE FOOD OUT OF OUR MOUTHS

Do you remember this newspaper's proposal to store our surplus food all around the United States in easily accessible places so that in the event of a terrible disaster, such as a hydrogen war, each community could be assured of enough basic foods so that its population would not starve?

It has been estimated by experts that it would take 2 years after such a hydrogen bomb attack to get our farms producing again the food which we must have in order to live. Storing seems a sensible and rational plan, but if the United Nations has its way we will not be allowed to do any such thing.

At a recent meeting in Geneva of the Economic and Social Council of the United Nations it was decided that the right thing to do would be to have any nation with a surplus of food, such as the United States, ship that food to underdeveloped countries, such as India, Communist China or any other nation which needs food. If this plan was followed before war broke out, the United States would have been conveniently deprived of its food by its enemies for the benefit of its enemies.

A neater trick this newspaper cannot imagine, but unless someone with brains steps in in Washington, you can be sure this is exactly the sort of thing this Nation will do. We will wake up some morning to find ourselves under a threat of attack and all our surplus food storage given to our enemies.

It is bad enough to give away our money, our airplanes and our armaments to potential enemies, but to give away the food on which our very lives depend is even worse. It will certainly happen unless enough citizens protest.

Five Mideast Illusions That Befog Us

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. UDALL. Mr. Speaker, the rising tide of nationalism in the Middle East must be recognized in its true perspective if America and the western nations are to avoid grave mistakes in the months ahead. An article, written by Peggy and Pierre Streit, which appeared in the New York Times Magazine of Sunday, August 3, served to clarify and enlighten this vast movement of peoples seeking their own destinies, and I commend it to the scrutiny of all Members. The article follows:

FIVE MIDEAST ILLUSIONS THAT BEFOG US

(By Peggy and Pierre Streit)

The crisis of our policy in the Middle East stems in large degree from the misconceptions that we hold about the area, from our tendency to equate our standards and ideals with those of the Arab world. It is vital to recognize the difference between the mirage and the reality. Having done so, we may hope that a fresh approach will give the Middle Easterners reason to rid themselves of illusions they have about us.

The most persistent and significant misconceptions about the Middle East are set forth below:

Misconception No. 1: That the tumult and ferment in the Middle East have been caused by Khrushchev and Nasser.

It is tempting to believe that if Nasser were overthrown and the Soviet Union rendered impotent, tranquility would return to the land and oil would flow unthreatened from Middle East wells. But such a thesis ignores basic forces now churning the Middle East and surging from the depths of empty stomachs and ancient resentments.

At least three dynamics dominate life there today. First is the impatient, rapidly accelerating demand of the people for a better life. Second is the passionate resentment toward foreign domination, direct or indirect, real or imagined. Third is the rise of nationalism—the desire of the people to be master in their own house. Recently this nationalism has grown to encompass the ancient ideal of Arab unity.

History and the mercurial Arab temperament—not Nasser or the Soviet Union—are responsible for these forces. No doubt, however, the Egyptian leader, with the aid and approval of Moscow, has ridden and promoted them, for both he and Russia thrive on unrest.

Misconception No. 2: That the Middle East can still be dominated by the traditional ruling classes that have held sway there for centuries.

In general, Middle Eastern society has been composed of two groups. The first was the small ruling elite comprising the landed aristocracy, tribal chieftains, and the great merchants. Often highly cultured, broadly traveled, foreign educated, this group lived its own life with little or no contact with the people who inhabited and tilled the land.

These comprised the second group—the peasants, villagers, small artisans, and shopkeepers. Their lives were agonizingly simple, for they sought merely to exist. All of their energies were consumed in this struggle and what they desired most from their rulers was to be left in peace.

Contact between these two groups was usually limited to the levying of taxes and the mustering of troops.

In the past decade there has been profound change. The voiceless, voteless, illiterate "little man" of the Middle East—who accounts for upward of 85 percent of the population—is emerging as a political force. Partly as a result of the social awakening everywhere; partly because of the sudden gush of oil wealth; partly because of Soviet as well as American emphasis on raising the standard of living of the world, the old walls of peasant fatalism are crumbling.

There is a snowballing awareness of the good things this earth can offer and a surging, impatient desire to share them. The growing middle class—the semieducated technicians, mechanics, interpreters, and civil servants—give greatest voice to the new aspirations and old resentments; and their words trickle back to the villages.

Today the peasants are beginning to beat their plowshares into swords and their pruning hooks into spears. After centuries of social stability, the Middle East now echoes with the demand for change—change of any kind at any price. The people who aspire to it are, for the most part, uneducated, prone to be unreasonable and susceptible by temperament to the rantings of any demagog who promises them something new. Very probably, social unrest resulting from the awakening demands of the people will churn the Middle East for some time to come, for it seems likely that no leader, no matter how able, will meet the demands of the masses now that they have been aroused.

Misconception No. 3: That the Middle East is ready for western representative government.

Western forms of representative government have been introduced gradually into the Middle East over the last 50 years: "Constitutional" monarchies have been established; "parliamentary" governments instituted. What the West and many well-meaning middle-eastern leaders frequently fail to realize, however, is that the strength, viability, and effectiveness of representative government, developed in the West over centuries, does not lie in these forms. It must stem from the people themselves, from their sense of responsibility, from the respect they hold for the rights of each other and for the law that governs them.

In other words, a functioning, representative government implies a number of preconditions which we in the United States tend to take for granted, but which only partly exist in the Middle East.

Implied, for example, is a literate electorate, capable of informing itself relatively well about the issues, men, and problems of its government. In the Middle East, illiteracy in some countries runs as high as 85 percent, thus precluding the existence of a mature electorate. Also implied is a degree of economic independence enabling a man to express his vote without threat to his very existence. In the Middle East economic independence is almost nonexistent. It is futile to expect a tenant farmer to vote against a landlord who can utterly dispossess him.

The functioning of effective representative government requires, in addition, a degree of civic consciousness and a tradition of respect for law. In the Middle East the fight for existence has tended to pit man against man, leaving only respect for the law of survival. Without some of the preconditions outlined here, parliamentary government tends to be an empty shell that serves to clothe the traditional ruling class in a mantle of legitimacy and to soften the opprobrium attaching to authoritarian rule.

Furthermore, these governments have frequently proved themselves unwilling to bring about change. Many of them have been and are composed of the old-guard kings, landlords, sheiks, and merchants whose power and wealth is rooted in the feudal system and who see in reform their self destruction. Sometimes, under the pressure of the times, gestures toward basic improvement of social and political conditions have been made, and laws have been passed, but with little thought of implementation.

Misconception No. 4: That the Middle East thinks, as we do, that authoritarian government is evil.

Actually, authoritarian rule has always prevailed in the Middle East. Despite the trappings of parliamentary forms, most of the traditional governments were and are dominated by strong men. What happens in the Middle East when a "constitutional" regime is overthrown by a military junta, is not (as Westerners tend to view it) the destruction of a Western-type representative government and a retrograde step toward totalitarianism, but merely the replacement of one authoritarian rule by another.

The new regimes may or may not speak and act in the interests of the people. But it is likely that these interests must increasingly be taken into consideration. When they are, and the ground swell for social and economic change is measured against the weakness of existing political institutions in the Middle East to enact change in a peaceful and orderly fashion, it becomes clear that some form of authoritarianism will probably fill the vacuum. Rightly or wrongly, many Middle Easterners believe that today only a dictator—and a ruthless one, if necessary—can cope with the overwhelming problems at hand.

Misconception No. 5.—That the Middle East agrees with us that Soviet policy represents a threat to personal liberty and political independence.

This belief assumes that the people of the Middle East attach the same value we do to personal and political freedoms. How can they? Except for the sophisticated few among the ruling elite, individual freedom and its retinue of rights are nonexistent. The mass of the people cannot fear the loss of something they do not have. And for those a cut above the mass—the white-collar workers, the young army officers, the intelligentsia—individual freedoms are frequently considered luxuries which have little of no bearing on the pressing social and economic needs of the time.

What the United States also overlooks, when it seeks Middle East support against the Soviet threat to freedom and independence, is that it is the West, and not Russia, which for many years has constituted that threat. The Middle East has had a long and bitter personal experience with Western domination. It has had virtually no such direct experience with Soviet imperialism. It is expecting a great deal of dispassionate thinking and political discernment from the majority of the Middle Easterners to expect them to perceive that what is red is really black and what is black is actually white.

Furthermore, in appraising the Soviet Union through the eyes of the people and the new leaders of the Middle East, one fact looms larger than communism's ruthless denial of freedom. It is that Russia, once a weak, underdeveloped nation facing many of the social and economic problems the Middle East faces today, has mastered these in less than a lifetime and has not only raised the standard of living of its people but has emerged as one of the most powerful nations in the world. In the context of the aspirations of the Middle East today, the Soviet experiment offers more instructive, practical parallels than the democratic experiment symbolized by the West.

Our foreign policy in the Middle East has suffered grave consequences as a result of these misconceptions. One of the gravest is the readiness with which we attribute all our

troubles and discomfitures to Nasser and the Soviet Union. This has tended to blind us to the real problems and to make us seek solutions where they can't be found.

Simply stated, the policy of the United States Government has been to keep Soviet influence from flowing in and to keep oil flowing out. To do so, the United States has sought to maintain stability in the Levant.

Implied in this policy is a static view of the social, political and emotional climate of the area. When it is realized that the Middle East is entering a period of basic change, that this change is not likely to be tranquil and that consequently instability is likely to be the norm, a policy that seeks stability is likely to fall out of step with events.

Furthermore, in seeking stability in the Middle East, the United States has backed, however reluctantly, regimes that have tended to be repressive, reactionary and increasingly unrepresentative of the growing aspirations and demands of the people. Thus, United States policy has unwittingly tended to bottle up the ferment and add to the explosive force of events.

It may be easy to point to shortcomings of United States policy. It is another matter to suggest remedies. Nevertheless, some broad suggestions may be attempted.

The United States must frame its policies in terms of what are realities for Middle Eastern countries, as well as realities for us. Internal social and economic pressures in the area presage a period of turmoil. Governments and regimes must be expected to come and go, reflecting the area's search for eventual stability. We must be able, or at least try, to ride with the changes.

The recognition we extend to any government should be more circumspect than it has been in the past. We should not tie our fortunes too closely to governments that, by their nature, may not be able to withstand the tide of events.

And we must, in some way, identify ourselves with the legitimate aspirations of the people of the area.

Bold Action on Depreciation

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. FULTON. Mr. Speaker, because I feel that the points of Adm. Ben Moreell as chairman of the board of Jones & Laughlin Steel Corp., as well as the views of Steel, the Metal Working Weekly, of Cleveland, Ohio, should be brought to the attention of the Congress and the people of the United States, I am submitting the following items for the RECORD.

Adm. Ben Moreell has been the outstanding advocate of getting things done. He has been the successful head of the Seabees in the Pacific during World War II when so much was done in building advance airfields with so little, but with the tremendous enthusiasm of thousands of young men whom he led.

Ben Moreell, since his retirement from the Navy, has been associated in many executive capacities with Jones & Laughlin Steel Corp., one of our big steel producers. He has just retired as chairman of the board, in which position he has been setting the policy of this important steel producing union in the capacity of the United States.

JONES & LAUGHLIN STEEL CORP.,
Pittsburgh, Pa., June 16, 1958.

Congressman JAMES G. FULTON,
House of Representatives,
Washington, D. C.

DEAR JIM: I am forwarding to you with this letter an article which appeared in the April 28, 1958, issue of Steel magazine entitled "Let's Leap to Recovery With Bold Action on Depreciation."

It is generally held by most economists that the greatest single stimulus to economic activity is capital investment by industry. The records indicate that such investment exerts a stimulating effect beginning with the production of raw materials at the mine and in the forest, and that this effect permeates throughout the economy.

While I am not sure that the enclosed article defines the most realistic and effective procedure for stimulating capital investment, it is certainly a long step forward in the right direction.

It has been said that, because of what appears to be overcapacity in many lines of industry, a fast tax writeoff law would not be effective. I do not agree with this point of view. Taking the steel industry as an example, I know that there are huge expenditures which should be made now in order to improve quality or reduce production costs. While neither of these would result in an increase in quantity, they would both have the effect of increasing the productivity of the working force. The steel industry, in common with many other industries, is now laboring under the disadvantage that results from an increase in employment costs since the end of World War II which far exceeds the increase in productivity.

The stimulation of expenditures designed to redress this imbalance, at least in part, would have the collateral and very desirable effect of stimulating the entire economy.

I feel certain that the same situation exists in other industries.

I would appreciate your careful consideration of the enclosure and whatever action is feasible to promote legislative authority for accelerated amortization.

With kindest regards, I am,
Sincerely yours,

BEN.

[From Steel magazine of April 28, 1958]

FIGHT ON RECESSION: WILL YOU JOIN US?

A bold yet simple program to correct the recession and to halt the march of inflation is proposed by the editors of Steel. It is based on these facts:

The recession got its start (and has its deepest roots) in the capital-goods industries.

Capital-goods dollars have more bounce than soft goods and service dollars.

The quickest, surest way to correct the recession is to stimulate spending for capital goods—spending for reequipment and, where needed, spending for new plants.

The most direct method to encourage spending for tools is to free industry from our straitjacket depreciation laws.

Steel's program has only two steps:

For the short term, allow any equipment, building, or land acquired from January 1, 1958, until June 30, 1959, to be amortized for tax purposes in 5 years—if the owner elects to do so.

For the long pull, set up an industry-Government commission to modernize the depreciation setup on a permanent basis.

The program has its genesis in letters and conversations with our readers. Scores of you who are participating in this publication's cost crisis competition (its aim: The updating of capacity and equipment to lower unit production costs) have suggested that depreciation reform is essential to keeping our industrial machine modern.

You have said that investment triggered by liberalized depreciation will do more to regain high-level employment and output than any stopgap measure aimed at putting more dollars into the consumer's pockets. You have pointed out that the updating of our industrial machines (as opposed to outright expansion) is an immediate need in slendering costs, boosting output per man-hour of labor input, and holding down prices.

We realize that one publication alone—or one company or one industry alone—cannot overcome the inertia that is blocking depreciation reform. Pleas made in the past by industry and publications—in editorials, in speeches, in corporate reports, in testimony before congressional committees—have been like drops of water falling on the desert. They have evaporated before they could form a reservoir to build up enough pressure to get action.

With the Nation groping anxiously for a way to stem the recession, we believe the time for concerted action is now.

In the weeks ahead, the editors of Steel will continue to spearhead the drive for short- and long-term depreciation reform. Our voice will reach all Congressmen and appropriate Government officials.

Will you join us in the fight?

WALTER J. CAMPBELL,
Editor.

LET'S LEAP TO RECOVERY WITH BOLD ACTION ON DEPRECIATION

The United States can take a giant step toward halting the recession and checking inflation with this two-point program:

1. Allow any equipment, building, or land acquired from January 1, 1958, until June 30, 1959, to be amortized for tax purposes in 5 years, if the owner elects to do so. (Congress should enact the enabling legislation now.)

2. Appoint a Government-industry committee (like President Eisenhower's Commission on Foreign Trade Policy) to study what can be done for permanent depreciation reform. A new system should be ready to go into effect July 1, 1959. We must abandon the Government's rigid concept of useful lives for facilities, as embodied in the Internal Revenue Service's Bulletin F. Recommended is the adoption of a bracket system, advanced by the National Machine Tool Builders' Association and following somewhat the Canadian pattern which is working so well. Adopted in 1949, it has withstood the test of 9 years' use.

IMMEDIATE RELIEF

We have, in effect, declared depreciation moratoriums twice before—in 1940 and in 1950 when 5-year amortization was enacted. Both contributed immeasurably to the productivity and prosperity of those periods by stimulating capital expansion.

Today, the recession is caused primarily by a decline in capital spending. The recession has since fed on itself and has brought unemployment and other ramifications in virtually every segment of the economy. To get things going again, we have to move the capital equipment and industrial construction industries off dead center. It has been proved that moratoriums can provide such stimulation, by giving industry the impetus to buy facilities to make new or improved products at less cost.

Previous moratoriums were designed to increase capacity in times of war. Now we need more facilities that will cut costs so that American goods can be priced back into the domestic and world markets.

We need the moratorium in the battle against inflation. Increased productivity is the most effective way to combat it. And

the most effective way to make significant gains in productivity is through improved equipment.

Thus a moratorium on our straitjacket depreciation rules that force much of industry to write off its equipment in 20 years and its buildings in 40 to 60 years would stimulate the basic capital equipment and industrial construction industries. That would strike at the core of the recession. Reequipment boosts productivity and lowers costs. That would strike at the core of inflation.

Sentiment is rising for a temporary return to fast amortization. Representative EDGAR W. HIESTAND, Republican, of California, has just introduced H. R. 11863 which would return 5-year writeoffs for 1958. Herbert I. Segal, president, Van Norman Industries, Inc., New York, suggests its return as part of his program for recovery. J. A. Swaney, assistant to the treasurer at Harris-Intertype Corp., Cleveland, believes it would be a godsend to the printing and printing equipment industries.

LONG TERM CATALYST

We need a permanent depreciation policy that is sane. Ours is the most archaic among industrial nations of the world.

Standard machine tools are usually depreciated over a 15 to 25 year span in America. In Canada, the depreciable life normally allowed for machine tools is 5 years. In England, it's about 8; in West Germany, it's not over 10; in France, it's 6 or 7; in Italy, it's 7; in Switzerland, it's about 8; in Sweden, it's 5 for machines acquired after 1952 and at the discretion of the taxpayer on what was acquired before then.

A President's commission on depreciation would have scores of reform proposals to study, plus plans in other nations, virtually all of which are more liberal than ours.

USEFUL LIVES

America's depreciation ills stem primarily from two sources—from the rigid concept of useful lives for facilities and from inflation. A solution that attacks the first problem will probably help with the second because more flexible and liberal schedules of useful lives will allow more rapid writeoffs. The faster the amortization the less chance for inflation.

That's why the majority of depreciation experts interviewed by Steel agree with E. F. Gibian, staff director for industrial engineering at Thompson Products Inc., Cleveland: We should tackle the useful-life problem first. Proposals that aim at both get complicated and have less chance of congressional acceptance.

Steel prefers the bracket approach as the solution to the useful-life difficulty. It's simple. It follows generally the system working so successfully in Canada and other nations. (It already has the backing of powerful groups such as the tool builders.

Under it, the limited physical life concept would be scrapped. "Even the most expert machine tool builders and engineers could not compile a list of average lives for every machine tool that would be meaningful," says Jerome A. Raterman, president of Monarch Machine Tool Co.

The multitude of confusing Internal Revenue Service schedules in Bulletin F, with its requirements of salvage and residual values, is a unique American phenomenon. No important foreign country uses them, nor does any other country make the computation so difficult, arbitrary, and inequitable. NMTBA proposes that Bulletin F should simply be a statement of policy and practice which would properly recognize obsolescence. The 1920 and 1931 editions of Bulletin F followed that pattern—giving the principles to be considered in the estimation of useful lives. Detailed schedules had been published separately but were not incorporated into the bulletin itself until the 1942 edition.

Instead of the detailed, obscure schedules, brackets of useful lives would be set up, within which the user could select his own writeoff period. For machine tools and comparable productive equipment, the brackets would be 7 to 10 years; for buildings, 20 to 30 years; for short-lived facilities, such as cars and trucks, the present 3 to 5-year bracket. The bracket idea parallels the Canadian system which sets maximum rates for 14 general classifications of facilities.

If the user is within the brackets, the IRS would not challenge him. However, if he tried to go below the brackets—3 years, say, for a machine tool—he would have the burden of proving that as a reasonable period.

Greater flexibility in our depreciation laws would allow for a new factor influencing obsolescence today. Listen to Roger W. Bolz, editor of Automation: "There is a growing need with automation to consider entire production lines, or plants, as expendable tooling, useful only for the short duration of effective product sales life. Automation equipment, unlike machinery in past years, is often of no value for economically turning out products other than those for which it was designed."

Hear a maker of automation equipment, Frank White, president of Automation Development Corp., Willoughby, Ohio: "Under the ideal depreciation setup, equipment should be written off as an expendable item in relation to the life of the product it makes. Since we don't have that, many of our customers, in effect, keep double records—one for slow tax depreciation purposes and one for their own information on how long the machine will be useful to them."

But not every company will bother with double records. Because of our horse-and-buggy depreciation laws, much of industry tends to reequip on a horse-and-buggy basis to conform with bulletin F's schedule of useful lives. Many companies tend to buy new equipment only when their old has been fully or nearly fully written off for tax purposes. Depreciation reform will get around that industrial prejudice and stimulate much of metalworking to reequip on a more realistic basis.

INFLATION

Many proposals for depreciation reform aim primarily at the inflation problem. Most embody some device to figure tax writeoffs on a replacement basis, rather than the traditional original cost approach. If depreciation on all industrial facilities were figured at current prices, Machinery & Allied Products Institute figures American industry this year would not be paying income taxes on $6 billion.

Congress can hardly be expected to accept depreciation on a replacement basis when the concept isn't generally accepted by industry or the accounting profession. One hope: A recent survey of businessmen and heads of business schools by the Institute of Certified Public Accountants shows 74 percent favor shifting to the replacement method. Ten years ago, only 30 percent advocated such a change.

The institute's committee on accounting procedures pretty much dictates accepted practices. Methods set forth in its bulletins are accepted, for example, by the Securities and Exchange Commission. The committee has had the matter of price-level adjustment of depreciation on its inactive agenda since the 1948 survey. At its June meeting, it will consider moving it to the active agenda. But even then, it might be a year or two before a bulletin is issued.

So, the time is closer (but not close enough) when we can at last persuade Congress to accept the replacement cost concept. Steel believes the most workable proposal for the replacement concept is "reinvestment depreciation," which has many sponsors, including the steel industry. It applies the LIFO concept of inventory accounting to capital spending. An index is applied to facilities to bring their value up to today's dollars. If the facilities are disposed of, the updated value may be credited to the depreciation account of the company in the year they were disposed of, if new facilities are installed to take their place.

WILL TAX REVENUE BE LOST?

We have had 5-year amortization twice before, but it has been dropped twice on the grounds that it cost the government tax revenue. Evidence is to the contrary.

Corporate taxes hit $32.4 billion in the 5 years beginning in 1940 and $89.9 billion in the 5 years beginning in 1950. Up until that time, those were record or near-record receipts. Of course, tax rates were higher during most of those years than they are now, but the figures show there's little ground for worry about tax losses.

Canada, Britain, West Germany, France, Switzerland, and Sweden all have more liberal depreciation laws than we have. All have equally urgent tax revenue problems. But they're not killing the goose that lays taxable eggs. We are by excessively taxing income-producing equipment and buildings through our archaic depreciation setup.

More liberal amortization may defer taxes, but it does not forgive them. They will be paid eventually. By generating more prosperity, speedy writeoffs could conceivably increase taxes. In the long run, fast amortization now and more liberal permanent regulations beginning in 1959 will be cheaper for the United States than the tax cut proposals now being considered as antirecession remedies.

CONCLUSION

Needed is an imaginative approach to the depreciation problem. Bulletin F, with its physical lives based on the history of the 1930's and 1940's, is unfair and leads to interminable controversy between industry and Government. Think of the savings in time and money to both if those unproductive arguments end. That aspect of the situation is bad enough. Another handicap is even worse. If we don't get a more constructive depreciation system, we'll be fatally handicapped in fighting inflation and achieving long-term prosperity.

We have had capital expansion in the last decade partly because 5-year amortization has given us a partial moratorium on our outmoded depreciation laws. But fast writeoffs were virtually killed last year by legislation sponsored by Senator HARRY BYRD, Democrat, of Virginia. That has contributed to the capital goods recession, which is completely unmasking the deterrents and inequities of our depreciation system. What are we going to do about it?

Steel's answer: Adopt a two-point program—return to fast amortization temporarily while an industry—Government commission has time to forge a permanent, liberal depreciation system.

TALE OF THE MILLION-DOLLAR TURRET LATHE

How does our present depreciation system penalize industry? Thompson Products Inc.'s tale of the million-dollar turret lathe bears repeating because it's becoming a classic.

In 1942, Tapco bought a Warner & Swasey 3–A saddle-type turret lathe for $12,000. Federal tax laws permitted the company to depreciate the original cost over 14 years.

In 1956, the lathe became obsolete. It had a resale value of $1,000, and the company had $12,000 to add to that with which to buy a replacement.

But the replacement cost in 1956 was $35,000 for a lathe that would perform the same function as the old one, or $67,000 for

a new one with attachments to meet today's more exacting needs.

Thompson had only $13,000 to do a $67,000 job. The difference of $54,000 had to come out of profits. To get that amount in 1956, the company had to earn a profit of more than $112,500 before taxes because $54,000 was all there was left after the Government took its corporate profit tax of 52 percent.

And, to earn that profit, the company had to sell more than $1,250,000 worth of products. Hence, the million-dollar turret lathe.

The Sherman Adams Case

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. WATTS. Mr. Speaker, under leave to extend my remarks, I wish to incorporate in the RECORD two editorials which appeared in the Lexington Herald, Lexington, Ky., relating to the Sherman Adams case:

[From the Lexington (Ky.) Herald of June 21, 1958]

THE PRESIDENT REALLY NEEDS ADAMS

How greatly President Eisenhower depends upon Sherman Adams in administering the affairs of state is a point that must be grasped to understand the full and tragic significance of the controversy surrounding the Presidential Assistant. No other President has depended any more upon one man, and thus it is understandable why the President wants to retain Adams as his right-hand man, his chief of staff. "I need him," Mr. Eisenhower said the other day. It was a pathetic admission.

It was Sherman Adams who exercised a considerable weight in influencing Mr. Eisenhower to run for the Presidency in 1952. Then it was Sherman Adams who did much of the master-minding of the Eisenhower campaign in 1952. Inexperienced in politics and government, Mr. Eisenhower upon being elected turned to Adams for help in getting adjusted to the ways of governmental operations. To a great extent, Sherman Adams assumed responsibility for handling domestic matters. The President depended upon Secretary Dulles and his military chiefs for help on foreign and military matters. Adams' responsibility became much greater after the President became ill in 1956.

As pointed out by the New York Times, Adams "presides over the White House staff, screens requests for appointments with the President, and has wide powers of decision over which matters get to the President's desk. Many stop right at Mr. Adams' desk. The legend 'O. K.—S. A., or 'No—S. A.' on a document carries almost as much weight throughout the executive branch as the President's signature."

There has been a comparison of the acceptance of gifts by Sherman Adams and by Gen. Harry Vaughan, President Harry Truman's military aide. But this is as far as the comparison goes. General Vaughan held a ceremonial position and was somewhat of a presidential crony, but he exercised little influence, as far as is known, in governmental affairs. Next to the President, Sherman Adams is the most influential man in the White House.

About General Vaughan or any other one White House aide, Harry Truman need never have pleaded that "I need him." On the other hand, it would be difficult indeed for President Eisenhower to get along without his Sherman Adams.

[From the Lexington (Ky.) Herald of June 25, 1958]

AMMUNITION SUPPLIED BY GOP

No one has questioned the honesty or integrity of Sherman Adams, who is under fire from members of his own party for what he and President Eisenhower are pleased, for want of a better term, to call imprudence, but the question that naturally arises is how anyone so stupid, politically, could become involved with vicunas, hotel bills, and oriental rugs. The assistant president, as he is wont to be called by many, accepted lavish gifts from Bernard Goldfine and now is engaged in explaining that appointments and contacts he made with Federal agencies in behalf of Mr. Goldfine have no unusual significance.

David Lawrence, who has been going to great lengths to explain just how it all happened, now has followed the lead of others—who can offer no valid reasons in support of such acts by members of their own party—and has gone back to democratic delinquencies. He cites numerous cases along the same line as proof, we presume, that it's all right to perform such extracurricular services so long as both parties indulge in it. But Mr. Lawrence, like many others who believe that the best defense is reference to past sins of others, misses the point entirely when he says that Senators and Representatives are equally guilty with Mr. Adams in carrying complaints to department heads when asked to do so by constituents.

If any Senator or Representative gets a $700 vicuna coat, then he is as guilty as Mr. Adams of stupidity and incompetence if he intercedes for a friend with some Federal agency. The same applies to a $2,500 hotel bill or the loan of a $2,400 oriental rug. Few Representatives in Washington receive elaborate gifts from the folks back home. The constituents generally want free service and lots of it, and they think their Representatives should go all out just on the simple ground of friendship. When constituents begin to send them handsome gifts, if this ever is the case, then it's time for the Representatives to begin a careful study of the situation and perhaps return a few gifts.

The suggestion that Mr. Adams has outlived his usefulness in government did not come from the Democrats. The ammunition all has been supplied by members of Mr. Adams' own party. The Democrats readily agree that he should step aside, but we are inclined to think that many of them would be glad to have him continue to serve in the administration, since he would provide the party with a fine whipping boy for the November elections.

Statement of the Milwaukee County Council of Churches on the Middle East

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 1, 1958

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement on the Middle East crisis by the International Relations Committee of the Milwaukee County Council of Churches:

In the present Middle East crisis, we, as Christian churches of Milwaukee, Wis., reaffirm our Christian faith. We believe in God's creative love and power. We believe in Christ's redeeming love and sacrifice. We believe in the Holy Spirit, effectively available through Christ to all men. We therefore call upon the Christian people to seize at once the opportunities now at hand for the advancement of the brotherhod of nations.

We call today for Christian repentance, in that we have enjoyed prosperity without helping Arab nations lift their standard of living, and in that we have failed to understand or appreciate Arab national aspirations or to practice full democracy of nations. We have been overconcerned with the conflict of East and West, and underconcerned with the struggle of the Middle East for welfare and prosperity, unity and freedom.

While we regret the use of military force in the situation, we commend the leaders of our Government for the good order and restraint with which they have tried to stabilize conditions in Lebanon and for emphasis on prompt United Nations evaluation and control.

We call upon our American leaders to commit themselves not to support any individual leaders at the expense of the welfare of Mideast nations and peoples. We ask for a U. N. commission to guide a program of relief and reconstruction for the Arab peoples, without dependence upon dictators, swollen military forces, or the shipment of competitive armaments by outside powers.

Our greatest united opportunity today in the Middle East lies in the development of a program for the provision of food and water, medical and technical skill, education and social welfare. We have abundant evidence of the ability of U. N. specialized agencies to provide technical help sufficient to guide these Arab nations into economic health, stability and self-reliance. We believe that profits from oil production should go primarily to the producing nations, but that other nations now dependent upon this source of oil supply should be enabled to purchase it for a fair price.

Historically, culturally and economically, all nations both East and West have vital interests in the Middle East. Now we have reached the point of no return. Either we must do much or we have already done too much. We pray God that American leadership may be used to enlist the nations of the world upon a bold and imaginative program of action for the good of this region and of the world. To this end we humbly ask God's help and guidance.

The Reader's Digest Spotlights the Trouble in Latin America

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. PORTER. Mr. Speaker, the August issue of Reader's Digest contains a very interesting article concerning Latin America by Michael Scully, entitled "What's Behind Our Trouble With Latin America?" I would like to quote two paragraphs from this article:

Another source of anti-Yankee ammunition is our superfluous friendliness toward

Latin dictators. A United States Ambassador in Buenos Aires once hailed Peron, the Argentine demagog, as a great leader. When an assassin shot dictator Somoza of Nicaragua, a White House physician was flown down to try to save his life. The dictators of Venezuela and Peru were decorated by the United States for their fight against Communist subversion.

Red propagandists treasure these items. They help to convince student-age Latins that our championship of democracy is hypocrisy.

If we are to regain the confidence and respect and admiration of the people of Latin America, Mr. Speaker, we must change our attitude toward dictators and democracies south of the border. Vice President NIXON put it very well on his return from his recent trip to Venezuela when he said that there should be formal handshakes for dictators and warm embraces for democracies. In this I agree with him wholeheartedly. It is my sincere hope that this attitude may soon be incorporated in our official policy toward Latin America.

Under leave to extend my remarks, I include the entire article.

WHAT'S BEHIND OUR TROUBLE WITH LATIN AMERICA?

(By Michael Scully)

In Caracas, Venezuela, last May 13, the Vice President of the United States and his wife were spat upon and stoned by berserk mobs. This happened in a land where not long ago you would have had to look far to find a professed enemy of the United States.

Why?

The quick, but only superficially accurate, answer is "communism." The truth is that Communists were only picking the fruits of a tree of distrust and misunderstanding planted and nurtured by the well-meaning, unwary, literate but ill-informed people of all American nations—and their governments.

For weeks, Venezuela's newly legalized Communists had fomented a get NIXON campaign among students and young workers. Their newspaper stirred a caldron of hatred, using a few bitter truths (for which the United States is to blame) to spice a stew of fantastic lies and distortions. Sample distortion: The United States had welcomed and sheltered their despised ex-dictator, Pérez Jiménez. Truth: He was admitted on parole, as many of his political foes have been. Venezuela, on the basis of legal charges, can at any time make a request to our courts to extradite him and return him home for trial. As of mid-June it had not moved to do so.

Such exploitation of the uninformed and easily swayed created the explosion of May 13. The duped mob had no idea it was acting as a boobytrap for its own and 20 other nations. Had the plan behind the explosion succeeded, it would have wrecked United States relations with Latin America. This would have collapsed the weak economies of many southern nations and led to the hunger riots, political upheaval, and chaos on which communism thrives.

Only the superb control of NIXON's Secret Service guards averted disaster. The mob-manipulators' aim was to provoke them into firing one shot. What would have been the consequences?

Tragedy, of course, NIXON might have been killed. Certainly others would have died. The blackest incident in inter-American history could have led to a break in United States-Venezuelan relations, leaving Venezuela, without a United States market for its oil, forced to deal with Iron Curtain countries on their terms. It could have meant the overthrow of the present friendly government and its replacement by quasi-Communists.

But a broader objective of the mob promoters was to trap the United States into armed intervention in Latin America. When President Eisenhower, alarmed by NIXON's peril, sent troops to Caribbean bases, advising the Caracas government they would fly to Venezuela only at its request, the very gesture stirred protests in some Latin lands. Had the Caracas violence reached a stage to compel armed rescue of the Nixons, Red propagandists, masters of misrepresentation, could have produced a United States Invades Latin America story that might almost erase Latin memories of Soviet massacres in Hungary, East Germany, and Poland. By creating a monstrous lie from a grain of fact, they might have swung critical segments of Latin opinion and political decision against the United States. And they knew the Latin American climate was right for such a move.

That returns us to why?—the key word of this article.

Why did NIXON, in most of the eight South American lands he visited, meet heckling and boos from a minority, silence from a majority, friendliness from only a few? Why is anti-Americanism rising to the south? Most important, why does it take such an explosion as that at Caracas to focus United States' attention on Latin America and compel us to ask, "Why?"

One colossal fact is almost willfully disregarded in both Americas: The welfare and strength of each are absolutely vital to the other. Let us look at that fact.

Could we have won out in World War II without Latin-American minerals, tropical industrial crops, medicinal sources? Or without Latin bases for the buildup in Africa? How would the Latins have existed without our Navy-convoyed imports and exports, without the machinery and funds we provided for their imperative industrialization?

In peace, we are equally interdependent. In 1953, a midway postwar year, the United States sold Latin America 50 percent of its imports ($3.1 billion), taking 48 percent of its exports ($3.4 billion). Such figures mean millions of jobs, in both Americas.

How is it, then, that regions so vitally linked reached a situation where a few conspirators could create the explosion at Caracas? Or the no less insulting stone-throwing by students in Lima, Peru?

During World War II, when our Good Neighbor policy lavishly recognized interdependence, we set up a huge agency to help the Latins fight disease, increase food supply, broaden education, and train technicians. Our vast spending for war materials helped to set off a Latin-American industrial boom. Then, after the war, the Latins say, we let them down.

They cite the record: Of $62 billion the United States has put into foreign aid since mid-1945, Latin nations have received only 2.7 percent. Of $3.6 billion voted for the mutual security program for fiscal 1958, it is planned that the Latin nations will receive 96 million—for arms and a minimum technical aid program.

Another sore point is that the cost of United States goods has gone up and up since 1945, while prices for Latin-American minerals and export crops have dropped, forcing the Latin countries to borrow and pile up debt if they are to trade with us at all.

Even our efforts to help some nations have offended others. When we sold surplus wheat at cut rates to Brazil, for instance, Argentina, the normal source of Brazilian wheat imports, could not supply the demand, but it protested that our low price was depressing its market. Surplus United States cotton sold to Colombia and Chile created resentment in Peru, a cotton exporter. Our cut in oil imports from Venezuela and a move in Congress to raise tariffs on lead, zinc and copper (major exports of Peru, Mexico and Chile) created widespread alarm.

Another source of anti-Yankee ammunition is our superfluous friendliness toward Latin dictators. A United States Ambassador in Buenos Aires once hailed Perón, the Argentine demagogue, as "a great leader." When an assassin shot dictator Somoza of Nicaragua, a White House physician was flown down to try to save his life. The dictators of Venezuela and Peru were decorated by the United States for their "fight against Communist subversion."

Red propagandists treasure these items. They help to convince student-age Latins that our championship of democracy is hypocrisy.

Friendly, informed Latins say patiently they can understand that the United States, faced with the problems of a chaotic world, may be tempted into using expedients with dictators now and then. What they cannot understand—and this is their major source of grievance—is our policy on Latin America's postwar development.

After 1945 Washington, faced with rebuilding Europe and fighting fires in Asia, adopted a new Latin-American policy. It reasoned that no southern nation had suffered by the war, that some had made big export profits, that none was immediately imperiled by communism. It argued that our aid to Europe was reviving Latin America's European markets and providing primary military protection. We insisted that the Latin solution for big-scale development plans was to attract private foreign capital, as the United States had done in the 1800's.

Since 1946, private United States investments to the south have swelled from $3 billion to $8.5 billion. "Fine," say the Latins, "but that money is almost entirely in oil production, mining, and manufacturing. It has increased jobs and helped to build huge cities. But it has aggravated our whole situation." And they are right.

Most Latin boom cities are crowded islands of discontent. Movies, bright show windows, and advertising give millions new desires. Politicians and labor leaders turn desires into expectations. But, as prices rise faster than wages, and as shortages of water, light, fuel, and transportation grow, there is frustration. One-fourth of Rio de Janeiro's 3 million people, for instance, spend 6 hours or more daily on trolleys, trains, and buses so inhumanly packed that broken bones and riots of protest are far from rare.

Explanations are simple. Population is fast outgrowing food supply. Great untouched areas can produce food and raw materials, but the vital need is for railways and highways to open them, for irrigation systems, storage facilities, river transportation. Private capital doesn't provide such things. It also shies away from low-profit utilities. Schools, hospitals, and water-supply systems are not in its province.

Since 1948, Latin nations have asked Washington for help—not for giveaways, but for a hemispheric banking fund big enough to lend $500 million or more per year for the next step in their social-economic revolution. The problem, they have argued, offers both Americas a historic opportunity. Successful solution would mean a solid hemisphere of allied democratic nations with complementary economies, militarily invincible. Moreover, much of our industrial output for a generation could be profitably absorbed in developing their vacant spaces and welding isolated areas into strong nations.

But Washington has clung to a policy of delay, emergency loans, and unproductive factfinding surveys.

Our share of the blame, however, cannot be put entirely on Democratic and Republican administrations since 1945, nor on Congressmen who push high tariffs and subsidies

that may briefly benefit their districts but hurt the Nation's interest. A big part of it traces to our massive national misunderstanding of Latin America. It is axiomatic with the United States press that Latin America is newsworthy only when something goes bang—a revolution, an earthquake or an anti-American riot. The rest of the time we are left unaware of the ferment in a region nearly three times the size of the United States—a ferment which will lead either to a body of strong democratic nations or to submission to communism.

But when the American of intelligence and wide interests looks southward, he is bewildered by a paradox. He sees nations settled 400 years ago and still underdeveloped; lands with vast, diverse resources and one-crop economies; constitutional democracies ruled by dictators; lands where innumerable revolutions seem to have solved no basic problems. His interest is likely to fade.

This leads to the deepest "Why?" of all. Latins themselves must bear the responsibility for such bewilderment and for much of the inter-American friction which offers temptations to home-grown demagogues as well as to communism.

The one natural reason for Latin America's underdevelopment is a geography of mountains, jungles and areas of alternating flood and drought. But today's technology and medical science cancel that reason. Vast healthful regions of South America's interior can be populated. Other areas can be made healthful.

Latin America's major obstacles are man-made. The greatest is that nations democratic in form and spirit are still under the ghostly influence of long-dead absolute kings.

The regions now covered by 18 nations were cut into segments which the Spanish Crown called "those kingdoms." They belonged, not to Spain, but to the king. He named officials, held a monopoly over all trade, collected all revenues. He was the complete dictator.

The Latin nations that won independence in the 1800's had none of the political experience that began to the north in 1608. They modeled their constitutions on those of the United States and France. But the governing machinery was a revised absolutism with a strong presidency replacing the king. The executive either named governors or had power to overrule or remove them. Today he usually can deny civil rights, disregard congress and the constitution, and rule by decree. This top-to-bottom rule makes the presidency the grand and only political prize.

Today in many Latin-American countries the growth of industry, unions, the middle class, and intellectual ideologists has made politics a year-round free-for-all. Some have 10 to 15 parties and subparties. This leads to minority presidents who must win support of other parties by favors that include the gross overloading of public payrolls with their henchmen. In Congress it means incessant debate, delay, amendment, and weak compromise legislation. This often leads to tolerance of a legal or thinly disguised Communist Party whose small votes and aggressive tactics can give a non-Communist coalition the margin it needs for victory. A major objective of communism at the present is to promote such fragmentary parties and finally paralyze the democratic process.

This instability of government has produced a dozen other evils that drain a nation's strength. Often the bickering near-paralysis of a multiparty congress tempts a military clique to seize the presidency and, while restoring order, fill its own pockets. When it in turn is overthrown, there is chaos until fiscal and foreign policies are changed, departments and foreign service restaffed, the army and police reorganized—and often the constitution rewritten. Business awaits government decisions. The loss of national revenue is terrific.

Since 1945, there have been 27 such upheavals of government. Six ex-dictators or ousted presidents—Arbenz of Guatemala, Prío Socarras of Cuba, Magloire of Haiti, Perón of Argentina, Rojas Pinilla of Colombia, and Pérez Jiménez of Venezuela—and their cohorts have escaped with at least $1 billion. A 1941 survey found $551 million from Latin America in United States banks, part of it deposited by the wealthy to guard against currency collapse at home, part by politicians to insure comfort in exile. Under stable governments, such sums would be building prosperity at home.

More costly is the enormous waste of productive manpower. Some countries still are more than 50 percent illiterate because their leaking economies do not provide revenues for schools, and their illiterates, almost without exception, live on a bare subsistence level, producing nothing for the national good. The necessities of multiparty politics have forced Brazil to employ 3 government workers where, by expert estimate, only 1 is needed. Uruguay, still a two-party country, keeps a delicate political balance by employing twice as many government workers as necessary, on a year-round half-day basis. The same burdens on productive workers are evident in many other Latin countries.

The United States cannot solve the whole problem by piecemeal loans, tariff cuts or price stabilization for coffee. It must frame a coordinated big-scale program of economic assistance through which its aid will be used for each nation's broadcast welfare. But all the gold in Fort Knox will not remedy the root evil of political instability that drains the economies of most southern countries and gives communism its chance. The solution for that half of the inter-American problem must be, and can be, found by the Latin American nations.

Candidacy of Hon. Thomas K. Finletter for the Democratic Nomination to the United States Senate

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, August 13, 1958

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD some editorials and statements regarding the Honorable Thomas K. Finletter of New York.

I believe most of the Members of this body are familiar with the long and distinguished career of Mr. Finletter in the service of his country. He was a right-hand man to Cordell Hull during the important period when our foreign economic policy was being formulated. He was Secretary of the Air Force during the Korean war and he played a leading role in many key public and private undertakings in New York State.

There being no objection, the articles and editorials were ordered to be printed in the RECORD, as follows:

[From Mrs. Eleanor Roosevelt's column My Day]

Thomas K. Finletter has announced his candidacy for the Democratic nomination for Senator from New York. IRVING IVES, a Republican, is retiring this year on account of his health, and this gives the Democrats an opportunity to try to place in the Senate someone who has the capacity to grow and become as important a statesman as former Senator Lehman was.

While Lehman was there, we could be proud of his stature among his colleagues. He was called "the conscience of the Senate," and on several occasions stood alone, or almost alone, for what he thought was right. The other Republican Senator, JACOB JAVITS, is a good man, but I doubt that he can grow to be the influence and the leader that Lehman was.

The only candidate that I see with the potentialities to give New York State the representation it should have is Finletter. He has already proved his competence in office. He is known in the national field and even internationally. His friends know that he has integrity.

When he says that the Senate "is one of the most powerful instruments for peace and freedom in the world," he knows that he can offer qualities to help make the Senate achieve these ends. For these reasons I am hoping that the New York State Democratic convention will see fit to nominate Finletter, and that all our party leaders will work for his election.

[Telegram to Mr. Finletter from Hon. Herbert H. Lehman]

Delighted that you have announced your candidacy. Heartiest congratulations and warmest good wishes. I am confident that you will make an outstanding Senator, and therefore, I look forward to participating actively in your campaign for election. Regards.

HERBERT LEHMAN.

[Excerpts are from an editorial in the New York Times, Friday, July 25, 1958]

Thomas K. Finletter's announcement of his candidacy for the New York State Democratic senatorial nomination is no surprise, but is welcome all the same.

A prominent lawyer who was Secretary of the Air Force under President Truman and has had long experience in public affairs in an appointive capacity, Mr. Finletter is a man of highest caliber. His willingness to undergo the trial by ordeal of running for elective office is much to his credit. Offering as the most important reason for his candidacy the deteriorating diplomatic and military position of the United States, Mr. Finletter rightly points out that "next to the Presidency itself the United States Senate today is one of the most powerful instruments for peace and freedom in the world."

* * * * *

Mr. Finletter has the endorsement of an influential segment of the Democratic Party, including such personalities as former Senator Lehman and Mrs. Roosevelt, and he would also probably have the backing of the Liberal Party as well. His official entrance into the race makes it more interesting than ever.

[Excerpts are from an editorial in Newsday]

Averell Harriman is going to be renominated for Governor, and on the basis of his record deserves to be. Who will get the nod to run for United States Senator on the same ticket remains to be seen, but we would enjoy watching a wide-open fight for this job. Our candidate is Thomas K. Finletter.

Finletter by all odds is the best hope for the Democrats. He is a statesman, a man with a vast knowledge of world affairs, and a former Secretary of the Air Force.

[From the New York Post of July 24, 1958]

Thomas K. Finletter's formal announcement that he is seeking the Democratic

nomination for the United States Senate is welcome news.

Finletter is an able, thoughtful citizen with a distinguished record of Government service. He has strong convictions about the failures and follies of United States foreign policy; he feels deeply about the cause of human equality. These were matters on which the voice of Herbert Lehman was heard so eloquently in the Senate; Finletter belongs to the same tradition.

His candidacy is given special significance by events of recent days. Few Democrats have shown any willingness or capacity to debate the great issues of foreign affairs so pointedly exposed by the Middle East crisis. As a Member of the Senate Finletter could—among other things—make an enduring contribution to such a debate. We believe his candidacy would be a rallying point for many independent voters, and that his election would be an eminently good thing for the country.

[Senator JOHN F. KENNEDY's comment on Finletter's book, Foreign Policy the Next Phase]

Mr. Finletter's book is persuasively argued, broad in its outlook, yet always closely reasoned. He evades none of the tough issues which face United States foreign policy in the years ahead. Though the book is especially outstanding in the area of Mr. Finletter's special competence, military strategy, he does not neglect other dimensions of foreign policy, such as new patterns of foreign aid and disarmament. Mr. Finletter's practical experience and clarity of judgment combine to make this a book deserving the attention and reflection of thoughtful Americans.

[Comment by Senator STUART SYMINGTON on Mr. Finletter's book]

As usual, Mr. Finletter writes with knowledge, clarity, and vision, especially because of his vast background of experience in the defense and diplomatic fields.

Schooling the World's Scientists in Nuclear Energy

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 13, 1958

Mr. WILEY. Mr. President, I was delighted to read in yesterday's Christian Science Monitor an article entitled "Argonne Schools World's Scientists."

It reports that no less than 421 scientists and engineers have been participants in the first 7 sessions of the International School of Nuclear Science and Engineering, established at the Argonne National Laboratory outside Chicago, in 1955.

In this marvelous educational work, we are carrying out Dwight D. Eisenhower's historic atoms-for-peace program.

In my judgment, Mr. President, this sort of American leadership will pay off a thousand-fold. It will pay off materially, because it will expand the world's technical know-how in capitalizing on peaceful use of the atom.

It will pay off intangibly in terms of good will for America.

The Atomic Energy Commission is to be congratulated for the fine job which it has performed in training foreign technicians.

As senior minority member of the Senate Committee on Foreign Relations, I know what this international training program means in terms of impacting the world's peoples, especially peoples in the underdeveloped regions.

I hope that this program will not only continue, but that it will expand.

Although unique in certain characteristics, it is part and parcel of the overall picture of American education and training, such as are provided for by the Fulbright and Smith-Mundt programs.

For the foreign engineers and technicians not only learn how to deal with nuclear reactors, they learn about America, itself. They learn about its people, its homes, its way of life, its freedoms, its friendship for all mankind.

Let America become still more a center of education and training, not only in the technical sciences, but in the social sciences and in the humanities.

Let us be more than ever before a Mecca of learning, of truth, of insight into man's problems, both material and spiritual.

I ask unanimous consent that the text of the Monitor article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARGONNE SCHOOLS WORLD'S SCIENTISTS

(By Godfrey Sperling, Jr.)

CHICAGO.—Mitsuho J. Hirata in Tokyo dreamed of controlling fusion reaction and going to Mars by fusion-reaction-propelled rocket. He came here to the Argonne National Laboratory to learn nuclear knowledge that would provide some substance to his aspirations.

From all over the world they come, these dreamers of imaginative, atom-powered dreams, from Afghanistan, from Egypt, from Iraq, from Israel, from Venezuela, from Yugoslavia, from the Philippines, from Greece, from India, from France, from Germany—from 42 foreign countries in all.

LEADERSHIP PROVIDED

A total of 421 scientists and engineers have been participants in the first 7 sessions of the International School of Nuclear Science and Engineering, established at Argonne in 1955 to implement President Eisenhower's atoms-for-peace program.

Thus Chicago, with its Argonne nuclear school, has become the global center for those who would, in their own countries, unlock the secret of the atom and its peaceful use, for those who have been designated to carry the nuclear torch throughout much of the world.

Moreover, in a quiet but effective way, Chicago is providing leadership in the rapidly shaping world of nuclear science. Dr. Norman Hilberry, director at Argonne, explains how this is coming about:

"These men," he says, "gain a feeling while here that they have a second home, a scientific home right here, a place where they can work out their problems among people they know and understand."

Dr. Hilberry says that when these scientists go home, "all to key nuclear positions," they continue to turn to Argonne for help in their problems, through correspondence.

The 4-month training period here is designed to give each participant a balanced program in advanced science and engineering theory and practice. Though primarily concerned with nuclear reactors, the course also includes other specialized studies that are important to the peaceful use of nuclear energy.

It is almost on-the-job training. Students usually work with hypotheticals, however, since there is insufficient time for carrying an actual project to full conclusion.

Laboratory work includes procedures which are basic to the entire reactor technology for large-scale experiments in reactor engineering and in preparation and reprecessing of reactor fuel. There is also training in the techniques of nuclear research, in nuclear chemistry and physics, and in nuclear engineering.

ARGONNE FIRSTS

Participants at the International School operate and perform experiments with the Argonaut, Argonne's low-power reactor. For certain experiments they use Chicago pile 5, the laboratory's principal reactor for scientific research. Arrangements are being made for use of Argonne's caves for experiments which involve highly radioactive materials.

Argonne National Laboratory is the senior United States center for research into peaceful applications of nuclear energy. Its site, covering 3,700 acres, is located near Lemont, Ill., in the western suburbs of Chicago. Among its staff of 2,900 are nearly a thousand scientists and engineers actively engaged in basic and applied nuclear research.

Among Argonne firsts since the laboratory was established in 1946 are discovery of the process for separation of uranium and plutonium by solvent extraction, first production of electricity from nuclear energy, and development of the fast-breeder power reactor, a type that produces nuclear fuel while generating steam to run an electric turbine.

PLANTS VISITED

The seventh class of the International School here is now underway. The participants, from 25 foreign countries and the United States, toured atomic energy facilities in the eastern United States before coming here.

They stopped at Oak Ridge, Tenn., National Laboratory; the Detroit Edison atomic power reactor development and planning center; nuclear-energy laboratories at the University of Michigan; and the Shippingport, Pa., pressurized water reactor operated by the Duquesne Power and Light Co.

Two universities participate with Argonne in the International School training: North Carolina State College and Pennsylvania State University. Basic course work is presented at these universities in a 17-week period that preceded the training here. Each of the schools has a nuclear reactor and conducts a training program in nuclear science and engineering.

Instruction at the nuclear school here is conducted by a full-time staff augmented by members of Argonne's research and development staff, who present lectures on specialized topics and who assist in the direction of special projects.

An Oregon Hero Passes to His Reward

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 13, 1958

Mr. NEUBERGER. Mr. President, one of Oregon's great heroes died early this

month. When Leslie Matlock, of Heppner, Oreg., was laid to rest at the age of 84, many of the older citizens of his community paid their respects to the man who was responsible for their being alive. Leslie Matlock was a man who knew what to do in an emergency. When cloudbursts in the late evening of June 14, 1903, deluged the high plateaus of Morrow County and churned Willow Creek into a 60-mile funnel of death and destruction, Matlock and his pal, Bruce Kelly, riding horseback, outdistanced the flood and cried a warning to hundreds within its path. In human lives, the flood's toll reached several hundred. But for the heroic action of Matlock and Kelly, hundreds who survived would have been swept to their deaths under the angry torrent that poured into the Columbia River on that stormy Sunday night.

Mr. President, visitors to Heppner over the years found Leslie Matlock a friendly, approachable man. He would retell for them the story of the ride in simple, modest terms, if genuine interest were indicated; he knew a hero's deeds speak louder than any words.

Candy Johnson, Heppner correspondent for the Pendleton East-Oregonian, has informatively reported the funeral in the July 19, 1958, issue.

Mr. President, I ask unanimous consent that the report be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HEPPNER BURIES HERO; WON RACE WITH TIME

(By Candy Johnson)

HEPPNER.—Funeral services were held in Heppner yesterday for one of Morrow County's most unforgettable heroes—Leslie Matlock—whose courageous warning ride in the face of the Heppner flood of 1903 saved hundreds of lives in Lexington and Ione.

On that fateful afternoon, more than 50 years ago, Matlock had finished a quiet dinner with relatives and returned to his room at Palace Hotel when Willow Creek broke its bounds, joined with its tributaries and sent great walls of water crashing into the streets of Heppner.

CALLED FRIEND

The 29-year-old man called his best friend, Bruce Kelly, and together they "borrowed" a couple of horses hitched to the railing outside the hotel, broke into a Sunday-closed hardware store for a pair of wire cutters and set out cross-country, cutting fences and shouting warnings as they rode.

Accounts of the fabled ride quote Matlock as saying:

"We started over the hills toward the northwest * * * the lightning kept the country bright as day. * * * I still don't know who was scared the most—the strange horses or Bruce and I—but, by pushing them, we finally managed to get a few miles ahead of the water just below Lexington. * * *

"All along the way we shouted at every farm house * * * no one seemed to doubt our word * * * as we passed we could see the oil lamps blown out and the families starting for higher ground. * * *

SIX HOURS

"I don't know how long it took us to make the ride * * * but we spent 6 hours getting back to Heppner and the piled-up bodies we saw along the way were an awful sight. * * *" Matlock's ride is credited with saving hundreds of people in the Lexington-Ione area, although 325 lives were lost in Heppner and damages reached the half-million mark.

The flood broke June 14, 1903, lasted only 1 hour, and took, proportionately, more lives than any other flood in the United States.

Matlock was born November 6, 1873, at Heppner and was a charter member of the Heppner Elks Lodge 358. His family crossed the plains in a covered wagon in 1853 and settled here in 1871. His father was once sheriff of Morrow County.

A tall, erect and handsome man, the Paul Revere of Heppner died at the age of 84, Tuesday night at his home after an illness of almost 2 years. He had returned to his home a week ago after hospitalization in Portland.

Still with him at the time of his death was one of his most treasured possessions—a goldheaded cane given to him by the people of Ione and bearing this inscription:

"Leslie Matlock, presented by the people of Ione in grateful remembrance of his heroic ride during the flood at Heppner, June 14, 1903."

New York State Housing Code Study

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, August 13, 1958

Mr. JAVITS. Mr. President, New York State, which under the leadership of Gov. Thomas E. Dewey and our former colleague, Gov. Herbert E. Lehman, pioneered in extensive State housing programs for many years, established a precedent 3 years ago when its first large-scale middle-income housing program was initiated. Low-rent public housing totaling nearly a billion dollars in cost has been constructed by the State of New York since 1938 under Republican and Democratic administrations. My State has shown over the years that effective leadership and assistance by State governments can stimulate vigorous local rehabilitation and conservation programs to overcome the scourge of slums and blight and prevent their recrudescence.

I wish to invite attention to an important housing study prepared by the New York State Division of Housing, the head of which is the highly regarded former staff director of the Senate Banking and Currency Committee, Joseph P. McMurray. This three-volume report, entitled "Housing Codes, the Key to Housing Conservation," represents an auspicious milestone in the development of urban renewal techniques to cope with the problems involved in a successful rehabilitation and conservation program.

I ask unanimous consent that the New York Times editorial of August 4, 1958, commenting on this report, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE STATE HOUSING REPORT

A 2-year study by the State division of housing shows that more than one-third of our 1,600 cities, towns and villages do not inspect new construction to assure safety, sanitation and restraint of fire hazards. There is even less inspection of older buildings. Many communities have no building code. Where there is a code enforcement usually is undertaken only in specific cases after citizens have complained of violations.

State Housing Commissioner Joseph P. McMurray, in his report to the Governor on the survey findings, has pointed out that this situation produces new slums, while vast sums of public and private money are being spent to redevelop old slum districts.

While large-scale demolition and rebuilding is the only way to root out the advanced slums, this is a slow and costly task. The report suggests that slum clearance be complemented, in every case, by code adoption and enforcement to arrest the spread of blight. It proposes that small communities, unable to afford full-time technical and enforcement personnel, pool their resources and engage in joint programs.

This and other recommendations are contained in the report, issued in the form of 3 handy booklets. Among the contents are a model ordinance of minimum housing standards, an administrative guide for local conservation programs and a series of code-enforcement problems with suggested solutions.

The Federal Government, which has made grants totaling more than $100 million for slum clearance in New York State, urges increased emphasis on neighborhood conservation and rehabilitation. It contributed half of the $145,000 required for the survey, the other half being State money. The greatest possible good can be realized from this small investment if officials of every community study the proposals for local application. Copies are available at the State division of housing.

Multiple Use of Forest Lands: A Concept

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 13, 1958

Mr. KUCHEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article on the multiple use of forest lands, written by Charles A. Connaughton, regional forester of the United States Forest Service in California, and an editorial which recently appeared in one of the outstanding newspapers of my State, the Bakersfield Californian, commenting on the article.

Perhaps no man in the Service must know and apply in each operation of his area the principles of multiple use in forest problems as constantly as Mr. Connaughton, and it is proper to observe that since he has become regional forester, he has ably demonstrated his knowledge of these principles and his grasp of administrative and policy problems.

Mr. President, approximately one-third of California's area of 100 million acres has forest and watershed purposes as its chief value. The scenic and recreational resources therein are outstanding. Deposits of numerous kinds

of minerals are found in many sections.

With the growth of population and the concomitant demand on the part of hundreds of thousands of American families for greater opportunities to enjoy the outdoors, I have felt that increasing emphasis should be given to the recreational values. As a part of this approach, the need for preserving wilderness areas as one of the multiple uses to which specific limited areas can be put should be carefully studied. I was interested in Mr. Connaughton's statement that wilderness use is one of the multiple uses of the forests which is essential and highly desired.

I have no doubt that the increasing interest in land use planning in the development of California gives importance at this time both to Mr. Connaughton's studious essay and to the Bakerfield Californian's comments on it.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

MULTIPLE USE FORESTRY

(By Charles A. Connaughton)

MULTIPLE USE IS A CONCEPT

Multiple use of forest land—how often have you heard this phrase? How vivid a picture of land use does it convey to you? And are there any uncertainties as to exactly what it means?

In spite of the many years foresters have talked about multiple use all of us still do not have a common and precise understanding of its meaning. This comes about because multiple use is a concept rather than a system or method of land use. As a concept it is not subject to precise and universal meaning when applied area by area.

A forest may have major value for sawlog production with intermingled values for recreation, water yield, grazing by domestic livestock and wildlife, and mining. Another area may have no timber production but have vital recreation and watershed values. Actually there are innumerable combinations of use varying with the area.

As a general rule, however, multiple use is simply a concept of management which involves the combination of uses or services of the land in such a way that full utilization is realized consistent with managerial objectives. This situation presuppose that the uses and services will be combined in a manner so that they are complementary, insofar as attainable. When this is not attainable minor uses must be adjusted to exclude conflict with the major or dominant use or uses.

MULTIPLE USE APPLIES TO LARGE AREAS

The multiple-use concept is conceived to apply to large areas, such as watershed units. As such, it is a misconception if it is thought to specifically apply acre by acre. If, in the process of application, multiple use of individual acres is obtained—and this does happen frequently—there is no conflict with the definition; but such pinpoint application is purely incidental and is not intended or necessarily desired.

Multiple use is thoroughly workable, therefore, if more than one compatible use for an area as a whole is conceived in the plan of management. The dedication of individual acres to single uses within a management unit is a perfectly logical procedure consistent with the multiple-use concept.

OBJECTIVES MUST BE DEFINED

In applying multiple use to an appropriate area the first determination involves a definition of land management objectives. These objectives are those of the land manager or owner and may be determined by a number of factors. On private land it probably means that the objectives are influenced most strongly and properly by profit considerations. On the public lands it may mean full use designed to satisfy the overall public needs which may or may not be tangible as measured by income. When a dominant use determines primary objectives, with lesser uses subordinated and restricted, the effect is something short of full use. However, irrespective of the ownership, the objective of management must be clearly understood prior to the application of the multiple-use concept.

Once objectives of land management are defined the techniques of using the individual resources in a manner complementary to each other comes into play. If all values and services can be used to a maximum without conflicts the ultimate is obtained. Such full use isn't usually attainable, particularly under intensive management. In short, a harmonious combination of uses to arrive at the maximum overall service from the land usually requires some concessions in individual use. As for example, in managed forests the maximum production of wood might be adjusted downward to benefit wildlife or water yield if the defined objectives so dictate.

In considering applied multiple use it is significant that the demands of an expanding population with corresponding pressures on all land uses make it more difficult to secure full use of all services from the land. Certainly, under intensive management, the land administrator must be infinitely more skillful in combining the uses, at the same time minimizing conflicts.

MULTIPLE USE NOT A UNIVERSAL ANSWER

One feature of land management needing emphasis in terms of multiple use is the fact that full utilization of resources isn't always the best management for a given tract of land. The case frequently prevails where 1 or 2 uses may be so completely dominant that all other uses must be subordinated or eliminated. As an example, watershed values of certain southern California mountains require that during high hazard fire weather all human use be eliminated. Or, in the established and designated wilderness areas in national forests and parks, some uses are completely eliminated in deference to the dominant wilderness values and use.

CONFLICTS ARE FREQUENT

In closing this brief discussion a few instances illustrating the complexities of multiple use will serve to bring out the realities in its application. One of the most complex aspects of multiple-use application involves conflicts within uses rather than between uses. For example, mass recreation requires roads and improved travel facilities, whereas wilderness use is conceived and carried out without these facilities. The two are not harmonious, yet both are essential and highly desired. In timber production the harvesting rotations necessary for pulpwood or other small products are distinctly different from those required for producng sawlogs, yet both are desirable in their own particular circumstances.

Conflicts between uses may arise, such as between grazing of domestic livestock and big-game production, between forest management for recreation and timber production, and between watershed management and timber production. These are only examples which can be multiplied many times with each combination presenting its own particular problems and solutions.

MULTIPLE USE APPLICATION REQUIRES SKILL

In applying multiple use the land manager is faced, therefore, with reconciling conflicts in such a way that overall objectives are attained. The manner in which objectives are reached is a measure of the manager's skill and success. Objectives are best fulfilled by securing the highest degree of multiple use that the characteristics of the land will permit. There should be full recognition, however, that frequent exceptions to the general rule exist. Where these exceptions occur management systems must be designed and carried out with infinite skill to achieve most effectively the objectives of the particular ownership involved regardless of the level or degree of multiple use secured.

[From the Bakersfield Californian of May 23, 1958]

MULTIPLE USE EXPLAINED

In view of new and energetic advocacy of expanded wilderness area allotments in the national forests and resultant confusion in the concept of the axiom of multiple use in the policy of the United States Forest Service, it would be well to turn our attention to this idea of multiple use and its application to the overall problems that face the Forest Service in its assigned task of administering public lands placed in its care.

One of the clearest and most complete statements of the principle has been enunciated by Regional Forester Charles Connaughton of California, able head of the Forest Service in region 5, which includes California and tackles the many problems imposed on the service by the expanded population, recreation use, demand for more of its natural resources and need for greater watershed protection.

Perhaps no man in the service must know and apply in each operation of his area the principles of multiple use in forest problems as constantly as Mr. Connaughton, and it is proper to observe that since he has become regional forester, he has ably demonstrated his knowledge of these principles and his grasp of administrative and policy problems.

In his recent statement, the California regional forester observes that multiple use is a concept rather than a system or method of land use and as a concept it is not subject to precise and universal meaning when applied area by area. He notes, for example, that a forest may have major value for sawlog production with intermingled values for recreation, water yield, grazing by domestic livestock and wildlife, and mining; another may have no timber production but have vital watershed and recreation value, and there are innumerable combinations of use varying with the area.

"As a general rule, however, multiple use is simply a concept of management which involves the combination of uses or services of the land in such a way that full utilization is realized consistent with managerial objects," according to Regional Forester Connaughton; "This situation presupposes that the uses and services will be combined in such a manner so that they are complementary, insofar as obtainable. When this is not obtainable, minor uses must be adjusted to exclude conflict with the major or dominant use or uses."

Mr. Connaughton goes on to say that the multiple use theory is well applied to large areas, such as watershed units, which of course are exceptionally important in California, and is not primarily designated to be applied acre by acre. The first determination in applying multiple use involves a definition of land management objectives, and on public lands this may mean, and often does, the full use designed to satisfy public needs which may or may not be tangible as measured by income. He also notes significantly that the demands of an expanding population with corresponding pressures on all land uses make it more difficult to secure full use of all services from the land, and certainly under intensive management, the land administrator must be infinitely more skillful in combining the uses and at the same time minimizing conflicts.

Noting many such conflicts in his discussion, several of which we are familiar with even in this area, the regional forester observes that "objectives are best fulfilled by securing the highest degree of multiple use that the characterizations of the land permit," and where exceptions exist, management systems must be designed and carried out with infinite skill to achieve most effectively the objectives of the particular ownership involved, regardless of the level or degree of multiple use secured.

This reasonable and clear explanation of the multiple use principle by Regional Forester Connaughton serves to increase public respect for his organization and widen the conviction that we have an able and thoughtful administrator at the head of the Forest Service in California.

The NORD-Godchaux Baseball Team From New Orleans, La.

EXTENSION OF REMARKS
OF
HON. RUSSELL B. LONG
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 13, 1958

Mr. LONG. Mr. President, the NORD-Godchaux all-American baseball team, from New Orleans, La., visited Washington, D. C., on Monday of this week. They stopped by here en route to Johnstown, Pa., where they are taking part in the national championship playoff of the All-American Amateur Baseball Association.

NORD stands for New Orleans Recreation Department. The team is made up of those young men in the 17- to 19-year age bracket who survived a hotly contested championship round in New Orleans for the honor of representing the Crescent City in this national tournament.

The boys are sponsored by Mr. Leon Godchaux, of New Orleans, and are here because they voted to come by bus in order to visit the Nation's Capital, and it was the pleasure of Senator ELLENDER, Congressman BOGGS, and myself to show them some of the highlights of our Capital.

This is the eighth time the New Orleans team has competed at Johnstown. Four times they have won the championship; twice they were runners-up. This year's team is a capable successor of those former champions, and it stands for all of the high ideals we seek from an American program of recreational activity.

Mr. President, I ask unanimous consent to have printed in the RECORD the names of the players, coaches, and sponsors who are with us from the city of New Orleans:

There being no objection, the names were ordered to be printed in the RECORD, as follows:

Fred Schwartz; Bob Terrell; Allen Armstrong; John Majoria; Sheldon Gebbs; Buel Bourgeois, Jr.; Gene Faust; Richard L. Dixon; Fritz Miller, Jr.; Lou "Rags" Scheuermann; Eldred Paternostro; John Brechtel; Gerald Brady; Bob Foret; Darrlyn Tschirn; Jack Boasberg; Gus Lamana; Thomas A. Fox; Jay Handelman; Morris Powell; Lloyd Webre; Bob Delpidio; Ed Wahden; Fritz Miller, Sr.; Bernard Smith; Richard R. Dixon; Buel Bourgeois, Sr.; Rogers Roberts.

The United Nations General Assembly and the Mideast Situation

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, August 13, 1958

Mr. WILEY. Mr. President, it has already been noted on the floor of the Senate that the President and Mr. Gromyko have spoken in the United Nations. Thoughtful people are asking, "What has taken place? Is there a possibility of an effective agreement being reached? What is an effective agreement?" It is certainly not a mere piece of paper. It must be an agreement which is mutually advantageous to both sides. Otherwise, we know from the Kremlin's past actions that it will not amount to very much.

So far as the Kremlin is concerned, this maneuver has all the earmarks of another Communist scheme, as I see it, to gain a foothold and then stand by patiently until the time is ripe for a complete takeover.

There appears in today's Washington Evening Star an article entitled "Peril in Unconstructive Criticism," written by David Lawrence, which I feel Senators can read with profit. It speaks of the hindsight kibitzers of United States policy. This is no time for us to be indulging in that particular kind of talk. What we should seek to do is to see if we can be of assistance to the executive department in finding our way through the troubled waters of the Mideast.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PERIL IN UNCONSTRUCTIVE CRITICISM—HINDSIGHT KIBITZERS OF UNITED STATES POLICY WHO CAN'T BE SPECIFIC ARE CRITICIZED

(By David Lawrence)

Critics of American foreign policy, both inside and outside of the Democratic-controlled Congress, are having a hard time being specific. They generally bemoan what seems to them a lack of positiveness, and they even blame the President and the Secretary of State for not having a secret microphone in the Kremlin to get minute-by-minute reports of what an erratic Khrushchev plans to do throughout the world.

The tendency after every crisis is to complain either that the intelligence reports of the United States were not adequate or timely, or that the United States has failed somehow to checkmate Soviet moves in the world.

Partisan politics and the hope for some advantageous issue from a political standpoint undoubtedly are back of most of the criticism, especially the mimeographed speeches and statements that flow from certain quarters in and around the Democratic membership of the Senate Foreign Relations Committee. The doctrine that "partisanship ends at the water's edge," an American tradition, seems to have been replaced by an attitude which says, in effect, that any criticism of the United States—even if the Soviets pick it up for their own radio broadcasts—is good sniping in the game of politics-above-patriotism.

There are, of course, some critics, inside and outside Congress, who are not trying to be partisan at all but who find themselves baffled by world events to the point where they see only American surrender and appeasement as the way out. They mistakenly believe it will prevent American involvement in war, though history tells us a sure way to get into war is to emphasize constantly your own weakness and lack of resoluteness.

The main criticism seems to center on the charge that the United States should have foreseen the way things have shaped up in the Middle East. Just how is never made clear. But the idea most widely advertised is that the United States should have taken Nasser unto its bosom and loaned him billions for the Aswan Dam, even though he indicated clearly beforehand that he intended to seize the Suez Canal and secretly got arms from the Soviets.

Sometimes it is argued by the hindsight critics that the western allies never should have allowed the State of Israel to be created in the first place. This is a favorite gripe, particularly among some people who want to continue to do business with the Arab countries and feel that it is expedient to apologize constantly for America's interest in Israel.

There never seems to be any inclination to search the real estate titles in the Middle East and to go back far enough to discover that the people of Israel may possibly have lived there long before the modern Arab monarchies or colonies came into being. World War I took most of Asia Minor away from Turkey and enabled some new republics and monarchies among the Arabs to start up in business. But simultaneously Israel's right to existence as the Palestinian homeland was recognized in public declarations made by the Foreign Secretary of Great Britain and by the President of the United States.

The issue today isn't Israel, or Arabian supremacy, or colonialism, handy as it may be to toss slogans around that reflect the prejudices of the interested parties. The real issue in the world today is the same as it was before World War I and before World War II. It's whether a single power—an authoritarian government and dictatorship—shall threaten the peaceful life of the free democracies or true republics of our times.

Most of the international mischief perpetrated in the Middle East, the Far East, and inside Europe, Africa, and North and South America—usually called subversion or infiltration—can be traced to an espionage apparatus of worldwide proportions financed and directed by the evil men in the Kremlin.

Some of the critics want a blueprint or an affidavit to this effect signed by Khrushchev before they'll believe it, although the intelligence reports are overwhelming. Some gullible critics still doubt that Iraq or Lebanon have been victimized by the Soviet spy rings. They call it just a people's uprising when the king and his family are murdered and their bodies mutilated. What kind of Arab nationalism is it that not only assassinates kings and prime ministers but also drags through the streets the bodies of Americans deliberately removed from their hotel and killed? Wouldn't this be more realistically described as "Arab barbarism"?

There is only one way to keep the peace in the world. It would have saved us participation in two world wars. It's to build militarily a strong alliance with Western nations that believe as we do, to say again and again that force will be used to secure respect for our rights, and to mean it.

That's the only positive policy America can pursue—to be ready to go to the brink of war and let the world know it. But such a policy cannot succeed if there's internal disunity and if kibitzers deride firmness as brinkmanship and thus weaken the hand of their own Government. Criticism is helpful always when it is constructive, and there isn't any difficulty recognizing when it is and when it isn't. Unity inside the United States and inside the Western alliance is worth as much militarily as many divisions of troops.

Modern Art: A Pertinent Commentary

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, August 13, 1958

Mr. JAVITS. Mr. President, in connection with the Brussels Fair, as in connection with many other activities of Government in which the Congress has a direct interest, either through appropriations, or authorization legislation, including Government buildings, activities of the United States Information Service, cultural exchange activities, Members of Congress have advanced varying opinions about modern art. That the modern artist has not achieved, or striven for, universal comprehension may be impolitic on his part but should neither affect his credibility as an artist nor public acceptance of his efforts.

In an issue of Art News dating back to the summer of last year I came across an article of such clarity and so specific on what modern art is and what it is endeavoring to accomplish, that I thought it worthy of the interest of Members. I ask unanimous consent to have it printed in the RECORD abbreviated somewhat so as to comply with the requirement of space of the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LIBERATING QUALITY OF AVANT-GARDE ART—THE VITAL ROLE THAT PAINTING AND SCULPTURE PLAY IN MODERN CULTURE

(By Meyer Schapiro)

In discussing the place of painting and sculpture in the culture of our time, I shall refer only to those kinds which, whether abstract or not, have a fresh inventive character, that art which is called modern not simply because it is of our century, but because it is the work of artists who take seriously the challenge of new possibilities and wish to introduce into their work perceptions, ideas, and experiences which have come about only within our time.

In doing so I risk perhaps being unjust to important works or to aspects of art which are generally not comprised within the so-called modern movement.

There is a sense in which all the arts today have a common character shared by painting; it may therefore seem arbitrary to single out painting as more particularly modern than the others. In comparing the arts of our time with those of 100 years ago, we observe that the arts have become more deeply personal, more intimate, more concerned with experiences of a subtle kind. We note, too, that in poetry, music and architecture, as well as in painting, the attitude to the medium has become much freer, so that artists are willing to search further and to risk experiments or inventions which in the past would have been inconceivable because of fixed ideas of the laws and boundaries of the arts. I shall try to show however that painting and sculpture contribute qualities and values less evident in poetry, music, and architecture.

It is obvious that each art has possibilities given in its own medium which are not found in other arts, at least not in the same degree. Of course, we do not know how far reaching these possibilities are; the limits of an art cannot be set in advance. Only in the course of work and especially in the work of venturesome personalities do we discover the range of an art, and even then in a very incomplete way.

In the last 50 years, within the common tendency towards the more personal, intimate and free, painting has had a special role because of a unique revolutionary change in its character. In the first decades of our century painters and sculptors broke with the long-established tradition that their arts are arts of representation, creating images bound by certain requirements of accord with the forms of nature.

That great tradition includes works of astounding power upon which artists have been nourished for centuries. Its principle of representation had seemed too self-evident to be doubted, yet that tradition was shattered early in this century. The change in painting and sculpture may be compared to the most striking revolution in science, technology, and social thought. It has affected the whole attitude of painters and sculptors to their work. To define the change in its positive aspect, however, is not easy because of the great diversity of styles today even among advanced artists.

One of the charges brought most frequently against art in our time is that because of the loss of the old standards, it has become chaotic, having no rule or direction. Precisely this criticism was often made between 1830 and 1850, especially in France, where one observed side by side works of neo-classic, romantic, and realistic art—all of them committed to representation. The lack of a single necessary style of art reminded many people of the lack of clear purpose or of common ideals in social life. What seemed to be the anarchic character of art was regarded as a symptom of a more pervasive anarchy or crisis within society as a whole.

But for the artists themselves—for Ingres, Delacroix and Courbet—each of these styles was justified by ideal ends that they served, whether of order, liberty or truth; and when we look back now to the 19th century, the astonishing variety of its styles, the many conflicting movements and reactions, and the great number of distinct personalities, appear to us less as signs of weakness in the culture than as examples of freedom, individuality, and sincerity of expression. These qualities corresponded to important emerging values of the social and political life of that period, and even helped to sustain them.

In the course of the last 50 years the painters who freed themselves from the necessity of representation discovered whole new fields of form-construction and expression (including new possibilities of imaginative representation) which entailed a new attitude to art itself. The artist came to believe that what was essential in art—given the diversity of themes or motifs—were two universal requirements: that every work of art has an individual order or coherence, a quality of unity and necessity in its structure regardless of the kind of forms used; and, second, that the forms and colors chosen have a decided expressive physiognomy, that they speak to us as a feeling-charged whole, through the intrinsic power of colors and lines, rather than through the imaging of facial expressions, gestures, and bodily movements, although these are not necessarily excluded—for they are also forms.

That view made possible the appreciation of many kinds of old art and of the arts of distant peoples—primitive, historic, colonial, Asiatic and African, as well as European—arts which had not been accessible in spirit before because it was thought that true art had to show a degree of conformity to nature and of mastery of representation which had developed for the most part in the West. The change in art dethroned not only representation as a necessary requirement but also a particular standard of decorum or restraint in expression which had excluded certain domains and intensities of feeling. The notion of the humanity of art was immensely widened. Many kinds of drawing, painting, sculpture and architecture, formerly ignored or judged inartistic, were seen as existing on the same plane of human creativeness and expression as civilized western art. That would not have happened, I believe, without the revolution in modern painting.

The idea of art was shifted, therefore, from the aspect of imagery to its expressive, constructive, inventive aspect. That does not mean, as some suppose, that the old art was inferior or incomplete, that it had been constrained by the requirements of representation, but rather that a new liberty had been introduced which had, as one of its consequences, a greater range in the appreciation and experience of forms.

The change may be compared, perhaps, with the discovery by mathematicians that they did not have to hold to the axioms and postulates of Euclidian geometry, which were useful in describing the everyday physical world, but could conceive quite other axioms and postulates and build up different imaginary geometries. All the new geometries, like the old, accepted one, were submitted to the rules of logic; in each geometry the new theorems had to be consistent with each other and with the axioms and postulates. In painting as in mathematics, the role of structure or coherence became more evident and the range of its applications was extended to new elements.

The change I have described in the consciousness of form is more pronounced in painting and sculpture than it is in any other art. It is true that music and architecture are also unconcerned with representation—the imaging of the world—but they have always been that. The architect, the musician and the poet did not feel that their arts had undergone so profound a change, requiring as great a shift in the attitude of the beholder, as painting and sculpture in the beginning of our century. Within the totality of arts, painting, and sculpture, more than the others, gave to artists in all mediums a new sense of freedom and possibility. It was the ground of a more general emancipation.

Even poets, who had always been concerned with images and with language as a medium which designates, poets, too, now tried to create a poetry of sounds without sense. But that movement did not last very long, at least among English-speaking poets, although it was strong at one time in Russia and exists today in Holland and Belgium.

This sentiment of freedom and possibility, accompanied by a new faith in the self-sufficiency of forms and colors, became deeply rooted within our culture in the last 50 years. And since the basic change had come about through the rejection of the image function of painting and sculpture, the attitudes and feelings which are bound up with the acceptance or rejection of the environment entered into the attitude of the painter to the so-called abstract or near-abstract styles, affecting also the character of the new forms. His view of the external world, his affirmation of the self or certain parts of the self, against devalued social

norms—these contributed to his confidence in the necessity of the new art.

Abstraction implies then a criticism of the accepted contents of the preceding representations as ideal values or life interests. This does not mean that painters, in giving up landscape, no longer enjoy nature; but they do not believe, as did the poets, the philosophers and painters of the 19th century, that nature can serve as a model of harmony for man, nor do they feel that the experience of nature's moods is an exalting value on which to found an adequate philosophy of life. New problems, situations and experiences of greater import have emerged: the challenge of social conflict and development, the exploration of the self, the discovery of its hidden motivations and processes, the advance of human creativeness in science and technology.

All these factors should be taken into account in judging the significance of the change in painting and sculpture. It was not a simple studio experiment or an intellectual play with ideas and with paint; it was related to a broader and deeper reaction to basic elements of common experience and the concept of humanity, as it developed under new conditions.

In a number of respects, painting and sculpture today may seem to be opposed to the general trend of life. Yet, in such opposition, these arts declare their humanity and importance.

Paintings and sculptures, let us observe, are the last handmade, personal objects within our culture. Almost everything else is produced industrially, in mass, and through a high division of labor. Few people are fortunate enough to make something that represents themselves, that issues entirely from their hands and mind, and to which they can affix their names.

* * * * *

What is most important is that the practical activity by which we live is not satisfying; we cannot give it full loyalty, and its rewards do not compensate enough for the frustrations and emptiness that arise from the lack of spontaneity and personal identifications in work: the individual is deformed by it, only rarely does it permit him to grow.

The object of art is, therefore, more passionately than ever before, the occasion of spontaneity or intense feeling. The painting symbolizes an individual who realizes freedom and deep engagement of the self within his work. It is addressed to others who will cherish it, if it gives them joy, and who will recognize in it an irreplaceable quality and will be attentive to every mark of the maker's imagination and feeling.

The consciousness of the personal and spontaneous in the painting and sculpture stimulates the artist to invent devices of handling, processing, surfacing, which confer to the utmost degree the aspect of the freely made. Hence the great importance of the mark, the stroke, the brush, the drip, the quality of the substance of the paint itself, and the surface of the canvas as a texture and field of operation—all signs of the artist's active presence. The work of art is an ordered world of its own kind in which we are aware, at every point, of its becoming.

All these qualities of painting may be regarded as a means of affirming the individual in opposition to the contrary qualities of the ordinary experience of working and doing.

I need not speak in detail about this new manner, which appears in figurative as well as abstract art; but I think it is worth observing that in many ways it is a break with the kind of painting that was most important in the 1920's. After the First World War, in works like those of Léger, abstraction in art was affected by the taste for industry, technology, and science, and assumed the qualities of the machine made, the impersonal and reproducible, with an air of coolness and mechanical control, intellectualized to some degree. The artist's power of creation seems analogous here to the designer's and engineer's. That art, in turn, avowed its sympathy with mechanism and industry in an optimistic mood as progressive elements in everyday life, and as examples of strength and precision in production which painters admired as a model for art itself. But the experiences of the last 25 years have made such confidence in the value of technology less interesting and even distasteful.

In abstraction we may distinguish those forms, like the square and circle, which have object character and those which do not. The first are closed shapes, distinct within their field and set off against a definite ground. They build up a space which has often elements of gravity, with a clear difference between above and below, the ground and the background, the near and far. But the art of the last fifteen years tends more often to work with forms which are open, fluid or mobile; they are directed strokes or they are endless tangles and irregular curves, self-involved lines which impress us as possessing the qualities not so much of things as of impulses, of excited movements emerging and changing before our eyes.

The impulse, which is most often not readily visible in its pattern, becomes tangible and definite on the surface of a canvas through the painted mark. We see, as it were, the track of emotion, its obstruction, persistence or extinction. But all these elements of impulse which seem at first so aimless on the canvas are built up into a whole characterized by firmness, often by elegance and beauty of shapes and colors. A whole emerges with a compelling, sometimes insistent quality of form, with a resonance of the main idea throughout the work. And possessing an extraordinary tangibility and force, often being so large that it covers the space of a wall and therefore competing boldly with the environment, the canvas can command our attention fully like monumental painting in the past.

It is also worth remarking that as the details of form become complicated and free and therefore hard to follow in their relation to one another, the painting tends to be more centered and compact—different in this respect from the type of abstraction in which the painting seems to be a balanced segment of a larger whole. The artist places himself in the focus of your space.

These characteristics of painting, as opposed to the characteristics of industrial production, may be found also in the different sense of the words "automatic" and "accidental" as applied in painting, technology and the everyday world.

* * * * *

Conscious control is only one source of order and novelty: the unconscious, the spontaneous and unpredictable are no less present in the good work of art. But that is something art shares with other activities and indeed with the most obviously human function: speech. When we speak, we produce automatically a series of words which have an order and a meaning for us, and yet are not fully designed. The first word could not be uttered unless certain words were to follow, but we cannot discover, through introspection, that we had already thought of the words that were to follow. That is a mystery of our thought as well.

Painting, poetry, and music have this element of unconscious, improvised serial production of parts and relationships in an order, with a latent unity and purposefulness. The peculiarity of modern painting does not lie simply in its aspect of chance and improvisation but elsewhere. Its distinctiveness may be made clear by comparing the character of the formal elements of old and modern art.

Painters often say that in all art, whether old or modern, the artist works essentially with colors and shapes rather than with natural objects. But the lines of a Renaissance master are complex forms which depend on already ordered shapes in nature. The painting of a cup in a still-life picture resembles an actual cup, which is itself a well-ordered thing. A painting of a landscape depends on observation of elements which are complete, highly ordered shapes in themselves—like trees or mountains.

Modern painting is the first complex style in history which proceeds from elements that are not preordered as closed articulated shapes. The artist today creates an order out of unordered variable elements to a greater degree than the artist of the past.

* * * * *

Another aspect of modern painting and sculpture which is opposed to our actual world and yet is related to it—and appeals particularly because of this relationship—is the difference between painting and sculpture on the one hand and what are called the "arts of communication." This term has become for many artists one of the most unpleasant in our language.

In the mediums of communication which include the newspaper, the magazine, the radio and TV, we are struck at once by certain requirements that are increasingly satisfied through modern technical means and the ingenuity of scientific specialists. Communications, in this sense, aims at a maximum efficiency through methods that ensure the attention of the listener or viewer by setting up the appropriate reproducible stimuli which will work for everyone and promote the acceptance of the message. Distinction is made between messsage and that which interferes with message, i. e., noise—that which is irrelevant. And devices are introduced to insure that certain elements will have an appropriate weight in the reception.

* * * * *

The methods of study applied in the theory of communication have been extended to literature, music, and painting as arts which communicate. Yet it must be said that what makes painting and sculpture so interesting in our times is their high degree of noncommunication. You cannot extract a messsage from painting by ordinary means; the usual rules of communication do not hold here, there is no clear code or fixed vocabulary, no certainty of effect in a given time of transmisssion or exposure. Painting, by becoming abstract and giving up its representational function, has achieved a state in which communication seems to be deliberately prevented. And in many works where natural forms are still preserved, the objects and the mode of representation resist an easy decipherment and the effects of these works are unpredictable.

The artist does not wish to create a work in which he transmits an already prepared and complete message to a relatively indifferent and impersonal receiver. The painter aims rather at such a quality of the whole that, unless you achieve the proper set of mind and feeling toward it, you will not experience anything of it at all.

Only a mind opened to the qualities of things, with a habit of discrimination, sensitized by experience and responsive to new forms and ideas, will be prepared for the enjoyment of this art. The experience of the work of art, like the creation of the work of art itself, is a process ultimately opposed to communication as it is understood now. What has appeared as noise in the first encounter becomes in the end message or necessity, though never message in a perfectly reproducible sense. You cannot translate it into words or make a copy of it which will be quite the same thing.

But if painting and sculpture do not communicate they induce an attitude of communion and contemplation. They offer

to many an equivalent of what is regarded as part of religious life: a sincere and humble submission to a spiritual object, an experience which is not given automatically, but requires preparation and purity of spirit. It is primarily in modern painting and sculpture that such contemplativeness and communion with the work of another human being, the sensing of another's perfected feeling and imagination becomes possible.

If painting and sculpture provide the most tangible works of art and bring us closer to the activity of the artist, their concreteness exposes them, more than the other arts, to dangerous corruption. The successful work of painting or sculpture is a unique commodity of market value. Paintings are perhaps the most costly man-made objects in the world. The enormous importance given to a work of art as a precious object which is advertised and known in connection with its price is bound to affect the consciousness of our culture. It stamps the painting as an object of speculation, confusing the values of art. The fact that the work of art has such a status means that the approach to it is rarely innocent enough; one is too much concerned with the future of the work, its value as an investment, its capacity to survive in the market and to symbolize the social quality of the owner. At the same time no profession is as poor as the painter's, unless perhaps the profession of the poet. The painter cannot live by his art.

Painting is the domain of culture in which the contradiction between the professed ideals and the actuality is most obvious and often becomes tragic.

* * * * *

But granting the importance of all those perceptions and values which find no place in painting today, the artist does not feel obliged to cope with them in his art. He can justify himself by pointing to the division of labor within our culture, if not in all cultures. The architect does not have to tell stories with his forms; he must build well and build nobly. The musician need not convey a statement about particular events and experiences or articulate a moral or philosophical commitment. Representation is possible today through other means than painting and with greater power than in the past.

In the criticism of modern painting as excluding large sectors of life, it is usually assumed that past art was thoroughly comprehensive. But this view rests on an imperfect knowledge of older styles. Even the art of the cathedrals, which has been called encyclopedic, represents relatively little of contemporary actuality, though it projects with immense power an established world view through the figures and episodes of the Bible. Whether a culture succeeds in expressing in artistic form its ideas and outlook and experiences is to be determined by examining not simply the subject matter of one art, like painting, but the totality of its arts, and including the forms as well as the themes.

Within that totality today painting has its special tasks and possibilities discovered by the artists in the course of their work. In general, painting tends to reinforce those critical attitudes which are well represented in our literature: the constant searching of the individual, his motives and feelings, the currents of social life, the gap between actuality and ideals.

If the painter cannot celebrate many current values, it may be that these values are not worth celebrating. In the absence of ideal values stimulating to his imagination, the artist must cultivate his own garden as the only secure field in the violence and uncertainties of our time. By maintaining his loyalty to the value of art—to responsible creative work, the search for perfection, the sensitiveness to quality—the artist is one of the most moral and idealistic of beings, although his influence on practical affairs may seem very small.

Painting by its impressive example of inner freedom and inventiveness and by its fidelity to artistic goals, which include the mastery of the formless and accidental, helps to maintain the critical spirit and the ideals of creativeness, sincerity and self-reliance, which are indispensable to the life of our culture.

The Reciprocal Trade Program

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 13, 1958

Mr JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Jenner Hits Export of United States Jobs."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Fort Wayne News-Sentinel of August 4, 1958]

JENNER HITS EXPORT OF UNITED STATES JOBS

In a withering attack on internationalists, Senator WILLIAM E. JENNER, in the United States Senate the other day, pertinently declared that the so-called "reciprocal trade program," in combination with other inane internationalist programs, "is in fact a system for exporting American jobs to other countries."

Far from increasing job opportunities or wages paid in the United States, Senator JENNER declared that this vicious system is stimulating the export of American working capital to make many thousands of jobs in other countries at the expense of the American workingman. The output of the holders of these exported American jobs, completes a vicious circle by coming into the American market to compete with the output of American factories and farms.

With obvious prophetic certainty, JENNER forecasts that surrender to a still further expanded directed international economy, will fall heaviest on the workers of the United States whose high wages depend on our vastly superior machinery and equipment, provided out of the savings of Americans, reinvested in employment here at home.

"The reciprocal trade program is by now so great a detriment to American economic life," said JENNER, "that it is almost impossible to describe it in temperate language." He added that is so incredibly malevolent to American interests that "it is almost impossible to make it creditable to those who have not looked behind the fleecy clouds of propaganda to see the cold unvarnished truth."

Senator JENNER described at length to the Members of Congress the genesis and development of this specific entity of a veritable wave of schemes submerging the best interests of America to the benefit of every improvident country in the world. He cited how, in enacting the reciprocal trade law in 1934, Congress indeed voted to surrender its legislative responsibility to the executive branch of the Government.

The executive branch originally asked for this power to implement an overall policy approaching free trade in its disturbing ramifications. And after World War II, the executive branch compounded its evil sell-out of American interests by surrendering its derivative legislative power to an international body, of which we are 1 of 36 members.

JENNER graphically described how it would be grimly humorous if it were not so serious, to contemplate how, paradoxically, this international body is not concerned primarily with free trade, but with is very opposite—an elaborate worldwide system of quotas and allocations of markets, which is under no obligation to put American interests above those of its 35 members in any manner whatever. And that it interlocks with a host of other international bodies operating above the Congress and the Constitution, and in accordance with the principles of a directed, not a free economy.

Senator JENNER explains how this not only does nothing whatever to increase the volume of world trade, or reduce the controls on freedom of trade employed by other nations, but also actually is a limitation on the total of world trade, and a transfer of a share of the world market from American production to foreign production under specious arguments about a dollar shortage.

JENNER cited how, the one worlders behind the reciprocal trade gimmick report huge foreign aid giveaways as foreign trade, which the Senator debunks for the specious misrepesentation that it is. "If they (these reported exports) were foreign aid, they were not exports," said JENNER. "They were not paid for abroad—and the cost was met by taxes on American workers," he added, then citing how Indiana's proportionate share of those taxes is higher than anything that appears in these dishonest statistics on foreign trade."

Challenging the Congress to take action to deal with this international division of wealth, the Senator predicted, "if we do nothing, the division of wealth will continue until we average the income of Americans with those of Cambodia and Egypt. I ask you, what kind of average do you get if you divide up the incomes of 173 million Americans with the incomes of over a billion people in the under-privileged areas?"

Once again we are justified in being proud of our Hoosier Senator because once again he is so right.

Germany's Friendship for Israel

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, August 13, 1958

Mr. KEFAUVER. Mr. President, with events moving so fast, it is most refreshing to read a calm and understanding analysis of the present world crisis. I have before me an editorial which appeared in the Chicago Sun-Times on July 29, 1958, titled "Khrushchev Favors Turmoil."

I have often disagreed with the editorial policy of the Sun-Times, but I want to compliment the editor for a most scholarly analysis of the present world crisis and the problem in the Middle East. I was particularly interested in the reference to the Adenauer administration's position vis-a-vis the Middle East and Israel.

I ask permission to have this editorial inserted in the RECORD so that all my colleagues may have the benefit of reading this splendid presentation of a most complex problem.

I have before me also a letter to the editor of the Chicago Sun-Times written by Gen. Julius Klein, of Chicago. He is well known as an able man and a keen analyst of world affairs.

After he finished a useful study of defense programs in Europe a few years ago, I took the floor at that time, as my colleagues on both sides of the aisle have done before, to pay tribute to that fine citizen-soldier for a mission well done. Many of the recommendations made in the general's mission report have been adopted. Others should have been followed, but that is beside the point today.

General Klein's letter to the editor of of the Sun-Times contains the answer in which I, and I am sure my colleagues concur respecting our country's relationship with our present German ally.

I think the Sun-Times editorial and General Klein's reply show us how wise our Government was in pursuing the policy it did regarding postwar Germany. Chancellor Adenauer has done all be could to make Germany a loyal and true democratic ally and thus bring the German people to atone for the terrible sins and crimes committed under Hitler. We are not unmindful of the historical turn of events which saw Germany become a stanch supporter of the newest democracy and fortress of freedom in the Middle East—the State of Israel.

I applaud not only Chancellor Adenauer but also the Chicago Sun-Times for their editorial recognition of this historical achievement and for making the splendid presentation they did on the subject.

I ask unanimous consent to have printed in the Appendix of the RECORD the editorial, together with General Klein's reply.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

[From the Chicago Daily Sun-Times of July 29, 1958]

KHRUSHCHEV FAVORS TURMOIL

Soviet Premier Khrushchev torpedoed the idea of a UN summit conference at New York yesterday. He went back to his previous insistence that the Middle East is a powder keg that can be deactivated only by his previous proposal for a summit conference attended by only five powers, the United States, Britain, France, the Soviet Union and India.

By this move Khrushchev tried again to give the impression that the peace in the Middle East is threatened by the United States and Great Britain and not by the militancy of Arab nationalism and the long-standing feud between Israel and the Arab states. Khrushchev seeks to put the United States and Great Britain on trial at a summit; he is not interested in getting down to the source of the trouble in the Middle East.

A recognition that any summit conference must deal with such basic problems was given Sunday by West Germany.

The West German Government added its voice to those who believe that Israel should participate in a summit conference if Arab States are included.

This stand by the German Government is especially interesting inasmuch as West Germany recently has enjoyed particularly good relations with President Nasser of the United Arab Republic.

Germany has been doing business on a relatively large scale with the UAR. Just last Sunday President Nasser opened Egypt's first steel plant near Cairo. It was built by German technicians. Nasser publicly thanked them, saying, "We shall not forget those who worked with us under difficult circumstances."

It is ironic that the nation which, under Hitler, persecuted its Jewish citizens and hastened the formation of a homeland for refugees from anti-Semitism, should now be a supporter of Israel. But Germany has been consistent in its remorse since the death of Hitler for his treatment of Jews. West Germany has made a substantial donation to Israel's development. It is paying in restitution funds $714 million to Israel over a period of 12 years.

It has been said that the turmoil in the Middle East will not subside until the Western Powers accept the ambition of Arab nationalists to form a federation of Arab nations, or even a single Arab State. Even if this should happen, there would still be instability in the area unless Arab leaders accept the fact that Israel is here to stay and that cooperation between Israel and her neighbors is necessary and inevitable.

On the other hand, Arab leaders profess the fear that Israel, beacuse she is not self-supporting, inevitably must expand her boundaries at their expense. A discussion of boundaries—with guaranties for both Israel and her neighbors—is imperative for any discussion of Middle East problems. Both sides will have to realize that there must be some form of compromise on boundaries. The refugee problem also cries out for solution.

The proper place for a discussion of these basic problems is in the United Nations, at a meeting at which the great powers can show their sincerity by sending their heads of state. By his reply, turning down such a U. N.-sponsored meeting, Khrushchev has shown once again that he is not interested in stabilizing the Middle East but in keeping it stirred up.

JULY 29, 1958.

EDITOR,
Chicago Sun-Times,
Chicago, Ill.

DEAR SIR: I would like to congratulate you on your July 29 editorial, Khrushchev Favors Turmoil. Your calm and statesmanlike analysis of the real problem facing the free world in connection with the proposed summit conference on the Middle East is superb.

I saw Chancellor Adenauer only 3 weeks ago and he discussed with me freely his burning desire to contribute all he can to bring peace out of the present chaotic situation which can only lead to world catastrophe. He further expressed his great personal interest in the Middle East problem about which he has shown great and genuine understanding.

It is with special interest that I read the following paragraph in your editorial:

"It is ironic that the nation which, under Hitler, persecuted its Jewish citizens and hastened the formation of a homeland for refugees from anti-Semitism, should now be a supporter of Israel. But Germany has been consistent in its remorse since the death of Hitler for his treatment of Jews. West Germany has made a substantial donation to Israel's development. It is paying in restitution funds $714 million to Israel over a period of 12 years."

You are right. That is what the Adenauer government has been and is doing. Let me say that I consider Adenauer one of the great, if not one of the greatest, European statesmen at this moment. His loyal support of President Eisenhower and Secretary of State Dulles in their position against the Communist bloc, his great love for humanity, his firm and courageous stand on present world problems are characteristic of the principles which have animated the entire life of this deeply religious and noble gentleman.

I believe when history is further written it will record Adenauer as having contributed one of the most important chapters toward establishing permanent peace to the world. America is fortunate in having such an ally.

The Eisenhower and Truman administrations should be congratulated for the wisdom with which they dealt with Germany. We are now reaping the dividends of this bipartisan American approach toward a former foe—now a loyal ally.

We must do all we can to cement this friendship and alliance as Germany today stands as a bulwark against the Communist steamroller and the democratic, western way of life.

JULIUS KLEIN,
Major General (Retired).

Construction and Improvement of Certain Roads on the Navaho and Hopi Indian Reservations

---

SPEECH
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. UDALL. Mr. Speaker, I am very glad that the gentleman from Iowa demanded a second, because I think he, more than any other Member, should support this bill.

In 1950 the Congress passed the Navaho-Hopi Rehabilitation Act to provide a rehabilitation program for these tribes. It might be called a domestic point 4 program, if the gentleman would like to call it that, to enable these Indians—who occupy a land area almost as large as the entire State of West Virginia—to develop their resources.

This legislation authorizes the expenditure of money for the construction of two main highways across these reservations. There is none at the present time. They are needed to carry out the educational, health, and resource development programs needed on these reservations.

The specific purpose of the legislation is to increase the authorization of the original bill from $20 million to $40 million so these roads can be completed.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. UDALL. I yield.

Mr. GROSS. The gentleman referred to this as a domestic foreign aid program. Let me say to the gentleman that I never considered the American Indian a foreigner.

Mr. UDALL. Nor do I, but I was suggesting something I thought would appeal to the gentleman, for he is always saying that we ought to do something about our own problems and put our own people first. We have health, education, and roads programs under our mutual security program, and I believe we should not do less for our own people.

I would say to the gentleman that you cannot even travel in this vast area of the United States, almost as large as the State of West Virginia, in a regular motor vehicle. How then, in these areas, can you carry out programs of rehabilitation and betterment unless you have adequate access to the people who must be served?

Mr. HOFFMAN. Mr. Speaker, will the gentleman yield?

Mr. UDALL. I yield to the gentleman from Michigan.

Mr. HOFFMAN. The gentleman said that we should pass this bill because he thought we were doing so much for people abroad.

Mr. UDALL. I thought that argument might appeal to the gentleman from Michigan.

Mr. HOFFMAN. Does the gentleman mean and does he really think we ought to look after our own people first?

Mr. UDALL. I have always held that point of view, and that is the reason I favor this particular legislation. I think this should have a priority over much of the legislation we have already passed.

Mr. HOFFMAN. Does that make the gentleman an isolationist?

Mr. UDALL. No, I would not think so.

Mr. HOFFMAN. I agree with the gentleman that we ought to look after our own folks.

Mr. UDALL. I thought the gentleman would concur in my point of view on this matter.

Civil Rights

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, August 13, 1958

Mr. JAVITS. Mr. President, it will be recalled that title III of what is now the Civil Rights Act of 1957 was stricken by the Senate from the bill as it passed the House and thus was not included in the final legislation as it became law. Title III authorized the Attorney General to bring actions in the name of the United States Government to enforce rights guaranteed by the Constitution, which would include enforcement of the Supreme Court's decree on school desegregation.

In an article in the August 1958 issue of The Progressive, Dr. Charles Alan Wright, professor of law at the University of Texas, has observed that segregation will be ended in the South only if the Government of the United States recognizes that it is its function and its responsibility to require compliance with the Constitution. Title III, referred to above, would serve to bring about that recognition. It is the subject of several bills before the Congress. Title III is essential in the national interest and will have to be enacted by the Congress if we are to effectively guarantee the constitutional rights of Americans, especially in those areas of the Nation where there is a reluctance to recognize that those who share the obligations of American citizenship, such as serving in the military forces, must also be accorded the rights of American citizenship. I append Professor Wright's article hereto.

I ask unanimous consent that the article in the August 1958 issue of the Progressive, entitled "School Integration: An Almost Lost Cause," written by Dr. Charles Alan Wright, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCHOOL INTEGRATION: AN ALMOST LOST CAUSE
(By Charles Alan Wright)

In the course of his campaign in the primaries leading up to the 1956 Democratic National Convention, Adlai Stevenson commented that it would be a fine thing if desegregation of the public schools could be completed by 1963, the 100th anniversary of the Emancipation Proclamation. For this statement he was roundly denounced, by Negro leaders and by liberal groups, as a gradualist and a go-slower. It is a measure of the extent to which southern conditions and northern hopes have deteriorated that today it is entirely clear segregation will not be ended by 1963. Even more frightening, it is now entirely conceivable—perhaps even probable—that in major parts of the South the schools will never be desegregated.

It has been far too easy to be complacent about the future of desegregation, to assume that because the Supreme Court has spoken, the South must ultimately go along. This complacence is fed by the well-publicized success of integration in places like Louisville and San Antonio, and by the figures released from time to time showing hundreds of southern schools now open to children of all races. These gratifying developments have caused those who do not follow the situation closely to overlook the insolence of Dallas, the intransigence of Georgia—to ignore, in a word, the reality of what has been happening and will happen in the South.

Integration has come, on the whole, only in those places where it is easy, where white supremacy is not a vital article of faith, where the cost of two separate—though almost never equal—school systems has been a crushing financial burden, accepted by the taxpayers only out of habit. In the States and cities where these conditions exist, the Supreme Court decision must have been secretly welcomed, no matter how the politicians waved the Confederate flag, because it provides a graceful excuse for ending this expensive obeisance to a virtually forgotten ancestral memory.

Texas, for example, has a patently invalid law which purports to make it a matter of local option for school districts to decide whether they will or will not comply with the Constitution of the United States. In the only election which has been held under this absurd statute, the people of Pleasanton, Tex., voted quite decisively in favor of integration. They did this, however, only because the local Negro school was so shockingly inadequate as to offend the sensibilities of usually tolerant State officials. If the voters of Pleasanton had rejected integration, they would have been faced with the alternatives of paying heavily for an adequate Negro school, or of losing accreditation and State aid for all the schools of their district. Pleasanton is in south Texas, where the Negro population is small and prejudice traditionally has been directed against Mexicans rather than Negroes. Under all the circumstances, it is not surprising that Pleasanton accepted integration. These, however, are not the circumstances which exist throughout the Deep South.

No Negro child has yet been admitted to a white school in Mississippi, Alabama, Georgia, Florida, South Carolina, or in east Texas, and there is no sign that any will be admitted in any reasonable period of time. No Negro child has yet been admitted to a white school in Virginia or Louisiana, though in those States litigation intended to cause some desegregation is well advanced, and the future is unpredictable. A handful of Negro children do go to previously white schools in North Carolina, but their admission is openly described as a mere token, designed to obscure the fact that the overwhelming majority of Negro children in that State are being denied equal protection of the laws. More than 4 years have gone by since the Supreme Court announced that the Constitution of the United States forbids racial segregation in public education, but the Deep South remains committed to its old ways, its defenses not even seriously attacked much less dented. Prospects that this situation will change are bleak indeed.

There was a time when many people hoped that the South would end segregation simply because segregation is no longer lawful, and the Southern gentleman—or so the myth runs—is a law-abiding person. Four years have been more than enough to show how naively unrealistic that hope was. Southern legislatures vie with each other in passing resolutions of defiance of the court and laws intended to circumvent enforcement of its decrees. Southern political leaders—even those regarded as liberal on other issues—bid for voter support by denunciations of integration and promises that it will never take place during their administration. Otherwise responsible newspapers, with few exceptions, fan the fires of lawlessness with distorted and inaccurate criticisms of the Supreme Court, and proud boasts, like that of the Dallas Morning News, that the policy in their area is all deliberate delay. It is plain that segregation will not be ended in the Deep South merely because it is contrary to the Constitution of the United States.

Others have comforted themselves with the hope that a God-fearing South would end segregation because segregation is morally wrong. This hope, too, has been forlorn. Many southern clergymen have behaved splendidly on this issue. Almost the only white voices which have been heard to speak favorably of desegregation have been voices trained for use in the pulpit. Unfortunately these are voices crying in the wilderness, ineffective to persuade even the faithful. Segregation remains almost invariably the pattern within the church itself, and at church-run schools. Two Episcopal bishops, one in Virginia and one in Texas, met defeat at the hands of the pious and respectable church leaders who make up a diocesan convention when they proposed this spring that summer camps operated by the church should not be racially segregated—and this despite the influence and prestige which bishops historically enjoy in the Episcopal Church. So long as lay people will not follow their spiritual advisers even as to race relations within the church, it is idle to hope that they will let religious teaching dictate their action in public affairs.

There is a final possibility. If the South will not end segregation because it is contrary to law, if the South will not end segregation because it is immoral, there remains the possibility that segregation will be ended by orders of the Federal courts. Such orders there surely will be. That they will end segregation is far less clear. Mansfield, Tex., was ordered to end segregation in its schools by the Federal court in August 1956. No

Negro child has yet attended those schools. A threatening mob, unrestrained by local and State authorities, was enough to intimidate would-be Negro applicants, and to keep the school for white students only. The University of Alabama was ordered to admit Negroes in 1955. No Negro has yet attended that university, except for the day or two that Autherine Lucy risked her life to get to the classroom. Nine Negro children did attend Central High School in Little Rock, thanks to their own fantastic courage and the might of the United States Army. Under Judge Lemley's order, they will not be allowed to return to Central this fall.

If a handful of juvenile delinquents, goaded on by their elders and their governor, can create enough unpleasant incidents within an integrated school, then, so Judge Lemley ruled, the constitutional rights of Negro children must yield to the desire of the community for peace and order in its schools. It is hard to imagine a clearer or simpler blueprint for thwarting desegregation. Perhaps Judge Lemley's order will be reversed on appeal—though I wouldn't bet on it. Most Southern States are already armed with another answer, statutes which provide that any school occupied by Federal troops is to be closed, while the white children are educated in private homes, churches, or any other place that can be found. Probably the courts will be able to see through such laws. Perhaps the Federal Government will have the determination to insist on reopening of the school, and to protect Negro children who go there. But even if, after long court struggles, Negroes are admitted to a particular school, new and more subtle statutes will surely have been enacted to remove them from that school, and thousands of other schools will remain segregated.

Violence may be the principal weapon for keeping schools segregated, despite orders of the Federal courts, but it has a powerful ally in the delaying legalism. It has been 2½ years since the United States Supreme Court ruled, after years of litigation, that Virgil D. Hawkins cannot be denied admission to the University of Florida law school because of his race. Since the Court spoke, Hawkins' case has been back and forth through the Florida courts again, has gone once more to the Supreme Court, and now is in a lower Federal court. Hawkins has helped make a good deal of law, but he has not yet been admitted to law school. Last winter a Federal court in Dallas finally issued a decree, after the case had been appealed three separate times, calling for an end of segregation in that city. But the Dallas School Board has announced that there will be no integration there next year, because, so it says with breathtaking hypocrisy, it does not know which is controlling, the Federal court order or a Texas law, enacted since the litigation began, requiring continued segregation.

The problem of integration is, in ultimate analysis, a simple question of law enforcement. A State which discriminates according to race in admissions to its schools is breaking the law. Usually when a government has a law forbidding certain conduct, the full resources of that government, including its police and its prosecutors, are devoted to preventing and punishing such conduct. Quite frequently private persons who have a special concern with the unlawful conduct may also bring their own lawsuit, but this is a supplement to the efforts of the government to enforce the law, rather than a substitute for such effort. It is virtually unprecedented to leave enforcement of the law of the land exclusively to private lawsuits, brought and financed by private persons, as we now are doing with that provision of the 14th amendment prohibiting school segregation.

There are special reasons why private law enforcement will not suffice to end segregation. Individual Negroes, denied their constitutional right to attend an integrated school, cannot possibly be expected to carry the brunt of litigation. The cost of these lawsuits is prohibitive. Necessarily they must combine their efforts, as they have done in the National Association for the Advancement of Colored People, but such an organization immediately becomes an obvious target for harassing investigations and legislation, and is forced to divert much of its energy and its resources into battling for its right to exist.

Even were the NAACP free to pursue its course unmolested, it is a rather puny David forced to do battle simultaneously with a number of alert Goliaths. In this battle the Southern States have every advantage. These lawsuits are extremely expensive and the funds which the NAACP is able to raise by private contribution are a pittance compared to what southern legislatures are willing to appropriate from otherwise impoverished State treasuries for the cause of preserving segregation. The States resisting integration have the edge with regard to legal talent. It is no disparagement of the dedicated lawyers who have worked tirelessly for the NAACP to say that, good as they are, they are not the outstanding lawyers of the South.

The South has the tremendous advantage of being able to revise at will the rules of the game. Let one segregation statute be held unconstitutional by a Federal court and the legislature in that State will hasten to enact a new package of laws which must be attacked and invalidated one by one before an end to segregation can be ordered. Finally, the South has the advantage of the seeming neutrality of the Federal Government. It is the Constitution of the United States which the NAACP is seeking to enforce, but the Government of the United States acts as if it is a matter of complete indifference to it whether segregation continues, in defiance of the Constitution, or whether it is ended. It is true that the Federal Government did intervene, effectively and powerfully, at Little Rock, but its intervention came at the wrong time and for the wrong reason. Segregation in the public schools is fully as unlawful in Biloxi, Miss., where no court action has even been begun, as it is in Little Rock, Ark., where a court has decreed its end.

Court orders must be obeyed, in a law-abiding country, and it is right that the Government should see to it that they are, but a court order has no stronger claims to obedience than does the Constitution itself, from which the courts derive their authority. For the Federal Government to remain idle in the face of open violation of its supreme law, except in the rare case where private persons have secured a court order calling for compliance with the law, is, in effect, to concede the ultimate victory to those States which are determined not to obey the law.

The South will not end segregation because the Supreme Court says it must, nor because the churches denounce segregation as immoral, nor because the NAACP, laboring manfully with inadequate resources, brings a pitifully few lawsuits looking toward this end. Segregation will be ended in the South only if the Government of the United States recognizes that it is its function and its responsibility to require compliance with the Constitution. The Federal Government alone has the money and the legal manpower and the patience and the power to force recalcitrant States to obey the law. Decisive Federal action in support of integration is the only thing which will persuade the South that the end of segregation is inevitable, and that nothing is to be gained by throwing stones outside a Central High School or spitballs within. And, not irrelevantly, the Federal Government has express constitutional authority, conferred by section 5 of the 14th amendment, to see to it that every person in the land enjoys the rights that amendment guarantees.

It has been only a year—though it now seems ancient history—since Congress came close to putting the responsibility for ending segregation on the Federal Government, where it properly belongs and where it must rest if segregation is to be ended. Title III of the bill which ultimately became the Civil Rights Act of 1957 authorized the Attorney General to bring actions to enforce school integration and the other rights given by the 14th amendment. The House of Representatives passed the bill in this form, and it was no secret that the bill gave the Attorney General this power. Before the bill came to the Senate, Telford Taylor, in an article in the New York Times magazine, referred correctly to title III as "the most important provision of the bill." But title III soon fell victim to southern adroitness and administration vacillation. Senator RICHARD RUSSELL, of Georgia, blasted title III as "the most cunningly devised and contrived piece of legislation I have ever seen," and suggested that it had been sneaked into the bill without the knowledge of the President. Senator RUSSELL must have scented victory when the President told his press conference the next day that his objective in the bill was merely to protect voting rights, and that he had read the bill that morning and found phrases in it he didn't understand.

This did not quite end the matter. The day the Senate agreed to consider the bill President Eisenhower issued a statement in which he said that one of the four objectives of the bill was "to provide a reasonable program of assistance in efforts to protect the constitutional rights of our citizens"—an obvious reference to title III—and that, though the Senate might make changes in detail, he hoped all four of these objectives would be retained. Unfortunately, the very next day, again at a press conference, he made a remark which the newspapers and the Senate understood to mean that he was not convinced that it would be wise to permit the Attorney General to bring school integration suits. It is doubtful that this is what the President actually meant to say, or what he thought he had said, but when no action was taken to correct this interpretation of his remarks, title III was dead. One week later it was formally interred. Despite the lack of clear encouragement from the White House, Senator KNOWLAND was able to hold a majority of Republicans to support of title III, and they were joined by some—but far from all—liberal Democrats. But the Senate voted, 52–38, to delete from the bill all except an unimportant remnant of title III, and thus to deny to the Federal Government the power to compel obedience to the Constitution of the United States.

All that has happened since that day—the wearing and unnecessary battle over the jury trial amendment, passage of the Civil Rights Act itself, the dispatch of troops to Little Rock, Judge Lemley's decision—has been a diverting but fundamentally meaningless sideshow. When title III was discarded, so too was any reasonable hope that school segregation will be ended in the foreseeable future. A few moments before the Senate voted on the deletion of title III, Senator JACOB JAVITS, of New York, said, with deep insight: "Today's vote is supremely important. It starts the process by which the whole ball game can be lost."

The whole ball game can indeed be lost. I think it is being lost. It will remain lost unless and until some future Congress corrects its mistake of last summer by adopting a statute similar to title III. More is at stake here than the right of Negro children to go to school with white children in the South, important as that right is. If the Supreme Court's decision that segregation

is unconstitutional is allowed, because of Federal inaction, to become a dead letter in places where it is unpopular, we can abandon our proud boasts that we live in a strong Federal Union, rather than a loose confederacy of States, and that we enjoy constitutional government under law.

Limitation of Appellate Jurisdiction of the Supreme Court

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 13, 1958

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Stymied Jenner-Butler Bill."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Fort Wayne News-Sentinel of August 1, 1958]

THE STYMIED JENNER-BUTLER BILL

Paradoxically, while legislation requested by the administration, to limit Supreme Court authority over the executive department has been passed, or well advanced toward passage, in short order, the Senate has done nothing about the infinitely more important Jenner-Butler bill, which was approved by the Senate Judiciary Committee and reported to the Senate floor more than 2 months ago.

The Court curb bill, drafted by Indiana's United States Senator WILLIAM E. JENNER, and extensively amended by Senator JOHN M. BUTLER, of Maryland, would curtail the authority of the Supreme Court in some fields in which it has usurped the constitutional rights and functions of the Congress and the States, and in doing so has given aid and comfort to Communists.

Senator JENNER commendably agreed to many changes in his bill, as amended by Senator BUTLER, assisted by Senator STYLES BRIDGES, of New Hampshire, which resulted in the Senate Judiciary Committee approving the revised bill by a 2 to 1 majority.

The Jenner bill amendments appear to eliminate anything that could in any manner pose any curbs on the Supreme Court's authority to review legal questions—or in any other manner interfere with the constitutional entity of the Court as the duly ordained judiciary branch of our Government.

However, it is vitally important that the revised bill retains the provisions that would void recent Supreme Court decisions by making clear the intent and rightful prerogative of Congress in laws affecting the investigative power of congressional committees in the antisubversive field, prosecution of sedition by the States and Federal Government of antisubversive legislation.

It is also salutary that provisions have been retained and approved by the Judiciary Committee which clarify and reffirm the traditional division between the judicial and legislative powers as prescribed by the Constitution. They would salutarily restrain the High Court from its recent penchant for making law, rather than confining itself to its proper province of merely interpreting it.

Indeed, the Jenner-Butler measure reaffirms with unmistakable clarity the strict division of all three of the powers of our tripartite form of government—the executive, as well as the judicial and the legislative. It asserts what certainly needs to be asserted, and that is that the Supreme Court has no supremacy over the Constitution any more than the other two branches of our Government have.

Senators JENNER, BUTLER, and BRIDGES and other United States Senators have given this proposed legislation most earnest thought, and the Senate Judiciary Committee devoted intensive study to it and strongly approved it in its most fair and effective modified form and reported it to the floor of the Senate.

Ordinarily, the Senate would have lost no time in debating and voting on so important a measure, concurred in by 10 members of a major congressional committee. However, the Jenner-Butler bill has been quickly and unceremoniously shelved and ignored. But why? Well, as in everything, there has to be a reason or reasons, and Senator JENNER puts his finger on one when he says it is because of Senate politics. He referred to the well-reputed fears of Senate Majority Leader LYNDON JOHNSON that if the bill were permitted to come to a vote, a lot of patriotic Democrats would vote for it—there would be a sharp split in the Democratic ranks on the matter of curbing the High Court, and that this would look bad for the Democratic Party in the November election.

But Senator JENNER realistically points out that there also would doubtless be a split among the Republicans—that the modern Republicans undoubtedly would oppose curbing the power of the court, as much as the New-Fair-Deal Democrats would.

The hour is indeed late when the Senate has for more than 2 months ignored so important a bill, so impressively endorsed by its own Judiciary Committee, and which would so importantly restore to the Congress itself the vital legislative powers decreed by the Constitution, which have been usurped by the Supreme Court.

We reiterate that with congressional adjournment just 2 or 3 weeks away, it is late. However, it is not too late, if the Senate will, still, at long last, act to retrieve the supremacy that was vested in the Congress by the Constitutional Convention.

The President's Address Before the General Assembly of the United Nations

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. KEARNS. Mr. Speaker, this morning I took time out of a busy schedule to listen to the President's marvelous speech before the General Assembly of the United Nations in New York.

As I listened, I was struck anew by the realization that when we elected the President to his second term we were fortunate enough to continue in office a leader with enormous prestige who can speak with great sincerity and authority to representatives of all the nations of the world, as he did so plainly and eloquently this morning when clarifying the picture in the Middle East, especially with regard to the position of the United States in the Middle East.

The President brought out most forcefully that since the birth of our Republic we have shared our wealth and our know-how, but have never sought territorial gains through aggression.

I believe the American people will agree with me that their investment in Dwight D. Eisenhower, as President, was beautifully exemplified this morning and it seems to me that he spoke for most of us when he said, "We want nothing, we give much, and we get so little."

Activities of the Committee on Un-American Activities During the 2d Session of the 85th Congress

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report on the activities of the Committee on Un-American Activties during the 2d session of the 85th Congress. This report covers the period from January 1, 1958, to and including July 31, 1958. Under the date of August 30, 1957, I inserted in the RECORD a report on the activities of the Committee on Un-American Activities during the 1st session of the 85th Congress:

REPORT BY CHAIRMAN FRANCIS E. WALTER ON THE ACTIVITIES OF THE COMMITTEE ON UN-AMERICAN ACTIVITIES DURING THE 2D SESSION OF THE 85TH CONGRESS

HEARINGS AND INVESTIGATIONS

During the period beginning January 1, 1958, and ending July 31, 1958, the committee interrogated 105 witnesses in public session and 60 witnesses in executive session. In addition, several hundred persons were interviewed by committee investigators.

Espionage

Pursuing connective information derived from United States counterspy, Boris Morros, the committee interrogated a number of persons in formal session, as well as in informal investigative interviews respecting the Soviet espionage apparatus in the United States.

While much of the information thus derived by the committee cannot for security reasons be publicly divulged, the committee is in the process of preparing a summary report outlining patters of Soviet espionage activity in the United States based upon some two dozen cases which have been the subject of extensive investigation.

Communist infiltration in basic industry

Communist penetration of basic industry has been a major focus of the committee work during the past several months. Hearings held in Gary, Ind., in which 14 witnesses testified in public session and 3 in executive session, disclosed a pattern of Communist colonization by highly educated, hard core party members who erase their identity, education, and background as they procure menial jobs in heavy industry in order to engage in Communist activity. The pattern of Communist penetration of basic industry developed in the hearings in Gary, Ind., was confirmed by data received by the committee in hearings in other key areas of the Nation.

Current organizational structure of the Communist Party

The current organizational structure of the Communist Party, its present techniques of operation and the scope of its functioning were developed in extensive hearings, espe-

cially during those hearings held in Boston, Mass.

Armando Penha, an undercover operative for the FBI from 1950 to the date of his appearance in March 1958, testified extensively concerning the inner workings of the higher echelon of the Communist conspiracy.

Assessing the current seriousness of the Communist Party, Mr. Penha declared:

"Based on my experiences, I feel—and I am sure that I am absolutely correct—that the Communist conspiracy, by and large today, is much stronger than it has ever been. * * * The party has strengthened itself every time that it weeds out weaklings, those that they suspect, those who do not accept the party discipline, and as such it becomes stronger."

During the 8 years that he was in the Communst Party, Mr. Penha had known approximately 400 members of the party. In the course of his testimony, he identified by name over 200 Communist Party members he had personally known, including topflight functionaries of the national committee of the Communist Party.

Communist propaganda

The progressively increasing flood of Communist propaganda stemming both from abroad and from domestic sources received committee attention in a number of hearings designed to develop factual material on which to base legislative recommendations to stem the tide of this phase of Communist cold war. Testimony was received by the committee from various sections of the country to the effect that notwithstanding the registration and labeling provisions of the Foreign Agents Registration Act the international Communist apparatus is directing huge quantities of subtly designed Communist propaganda to all segments of our society for the purpose of undermining our resistance, and propagating the basic foreign policy of the Soviet Empire in its drive for world domination. A new technique used by the Soviet apparatus for avoiding the labeling requirements of the Foreign Agents Registration Act was revealed in the form of the devious tactic of channeling Communist propaganda into the United States through non-Communist countries. The emphasis placed by the Kremlin-controlled international Communist-propaganda on student and youth groups in the United States and throughout the free world was given particular attention by the committee. Two of the principal Communist conduits for capturing the minds of youth were revealed to be the International Union of Students, founded in 1946, with headquarters in Prague, Czechoslovakia, which has branches in most countries; and the World Federation of Democratic Youth which claims over 85 million members in 97 countries of the world.

Red infiltration of entertainment industry

Exploitation by the Communist apparatus in the United States of persons in the entertainment media was the subject of committee hearings in New York City. These hearings disclosed a design of Communist use of persons prominent in the entertainment industry as sounding boards for the Communist line as well as a source of revenue to finance the activities of the apparatus in this country. A number of persons who had been identified as Communists under oath by responsible witnesses before the committee were interrogated respecting current activities in the entertainment industry. The hearings shed a new light on the current methods of Communist infiltration in an area of our society which is of vital importance in formation of public opinion.

Communist penetration in the South

That Communist colonizers, propagandists, and agitators are presently active in the rapidly developing industrial centers of the South was clearly established in hearings held by the committee at Atlanta, Ga. The testimony revealed that trained, hard-core Communists based in Red nests in metropolitan areas of the North are operating in various Southern enterprises including textile plants, publications, and organizations in which they are masquerading behind a facade of humanitarianism.

Typical of a number of witnesses who were interrogated by the committee during the Atlanta hearings were Eugene Feldman who had been identified under oath by a former undercover agent of the FBI as a member of the Communist Party, and, though presently in residence in Chicago, Ill., is publisher of the Southern Newsletter which carries the Communist Party line into the South; and Carl Braden, likewise, identified by a responsible witness under oath as a Communist who is a field representative of the Southern Conference Educational Fund, Inc., which is a successor organization to the one-time Communist front, the Southern Conference for Human Welfare.

REPORTS

Organized communism in the United States

This report, a detailed study of the Communist movements in America from the date of inception to and including 1958 was prepared and released by the committee.

Chronicle of treason

The committee published a series of articles by its chairman, Representative FRANCIS E. WALTER, on various episodes of the Kremlin secret war against America, including the activities of Harry Gold and the Rosenbergs, who stole some of America's vital military secrets for the Soviet Union; Judy Coplon, who kept her Communist masters informed about the efforts of the Government to root out espionage and subversion; Louis Wheaton, who betrayed his countrymen while they were fighting for survival in Korea; and Rudolph Abel, colonel of the KGB, the overseas intelligence arm of the Soviet Union.

About the Committee on Un-American Activities

Two publications about the Committee on Un-American Activities and its work were prepared and released. The first is a booklet entitled "The House Committee on Un-American Activities, What It Is, What It Does." This booklet in question-and-answer form covers the principal queries which from time to time have been posed by our citizens respecting the committee and its work.

The second publication about the committee is a study made by the Legislative Reference Service of the Library of Congress, entitled "Legislative Recommendations by House Committee on Un-American Activities." This study sets forth in detail the great body of legislation which has been enacted by the Congress following recommendations made by the committee from 1941 until 1958. The study reveals that bills were introduced in the House of Representatives embodying 80 recommendations made by the committee; that all but 2 of these bills were offered after 1949; that actual legislation enacted by the Congress carried out 35 of these committee recommendations and that there are pending in the 85th Congress 26 bills embodying committee recommendations.

The Internal Security Act of 1950, the Communist Control Act of 1954, and various provisions of the Immigration and Nationality Act of 1952, are among the more important legislative enactments in this field. In addition, executive agencies of the Government have put into effect policies, orders, and regulations relating to 13 recommendations made by the committee.

The Erica Wallach story

Based upon extensive interrogation both in Europe and in the United States of Erica Glaser Wallach, who was formerly active in the Soviet underground in Europe, but who has since broken with the Communist operation and is now a resident of the United States, the committee issued a report revealing techniques of Communist justice and the utopian nightmare, which produces—even to its inherents—the bitter fruit of assassination, torture, and enslavement.

Who are they?

Continuing the series of thumbnail sketches of the leaders of the Soviet Union and international communism, the committee this year published brief biographies of Vincente Lombardo Toledano, secretary general of the Popular Party of Mexico; Luis Carlos Prestes, general secretary of the Communist Party of Brazil; Enver Hoxha, first secretary of the Albanian Workers (Communist Party), and Gheorghe Gheorghiu-Dej, first secretary of the Rumanian Workers (Communist Party). The intrigues, double-dealing and ruthlessness of these leaders of the forces of communism in their respective countries give still further emphasis to the words of Emerson: "Don't say things. What you are stands over you the while, and thunders so that I cannot hear what you say to the contrary."

CONSULTATIONS

A series of consultations with authorities on each of the many facets of the total war which the Soviet Empire is waging with the United States of America as its principal target were conducted by the committee.

The Communist program for world conquest

Economic and psychological weapons rather than the launching of a third world war comprise the current Communist program for world conquest, Gen. Albert C. Wedemeyer warned in a consultation with the committee. One of the top strategic planners of World War II, General Wedemeyer was present at many international conferences as adviser to the President. He attended the conferences in Washington, London, Cairo, Quebec, and Casablanca before going to China as theater commander in 1944.

"They (the Communists) are attaining their objectives without the use of military force," General Wedemeyer said:

"If I were the senior planner in the Soviet hierarchy, I would advise Khrushchev: 'Continue to do exactly what you are doing now. Do not involve the Soviet Union in a major war but employ the satellites in brush fires or limited wars against our enemies, the capitalist countries. Continue penetration economically and psychologically, utilize economic or military aid to as many countries in the world as possible. They can be made indebted to the Soviet, and if not loyal, at least they will not be opposed to the Communist movement.'"

Communist psychological warfare (brainwashing)

Communist psychological warfare is now winning such extensive victories in the United States that the Red bloc will not need to employ direct military force against us in order to win the total war which they are waging with this country the principal target, Edward Hunter, American expert on Communist brainwashing, asserted.

Mr. Hunter, whose career as a foreign correspondent, author, editor, world traveler, and specialist in propaganda warfare, qualifies him as an authority on Communist propaganda techniques, stated:

"I spent 30 years, a little bit more perhaps, in countries under various forms of Communist pressure and attack. What I am witnessing in America is no different from what I saw in those other countries. I am often referred to as someone who has made phenomenal predictions that proved correct on things to come. Actually, I have never made a prediction as such in my life. I have

only predicted in the manner that one predicts the total of 4 after seeing the figures 2 plus 2.

"I have been watching developments under communism in other parts of the world, and now I see exactly the same developments here in America."

Communist propaganda activities in Canada

The sum of $20 million to $30 million yearly is collected by Soviet agents in Canada as customs duties on food and clothing parcels sent by Canadian citizens to the Soviet Union and is used to finance the activities of approximately 100,000 Communists in Canada, Milan Jakubec, president of the executive council of the Mutual Cooperation League of Canada and president of the Slovak Legion, stated.

These customs duties average 150 to 175 percent of the cost of the article itself, he emphasized, and are part of a sum of at least $100 million a year in similar duties which Soviet agents collect from citizens of the free world.

The Mutual Cooperation League of Canada, which Mr. Jakubec heads, consists of 18 ethnic groups originating from behind the Iron Curtain; and the Slovak Legion, of which he is president, consists of veterans who fought during the last war in French, British, and other Allied armies.

Mr. Jakubec stated that there are about 23 Communist newspapers in various languages in Canada. Other Communist propaganda publications in Canada include the Soviet News Bulletin, published by the Soviet Embassy, and Northern Neighbors, which is financed from the Soviet Embassy.

Communist psychological warfare (thought control)

The Soviet Union today is engaged in a gigantic campaign to win the cold war by mobilizing public opinion in western nations against their own governments, Prof. Constantin W. Boldyreff declared.

Professor Boldyreff, formerly on the faculty of Georgetown University and once a member of the Russian Cadet Corps, was one of the organizers of the NTS (National Alliance of Russian Solidarists), which is dedicated to the overthrow of the Communist regime in Russia.

The Soviet Union's propaganda campaign "is a totally new phenomenon" in international conflict, Professor Boldyreff continued. "History knows several cases when nations fought each other by economic pressure (the blockade of Napoleonic France) or even by harassing the enemy on the periphery (England and Spain) without actually resorting, for quite some time, to organized military operations. In the past this was a strife of one government against another government, with every citizen of the opposing nation being considered an enemy. In the present conflict, the main efforts of each of the striving governments are mainly directed to influence the citizens, individual citizens, of the opposing nation over the head of their own government in an attempt to capture their allegiance."

Communist encroachment in the Far East

"The Communist infiltrators are seating themselves in places of power in every level of our society and every organization we have," the late Gen. Claire Lee Chennault stated.

General Chennault organized and led the famed American volunteer group known as the Flying Tigers in the Sino-Japanese War. Later he commanded the 14th United States Air Force in the Far East during World War II. He has been a leader in the free world fight against communism for 20 years. The civilian airline which he organized after World War II—Civil Air Transport evacuated thousands of Nationalist Chinese who fled the Communist conquest of the China mainland in 1949.

The Communist world threat is so critical and the hour so late, he declared, that only a reversal of today's passive policies toward the Reds by the remaining non-Communist nations can save freedom.

What is behind the Soviet proposal for a summit conference?

The Kremlin looks upon a summit conference solely as another weapon in its program of global conquest, four experts on international communism asserted. The experts—Dr. David J. Dallin, Dr. Anthony T. Bouscaren, Dr. James D. Atkinson, and Mr. Francis J. McNamara—declared that in seeking an international conference, the purpose of the Soviet Union is not to negotiate peace but to disarm the West intellectually and psychologically.

The ideology of freedom versus the ideology of communism

The beliefs which sustain the free world can win the ideological struggle with communism, Dr. Charles Wesley Lowry, chairman and executive director of the Foundation for Religious Action in the Social and Civil Order, stated. The Foundation for Religious Action in the Social and Civil Order is an all-faith organization dedicated to opposing by spiritual means communism and all forms of totalitarianism and to renewing religious and moral foundations.

Dr. Lowry characterized the beliefs which sustain the free world as:

"The dignity, innate value, and inalienable rights of man; * * * the providence of God; * * * the integrity and ultimate sovereignty of the people; * * * the limitation and the division of governmental power; * * * and the dream and the vision of a new and fairer age of liberty and democracy for all people.

Dr. Lowry emphasized, however, that the ideological struggle was but the deepest phase of a total struggle with communism involving also military, political, and economic forces.

REFERENCE SERVICE

The reference service, maintained by the committee for Members of Congress, executive agencies of the Government, and the committee staff for the purpose of supplying data from the public files of the committee has received during the first 7 months of 1958, 1,625 requests for information on 5,197 individuals and 1,073 organizations, periodicals and general subjects. All of these have been answered with written reports.

WORK IN PROGESS

For the remainder of the year 1958 the committee has a heavy schedule of work in process including hearings and investigations, reports and consultations.

Benson Policies Beneficial to Specialty Crop Farmers of California

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. GUBSER. Mr. Speaker, I take this opportunity to point out an incident which shows that the policies of Secretary of Agriculture Ezra Taft Benson and this Republican administration have been beneficial to the specialty crop farmers of California.

The principal problem of fresh, dried, and canned fruit producers in California has been the surplus created by the loss of our overseas markets following World War II. Secretary Benson and the Departments of State and Commerce have rejected the idea of subsidizing fruit growers and have worked long and hard to once again build up our traditional foreign markets. The degree of their success was dramatically focused with a recent announcement by the United Kingdom establishing commercial import quotas on fresh, dried and canned fruit for the 1958–59 season in excess of $22 million. This announcement and an earlier one by the British Board of Trade clearly indicates a return to normalcy and an intention to make no further arrangements for British fruit imports under United States aid programs.

This is the first time the United Kingdom has permitted entry of United States fruit on a normal commercial trading basis since World War II.

Here is an example of a sound policy, without a single cent of subsidy, solving a major problem for a huge segment of our farm economy. We California farmers can thank God for men like Ezra Taft Benson.

United States Action in the Middle East

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. Mihail Farcasanu, president of the League of Free Romanians:

THE LEAGUE OF FREE ROMANIANS,
New York, N. Y., August 12, 1958.

The Honorable ALVIN M. BENTLEY,
United States Representative from Michigan.

DEAR MR. BENTLEY: The farsighted and courageous decision to prevent an eventual Soviet-Communist takeover of strategic points in the Middle East, has bolstered the prestige of the United States and given new life to the hopes of all her anti-Communist friends. The expectancy has been aroused that this firm stand will be followed by a comprehensive political action aimed at clearly identifying the aggressive colonial imperialism of Soviet communism, not only in the indirect aggression in the Middle East, but also in the overt aggression in central and Eastern Europe. The essence of this expectation lies in the hope that finally in central and east Europe also, new political tactics will be used commensurate with the nature and gravity of the overall Communist threat. It is in view of this expectancy that I take the liberty of respectfully submitting to you the following:

Posing as a champion of the Arabs, Khrushchev exalted national liberation and the right of the people to build their own life as they see fit, urging that foreign boots no longer be planted on their soil (Moscow speech, July 22, 1958). Khrushchev later added in his letter to President Eisenhower of August 5, that "no state * * * can assume the right to interfere in the affairs of small countries" and that "the peoples of

Eastern Europe have freely chosen their present way of life and will not allow anyone to change it." It seems that no political use has been made by the United States until now of these pronouncements in the field where they most pertinently apply; namely in the issue of Eastern Europe as related to the crisis in the Middle East.

President Eisenhower, in his note of August 1, to Khrushchev, refers of course to the system of political domination imposed by the Soviet Union in Eastern Europe, but no practical political charges and demands are expressed, a thing which not only would be in support of freedom, but highly profitable to the tactical-political interests of the United States at this juncture.

In the Rumanian sector, a situation has arisen which, together with the Hungarian case, would amply justify a certain move by the United States to expose the fraudulency of the Soviet pretense in the Arab national liberation question. Marshal Konev, commander of the Warsaw Pact forces, cryptically announced on May 26, that Soviet troops who have occupied Rumania for the last 13 years will be withdrawn "soon." In other words the "foreign boots" which Khrushchev could not stomach for 6 days in Lebanon, caused him no qualms during the 13 years in Rumania.

What is the reality of the so-called withdrawal of the Russian troops from Rumania? How can such a withdrawal be ascertained and what is, under the circumstances of Soviet domination in East Europe, its significance? Up to now the only information on Russian troop movements comes from Communist quarters: on June 15 the Communist Tanjug reported that "Soviet troops began pulling out" of Rumania; then on July 4, the Bucharest Communist Radio broadcast that "Soviet military garrisons in Constanta and Dobrogea regions in Rumania left by rail yesterday"; and on July 26, the same radio said the last Soviet troops had left Rumania.

No reliable source has corroborated this information. Moreover in the actual situation of Rumania, it would be difficult if not impossible, to ascertain for a fact a withdrawal of Soviet troops. It is relevant in this respect to remember the discrepancy in the estimations of the number of Soviet occupation troops in Rumania, ranging from 40,000 to 300,000. Another facet of this problem is the considerable numbers of non-uniformed Russian agents which, according to our underground information, amounts in the Bucharest area alone to 20,000. Again, as the country is surrounded by Communist dominated states, having nearly all its frontiers under Soviet control, the displacement of Soviet troops from one frontier to another, is in itself of very little importance. Any Soviet troop moves in the Warsaw Pact area belong basically to a mere strategic reorganization.

There is in consequence an immense difference between the alleged Russian withdrawal from Rumania and an eventual withdrawal of American marines from Lebanon, out of which the Kremlin will make its biggest propaganda barrage at whatever General Assemblies, summit conferences, etc., materialize. On one side, in Rumania, a declared withdrawal in the obscurity and secrecy of the Iron Curtain, which must be accepted on the Kremlin's word, in the absence of any international limelight of either the press, United Nations observers, or the interested diplomatic representatives; and on the other side, in Lebanon, an eventual departure in the limelight of publicity and cameras, watched by the whole world every hour on the hour. Why should this double standard of international behavior be accepted or passed over in silence?

Khrushchev is proclaiming the sacred right of people "to build their own life as they see fit" and the principle of "national independence." These principles are correct, but should they not be applied generally? And, if so, is not just to implement them also in a country such as Rumania, which has been, for 13 years, subjected to the Soviet military yoke, and where the people, kept in bondage, are denied the most elementary right of expressing their desires and aspirations? Is the noble debate on freedom and human rights as proposed by Khrushchev to be circumscribed to Lebanon and Jordan, as he intends, or should the United States turn forcefully the limelight on Eastern Europe?

It is unfortunate that the United States has recognized the Communist nonrepresentative governments in Eastern Europe and brought them to the United Nations, which fact makes it apparently awkward to denounce the real situation in the enslaved countries. But if the United States does not want to be reduced to a great extent to the role of merely a defender of her oil and military interests in the Middle East, while Khrushchev and Nasser will be the champions of national independence and the right of people to freely choose their governments, the United States should finally raise the question of East Europe and not just rhetorically, but politically.

This is the only strong card the United States has in order to turn the tables on Khrushchev and make him a defendant instead of an accuser. A firm decision should be taken at this 11th hour to bring before the United Nations the issue of Soviet interference in Central and Eastern Europe, with all its immense documentation, and draw the political conclusions which would expose unequivocally, especially to the peoples of Africa and Asia, the colonial and predatory true policies of the Soviet Union. There is conceivably no more powerful psychological antidote for the subtle buildup of the Soviet Union as a champion of liberation and noninterference for those peoples than such an exposure. If the United States opens this campaign, the Soviet propaganda against the United States will publicly be cut down to size and the virulence of Russian subversion noticeably checked.

As concerns the so-called withdrawal of Russian troops from Rumania, the United States and the United Kingdom have the right through the peace treaty they concluded with the Bucharest Communist Government, to supervise the military circumstances of that country. The legal basis on which the United States Government could avail itself for ascertaining the size of the Rumanian forces, and, in the process, the foreign troops situation there is clearly provided in the treaty, as well as it is for an inquiry into the implementation of the treaty regarding human rights and fundamental freedoms. The announced withdrawal should thus suggest two political moves on the part of the signatories, especially the United States: (a) As one of the side-attack responses in the General Assembly's Lebanon-Jordan session, a demand for an international verification of the military buildup in Rumania; (b) in connection with Khrushchev's demand in the Middle East debate that people be free "to build their own life as they see fit," another counter-attack to his accusations, a demand for international inspection of the human rights functioning and guarantees in Rumania and other countries. Such tactics would broadly apply to the whole area of Eastern Europe. Together with the Hungarian case, the announced move of Russian troops out of Rumania, constitute the most appropriate political field for a limited counterattack: Lebanon-Jordan versus Rumania-Hungary.

Allow me to draw your attention to the most important aspect, as far as the Rumanian situation is concerned. Under the tremendous Soviet pressure, embedded in the Kremlin's strategic expansion line and controlled by an apparatus infiltrated with Soviet agents, even in the event of an actual withdrawal of Russian troops—if no international political intervention materializes—the only way left for the population to regain their rights and liberties is through insurrection. In such a case what would be the attitude of the United States? In view of the Hungarian revolt and the brutal Soviet military intervention and the hands-off policy of the United States; in view of the Iraq revolt backed by the Soviets, with the enthusiastic moral defense of the right of the people to revolt and more substantial threats of sending "volunteers"; what if in the near future a revolt should take place in Rumania? Would the United States again assist passively to a Soviet military intervention as in Hungary? Would it not be wise to prepare in advance for such an eventuality?

The Subcommittee on Europe of the House Committee on Foreign Affairs has presented on May 15, 1957, a report on policy toward the satellite nations, which recommended some moves that should be made in this respect, but nobody has used these recommendations. The only recent quasi-authoritative declaration on the United States policy in the matter has been Senator KENNEDY'S statement of June 8, to the effect that "we are not going to help them revolt, or send arms", with the implication that if a spontaneous insurrection should break out, the United States would do absolutely nothing and thus give the Russians a free hand to massacre women, children and men fighting for their freedom. Was the Senator speaking for the administration?

The reluctance of the United States to sincerely bring up the issue of the Soviet enslavement of Eastern Europe and the constant refusal of the United States to support in any concrete manner the rights of these peoples to freely choose their own governments, have widely consolidated the belief that the present administration has either endorsed a previous deal between Russia, Great Britain, and the United States giving East Europe to Soviet domination; or there has been a new, post-1952, understanding between these powers, to the effect of not interfering with the Soviet subjugation of Eastern Europe, save for innocuous figures of speech from time to time. Moreover the rumor has spread that the Soviet intervention in Hungary has been partly facilitated by assurances of nonintervention by the United States. These impressions seem to be confirmed by Senator KENNEDY'S statement. Is his point of view shared by the Congress? If this is not true and it is felt that such a horror as that in Budapest should not happen again with the United States acquiescing in it by inaction, it is timely that a declaration of principle be made against Soviet military intervention, followed by an implementation of a constructive plan—the minimum basis of which could be the Kelly report—in order that any future bid for freedom by the enslaved peoples would have at least a chance and not be totally condemned in advance, as heretofore has been the case.

It may seem to some that the matter I am submitting is unrelated to the present concern with the Middle East, but as the Secretary of State himelf stressed again on August 6, in Rio de Janeiro, the unique cause which deeply subverts and threatens the freedom and peace of the whole world is communism. As all Communist actions are interrelated, so in order to be effective, it is necessary that the counteroffensive moves be also interrelated.

I remain yours respectfully,

MIHAIL FARCASANU,
President.

Freedom Is Still in the Hearts of the People Behind the Iron Curtain

EXTENSION OF REMARKS
OF
HON. OTTO KRUEGER
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. KRUEGER. Mr. Speaker, this year marks the 40th anniversary of the Ukrainian Independence Declaration. It also commemorates the 25th anniversary of man's inhumanity to man by the diabolical creation of an artificial famine in the Ukraine by the infamous Red rulers of Russia in 1932–33.

It would be well for our people to read the story related in the attached documents of man's revolt against domination and slavery. The Ukrainians in America—and we have many in my State of North Dakota—have not forgotten this tragedy, or their desire to see their former country free again. For myself, too, I may be forgiven for feeling this danger so intensely because my own German-born parents suffered a like fate when the forerunners of the Russian Communist Party first took over the Ukraine.

This should be a lesson to us to fight the inroads of communism wherever and whenever we see it crop up its ugly octopus-type encircling arms. It has happened in other countries. God forbid that it ever happen in ours. Let us encourage the renewal and growth of our cherished freedoms in other lands. Take heed from what has happened elsewhere lest it ever happen in ours.

So that it will be available for all to read, I am inserting a letter from Dr. Anthony Zukowsky, of Steele, N. Dak., president of the North Dakota Chapter of the Ukrainian Congress Committee of America, Inc., together with a statement entitled "Famine in Ukraine a Warning for the West," and a memorandum of the events as they transpired:

UKRAINIAN CONGRESS COMMITTEE
OF AMERICA, INC.,
Bismarck, N. Dak., July 31, 1958.

The Honorable OTTO KRUEGER,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN KRUEGER: I am taking the liberty of writing you that all over the United States and North Dakota special manifestations were held by Americans of Ukrainian descent to mark the tragic 25th anniversary of famine in the Ukraine, artificially created by Red rulers in 1932–33.

Twenty-five years ago the Communist rulers in the Kremlin instituted what history may one day record as the most inhuman act ever perpetrated on any nation, the famine which was deliberately started and maintained by the Russian Communists, in an all-out effort to break the spirit of the Ukrainians, and to eradicate an element in the Soviet Union that milder methods failed to sway.

In 1933, through the streets of Kiev, Kharkiv, Odessa, and other cities, the miserable wrecks of humanity dragged themselves on swollen feet, begging for crusts of bread, or searching for scraps in garbage heaps, frozen and filthy. Each morning wagons rolled along the streets, picking up the emaciated remains of the dead. The year 1933 brought death to the villages of Ukraine. Many which had formerly boasted a population of from 2,500 to 3,000, now counted some 200 to 300.

The Russians attempted to destroy the Ukrainian Nation as they did the Volga-Germans, Krymian-Tartars and others after World War II, and there has been, perhaps, no disaster of comparable magnitude that received so little international attention.

Recent events indicate that no people enslaved by the Russian Communist colonial empire either within the U. S. S. R. or as so-called satellites are willing to submit to oppression forever and without a fight. The Ukrainians, like other enslaved people, are just as willing and ready to make a bid for freedom as were recently their comrades in slavery, the Hungarians. It is therefore most fitting that at this moment of world tension and restive opposition to Soviet rule, we of the free world demonstrate our unity of purpose with those behind the Iron Curtain.

Ukraine's armed and prolonged resistance to Communist military aggression likewise provided the Hungarians with an opportunity to oust the puppet Communist regime of Bela Kun in 1919 because Lenin, forced to wage bitter war in Ukraine, was not in a position to intervene by force of arms in Hungary in 1919, something which Khrushchev and Zhukov were quite free to do in 1956–57.

Speaking for our blood-brothers in slavery, therefore, I respectfully request on behalf of the Ukrainian Congress Committee of America, Inc., State Branch of North Dakota, and 20,000 Americans of Ukrainian descent living in our State, that you present to the United States Congress, this dreadful situation in the Ukraine and condemn the Red rulers of Moscow for their antihuman terror and to give hope to those people behind the Iron Curtain, who have kept glowing the flickering flame of freedom in Ukraine, in Hungary, in Poland, in East Germany, in the Baltic and Balkan States.

Enclosed please find memorandum, a booklet, The Golgatha of Ukraine, and a manifestation leaflet entitled: "Famine in Ukraine a Warning for the West."

Our committee would appreciate inserting the memorandum and our manifestation leaflet, including this letter, into the CONGRESSIONAL RECORD, as a matter of public record. Thank you.

Very sincerely yours,
DR. ANTHONY ZUKOWSKY,
President, UCCA, State Branch of North Dakota.

FAMINE IN UKRAINE A WARNING FOR THE WEST

(Statement of Ukrainian Congress Committee of America, Inc., State branch of North Dakota)

The Kremlin today dominates one-third of the world and threatens the entire free world with subjugation and tyranny. The picture of conditions in the subjugated territories and enslaved nations shows only terror, slavery, mass genocide, persecution and misery.

This manifestation is being held upon the 20th anniversary of one of the most horrible crimes committed by the Kremlin upon its victims—an artificial famine calculated and carried out to break the will of the Ukrainians in their resistance and opposition to the regime.

Ukraine, with a population of 45 million has the richest farming land in Europe, 60 million acres of land produce wheat for 20 million tons of bread. From 1909 to 1913 Ukraine provided 20 percent of Europe's grain supply. It was known as the grainery or breadbasket of Europe.

In 1920 the Russian Communists overran Ukraine and made it their colony. They utilized the resources of Ukraine to develop their power and plans for sowing the seeds of chaos and revolution in the world. They introduced a system of slave labor in order to obtain products and goods cheaply and in this way to undermine the world economy.

In 1929, taking advantage of the economic crisis in the world, they began a 5-year drive against the peasants, forcing them into the collective farms. The Kremlin used the most diabolical methods on its resisting victims. In Ukraine, where the inhabitants by nature and tradition are most radically opposed to collectivization and state regimentation the effects were unbelievably horrible. From 1929 to 1932 the Moscow Communists confiscated 500,000 farms; drove 2,500,000 people, with their children, and aged out of their homes; deported 1 million peasants with their children, wives, aged, and ailing to slave labor camps into the tundras and Siberia to die of exhaustion and hunger.

With resistance still strong, Moscow resorted to extreme measures and calculated a plan of starvation. All food products in Ukraine were designated for export. By official edict of August 2, 1932, the peasants were forbidden under penalty of death to take any of the food they produced. They were forbidden to leave their villages in search of food beyond the borders of Ukraine, while throughout the other territories of the Soviet Union food was plentiful. Entire families died in the streets of the villages in the terrible tortures of starvation. Cannibalism was widespread. The grain elevators were overflowing, but they were vigilantly guarded by the armed Communist militia to prevent the people from reaching the life-giving grain—all of which was removed from Ukraine. The International Red Cross offered aid and relief to the victims of Moscow but the Soviet Government vehemently denied the very existence of famine and the need for aid. As a result of this famine between 6 and 7 million Ukrainians died.

Such methods are used by the Kremlin to Russify and subjugate the captive nations in the U. S. S. R. Even these methods, however, are not completely successful. The love of freedom is so strong and so firmly entrenched in the hearts and minds of the Ukrainians that they continue to this day to resist actively and passively, the tyranny in their land. They will continue to resist until their final goal of a free and independent nation is achieved. And these gallant people deserve the support and encouragement of every American who believes in the principles of democracy and human rights.

The suffering and misery of the Ukrainians throughout their long enslavement in the Soviet Union should serve the free world as a warning. We should not permit ourselves to be blinded to the real aims of the Kremlin by the current Russian peace offers. For the Kremlin offers the world not peace, but misery and enslavement.

FAMINE IN UKRAINE OF 1932–33—METHOD OF RUSSIAN POLICY OF PEACE AND BUILDING OF COMMUNISM

(Memorandum of Ukrainian Committee of America, Inc., State Branch of North Dakota)

This year is the 40th anniversary of the independence of the Ukraine.

On January 22, 1918, a free and democratically elected Parliament and Government of Ukraine issued in the capital of Kiev a solemn act of proclamation and the reestablishment of Ukraine as a sovereign independent nation called the Ukrainian National Republic.

This sovereign Ukrainian State was immediately and duly recognized by a large number of foreign nations and diplomatic relations were established with them forthwith. Recognition was even granted by Soviet Russia, but this did not prevent its Government

and Communist Party from opening hostilities against the new Ukrainian State.

Ukraine was conquered by Moscow's armed forces and occupied, but the people have not acquiesced and are refusing to be slaves of Moscow to this day.

In spite of the military victory, the Soviets had to face serious difficulties in governing Ukraine. Those Ukrainian Communists—the fifth column—who gave them their support, hoping for an autonomous Soviet Ukrainian Republic, were soon disappointed in their hopes. They were all entirely liquidated in the early 1930's when Ukraine was once again subjected to Red terror. At the time of the first 5-year plan, and the forced collectivization, the Ukrainian workers, peasants, and intelligentsia rose united to oppose the Soviet policy. The purges and large-scale deportations were conducted under the personal supervision of the highest party officials—the Russian Postyshev, Kaganovich, and Khrushchev. It is they and their Kremlin masters who must be held responsible for the terrible famine in Ukraine in 1932–33 which took a toll running in millions of lives for the barbarous destruction of Ukrainian learning, science, and religion, for the persecutions of hundreds of thousands of innocent and peace-loving people.

This year is also the tragic 25th anniversary of the most appalling crime in history, the famine deliberately planned by Moscow in Ukraine, in the years 1932–33.

By this almost incredibly atrocious deed more than 7 million Ukrainians died of sheer starvation.

This happened in the smiling Ukraine, agriculturally the richest country in Europe, the owner of the famous black soil.

There was no natural cause for this famine; it was purposely created by Moscow to break the resistance of the Ukrainian peasants to the collective farm system—a system of slavery, and was planned to teach the Ukrainians a lesson by the grim method of starvation to force them to recognize the supremacy of Russia to accept Russia domination over Ukraine.

After the Communists had overrun Ukraine, Stalin soon made it clear that the time had come for a new reign of terror. The year 1930 brought the order for compulsory collectivization of all the land and the means of production. The peasants were ordered to turn over their land and animals to the collective farm or be deported. Naturally this aroused tremendous opposition. In many places the peasants killed their cattle rather than turn them over and a condition of near revolt covered most of the Ukraine. Large forces of the NKVD and even military units were sent to the villages to force the people into the collective farms and those who hesitated or showed any opposition were forced into them or deported without possessions. There were hardly in Ukraine a village in which, under the instructions of Moscow, 5 to 15 percent of the population were not uprooted. In many cases their houses and barns were actually destroyed so that there would be no trace left of the enemies of the people.

When these methods failed to break the opposition of the peasants to the idea of the collective farms, Stalin decided upon a still more drastic device: the starvation of the Ukrainian village. This was carefully planned and worked out in the greatest detail.

During 1931 the demands for the delivery of grain reached an unprecedented height. New and extra delivery quotas were imposed upon the villages and the collective farms alike, and all the grain thus secured was either removed to the Russian Republic or was sold on the foreign market at dumping prices or even for the costs of unloading in some places in Italy. By these and other methods, the entire grain reserves were removed from Ukraine and so were all other crops that might support the population. The grain harvest of 1932 was somewhat below normal as a result of drought but the population could have survived, had there been the normal grain reserves.

Signs of the approaching famine were evident in the autumn of 1932 but they increased rapidly during the winter months and shortly after the beginning of 1933 the storm broke with all its fury. To strengthen the hand of authorities, the Council of Commissars of the Union in Moscow passed on August 6, 1932, a law for the "protection of Socialist property." This made it illegal to pick a single head of Socialist grain in the fields or even to pick up a stalk that had been overlooked in the harvesting. The same regulation applied to everything that was the nominal property of the collective farm.

To enforce this, Moscow sent to Ukraine, Pavel Postyshev as second secretary of the Communist Party of Ukraine with 7,000 political workers from the Russian Republic. These men were formed into special commissions for investigating the thefts of food by the peasants. They swarmed through the villages; they sounded the walls of the houses to make sure that no grain or other foodstuffs had been hidden in them; they investigated every place in the courtyards where the earth showed signs of having been disturbed.

The country became desolate. In the spring of 1933 there were many villages where the entire population had perished and almost one-third of the houses in some places were empty. There was no one to bury the dead. The bodies were hauled away on carts or thrown into ravines and allowed to lie as they fell, for no one had the strength to dig graves.

It is difficult to estimate the actual number of casualties during this artificial famine, for there is no doubt that it was artificial. In fact when Chubar, the chairman of the Soviet Commissars, Premier of the Ukrainian Soviet Socialist Republic, appealed to Stalin for food at least for the starving children, he received the definite answer from Stalin: "No remarks on that question." It was not long before Chubar disappeared as an enemy of the people.

The most conservative estimate is that there were between 6 and 7 million deaths. No graphic account however, can truly show the depth of this triumph of man's inhumanity to man.

That this was an artificially devised famine can be proven by the following facts:

1. There was no famine in Russia. In Russia normal Soviet life went on, monotonous and wretched, but nobody died of hunger.

2. In Siberia there were enormous supplies of government grain. When the grain was taken from Ukraine to Siberia, there was no place to store it, there were no warehouses.

3. The Ukrainians were forbidden to go to Russia for grain.

4. Russia gave no aid to Ukraine and rejected aid offered from abroad.

5. The rural population was forbidden to buy grain in the cities.

6. The Soviet NKVD staff in the cities and villages were well fed through the system of closed restaurants, entrance to which was forbidden to the starving village and town population.

7. In party institutions and factories of state importance, the workers received 4 pounds of bread a day.

8. It was forbidden to mention the famine under the threat of severe reprisals.

9. There was absolutely no mention of famine in the press and it was even emphasized that there was no famine and that the happy Ukrainian people thanked "the leader of the world proletariat" Joseph Stalin, for his 'liberality.'

10. It was forbidden to give medical treatment to those dying of hunger and to receive them in hospitals.

11. If any of the starving did get into a hospital, it was forbidden to make the diagnosis "exhaustion from hunger" and to give hunger as cause of death.

12. It was forbidden to make statistics of the starving and of the rate of mortality.

To understand properly the atrocities of Postyshev and Khrushchev in Ukraine and the masterful plan of Stalin and his bloody counselors regarding the liquidation of Ukrainian opposition, we must review briefly the historical relationship between Russia and Ukraine and the growth of the Ukrainian movement in the first decade of the Soviet power in Ukraine.

Ukraine always posed a vital problem for Russia, in all the latter's stages of development. The nationality problem has been the Achilles' heel of all the regimes and political systems of this semi-feudal and colonial slave state. Therefore, Russia's policy, with respect to the other Nations has always been the same: ruthless and extreme. Brutality and police terror, including physical liquidation of all those who in one way or another aspired toward freedom, social justice and the national and political independence of their people, were always the outstanding characteristics of Russia with respect to the non-Russian peoples.

By no means did the historic importance of Ukraine's independence end in 1920. The physical embodiment was destroyed then, but the fiery spirit of independence has lived to this day. It has for long been clearly evident that the destruction of the independent Ukrainian state laid the foundation for Moscow's subsequent aggressions and imperial aggrandizements. What Ukraine, Georgia, Armenia, Azerbaijan, White Ruthenia, Turkestan and other non-Russian nations suffered at the beginning of the twenties the Baltic nations, Poland, Hungary, Czechoslovakia and others experienced in the forties and fifties. Now, significantly enough, the same threat in this series of conquests confronts the United States, Canada, and countries of Western Europe, Middle East and others in the free world.

In spite of suffering and suppression, the Ukrainian people continue to this day to resist, actively and passively, tyranny in their country, and they will continue to resist until their final goal of a free and independent nation will be achieved.

Respectfully submitted by:

Dr. ANTHONY ZUKOWSKY,
President, Ukrainian Congress Committee of America, Inc., State Branch of North Dakota.

Hon. William E. McVey

SPEECH
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 11, 1958

Mr. KEARNS. Mr. Speaker, it was with a sense of shock and sincere grief that I learned of the death of the distinguished gentleman from Illinois, Dr. WILLIAM E. MCVEY. He was a great educator and statesman who dearly loved his country, and the fine contribution that he made to Government in the 8 years that he served in Washington will

live long in the annals of the United States Congress.

To his family and friends, and to the people of his congressional district, I extend my heartfelt sympathy.

Comments on Needed Labor Legislation by Individual Union Members

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to include another series of comments which I have received from individual union members. I believe the Members of the House will find these comments on possible labor legislation to be of considerable interest and will serve to give the Members some indication as to the feelings of individual union members:

This so-called right-to-work law should be banned by Federal Government. The workingman has no security whatsoever, I think an investigation should be made as to the origin of this. The workingmen of this country sure do not want it. Please think about this closely.

CRANE OPERATOR.

I am in favor of not using union dues for political purposes if the same applies to corporations, companies, and officials of the same. What's good for the goose is good for gander.

TOOLMAKER.

Right-to-work laws will not seriously affect unions except to keep them on their toes to maintain their membership. I don't think they should be handed a 100 percent membership on a platter.

Also anyone should be able to work at the craft for which he is qualified and have the right to make his own decision on union membership.

The company I work for does not have a union shop and the union is strong and effective.

There is no doubt in my mind that unions are necessary and they are here to stay. But they must be controlled and I think a certain political party (Democrats to you) had better wake up before it is too late or the Reuthers and Soaps will have the whole darned country and the Dems will be wondering what happened.

FACTORY WORKER.

While I am a member in good standing of the CIO–UAW and definitely not antiunion, I feel that there should be some limitations or governmental regulations of their power.

SHOP WORKER.

7C: Strike votes may be secret as far as voting goes but should be counted in presence of company and union representatives because no one really knows for sure just what the vote is (my idea).

Union members should be allowed to vote to accept or reject any proposal made by the company because once the strike starts the member has nothing to say what he will accept, until the union representatives get what they want, and show no worry over the members being out of work without funds or incomes.

MOTOR WHEEL WORKER.

7A: I think the labor unions generally have done an excellent job of running their own business.

7C: I have been a member of the labor union since 1910 and we have always had a secret free ballot for strikes and election of union officers.

7E: A buck for PAC a voluntary contribution should be allowed.

FACTORY WORKER.

No. 7: Should do more checking into union busines than they already have. Too many bad deals taking place that nobody knows anything about. Don't like them having all this extra money for strikes. If they don't use it, where does it go to. They sure don't give it back to us (the worker).

ELECTRICIAN.

No. 7: This is a touchy subject for me to answer for I am a good union man and intend to stay that way as long as I work for any corporation.

A. I think the unions should have no objection for public inspection on any of its different funds. They are published once every year.

C. There is less chance of an illegal strike or election if union members demand secret ballots. I am in favor.

E. It is not fair for any organization to use dues for political purposes.

If there ever is a law posted, national or local, in our State to ban union shop, I will fight it forever. We have had to go through hell with strikes and many other hardships to get working conditions where they are today and a ban on union shop will start it all over again. That is a good way to really get gangsterism started in all the peaceful unions.

In regard to 7E: Unions have as much right to use their dues money for political purposes as business has to use their profits for the same.

TOOLMAKER.

7A: The recent disclosures in the union racketeering hearing point out a need for investigations of corporations, as their hands do not appear lily white.

AUTO PLANT WORKER.

I would like to have our Congress pass a law to ban all closed union shops and let us work the American way and not the Russian way.

TOOLMAKER.

I think the time has come where the Government should decide how big labor organizations should get. The Government should keep a close watch on Reuther. His ideas are too Socialist. Through Williams he is trying to run the State of Michigan and I believe through Williams he is trying to get into the White House.

TIMEKEEPER.

7D: I'm in favor of a national right-to-work law to the extent that I'm opposed to the closed shop and there should be no pressure or discrimination against anyone who selects to be a nonunion worker.

TOOLMAKER.

7: The right-to-work laws are misnamed. People who have to work for others to earn a living do not want them but the States that have them appeal to companies in their advertising to come there. In other words, the exploiting of laborers is not just condoned, it is given official help.

TOOLMAKER.

7D: I really do not favor this sort of right. I have worked where they have both and I favor union shops. It never looked right to me for most all of the men to have to pay union dues, strike assessments, and stand on picket lines, and then the man that pays nothing, does nothing, reaps the harvest. It is easy to see the point of the man with a large family depending each week on his check, why he feels he should be allowed to work. If it is carried out like it should be, this sort of man should be taken care of through their strike money.

PLANT PROTECTION.

The New Class

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. VANIK. Mr. Speaker, a review of Milovan Djilas' new book The New Class has appeared in the May issue of the scholarly Reading Guide published by the Publication Society for the Law Library of the University of Virginia.

I commend the review to the attention of my colleagues active in the contest against subversion and infiltration by the Soviet-Communist staff. I also recommend the reviewer's own book Speaking of Politics to be read as a preface to The New Class. It is a remarkable coincidence that two such widely separated and socially unrelated authors as Djilas in The New Class and Salisbury in Speaking of Politics have reached such a similar evaluation of the true economic basis of modern Communist societies—whether Soviet-Communist, Sino-Communist, or Titoist. Both Salisbury's Speaking of Politics and Djilas' The New Class are significant contributions to our efforts in the not-so-cold war.

Under leave to extend my remarks, I wish to insert in the RECORD this brief review from the Reading Guide of the University of Virginia of May 1958, which reads as follows:

THE NEW CLASS

(Book written by Milovan Djilas)

(By Franklin C. Salisbury)

This is a book describing the rise of a new capitalist class throughout the Soviet Communist world. It is secondarily an informative analysis of that transient type of communism which some of us in this country label "Soviet communism" or "Stalinism" to distinguish it from other historical and Christian Communist ideologies. Soviet communism was imported into Russia after the long-delayed, but overly savage, revolution. Its success as an import into war-torn Russia encouraged its cancerous spread into other primitive areas. It ate away the feeble tendrils of local self-government and consumed with feverish haste the beginnings of nongovernmental enterprise and industrial ownership. This was particularly easy in Russia and in Yugoslavia where self-government by the individual had never been seriously tried and private capitalism, like Soviet communism, was a foreign import.

The author assisted in the adoption of Soviet communism by his native land. He does not apologize, for he points out "a Communist movement always begins as one of the highest idealism and most selfless sacrifice, attracting into its ranks the most gifted, the bravest, and even the most noble intellects of the nation." Indeed, as he observes, even Soviet communism can be, to many of its followers, a secular faith of high moral demands "True, these are the morals of a sect, but they are morals on a high plane." Too late the author realizes that these Soviet Communist moral values, while useful in a civil war, are meaningless when the physical strife is successfully completed.

The new class, with which the author is concerned, is a logical development in any society where the privilege of ownership of the means of production has been shifted from the individual, alone or in nonstate groups, to the state. The author explains that he has in recent years equated Communist with state capitalism, or more precisely, with total state capitalism. Although, from our vantage point of a relatively safe distance, we may remind the author that total state capitalism is but one-half the story of Soviet communism, the observation shows a greater objectivity on the part of Djilas amid peril than many of our commentators and scholars are able to conjure up amid plenty. The economies of any Communist system are those of state capitalism. The other half of the Communist theory is even more objectionable to the American temperament than state capitalism, namely, that all Communists foster and encourage dictatorships. This aspect does not loom as important to Djilas as the social consequences of state capitalism. But it is the dictatorship which keeps him in prison, and it this dictatorship that threatens the Western World with total destruction, not its adventure into monopoly capitalism.

Djilas' crusade against his friends and fellow travelers in the new class does not arise from "sour grapes." He reached the heights in the dictatorship, and he was as eligible as anyone in Yugoslavia to be an active member of the new class. He was a member of the policymaking arm of the Yugoslavian state—the Soviet Communist staff, which propagandists and their victims continue to label the "Communist Party." He fought side by side with Tito in liberating what private productive properties there were in his native land from the prior state capitalists of the aristocracy and the visiting firemen of private enterprise, mostly from abroad. He helped turn the wealth of the nation over to its new managers and owners, the bureaucrats and staff members. But, for idealist persuasions, he rejects this membership in the second most exclusive club in the world. He made and acted on an agonizing reappraisal. He sits in prison for his pains while the Soviet Communist staff grows fatter and jollier daily.

The author complains that "wherever Communists come to power, their assault on private ownership creates the illusion that their measures are primarily directed against the ownership classes for the benefit of the working class. Subsequent events prove that their measures are not taken for this purpose but in order to establish their own ownership."

And, as he further explains: "To divest Communists of their ownership rights would be to abolish them as a class. To compel them to relinquish their social powers, so that workers may participate in sharing the profits of their work—which [private] capitalists have had to permit as a result of strikes and parliamentary action—would mean that Communists were being deprived of their monopoly over property, ideology, and government."

Djilas' book will hardly help to influence this new class of state capitalists, the true monopoly capitalists, to give up their privileges which make them the envy of the propertyless liberals throughout the world. But it may make these materialist liberals pause in their campaign to elevate themselves to the new class at the expense of every freedom known to man. Just as the former slave makes a hard taskmaster, so the newly-propertied liberal makes a stern conservative.

Let the liberal and the egghead ponder the sufferings of Djilas as he wrote this grand book. For Djilas is a liberal and his predicament a tribute to his unhappy start as an egghead. Remember that Soviet Communists aspire to a total dictatorship and a total state capitalism and that you, if you are a liberal, may someday spurn the fruits of such a change of ownership and thus lose both your property and your freedom. Like the author, Milovan Djilas, you may end up in a prison of your own making.

Progress in the Plywood Industry

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. PORTER. Mr. Speaker, the progress made by the plywood industry is most encouraging. United States Plywood Corp., International Paper Co., and Georgia-Pacific along with other plywood plants, are to be congratulated on their resourcefulness in cutting their costs and providing for maximum utilization.

The following article appeared in Business Week for July 26, 1958, and is an excellent account of progress in the plywood industry. Under leave to extend my remarks I am inserting the entire article:

PLYWOOD PLAYS HOB WITH RULES

For more than 2 years, the plywood industry has been behaving as if it knew nothing of the precepts of classical economics. The charts above display the industry's paradoxical antics. While prices have been falling because of chronic overproduction and overcapacity, there has been at the same time only a slight slowing in plans to add even more capacity.

Plywood makers big and small—from giant United States Plywood Corp., International Paper Co., and Georgia-Pacific Corp., on down—are spending millions on new plants to turn out hundreds of millions more square feet a year. Already, production is setting records; this year, it's running at an annual rate of 5.7 billion square feet, a good 12 percent over 1957's previous alltime high.

But with the new facilities, this output only takes 80 percent of capacity. And this spring, after a February drop in the price of quarter-inch plywood panels to $64 per 1,000 square feet, more than 30 mills closed down to await a return to price levels where they could break even or at least lose less money. Since then, a burst in building starts has bolstered demand, and the price has climbed back to $72. But privately, at least, few industry realists think it will stay there long. Topheavy capacity and fierce price rivalry are just too powerful as downward influences.

Answering the riddle

Why is the industry still building new plants? It isn't because they were late starting on projects conceived during the boom—several of the mills were planned at the time prices were skidding most rapidly. The answer is that in today's market, plywood makers are able to turn a profit only with modern, integrated mills, where production costs are low.

In the high-price era—particularly 1950, when plywood was selling for $97, and 1954, when the price was around $90—dozens of small plants entered the industry. More than 75 percent of the Nation's plywood comes from the Pacific Northwest, and the number of Douglas-fir plywood plants in the region jumped from 50 in 1948 to more than 120 today. As long as the price stayed over $80, most of these fragmented, nonintegrated producers could make money. Plywood sales—the biggest share of it to home construction—increased fourfold in 10 years.

Now a new price level is emerging, reflecting both the plentiful supplies and the new low-cost production techniques, and the transition won't be easy. Most plywood still is made in small, high-cost plants. Many of these won't be able to survive with prices below $75.

But an integrated producer with a new plant can make money not only at the present $72 price but, in many cases, at $10 to $12 below that as well. And this explains the rush to build new capacity.

I. USP SHOWS THE WAY

An example of what's been going on is United States Plywood's new $2.8 million, 72 million square feet annual capacity plant at Roseburg, Oreg. Completed last May, it's just now beginning to flex its production muscles.

The very fact that USP built a new plant in Roseburg at all indicates that it wanted lower production costs. If its aim had been simply another conventional mill, it could have bought one of the existing plants for sale in the area. But it figured only a streamlined operation has a chance today.

Integrated two ways

USP's new Roseburg layout is on a railroad near a bounteous supply of old-growth Douglas-fir—some of it Government owned, some of it a 1 billion board-feet stand acquired by USP through purchase of two smaller lumber companies. The mill is integrated both vertically and horizontally. It starts with standing timber and ends up with finished products, and it can produce either plywood or lumber. Modern chipping and chip handling facilities dispose of by-products profitably.

According to George French, general manager of the new plant, and Marshall Leeper, division manager in charge of USP's $30 million Oregon investment, it should be possible to sell plywood from Roseburg for $60 and at least break even, but actual production costs won't be nailed down until the plant has been in full operation for a couple of months.

Challenge

To an outsider, the Roseburg mill wouldn't look too different from most other new mills. And, basically, it isn't. Improvements in plywood mills come from meticulous attention to every detail in the production process.

But there is one big difference at Roseburg. USP expects to increase yield and lower costs by challenging a basic concept of the Northwest lumber industry—the idea that high-grade veneer can only come from the biggest, most expensive logs. Traditionally, the very best logs from the thick base of the trees—called peelers—go to plywood plants, the leftovers to sawmills for conversion to lumber products. Too often, the sawmill is quite literally left with the short end of the stick, and it can't develop its full profit potential.

How a fir grows

This situation arises from the way a fir tree grows. Its lower limbs, denied access to light, wither and die and drop. In a comparatively short time, the lower portion of a tree contains clear, knot-free wood. In early stages of growth, there's only a shallow layer of this perfect wood—called shallow clear. But as the tree ages, the good wood thickens. By the time it's 3, 4, or even as much as 8 feet in diameter, it holds a generous amount of the perfect premium wood known as deep clear.

Deep clear logs are ideal for plywood. Cut into 8-foot lengths, debarked, and spun against a scalpel-sharp blade on a huge peeler machine, they yield a continuous ribbon of veneer thousands of feet long. The larger the "peeler log," the more veneer it contributes and the more efficiently the lathe that does the peeling operates, since it doesn't have to be shut down so often to switch logs.

Expensive material

But deep clear logs are costly. A typical old-growth fir gives up three 8-foot lengths of grade-A, deep clear logs from its lower quarter. Above the deep clear may come two 32-foot sawlogs—still relatively knot-free and suitable for top-grade lumber. Higher still, where the wood becomes knotty and old branches cling to the trunk, the wood is good enough for low-grade sawlogs. Often, though, this part of the tree is consigned to the chippers and chopped into fine flakes for particle board or paper pulp.

The first love of plywood plants is deep clear logs. If a plywood mill cuts its own timber, it usually trades its sawlogs to a lumber mill for deep clear peelers. Log-trading deals are common throughout the Northwest.

Since plywood mills have been increasing much faster than lumber mills, good peeler logs have been becoming scarce. So Roseburg is taking a new approach. After all, veneer from shallow clear logs is just as good as that from deep clear logs, even though there's less of it per log. So USP is going after shallow clear as its prime source. It will be able to peel its deep clear logs, too, of course. But if the price is right, it can assign them to the lumber mill for conversion to premium-quality, straight-grain lumber products.

Cooked logs

It took a lot of innovating for USP to be able to process shallow clear logs at less than competitive costs. To do the job, Roseburg plant manager George French drew on hardwood plywood techniques. As a prelude to peeling or slicing a hardwood log into brittle veneer, you must first steam it to soften the fibers and melt pockets of hard sap. French reasoned that if this trick increased the yield of hardwood, it would do the same for fir. So after Roseburg's logs are debarked—on a machine that handles more than a log a minute—they are dunked into big steam vats for several hours.

When the logs emerge, they cut like butter. For the first time in the industry, it's possible to get top-quality veneer not only from clear wood but also from sapwood—the outer layers of living fiber near the bark. Ordinarily, brittle sapwood with its damaging sap pockets comes off the lathe in a wavy, irregular cut. And the hot logs cut so much better that the lathe can trim them closer to their intended size. It just never made sense to me, says French, to spend a lot of money getting A-grade veneers for the top layer and then sanding two-thirds of it away when the plywood is sized.

Gentler logging

French went after a lot of other things that had never made sense to him—all the way back to the logging operation. He had to change the methods of handling logs, since sapwood layers had suddenly become a valuable veneer source. Extra care was necessary in felling a tree to prevent damage to upper parts of the trunk. In loading logs, slings took the place of big pinchers that pierced the bark. Loggers learned to cut the top and middle of a tree so that it would be easily divisible into 8-foot lengths for the plywood mill.

Revolution came even to the traditional mill pond. No longer do men with sharp pike poles jab logs into the chutes. Remote-controlled water jets nudge the logs along as gently as an Indian with a birch-bark canoe.

Accent on speed

The debarker and lathes were engineered for fast action. Lathe operators are selected for lightning-fast reflexes. Throughout the plant, the men's work is at hip level, so that no one has to bend over to pick up tools or material. "We figure," says Leeper, division manager, "that keeping the men fresh lets us produce 25 percent more."

USP saves money also in the clipping section, where the long sheets of veneer from the peelers are clipped into 4-foot wide sheets suitable for panels and defects removed. The standard industry practice is to slide the veneer through two clipper stations at 125 feet per minute, with a marker and a clipper to do the job. At Roseburg, USP installed three clippers and slowed the rate to 100 feet per minute. At this speed, a clipper doesn't need a spotter to help him. The result: Three men handle 50 feet more veneer every minute than 4 men do ordinarily.

II. INDUSTRYWIDE PATTERN

Other plywood producers are planning along the same lines as USP. Among the largest of the new plants will be Georgia-Pacific's at Coos Bay, Oreg., slated for completion this year. Independents are doing the same. Portland's Dwyer Lumber Co. added a plywood operation to its lumber business this year in a move to gain more horizontal integration—with a $1.5 million, 42 million square-foot capacity mill. Says Tony Dwyer, one of the owners: "Our plan calls for getting by at $64 price levels, but we'll have to operate for a while before we know we can do it."

Willamette Valley Lumber Co., of Foster, Oreg., also stepped toward more integration last February when it decided to invest $1.7 million in a plywood sheathing mill.

Who's who

In today's plywood industry, Georgia-Pacific is the biggest producer, with about 500 million square feet annually. Its 12 million board feet of timber make it almost self-sufficient. United States Plywood has capacity for 440 million square feet, but its markets twice again as much through long-term contracts with 3 independents and open-market purchases; it is by far the largest plywood marketer. Simpson Logging Co. turns out 364 million square feet annually, and Weyerhaeuser Timber Co. follows with 185 million square feet.

The attitude of these giants toward their industry today may well have been summed up by what United States Plywood's president, S. W. Antoville, recently told Business Week. "In a way," Antoville said, "I almost feel that I ought to apologize for building a new plant at this time. But with the good timber we had, it would be foolish to do anything else at Roseburg. If we can build a plant with operating costs 5 percent to 10 percent below our own best existing plants, that's the kind of competition we're going to have to play against in the future."

Facts on TVA Self-Financing Bill

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1958

Mr. EVINS. Mr. Speaker, recently Mr. S. R. (States Rights) Finley, the distinguished son of a distinguished former Member of Congress, and president of the Tennessee Valley Public Power Association, has written a cogent letter and fact sheet regarding S. 1869, the TVA self-financing bill which will shortly be considered by the House. Under unanimous-consent agreement, I insert this excellent letter and fact sheet in the Appendix of the RECORD. The letter and fact sheet follow:

TENNESSEE VALLEY PUBLIC
POWER ASSOCIATION,
Chattanooga, Tenn.

The Honorable JOE L. EVINS,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: On behalf of 6 million users of TVA power we want to request your earnest and favorable consideration of S. 1869 recently reported out of committee and shortly to come to the House floor. This bill amends the TVA Act of 1933 and places further normal electrical facilities' expansion upon a revenue bond basis, replacing the present appropriation method. The committee report makes clear the urgent need for its passage, without crippling amendments.

S. 1869 has been favorably approved in the Senate by a bipartisan vote of 61 for and 20 against. It represents a reasonable compromise of many views upon this matter. The bill has the approval of all three members of the TVA Board—all of whom have been appointed by the present administration. In four budget messages the President has expressed a need for TVA bond legislation, stating that it would do away with the necessity for Federal appropriations for further TVA power needs.

We are aware that Members of the House have recently received an expensively prepared brochure that predicts dire and unfactual results if the bill is passed. In answer to it we submit a mimeographed fact sheet upon the important features of the bill. The simple facts about S. 1869 are it (1) does away with the need for Federal appropriations to finance normal electrical TVA growth; (2) requires TVA to make larger cash payments to the United States Treasury than are now called for; (3) maintains congressional control over TVA but does not establish Budget Bureau control over TVA bond funds; (4) places definite restrictions upon the TVA service area and reduces (not increases) the area which could now receive TVA power; (5) puts a reasonable ceiling upon the amount of bonds which TVA could have outstanding at any one time; (6) gives Congress the right to disapprove new TVA power producing projects. It is a fair and good bill.

TVA, the sole source of power for we 6 million people, has had no appropriations for new power capacity for 6 years. Its only source of funds for this purpose has been the use of TVA's own revenues. These are not sufficient to care for the normal growth needs. The passage of S. 1869, unamended, is sorely needed. We earnestly ask for your favorable consideration of it.

Respectfully yours,
S. R. FINLEY, *President.*

FACT SHEET ON TVA SELF-FINANCING BILL

STATUS

Senate last summer passed S. 1869 (KERR) by a bipartisan vote of 61 to 20. Voting for were 36 Democrats and 25 Republicans; voting against were 5 Democrats and 15 Republicans. Republicans voting for were AIKEN, ALLOTT, BARRETT, CARLSON, CASE of New Jersey, CASE of South Dakota, COOPER, COTTON, CURTIS, DIRKSEN, DWORSHAK, HRUSKA, IVES, JAVITS, KNOWLAND, KUCHEL, LANGER, MORTON, MUNDT, PURTELL, REVERCOMB, Mrs. SMITH, THYE, WILEY, and YOUNG. Democrats voting against were BYRD, ELLENDER, ERVIN, HOLLAND, and PASTORE.

House Public Works Committee on July 30 favorably reported S. 1869, by a vote of 19 to 15. All Democrats were for, except FALLON (Maryland); all Republicans against except MACK (Washington).

PURPOSE

To give the Tennessee Valley Authority the right to issue revenue bonds in the private money market to finance future power generating facilities in the TVA area. TVA has had no Federal appropriations for new power facilities since 1953, and is able to meet the power needs of 6 million people now only because it is using its revenues from the sale of electricity to finance construction of some 1,715,000 kilowatts of capacity. TVA must have another source of funds—and this bill would send TVA into the private money market for those funds.

The TVA Board of Directors—all Eisenhower appointees—issued a statement on July 29 that passage of S. 1869 "is urgently required to enable TVA to meet the growing defense and domestic demands for power in the area."

BACKGROUND

Revenue-bond financing for TVA has been recommended by President Eisenhower in his last three budget messages. In January 1955, the President said: "TVA is giving immediate attention to the possibilities of financing further expansion of its power system by means other than Federal appropriations." In his 1956, 1957 and 1958 budget messages the President recommended that Congress pass such a bill, last January saying: "I hope that action on appropriate legislation will be speedily concluded in order that the Tennessee Valley Authority may be in a position to meet approved needs for new generating facilities." The administration favors revenue-bond financing because it does away with the need for Federal appropriations for TVA power.

TVA is the largest user of coal in the Nation, using some 20 million tons last year. Passage of this bill will further expand the market for coal, and will create jobs through construction of new steam electric generating units.

FEATURES OF BILL

Substitutes revenue bond financing for Federal appropriations to finance normal electrical growth in Tennessee Valley. Sends TVA to private money market, through issuing revenue bonds which will be paid off, principal and interest, by power users in valley; which will not be obligations of United States Treasury; and which are subject to Federal income taxes. This bill will not require any appropriations.

In addition, TVA will make even larger cash payments to United States Treasury than are now required. Such payments will consist of (1) a yearly cash payment which would cover the Government's average cost of money on the amount of Treasury funds invested in TVA power; and (2) a $10 million annual payment in reduction of the appropriation investment. At present, the total of these payments would amount to at least $42 million a year which TVA would pay, in cash into the Treasury, as a return on and in reduction of the Government's appropriation investment.

Puts a ceiling of $750 million on amount of bonds TVA may have outstanding at any one time. This is a 5- or 6-year program, and the ceiling makes it clear that TVA must come back to Congress within this period for further authorization, thus giving Congress a chance to review the success of revenue bond financing for TVA.

Maintains congressional control of TVA, but keeps TVA policy decisions in hands of TVA Board—where Congress placed responsibility—and not in hands of the Bureau of the Budget. Opponents of this bill (private power companies, United States Chamber of Commerce) have raised issue of adequate congressional control, but real issue is too much control of TVA by Budget Bureau and Secretary of Treasury. The TVA Board needs the management flexibility to issue bonds when they are needed, to secure the most favorable terms and to operate in the most economical and efficient manner.

Puts definite limitations for the first time on TVA's power service area, in general restricting TVA to counties now in Tennessee River drainage basin and TVA power service area. This more than cuts in half the amount of territory TVA could serve.

TVA will continue to submit its budget to the President, through the Budget Bureau, for transmittal to the Congress. This budget would include estimates on the amounts of bonds TVA planned to issue in the next fiscal year. In addition, Congress has the power to disapprove new TVA power producing projects, and Secretary of Treasury has the right to delay TVA bond issues for 3 months to prevent conflict with Treasury issues.

SIGNIFICANCE

This is a life-and-death matter for TVA, which must have another source of funds for its power program since it has had no appropriations for new power capacity for 6 years. By the end of calendar year 1960 TVA's loads will be equal to the system's assured load-carrying ability, with no margin for unforeseen developments. By contrast, the normal private utility reserve margin is about 15 percent. Present estimates are that 600,000 to 1,200,000 kw should be added to the TVA system before the end of 1961. An official TVA statement declares: "It would be necessary * * * to begin construction expenditures early in fiscal year 1959 in order to have this capacity in service in the fall of 1961."

Private power companies, United States Chamber of Commerce, National Association of Manufacturers, Council of State Chambers of Commerce, and others are going all-out to kill this bill, because they want to kill any measure that would permit TVA to continue to function effectively. S. 1869 is a compromise bill, with its proponents already having agreed to many restrictive amendments. This compromise bill must be passed at this session of Congress—without further amendments.

A Phase of the Communist Conspiracy

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1958

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include 2 of a series of 6 articles, delineating a phase of the Communist conspiracy apparently not as yet recognized by much of America. These brilliant and important articles were written by a renowned Communist fighter, George Todt, of the North Hollywood, Calif., Valley Times, and appeared in that newspaper July 28 through August 2, 1958:

[From the North Hollywood (Calif.) Valley Times of July 28, 1958]

RED THREAT TO MENTAL HEALTH PLAN

(By George Todt)

"By psychopolitics create chaos. Leave a nation leaderless. Kill our enemies. And bring to earth, through communism, the greatest peace man has ever known." (Beria, Lenin University address to American students, 1936.)

Well, the fat is in the fire. Last Friday, Senator Hugh P. Donnelly, Democrat, of Turlock, made the forthright accusation that mental health programs in the United States are part and parcel of a long-range Marxist scheme to seize control—through cunning, treachery, and stealth—of the minds of the people of our country in order to aid and abet the criminal Communist international conspiracy to set up a Red world government.

This came at a session of the State interim committee on education and wound up in a two-and-a-half-hour questioning of the man who has been administering mental health questionnaires in the Los Angeles school system, Dr. Wayne McMillen. He was brought to the local area by the Welfare Planning Council of Los Angeles to direct its mental health survey.

Now it is not the purpose of this article to go into the background of Dr. McMillen.

And it is not my purpose, either, to attack the principle of appropriate research and assistance to those unfortunate souls who have had their lives blighted with some form of mental health affliction. They deserve every help which we, their more fortunate brethren, can afford to give to them—and what is there that we cannot afford from our very hearts in this instance?

So put me down as a friend of those legitimate and sincere persons who are working hard to better the lives of those who have been afflicted with a terrible sickness that is beyond their powers to prevent or cure without the understanding sympathy and charity of their fellows. I will help carry the water for them any time I can be privileged to do so.

But at the same time, all of us must keep our eyes open and be alert to the possible infiltration of unworthy and even criminal types of mentalities into this kind of program which might attempt later to usurp its control to their own evil and wicked purposes.

Here I am referring to the Communist conspiracy specifically in all of its devious ramifications and overall plans of attack against the American people. For we must be defeated, utterly and completely, if the Communist dream of world domination may one day become reality. The Red warlords, while not shunning physical combat, would much prefer to gain our surrender by psychological means—through a weakening of our national will and determination to carry on the struggle against them—and this method has come to be known as psychopolitics. It is actually a phase of geopolitics, the study of which is not well enough known in the United States—although to such Marxist Socialist dictators as Adolf Hitler, Josef Stalin, Mao Tse-tung, Josep Broz Tito, and their ilk, it was always considered a must when viewed from any angle. And it still is, of course.

Now what is psychopolitics, anyway? There is a considerable body of intelligent

and well-educated opinion in our country today which holds that it is perhaps the greatest of all present threats to the traditional American way of life—built upon the free enterprise system and a concept of government through the consent of governed.

Perhaps one of the most illuminating works on this matter is a small book of large circulation by this time called Brainwashing, which is a synthesis of the official Russian textbook on psychopolitics. A complete address by the hated Beria, now liquidated by his erstwhile pals in the Kremlin, is set down verbatim as he gave it to a group of quisling American students of the course at Lenin University in 1936. The balance of the well-documented work gives us the hideous Bolshevik Communist concept of the way to bring the American people under Red domination through the fifth column strategy advocated in the book.

This revealing book may be obtained for $1 by writing to Truth, Inc., P. O. Box 10188, Fort Worth, Tex. For those who want to know what all the shouting is about, this text can became a real eye opener into certain questionable activities now going on behind the scenes, in a manner of speaking. Whether one agrees or disagrees that this may be a menace to our Republic of the first magnitude, there is only one way to know how we think about it—and that is to read the Russian handbook on psychopolitics, itself.

The man who authored this work, called Brainwashing, was a dues-paying member of the Communist Party of the United States from May 2, 1936, to October 10, 1939. He operated under his own name of Kenneth Goff and also under the alias of John Keats. In 1939 he appeared voluntarily before the Un-American Activities Committee in Washington under Congressman MARTIN DIES, Democrat, of Texas. Goff's testimony may be found in volume 9 of that year's Congressional Report.

Read his book and find out what it reveals.

[From the North Hollywood (Calif.) Valley Times of July 29, 1958]

AS BOLSHEVIK BOSS PUTS IT

(By George Godt)

"Treachery, though at first very cautious, in the end betrays itself."—Livy.

What was it that the cruel Beria, a subhuman Bolshevik high priest of modern Luciferianism before he was fortunately liquidated by his best friends several years ago in Moscow, had to say on the devilish science of psychopolitics to American quislings at Lenin University in 1936?

Why not give you his exact words, as reported by ex-Communist Kenneth Goff, in his amazing book Brainwashing, which is a synthesis of the official Russian textbook on psychopolitics? It may be obtained for $1 from Truth, Inc., P. O. Box 10188, Fort Worth 14, Tex. Its contents are as fascinating as the gaze of a cobra from 3 feet away. Why not try it on for size? Here is one revealing excerpt from the book:

AN ADDRESS BY BERIA

"American students at the Lenin University, I welcome your attendance at these classes on psychopolitics.

"Psychopolitics is an important, if less known, division of geopolitics. It is less known because it must necessarily deal with highly educated personnel, the very top strata of mental healing.

"By psychopolitics our chief goals are effectively carried forward. To produce a maximum of chaos in the culture of the enemy is our first most important step. Our fruits are grown in chaos, distrust, economic depression, and scientific turmoil. At last a weary populace can seek peace only in our offered Communist state; at last only communism can resolve the problems of the masses.

"A psychopolitician must work hard to produce the maximum chaos in the fields of mental healing. He must recruit and use all the agencies and facilities of mental healing. He must labor to increase the personnel and facilities of mental healing until at last the entire field of mental science is entirely dominated by Communist principles and desires.

"To achieve these goals the psychopolitician must crush every homegrown variety of mental healing in America. Actual teachings of James, Eddy, and Pentecostal Bible faith healers among your misguided people must be swept aside. They must be discredited, defamed, arrested, stamped upon even by their own Government until there is no credit in them and only Communist-oriented healing remains. You must work until every teacher of psychology unknowingly or knowingly teaches only Communist doctrine under the guise of psychology. You must labor until every doctor and psychiatrist is either a psychopolitician or an unwitting assistant of our aims.

"You must labor until we have domination over the minds and bodies of every important person in your Nation. You must achieve such disrepute for the state of insanity and such authority over its pronouncement that not one statement so labeled could again be given credence by the people. You must work until suicide arising from mental imbalance is common and calls forth no general investigation or remark.

"With the institutions for the insane you have in your country which can hold a million persons and can hold them without civil rights or any hope of freedom. And upon these people can be practiced shock and surgery so that never again will they draw a sane breath. You must make these treatments common and accepted. And you must sweep aside any treatment or any group of persons seeking to treat by effective means.

"You must dominate as respected men the fields of phychiatry and psychology. You must dominate the hospitals and universities. You must carry forward the myth that only a European doctor is competent in the field of insanity and thus excuse among you the high incidence of foreign birth and training. If and when we seize Vienna you shall then have a common ground of meeting and can come and take your instructions as worshippers of Freud along with other psychiatrists."

Hon. William S. Hill

SPEECH

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1958

Mr. OSTERTAG. Mr. Speaker, it is a privilege and an honor to join with my colleagues in paying tribute to an outstanding, devoted Congressman, and a true and loyal friend who is retiring this year from Congress. I am speaking of the Honorable WILLIAM S. HILL—or BILL HILL, as we all know him—of the State of Colorado.

In his 18 years here in the Congress, BILL HILL has established a reputation and a record which have earned for him the admiration, respect, and affection of us all. So it is with sincere regret that we see him leave the Congress this year. This body needs men like BILL HILL.

We all know of his outstanding contributions as a ranking member of the Committee on Agriculture and the Committee on Small Business. Bill is highly qualified by experience and training for his service on both of these important committees.

But in addition to experience and training, Representative HILL also is highly qualified for his service here by temperament and disposition. He has a great wealth of understanding and tolerance, and a pleasant sense of humor. All these attributes are very serviceable here. For, despite all the pressures and hectic activity here, BILL HILL always maintains a sound perspective on the overall requirements and responsibilities of the Congress.

These very warm and human attributes do not prevent him from being forceful and direct on issues before the Congress, however. He constantly demonstrates his enthusiastic devotion to his responsibilities here and to the interests of his constituents in Colorado; he maintains a standard of high principles and his actions are based on them.

I am going to miss the friendly companionship, the good commonsense, and the inspiration for better service which BILL HILL provides. He and his wonderful wife plan to return to Colorado to enjoy all year around the wonders of that colorful State. Our very best wishes and sincere affection go with them and we all hope they will continue to have a very fruitful and rewarding life among the friends and neighbors whom they represented in such outstanding fashion in Congress for all these years.

The Catholic War Veterans of the United States of America and Auxiliary Hold 23d National Convention

EXTENSION OF REMARKS

OF

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1958

Mr. BROYHILL. Mr. Speaker, I am pleased to report that the 23d national convention of the Catholic War Veterans of the United States of America and its auxiliary is scheduled to be held August 13 to 17, at the Hotel Statler, Washington, D. C.

I am glad to give them a hearty welcome to the Nation's Capital, and to wish them a fruitful convention. I feel sure that my colleagues extend a like hand of welcome to the thousands of officers, delegates, and members who will convene here, and to their families and friends from among 40 of our States.

One of the larger veterans organizations of our country, the Catholic War Veterans and its auxiliary constitute a powerful force for peace in America and throughout the world. They have long been active in civic and patriotic affairs through their own and with other vet-

erans' groups: They foster proper development of the young, protection of the aged, sick, and needy and friendless veterans and their dependents.

The members of CWV and CWVA fight to keep America strong as eagerly as they strove to preserve her in periods of national danger. Their motto—For God, for Home, for Country—is a holy one, and their work to assist others, in accordance with such noble ideals, is not kept within a small, secluded segment, but is extended to all members of America's society. In like broad measure we extend our friendship and encouragement to them.

The Catholic War Veterans ever hold dear the first amendment of our cherished Constitution: They firmly believe in, for themselves and others, the principle of the freedom of the individual to worship God according to his own conscience. They do not believe there is any inherent conflict between state and church; rather, they believe the two should work in harmony for the greatest good of all; separately where it is necessary, together where possible, but always with the thought that man is the child of God, a merciful, loving, Father to us all.

Mr. Speaker, I am pleased to inform this body that today I receive from Peter J. Hopkins, national commander, and M. Joseph May, chairman of the 23d national convention, a short background note concerning the Catholic War Veterans and an outline of their programs and plans. The report follows:

THE CATHOLIC WAR VETERANS OF THE UNITED STATES OF AMERICA AND AUXILIARY

States of America will have the honor of holding their 23d national convention in Washington, the District of Columbia, August 13 to 17, 1958. This is their first such convention in the Nation's Capital. Their auxiliary will hold its convention at the same time and in the same headquarters.

The Hilton-Statler Hotel has been selected as convention "home" for both the CWV and its auxiliary. Delegates to the convention, national officers, members and their families will be housed there and elsewhere; however, all the sessions and the chief social functions of the convention are to occur in the Statler. Upward of 5,000 people including families, and friends will be attracted to this world capital: for this reason the 23d CWV national convention is called the family convention. Special tours and surprises are being prepared for the children so that they may get to learn more of the Nation for which their parents sacrificed themselves in times of national emergency.

A highlight of the convention will be the military field mass to be celebrated at Arlington National Cemetery Amphitheater. CWV's national chaplain, Father Bede Scully, OFM, CAP, will be the celebrant. This event will be an occasion of prayer for all the war dead of America, and will be observed on the Feast of the Assumption of the Blessed Virgin Mary into heaven. This Nation, our beloved America, is dedicated to the Mother of God under another title. A century ago the Catholic bishops of the United States dedicated the United States to the patronage of the Immaculate Conception of Mary; this is the same title under which the Catholic War Veterans and auxiliary are dedicated. Brazil and Portugal, our friends, are likewise dedicated.

It is fitting too, that this convention is placed under the patronage of His Excellency Patrick A. O'Boyle, archbishop of Washington, within whose see is located one of the greatest religious shrines in North America. This is the rapidly rising, beautiful, National Shrine of the Immaculate Conception, on the grounds of Catholic University. It is a structure that will embellish the beauty of this magnificent Capital and stand as a mark of respect to the greatest of all women, the Jewish maiden, Mary, Mother of the Prince of Peace.

Perhaps it is no mere coincidence that the founder of the Catholic War Veterans of the United States of America is the Right Reverend Monsignor Edward J. Higgins, of Astoria, N. Y., the pastor of the Shrine Church of the Immaculate Conception in that city. Monsignor Higgins, an Army chaplain of World War I founded CWV in 1935, when there was great need to protect veterans and their families.

Another highlight of the convention will be a parade on K Street NW., Washington, D. C., Friday evening. Thousands of veterans and members of military, civic, and service organizations, and marching and musical units of the Armed Forces will participate. This parade is designed to inspire the young to patriotism and the mature to a deep reflection and consideration on world affairs, and how they may be directed and lead the world to peace.

Of outstanding importance to the convention will be its annual banquet and military ball, which will be enjoyed by well over 1 thousand delegates, officers and members.

His Holiness, Pope Pius XII, and His Holiness, Pope Pius XI, have approved the work of the Catholic War Veterans of the United States. President Franklin D. Roosevelt, President Harry S. Truman, and President Dwight D. Eisenhower have also approved the patriotic activities of CWV and their earnest work for peace and the welfare of the veteran in distress and for his family and community.

It is proper here to conclude with words from the Constitution of the Catholic War Veterans, organized as it is, "To promote zeal and devotion for God, for country, and for home: (a) For God: to promote * * * a greater love, honor and service to Him; (b) for country: through a more vivid understanding of the Constitution of the United States of America and through the active participation in the promotion of its ideals of life, liberty and the pursuit of happiness to develop a more zealous citizenship, encourage morality in Government, labor, management, economic, social, fraternal, and all other phases of American life; to combat aggressively the forces which tend to impair the efficiency and permanancy of our free institutions; (c) for home: to promote the realization that the family is the basic unit of society; to aid in the development of an enlightened, patriotic, American youth, to assist all veterans and widows and dependents of deceased veterans; (d) these objectives are encouraged without regard to race, creed, or color."

The remarkable fact about those words is that they were written in 1935. It is no wonder that such ideals have inspired the Catholic War Veterans to become a vigorous organization in the forefront of solid Americanism.

Practical Civil Rights

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. MADDEN. Mr. Speaker, the Gary (Ind.) Anselm Forum has won a national recognition back over the years in its successful experiment and accomplishments in combating bigotry and improving race and religious relations in the Calumet region of Indiana.

I am here submitting a reprint of October 5, 1956, from the Gary Post-Tribune which elaborates upon the integration policies originated by the Gary (Ind.) Anselm Forum.

I am also including with my remarks a letter from Mark C. Roser, supervisor, pupil personnel department of the Gary schools, to Mr. Reuben E. Olson, director of the Anselm Forum, Inc., in answer to an inquiry concerning the success of this integration problem:

[From the Gary Post-Tribune of October 5, 1956]

GARY POLICY WAS BEST

It has been evident from the start that the House subcommittee's investigation into the District of Columbia's schools was essentially an attack on the racial integration policy. Whatever committee members may say, it is intended to bolster the South's case for integration.

But if there is a fair appraisal of the evidence the committee has collected, it must be labeled as damaging to the South.

Negro children are not standing up equally with the white children of the same age in school tests—that is not surprising. What that really means is that the South has been short-changing its Negro youngsters in the separate but equal schools. It has not been giving them an education of equal value to that of the white students. Instead of discrediting the integration policy, the House committee in fact has been disclosing an important reason for adopting it. * * *

There are other factors, of course. When youngsters come from slum homes, when their parents have had little or no education, it can hardly be expected that they will do as well in classes as youngsters who come from adequate homes, with literate parents. * * *

There is much truth to statements that the integration program was advanced too rapidly in the District of Columbia. The Supreme Court ruling, it should be remembered, did not call for precipitous action but provided for gradual steps. * * *

More and more, recent developments are reflecting credit on the Gary school board for the integration policy it followed here. The gradual method, starting with the lower grades, took somewhat longer but it avoided the difficulties that have been revealed in the Washington schools.

It is doubtful if any other community has done a better job than did the Gary board. Some cities probably can integrate in one long step without trouble, if the percentage of Negro students is not large. But where integration involves a major change, schools would be wise to shape their policies after that which Gary used so successfully.

(Gary's integrated school policy adopted in 1946. Indiana's integrated school policy House Act 242, adopted 1949. Making Indiana the seventh State to so adopt.)

GARY ANSELM FORUM.

SCHOOL CITY OF GARY,
Gary, Ind., July 3, 1958.

Mr. REUBEN E. OLSON,
Director, Anselm Forum, Inc.,
Gary, Ind.

DEAR MR. OLSON: This is in answer to your inquiry concerning the board policy established in 1946, whereby Gary children are to attend the school in the district in which they live, regardless of race, creed, or color.

At the time it was the thinking of the school authorities that the implementation of this policy would best be accomplished by

starting with kindergarten through the third grade. Then, each following year the grade level would be advanced by one.

Experience has shown that for many reasons this best suited the psychological and social needs of our children and parents. This method utilized the natural prejudice-free attitudes of children so that democratic relationships could be established in the classroom. Thus, by the time adolescence was reached the children were better prepared to meet the usual stresses and strains of this period of emotional growth.

It was also found that parents, as well as teachers, could better relate themselves positively to younger children of differing culture and race than they can to the adolescent, where there is so much tension normally present in the personalities.

It is almost impossible for even neurotic adults to consistently hate a small child. Race hate, therefore, is reduced tremendously by first integrating young children. The other efficient method is work with mature personalities and start with colleges and graduate schools.

Yours truly,

MARK C. ROSER,
Supervisor, Pupil Personnel Department.
V. R. CHARLSON,
Director, Special Services Division.

Large-Scale Propaganda Drive in Latin America Agreed Upon at Soviet-Red China Conference

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Americas Daily of Miami Springs, Fla., on Thursday, August 7, 1958:

LARGE-SCALE PROPAGANDA DRIVE IN LATIN AMERICA AGREED UPON AT SOVIET-RED CHINA CONFERENCE

LONDON, August 6.—The Communist diplomatic offensive has been officially and formally extended from the Near East to Latin America, and therefore, the war of propaganda is taking place in the United States own backyard.

The extension of the offensive is the result of a decision taken jointly by the Kremlin and the Communist regime of Peiping, during the secret conversations of 3 days between the Soviet Premier, Nikita Khrushchev, and the head of Communist China, Mao Tse-tung.

What can be expected now is a large-scale propaganda offensive in the Latin American nations, with the United States as the main target of attack.

Forty-eight hours after the decision of Peiping, the Communists opened fire with an attack against the enslaving police action, which the United States presumably develops in Latin America.

The decision of the Red bloc is seen in the joint Chino-Soviet communique issued in Peiping Sunday, at the end of the secret deliberations of Mao and Khrushchev.

Communist China and the Soviet Union agreed formally there and then to lend firm support to the just struggle of the peoples of the United Arab Republic, the Republic of Iraq and all the other Arab countries, as well as movements for national independence of the peoples of Asia, Africa, and Latin America, according to the communique.

The fact that Latin America was included with the Arab nations, leaves little doubt of the aims of the Red leaders.

ANTI-UNITED STATES FLAMES IN LATIN AMERICA

TOKYO, August 6.—A semiofficial Peiping newspaper today continued Red China's bitter attack on United States policies in Latin America by declaring that anti-American flames are burning everywhere in Latin America.

The Communist-run Kwangming Daily, commenting on United States Secretary of State John Foster Dulles' visit to Latin America, added:

"The tide of national independence will not be checked by Dulles and his kind. No matter where they go, Dulles and his ilk will be received by fists and curses."

This was the third editorial attack in 2 days by the mainland's strictly supervised press.

Tuesday the Peiping People's Daily, official organ of the Communist regime, and the semiofficial Ta Kung Pao lashed out at the United States for exploitation and subversion of Latin America.

They charged the United States with fostering armed coups in Haiti and Venezuela and attempting armed intervention in Cuba.

The Kwangming Daily, in language strikingly similar to that used in Tuesday's editorials, said, "Latin America has been regarded by the Wall Street bosses as their backyard.

"It has been exploited and controlled by them. But the struggle against oppression and enslavement by United States imperialism is spreading in Latin America and the contradictions between the imperialist and the Latin American people are sharpening."

The newspaper said that in recent months Vice President RICHARD NIXON met a hostile reception, President Eisenhower's brother, Milton, encountered demonstrations in Panama and Nicaragua and Assistant Secretary of State Roy R. Rubottom met demonstrations in Brazil.

The Injustice of Public Law 84–676

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks, I include a letter by my good friend Robert W. Collins, of Yazoo City, Miss., which was written to the editor of the Army-Navy-Air Force Register. It appeared in the August 2, 1958, edition of that publication.

Mr. Collins' suggestion merits the attention of the House Committee on Armed Services, and I hope Congress will be given the opportunity to consider changing the effective date of Public Law 84–676.

URGES CONGRESS CORRECT OWN MISTAKE

DEAR SIR: The magnificent and prompt action of the President in sending a sizable marine force to rescue the integrity and independence of Lebanon brought many serious thoughts to many like myself who was privileged to serve in the Korean war as a career reservist. Perhaps the whole Nation can now get the meaning of the Korean war in a better sense of appreciation. Reappraisals are now being called for. Congress will be expected to and will support the actions commenced today. At this time of sober reflection on the Korean war the White House and the Congress can now correct an injustice to the two-war, former Reserve career officers who were released involuntarily after the end of those recent hostilities by applying the following remedy, to wit:

Reenact and approve Public Law 84–676 with one very simple and justiciable addition, as follows: "(i) This section shall be effective on July 1, 1954."

The Congress should reenact this public law on its own motion as a simple matter of correcting an injustice. Public Law 84–676 shows on its face why it fails in its stated purpose; to provide a lump-sum benefit to the members of the Reserve components who had served in World War II and the Korean war and were released involuntarily. The fact of the matter is that on the effective date of this statute, approved on July 9, 1956, practically all of the members of the Reserve components intended by the stated purpose of the legislation to be so benefited had already been released involuntarily in 1954 and 1955.

Sad to relate this anomaly is written into the hearings on H. R. 6725 and H. R. 9952 (both of the 84th Cong.), to which attention is invited. Public Law 84–676 is identical to H. R. 6725 save in one particular. It provided an effective date of July 1, 1954. H. R. 6725 was approved by the Armed Services Committee of the House on July 26, 1955. In the meantime it was withdrawn from the Rules Committee and the effective date of July 1, 1954, was deleted. On February 3, 1956, a new set of hearings commenced on H. R. 9952. What the responsible committeemen thought of the changed version was expressed by the chairman, as follows: "The committee went into the question of cost. It was a financial situation rather than wisdom." Thusly, H. R. 9952 was enacted by the House of Representatives and the Senate and Public Law 84–676 became law on approval by the President on July 9, 1956.

Congress can correct its own mistakes, particularly its admitted and recorded errors of resort to false economy in place of its stated wisdom in the premises. Accordingly, it is strongly urged that the Congress on its own motion reenact Public Law 84–676 with a change in its effective date to July 1, 1954.

ROBERT W. COLLINS,
Commander, United States Naval Reserve (Retired), Yazoo City, Miss.

Nineteen Hundred and Fifty-Eight Questionnaire

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. OSMERS. Mr. Speaker, for several years I have made it a practice to distribute widely among my constituents a questionnaire on the topics of the day. The replies to my 1958 questionnaire have now been tallied and I ask unanimous consent to insert the results in the Appendix of the CONGRESSIONAL RECORD:

Do you favor:

1. Agreement with Russia to end nuclear bomb testing without foolproof inspection?

Yes, 14 percent; no, 81 percent; undecided, 5 percent.

2. United States moral support for the independence of Algeria? Yes, 31 percent; no, 33 percent; undecided, 36 percent.

3. Broad tax cut by raising individual exemptions from $600 to $800 as an antirecession measure? Yes, 55 percent; no, 35 percent; undecided, 10 percent.

4. Large program of federally financed public works to create jobs? Yes, 33 percent; no, 61 percent; undecided, 6 percent.

5. Repealing excise taxes on autos, appliances, communications and transportation, luggage, and jewelry? Yes, 71 percent; no, 19 percent; undecided, 10 percent.

6. Tax reform? Yes, 87 percent; no, 4 percent; undecided, 9 percent.

7. Stronger laws to prohibit the use of untested chemical food additives? Yes, 97 percent; no, 0 percent; undecided, 3 percent.

8. Use of troops to enforce civil rights court orders as in Little Rock? Yes, 49 percent; no, 34 percent; undecided, 17 percent.

9. Granting the Interstate Commerce Commission power to terminate unprofitable railroad commuter service without regard to public need? Yes, 24 percent; no, 59 percent; undecided, 17 percent.

10. Legislation to safeguard employee health, welfare, and pension funds? Yes, 89 percent; no, 4 percent; undecided, 7 percent.

11. Stiffer penalties for distributors of obscene materials by mail? Yes, 88 percent; no, 3 percent; undecided, 9 percent.

12. Extension of Reciprocal Trade Agreements Act as is? Yes, 47 percent; no, 28 percent; undecided, 25 percent.

Records Are Set by Panama Canal

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statistical article on the Panama Canal which appeared in the New York Times of August 11, 1958:

RECORDS ARE SET BY PANAMA CANAL—TRANSITS AND TOLLS AT A HIGH BUT EFFECT OF DIP IS FELT IN DECLINE OF CARGOES

BALBOA, C. Z., August 10.—The Panama Canal Company has released figures showing that although it got through fiscal year 1958, ended June 30, virtually unaffected by the recession in the United States, signs of diminishing world trade were beginning to manifest themselves.

Commercially, it was the best year in the canal's 44-year operating history. Transits of oceangoing commercial vessels—nongovernment ships of 300 tons net or over—totaled 9,187 against 8,579 in 1957, the previous high. Toll collections on ocean-going commercial vessels totaled $41,796,000 as against $38,444,000 in 1957.

Total transits for the fiscal year 1958, including ocean-going commercial vessels, United States Government vessels, and vessels of less than 300 net tons or 500 displacement tons amounted to 10,553. The equivalent 1957 figure was 10,137.

TOLLS AT RECORD LEVEL

Toll collections were $42,834,000, some $3,180,000 higher than fiscal year 1957, and a record. The difference between the total tolls and the tolls for commercial vessels is represented by $991,000 in interagency credits for transits of United States Government ships.

It is in the volume of cargo carried through the canal that the recession's effects show. The 48,124,809 long tons of commercial cargo shipped through in fiscal year 1958 is 3.2 percent below fiscal year 1957's record figure.

The discrepancy does not show in the tolls collected, as the Panama Canal knows only two basic classes of customers—ships laden and ships in ballast. If a vessel carries as little as 1 ton of cargo it pays the same rate as if it transits fully loaded.

CARGO VOLUME DOWN

Strangely enough, even as the total volume of cargo dropped, a new 1-day record was established. Some 1,010,000 long tons of cargo more than last year moved through the canal from the Pacific Ocean to the Atlantic Ocean. But the 2,588,000 fewer tons moving from the Atlantic to the Pacific caused the overall drop.

According to Panama Canal Company statisticians, the prime cause for the drop in southbound, Atlantic to Pacific, cargo was the reduction in shipments, principally of scrap metal, to Japan.

In fiscal year 1958 the top 10 cargoes shipped through the canal from the Pacific to the Atlantic were: ores, 7,559,000 long tons; lumber, 3,323,000; wheat, 1,985,000; canned food products, 1,285,000; bananas, 1,082,000; sugar, 1,068,000; nitrate of soda, 1,046,000; various metals, 901,000; petroleum and petroleum products, 746,000, and barley, 711,000.

SOUTHBOUND CARGOES

Ten top cargoes from the Atlantic to the Pacific were: petroleum and petroleum products (excluding asphalt), 5,964,000 long tons; coal and coke, 3,849,000; iron and steel manufactured products, 1,922,000; phosphates, 1,257,000; soybeans, 814,000; sugar, 654,000; various ores, 564,000; scrap metal, 532,000; chemicals, 482,000; raw cotton, 354,000.

United States registered ships were the canal's best customers during the year. There were 2,023 such transits. Many ships whose regular runs are routed through the canal made several transits each. Next-best customers were British-flag ships, which logged 1,205 transits. Altogether ships bearing the flags of 35 nations used the canal in fiscal year 1958.

Meanwhile, the size of new ships using the canal is making the traffic problem no easier. They must get what the canal calls a daylight, clearcut transit.

Vessels accorded such transits make the whole journey by daylight (normally the canal is on a 6 a. m. to 10 p. m. basis) and may not be passed by any other vessels in the 8-mile-long Gaillard Cut.

Lutheran Laymen's League Sponsors Radio Meditations and Prayers for Peace

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. PRICE. Mr. Speaker, under unanimous consent of the membership of the House I present herewith in the RECORD the script for seven 2-minute radio meditations and prayers for peace which have been sent to every radio station in the United States with the compliments of the Lutheran Laymen's League, sponsors of the Lutheran Hour, the Family Worship Hour, and Day by Day With Jesus.

These messages were presented to the radio stations by the Lutheran League with the sincere hope that their use would help allay the fears and tensions of these turbulent times.

A recording and the script were presented to President Eisenhower on August 11 by the Lutheran Hour speaker, Dr. Oswald Hoffman.

The seven meditations and prayers follow:

LOOKING TO THE FOUNDATION

The world crisis flared up suddenly. Like a wolf in the snows of winter, it was upon us.

The struggle has only just begun, nor is the end in sight. In the midst of troubles, our people look to their defenses; actually it may be more important in these days to look to the foundation.

The foundations of national life are laid in our homes, and in the lives of those who dwell there. Have the foundations of your life, your home, been laid on shifting earth or on the rock that cannot be moved, though wind and stream beat vehemently upon it? This is no time to look for an easy way out. The days are at hand when we must look to the foundations. They call not only for convictions, but also for people who act upon conviction.

Listen to these solemn words of Jesus Christ about the foundations of conviction and action:

"Whosoever cometh to me, and heareth my sayings, and doeth them, I will show you to whom he is like: He is like a man which built an house, and digged deep, and laid the foundation on a rock: and when the flood arose, the stream beat vehemently upon that house, and could not shake it: for it was founded upon a rock. But he that hearth, and doeth not, is like a man that without a foundation built an house upon the earth; against which the stream did beat vehemently, and immediately it fell; and the ruin of that house was great." (Luke 6:47-49)

Will you pray with me?

Look upon us in mercy, O God, and let not our sins destroy us. Turn not Thou away from us in our time of testing, but give us strength to stand up and acquit ourselves as men, Thy men through Christ, our Saviour. Amen.

STRAIGHT THINKING

In a time of national crisis, it is important to keep our heads. The national welfare calls for straight thinking and thoughtful, well-considered words and action.

It is straight thinking to remember God in these troubled days. Listen to the Psalmist in a time of trouble:

"Lord, how are they increased that trouble me. Many are they that rise up against me. Many there be which say of my soul, There is no help for him in God. But Thou, O Lord, art a shield for me; my glory, and the lifter up of mine head. * * * I will not be afraid of ten thousands of people, that have set themselves against me round about. Salvation belongeth unto me Lord: Thy blessing is upon Thy people." (Psalm 3:1-6, 8.)

God rules; no one has usurped His power. Though they be increased that trouble us, though attempts be made to panic us with the thought that there is no help in God, God reigns.

God's blessing is upon His people. Have faith in God, and be numbered among His

people. Salvation and deliverance belong to the Lord, His express gifts to all men in Jesus Christ, His Son and our Savior. Have faith in Christ, Himself the divine guaranty that, though we may not always be right and often may be wrong, God loves and God cares, win, lose, or draw.

Pray to God in the confidence of the Psalmist: "I will not be afraid of ten thousands of people, that have set themselves against me round about." With trust in God, the Father of our Lord Jesus Christ, lay yourself down to sleep and awake refreshed, for the Lord will sustain you.

Discipline

A time of national and international crisis calls for discipline. For a free people, the highest form of discipline is self-discipline, the finest restraint is self-restraint. That's what the Book of Proverbs means when it says: "He that is slow to anger is better than the mighty; and he that ruleth his spirit then he that taketh a city."

Steadfastness of purpose requires no angry words to make its way, even when groping through the modern jungle of international politics.

God rules; He is still in control. The Almighty cares about what is happening in the world these days, and about what is happening to you. Remember it always, but most of all now.

How do I know that God cares? I have an answer for that question: Because God sent Jesus Christ. Remember the claim of Jesus Christ upon you, especially His claim to your trust and confidence. That kind of faith in God can carry you through these tense days with the qualities it transmits: Love, joy, peace, patience, kindness, generosity, fidelity, adaptability, and self-control—above all, self-control that no law can produce because it comes from inside a man.

Will you pray with me?

God, stay close to us and all associated with us in these days, that we may not give way to fear or uncertainty, but may live confident of Thy care and kindness, through Christ, our Lord. Amen.

Being Alert

The crisis hanging over the world imposes upon our citizenry as much as it does upon the leadership of our country the necessity of alertness.

We live in a trigger-happy world, living behind closed doors, any one of which could open suddenly to disclose the threat of destruction rather than the offer of friendship.

At the same time, we must be alert to recognize the clasp of friendship and reconciliation when it is offered. It is often hard to distinguish the friendly hand from the mailed fist in the murky darkness of self-interest and suspicion that characterize our time.

This is a time when all of us, whether we have previously paid attention to God or not, whether we have listened to Him carefully or lackadaisically, should be alert to His voice. I have no doubt that God is employing these days of trouble and tension to teach us all some lessons He wants our world to learn: that He is God; that we are members of His family, whether we recognize the fact or not, by virtue of His divine creation and by right of purchase through the sacrifice of His Son, Jesus Christ; and that He expects us to live in a manner worthy of His sons and daughters. To this kind of alertness God himself calls each one of us in the words of St. Paul: "Be on your guard, stand firm in the faith, live like men, be strong. Let everything that you do be done in love." (I Cor. 16:13).

Will you breathe this prayer with me?

God, our Heavenly Father, in these dark days, make us alert to the opportunities for service Thou dost place before us by Thy holy will and in Thy most gracious favor through Jesus Christ, our Lord. Amen

Meeting Realities

When events arrive at a crisis, they can no longer be ignored. Either one comes to grips with the problems they present, or runs away to let someone else find the solution.

Free people help to make the right decisions by their willingness to meet and deal with hard realities. The existence of a threat to world peace is one of these hard realities which cannot be blinked away. Selfishness and self-interest present their own hard reality to people as well as to peoples. Indeed, the presence of evil itself is a hard reality, evident in faces that can smile for the cameras one moment and harden into fine lines of cruelty the next.

The hardest reality of all is God, whose eternal existence and almighty power have been so lightly regarded in times past by some of the very people who imagine themselves to be the spokesmen for reality.

The past, including our own, stands under the judgment of God. There is only one way to meet this harsh reality—to repent as a people and as a Nation of the pride and self-will that have caused us, as well as others, to ignore God's will and transgress His commandments.

The future is in God's hands. There is only one way to deal with this sure reality—to trust in His love and hope in His mercy. If we should be minded to run away from reality in these times of tension, the Bible calls us back to the great reality of His merciful and reassuring presence:

"The counsel of the Lord stands for ever, the thoughts of his heart to all generations. Blessed is the nation whose God is the Lord, the people whom he has chosen as his heritage." (Psalms 33)

Rediscovering Resources

We are in the midst of a crucial world situation where the position of the world is encountering political, economic, social, and possibly military challenges in every part of the world from forces that, apparently, will not be satisfied until they have discredited all that we are and everything we stand for.

To meet this mortal challenge, we need to discover new resources or rediscover others too long neglected, more powerful than the arsenal of weapons which the opposing forces in the world will one day, if they do not now, possess in equally destructive profusion.

Without discounting the necessity of developing political, economic, social, and military resources of the free world, I firmly believe that spiritual resources will play a much larger role than any of them in resolution of the tensions now fettering the world.

We cannot create spiritual resources, but we can discover them. We shall not find them in ourselves, if we find them at all.

In God's warming love can be found renewing and energizing power—love reaching out to all men, of every class and condition, in the Son of God, Jesus Christ, appointed by His Father to be the lifegiving, self-sacrificing Savior of the world, inviting the faith and devotion of men everywhere.

Don't be ashamed to pray to God for strength in these days. What the Psalmist said is still true: "Except the Lord build the house, they labor in vain that build it; except the Lord keep the city, the watchman waketh but in vain." (Psalms 127:1.)

Ordinary Courage

In the midst of crisis, ordinary people often show the way, and simple things become important—faith, for example, and courage, and decency.

Things looked bad till an ordinary shepherd boy came out to visit his three older brothers doing military service in an army paralyzed by fear. The enemy proudly paraded his armor, and his spokesman prated "Give me someone to fight."

Everyone knows what happened when the ruddy and handsome youth went out alone to accept the challenge. His unforgettable courage has been preserved in words handed down to us over 30 centuries: "You come to me with a sword and with a spear and with a javelin; but I come to you in the name of the Lord of hosts, whom you have defied."

The kind of world in which we live demands courage at home and in the factory just as much as in the frontlines. It takes fortitude to hold a righteous position firmly while waiting out the time which will determine whether there is to be war or peace. This is a time to seek those extraordinary qualities of firm and calm courage which derive their strength from trust in God—the kind of trust expressed by David in the 34th Psalm:

"I sought the Lord, and He answered me, and delivered me from all my fears. * * * The angel of the Lord encamps around those who fear him, and delivers them. O taste and see that the Lord is good. Happy is the man who takes refuge in him." (Psalms 34:4–8.)

Will you offer this prayer with me?

Lord God, the refuge of all who trust in Thee, give us faith to sustain our courage with the extraordinary power that comes from Thee alone. Amen.

Mary Ryder Homes for Elderly Women Base Rates on Average Budget of $60

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1958

Mrs. SULLIVAN. Mr. Speaker, one of the major social problems facing the American people as our population's average age increases is to provide adequate housing at moderate rates for elderly couples and individuals, particularly those unable to work and with very limited incomes. It is one of the problems to which we on the Housing Subcommittee of the House Committee on Banking and Currency have devoted many hours of study. The omnibus housing bill which our committee has approved and which is now awaiting clearance for House debate would help somewhat in solving this problem by providing low-interest guaranteed loans to nonprofit organizations in providing good rental housing for the elderly.

One courageous person in St. Louis who saw this problem in all of its grimness some years ago and went ahead and did something about it is Mrs. Mary E. Ryder, who established the Mary Ryder Homes for Elderly Women and has been operating these homes successfully despite all kinds of difficulties associated with that sort of practical social welfare activity. She is particularly concerned over the housing needs of the infirm who cannot work and whose incomes average perhaps $60 a month on old-age assistance.

Mrs. Ryder recently wrote about some of the difficulties in meeting the housing needs of this group in an article which appeared in the St. Louis Labor Tribune. In it, she told how the Mary Ryder Homes try to keep elderly people safe, clean, well fed, and comfortably housed on a rate schedule of only $45, $48, $50, $52.50, $55, and $70 a month.

The Mary Ryder Homes for Elderly Women are a remarkable achievement by a remarkable St. Louis humanitarian, and I believe Mary Ryder's report on the problems of operating these homes under present conditions will be of interest to all Members of Congress. Consequently, under unanimous consent, I submit for inclusion in the Appendix of the CONGRESSIONAL RECORD the article from the St. Louis Labor Tribune referred to, by Mary E. Ryder, as follows:

IN DEFENSE OF OLD, INFIRM, MARY E. RYDER URGES FACING TRUTH WITHOUT THEORIES

(By Mary E. Ryder)

Every day, we read or hear on radio or television of conferences, surveys, press interviews, talking, speeches, and quiz panels concerning social issues without one single improvement or a real solution offered on the subject matter under discussion or any real action resulting therefrom.

Recently, a 2-day session on old-age problems was conducted in St. Louis, and one of our Government agencies, that is pitifully limited for funds to operate with, sent its representative out to St. Louis to offer a solution for the problems of the aged, which seemed to have for its purpose to put old people to work.

That is fine for those able to work and especially those who want to work. No one can find fault with that suggestion.

WHAT ABOUT THE OTHERS?

But what about the millions of old people who are unable to work, and never will be able to work again? Why do we never mention them at these conferences?

This is the group, due to their physical and mental conditions, whose problems will never be solved by a job. And, why doesn't someone touch on the truth: that this group, not provided with even a substandard budget, but merely a starvation budget, called $60 a month although it doesn't even purchase one-half of that value.

John Kenneth Gailbraith, a Harvard economist, recently wrote in a book entitled "The Affluent Society," a fact expressing what, with our economic system, many thoughtful people have been feeling is wrong. But will anything be done about it?

He points a finger to the contrast between private luxury and public squalor.

If it were not for the United Fund subsidizing the agencies which are trying to help the low-income elderly people of St. Louis, St. Louis County and St. Charles, quite a few would be living in the squalor which Professor Gailbraith refers to.

NEW DANGERS THREATEN

And now new dangers threaten the agencies which are helping to ameliorate the conditions of the helpless, old, and sick, and infirm, trying to live on squalor budgets.

In an effort to correct unsafe and unsanitary conditions, our State and local authorities find it necessary to impose costly alterations that certainly have caused the cost of care of elderly people to soar to where only homes which must ask for from $150 to several hundred dollars a month budget can expect to operate. To pay for this care on a $60 a month budget is something that is never discussed at old age conferences.

So, to let the public see for themselves, we invite the public to visit the Mary Ryder Homes at 4360–62 Olive Street and 4341 Westminster and see what is being done for the poor elderly women who must live on their low budgets.

We want the citizens of St. Louis to see how the Mary Ryder Homes try to keep elderly people safe, clean, well fed, and comfortably housed. We knew we cannot ask for an increase of rates. Our rates are $45, $48, $50, $52.50, $55, and $70 a month, because these old people do not have sufficient incomes.

Where can they go if we are forced to liquidate this service?

TRUTH NOT THEORIES

Let's have the truth, and not so many theories.

Let the people who, after all, support all of these institutions, be the judges.

And let those whose spiritual duty it is to help tell the truth—let them join this crusade and remove the fear that so many seem to have, a fear of truthful expression, in these confusing days.

Maybe the truth will finally set us free if we all meet facts squarely, and have some real action applied with truthfulness and not so many conferences and theories.

In the Name of Fair Play—Further Facts on the Official Snubs Accorded Admiral Rickover

---

EXTENSION OF REMARKS

OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1958

Mrs. SULLIVAN. Mr. Speaker, one of greatest experiences of my life was to have the opportunity in April 1956, to accompany other members of the House Committee on Merchant Marine and Fisheries on a 12-hour voyage aboard the nuclear submarine the *Nautilus*. I understand that I was the first woman to be aboard the revolutionary atomic submarine at sea, and that, of course, made the experience even more exciting.

But the thing which impressed me most during the 12-hour trip, 8 hours of which were spent below the surface of the ocean, was the dedication of Adm. H. G. Rickover and the sense of excitement he imparted to all of us over the potentialities of this amazing naval vessel. It was an experience similar, perhaps, to being taken on one's first airplane ride by one of the Wright brothers, or of sharing the triumph of a great pioneer in any field of human endeavor.

Admiral Rickover impressed all of us with his visions of the achievements of nuclear submarines in the future. Of course it was no surprise to us when the *Nautilus* was revealed to have made the first undersea transit of the Northwest Passage under the ice at the North Pole because we were ready to accept and believe the possibility of this submarine and others like it doing anything Admiral Rickover and his fellow pioneers in the field of nuclear propulsion set them to do.

However, I was deeply disappointed after this great feat had been accomplished by the *Nautilus* that Admiral Rickover was not even invited to the White House ceremonies at which the announcement was made.

Now, through the concern of a good friend, who has written me about it, I have further facts bearing on the official snubs being accorded Admiral Rickover and the picture this letter presents is far from pretty.

Mr. Speaker, under unanimous consent I submit for inclusion in the Appendix of the CONGRESSIONAL RECORD the letter referred to from Mr. Charles P. Muldoon, a St. Louis friend, who is a practicing attorney in Washington and who is in close touch with the military services and a keen observer.

I think every Member of Congress who believes, as I do, that Admiral Rickover has been very shabbily treated considering the monumental contributions he has made to America's defense and to the cause of freedom, will be interested in Mr. Muldoon's letter to me, as follows:

WASHINGTON, D. C., *August 11, 1958.*

The Honorable LEONOR K. SULLIVAN,
1313 House Office Building,
Washington, D. C.

DEAR MRS. SULLIVAN: It certainly is regretted there was no room for the father of our nuclear Navy at the White House ceremonies last week celebrating the transpolar voyage of the *Nautilus*. For Rear Adm. H. G. Rickover—the fiery little man who fought for a start on the nuclear submarine program—not to be invited, I understand, has come to be the usual treatment he expects when something he had long dreamed, carefully planned, valiantly battled for, comes to fruition. To me this is a shameful situation which compels me writing about it to you.

If you will stop a moment to recall, it took newspaper prodding to get him a place at the ceremonies marking the completion of the world's first nuclear powerplant for peaceful uses exclusively. He was finally allowed a few minutes on the radio and a seat on the platform. None of the young scientists and engineers in his nuclear reactor group who worked day and night to complete the Shippingport Power Plant were invited, a great disappointment to their wives and children who had to live without them for years and who had been looking forward to witnessing their hour of triumph. There were, however, plenty of others present who were not and had never been connected with the program, who did nothing to contribute to its final achievement but who were there largely, it is suspected, for the publicity involved.

Now once again it is rumored the first atomic submarine with two reactors will be launched, the huge *Triton*. The idea of using two reactors was again Admiral Rickover's and I believe you know that he had to fight every inch of the way to get it accepted. The hour of this particular success is, as usual, again one of personal pain to him. He had been given assurance that at least one of his submarines would be launched by his wife. It is difficult to understand on what basis the many ladies who have been launching A-subs were chosen, except, of course, Mrs. Eisenhower and Mrs. Strauss. But this time Admiral Rickover thought his wife would do it. But no, the Navy rejected the proposal made by many prominent people involved with the building of the *Triton* including, it is said, the officialdom of General Dynamics itself and the honor went instead to the wife of an obscure admiral who at no time has been connected with and who has done nothing for nuclear propulsion.

I also hear that Groton, Conn., is busily preparing to entertain—the number given

is 100—personal friends of this admiral's wife, friends whom she has invited to the ceremony. It must be assumed she is paying off social debts of many years standing at the taxpayers expense. As you know, these launchings are very expensive and the cost involved is written off as necessary advertising which of course is questionable.

Nevertheless, the total disregard of the personal insults involved to Admiral Rickover as a result of all this backstage maneuvering to grab the spotlight undeniably creates the impression that the top personalities in the Navy are only interested in that service to further their own personal ends.

Consequently, in the name of fair play it would be my hope that something could be done to bring this situation to light.

With kindest personal regards, I am

Very truly yours,

CHARLES P. MULDOON.

The Wild Blue Yonder

EXTENSION OF REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Richmond News Leader of August 6, 1958, entitled "The Wild Blue Yonder." This editorial which reviews the published testimony from one of our congressional committees points out the reckless and irresponsible spending of the Department of Defense under this administration. This disclosure of the facts has aroused my constituents, some of whom are registering their complaints with me. I hope that the publication of this criticism will arouse the administration to corrective action.

THE WILD BLUE YONDER

Early next month, the United States Air Force will open its new Air Force Academy near Colorado Springs. More than a thousand cadets will move in, the vanguard of a student body that in time will climb to 2,500 men. They will find waiting for them just what the Air Force originally sought to build: the finest institution of its kind in the world. That was the USAF's mission 4 years ago; and though a great deal of work remains to be finished, today the Air Force can say, with a smile, mission accomplished.

And the American taxpayer can add, with a groan, at what fantastic cost.

The records are not complete on this fabulous oasis in the Rockies. It is doubtful if the Congress ever will be able to add up everything and draw a line at the bottom, for the Air Force, disdaining economy and laughing at fiscal controls, has spent money with the arrogant ease of a Roman emperor and juggled funds with the slick skill of a three-card artist at a county fair.

In the beginning, former Secretary Talbott represented to the House that a complete, turn-key job could be had for approximately $126 million. That, in itself, seemed a fairly incredible sum, but on the promise that the Academy could be made ready within that figure, the Congress authorized a beginning. That was in the 1954–55 fiscal year.

As nearly as anyone can figure out today, total authorizations and expenditures now amount to something in the neighborhood of $170 million, give or take $10 million. A House committee reported last month that if the Air Force carries out all the plans now on paper, the total cost may reach $300,900,000. Witnesses for the Air Force, though they have termed this particular figure preposterous, have been careful not to deny that such a figure may be reached. They say only that they have no present intention of going after it.

The site originally was to consist of 10,000 acres. It now consists of 17,800 acres. The State of Colorado, it was said, would provide the land through a donation of $1 million expected to be sufficient to cover the 10,000 acres at $100 an acre. Land in the original area actually came to nearly $300 an acre. Total real-estate costs to the Federal Government, exclusive of Colorado's contribution, amount to $4,256,000.

On close inspection, it was found that the chosen site was subject to severe conditions of soil erosion. Retaining walls amounting to $4 million have proved necessary. Water supplies present a serious problem; an expensive irrigation system is the answer.

Designers for the Air Force sought to achieve a sense of spaciousness. Thus the Academy buildings and staff facilities are dispersed widely over an area half the size of Washington, D. C. One result: The central steam plant is nearly a mile from the center of the academic area. Utilities alone have cost $24 million. Street lights, along 70 miles of roads, amount to $2 million more.

The cadets will spend most of their waking hours in the area shown above. This includes the academic building, physical education building, dining hall, and half a dozen other structures. Originally, these were to cost $28,468,000. The current figure is $44,721,000.

Consider two of these buildings only:

The academic building, once budgeted for $14,322,000, is now fixed at $20 million. In the course of the building's construction, 225 change orders were made; the structure grew from 850,000 square feet to 965,000 square feet in the process. For esthetic reasons, the ground floor is largely open; the third floor is completely open. Only 58 percent of the gross area is net usable space.

Not far away is the cadet dining hall. Because the students will be in relatively small classrooms and dormitory rooms most of the time, it was felt they would benefit spiritually from a feeling of wide open spaces at mealtimes. Officials of the Academy did not see how the daily schedule could be modified so that cadets and their teachers could eat on two shifts. Thus, the Air Force erected one of the most astonishing dining halls ever brought into being. It is 252 feet square. It will feed 3,000 persons at a sitting. The floor is terrazzo, the ceiling of enameled steel panels; the walls on three sides are of glass from floor to ceiling. Diners will have a fabulous vista of the Rockies. The entire space is open. In the committee's estimate, the use of spaced supports would have achieved a saving in steel and roofing of about $275,000. Had conventional acoustical tile been used on the ceiling, an additional $140,000 might have been saved.

It is a temptation to comment also on the administration building, which was to have cost $1,439,000, and has wound up at more than double that figure; part of the added cost came (this is in Colorado Springs) for air conditioning. An Air Force spokesman stated that it was felt that having windows opened at various angles would not be in keeping with the esthetic standards of design set for the Academy. Other Air Force spokesmen have denied this was a consideration.

In 1956–57, the Air Force obtained approval from Congress for 405 staff housing units. Only 46 of these have been built—44 professors' houses at $43,690 apiece, and 2 rectories at $56,000 each. The authorization included a superintendent's house at $90,000, but this will not be constructed at the present time since the superintendent is not satisfied that a suitable residence can be constructed for $90,000.

This feeling that nothing could be too good for the superintendent characterized the project as a whole. Although the Air Force's original directive asserted that "insofar as possible, standard cataloged items will be provided," this proved not to be possible very far. The only standard catalog item the committee could find in the cadet dormitory was a $5 wastebasket. Everything else was custom made, including a medicine cabinet for each cadet at $71.76. The successful bidder on the medicine cabinet contract, in a desperate concern for his fellow taxpayers, suggested a less expensive alternative—a seamless, more sanitary, easier to keep clean cabinet, which he could manufacture "exactly to your overall measurements" for $51.70 each. "If you are interested in saving thousands of dollars and getting a superior product," wrote the contractor, "we will be pleased to submit a sample before an award is made." The Air Force was not interested in saving thousands of dollars. The contractor's offer was received on April 30, 1957, and rejected on the morning of the following day, May 1, 1957.

"Did you go into that thoroughly?" asked Congressman LAIRD, of Wisconsin.

"We consider we went into it thoroughly," replied a Colonel Jones of the Air Force. "We work pretty fast out there."

"Perhaps too fast," said Mr. Laird.

There will be a great thundering performance of the Air Force anthem when the Academy opens next month: Off we go, the cadets will sing, into the wild blue yonder. The West Point of the Air will be soaring high. And if a small, still voice from Virginia may be excused, permit us to add the observation that so is the national debt soaring high. And reading the RECORD, we begin to understand why.

People With Names Ending in "ski" Have Been in This Country as Long as Smiths, Jeffersons, Randolphs

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. SCOTT of Pennsylvania. Mr. Speaker, the following article from the Polish Star of July 10, 1958, recalls an interesting bit of Americana. Americans have been of many racial extractions from our beginnings. This is and has been our great strength. The article follows:

PEOPLE WITH NAMES ENDING IN "SKI" HAVE BEEN IN THIS COUNTRY AS LONG AS SMITHS, JEFFERSONS, RANDOLPHS

(By Bill Frank)

Most of us think that anyone with a name ending in "ski" is of a generation of newcomers, fresh from the old country.

And a lot of people also assume that anyone with a name that has a combination of "z" and "r" or "c" is of parentage that came to this country in the steerage of huge ocean liners filled with immigrants from mid-Europe.

But it's high time we came to realize that the people with names ending in "ski" have been in this country as long as the Smiths

and the Jeffersons, the Randolphs and the others with more pronounceable names.

TOO LITTLE ABOUT POLES

A guess a great deal of what we know about peoples in American history depends upon how well certain historians have popularized certain personalities.

Up until now, there's been too little published about the contributions of the Poles, for example.

The average American, I'm sure, has an idea that the Poles in our country came here along about the 1880's or soon after that, and the immigration from Poland was stepped up in the early part of the 20th century.

Also, the same average American thinks that the only Poles who ever made any contribution to this country before the last decade of the 19th century were Kosciuszko and Pulaski.

I certainly don't want to depreciate the valiant services these two noted Poles gave to these United States—particularly Pulaski, who died for the young democracy.

But now along comes Vincent J. Kowalewski of the Polish-American Congress in Delaware, and sends me a brochure that has opened my eyes.

ANOTHER JOHN SMITH STORY

Every American school kid knows that an Indian girl, Pocahontas, saved the life of the fabulous Capt. John Smith but—

How many know that two Poles, Zbigniew Stefanski and Jan Bogdan, also saved the life of the intrepid captain when he was about to be ambushed by Indians?

We read a great deal about the first families of Virginia, etc., but not enough about those first Poles who helped to save Jamestown from total failure.

THEY WERE SKILLED CRAFTSMEN

Let's go back a little in American history and pause at the year 1607.

That was the year when Jamestown was founded by the Virginia Company of London.

The newcomers were faced with all kinds of problems in the new world. They especially needed skilled craftsmen, whose services were essential to the survival of the colony.

Where to get them?

The Englishmen remembered that for years Poland had been England's principal source of pitch, tar, rosin, flax, masts, wainscots, and glass.

ENGLAND TURNS TO POLAND

There England could enlist the craftsmen for the great adventure in the new world.

And so on October 1, 1608—350 years ago—the ship *Mary and Margaret* arrived in Jamestown with a company of Poles. The roster contained such names as Michael Nowicki, Stanislaw Sadowski, Jan Mata—all journeymen in the crafts that were badly needed. And they were soldiers, too; good fighters.

Capt. John Smith knew Jan Bogdan personally, having met him in Poland in 1603, and it was with great joy that men of his type were welcomed to Jamestown.

Within 3 weeks after the Poles arrived in Jamestown, things began to hum. A glass furnace was roaring—the first factory in America.

And within 2 months, the ship *Mary and Margaret* was on its way to England with American-made materials—the first export of manufactured goods—soap ashes, tar, pitch, green glass bottles, and vases.

THE BIG STRIKE

Later, other Poles arrived. They were dreamers, too, and adventurers, in a way, but they also had a very practical outlook on life. The romantic stories of early America just never gave them a break.

Then came the big strike for civil liberties.

Fed up with the finagling in the colony of Jamestown, Capt. John Smith decided to return to England. The Poles refused to stay behind. They'd have none of the shenanigans.

They went to London but not for long. The Virginia Company implored them to return to Jamestown and help the colonists attain industrial self-sufficiency. Reluctantly, the Poles agreed but on one major condition: There were to be more rights for the people.

DENIED VOTE

Everything went along all right until they were denied the right to vote for members of the legislative assembly.

And the reason?

A flimsy and vicious one.

It was said that the Poles couldn't vote because they were still in debt for their passage from England to America.

All right—so the Poles just went on strike. They stopped working in the glass factory.

Gov. George Yardley tried to reason with the Poles—but he probably had never bumped up against the dogged stubbornness of Poles sticking up for what they believe are their rights. Some of the most infamous dictators of Europe have had apples out of that barrel, even in our day.

THE STRIKE ENDS

The whole mess became a first-class stench that seeped over to England, and eventually it was decided that concessions be made to the Polanders, and the strike was ended.

The first strike in America—not for economic gains, but for civil liberty.

All this and a lot more about the contributions of Polish craftsmen and workers are to be found in the dusty annals of American history, hidden far too long.

It is most refreshing to learn that Poles all over the United States are going to observe the 350th anniversary of the arrival of the first Polish immigrants to these shores.

It should knock the theory that Poles are "furriners" into a cocked hat.

"The Things That Should Be Done"

EXTENSION OF REMARKS

OF

HON. WILL E. NEAL

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1958

Mr. NEAL. Mr. Speaker, one of the most frequent quotes from Abraham Lincoln, in recent years, that attempts to justify Government projects, is to the effect that Government is justified in doing for the people the things that should be done, which they are unable to do, or to do as well, for themselves.

It seems to me that many times we are so eager to project Government into the realm of our economic and commercial fields, for the sake of creating jobs, making so-called improvements, developing projects, and so forth, that we fail to use proper care to determine whether or not the object is really worth the cost. In other words, we are overlooking that phrase, "that should be done."

I can go along with the quote that is ascribed to Lincoln if we take it in its entirety. Those things that should be done can be done. They can be done without harming the national economy. If the object brings to the Nation a benefit that is greater than the cost, then the Nation is better off by having it accomplished. In this case, also, there can be no inflationary or other harmful results. The economy is made stronger by the accomplishment of any project that will yield benefits greater than the cost of the project. This reasoning does not apply, however, to the many projects that cost in excess, and many far in excess, of any possible benefit that can be realized.

I say this is a consideration in recent year. Traditionally the Government did not engage in economic or commercial activities. These fields were left entirely to the people. The Government provided and enforced laws to prevent wrongs, not to provide rights. People were free to do and to achieve for themselves. The law or the Government merely prevented abuses. This system gave to the Federal Government only such powers as were contained in the Constitution, and reserved to the States and to the people all other rights or powers. In other words, the Federal Government could do only those things the people authorized it to do. Conversely, in the Old World, where there were socialistic republics instead of our constitutional republic, the matter was just the reverse. All rights were vested in the Government. The people could do only those things that the Government permitted them to do. This difference is the difference in being free or not being free; the difference between citizen and subject. Which system is best is hardly necessary to mention to any American. History has made the answer most abundantly clear. Current events indicate which system is looked to to carry the burdens of the world. Just simply ask or observe who it is that is expected to pay the cost, who puts up the money for our international undertakings. Our system, which is maligned and abused by many so-called peoples democracies, is always there when it comes to paying the cost of our international or cooperative projects among the nations.

I am not indicating that all of this is wrong. I believe there are many things Government can and should do "to promote the general welfare." There is however a right way to do it. There are also many wrong ways to do it. In our eagerness, not our urgency, we are inclined to look so high and so straight at the object that we fail to see many of the curves and pitfalls that exist between us and the object. We run recklessly ahead, our eyes so completely upward, that we can easily stumble and fall.

Many of the projects that we have tried, and many that are now being offered, under the guise of "progress and development," fail to square with that clause "that should be done." Many are not sound, not worthwhile. Their cost far exceeds any possible benefit that can be realized. Some of them, perhaps, the people themselves can do; others the States or local jurisdictions can well handle, even to a better efficiency than the Federal Government. This is true of almost all local projects.

Then I would say a word about our major Federal projects. When we enter a field to develop it; we should have in mind that our purposes are to establish

the project; get it to a point where it will be self-supporting, then release it to independent enterprise. Our nuclear power development is a good case in point. I do not believe we would have this great new power today if the Government had not in large measure, along with private enterprise, carried the major share of the cost of its development. This new power which holds so much promise for the future, even now is a major deterrent to war and indirectly at least is a great factor in our national security. Surely it indicates that Government moving to do for the people those things, which should be done, and which they are unable to do, or to do well, for themselves, is justified. The new era which lies ahead of us due to the development in this field is most promising indeed. It is still a hazardous new area. Again we are pioneers. It is exciting to contemplate. Now Government and private enterprise are partners, working together, as the development stages are being continued.

Once the development stages are ended, however; and the project has proven itself successful and useful, then it is time for Government to yield to independent enterprise. Let the field back to the people. Let independent enterprise take over, and let Government continue to follow its proper course. A good case in point where the Government should now accept the fact that the development stages are over would be our great Tennessee Valley Authority. Surely the years and the hundreds of millions that have been spent in this development of a power project are sufficient to prove it and establish it as a going concern. The growth and development from this venture has been eminently worth while. The power production facilities have been accomplished. The market for the power has also been developed. If the power is sold, and if the facility is economically operated, surely TVA as an independent producer could now stand on its own feet, pay its normal and fair share of taxes to support the Government along with others in its field and be a going independent, American enterprise. This then would be a shining example of what I am talking about. Here would be a case where the Government stepped in and did something, that the people appear to have been unable to do for themselves; something that should be done; something that is worthwhile, now proven to be self-sustaining and a real asset to our economy; and a something once developed, largely at Government expense, now can and will live, function, meet its normal requirements, benefit the citizens, and pay its proportionate share of the cost of Government.

There are those who will disagree. Herein lies the danger of welfare projects. Those whose jobs are now apparently secure; those whose power rates are exceptionally low due to Government subsidy, and others who have a selfish interest will all decry against it. But those who are paying the taxes for the subsidies; those whose taxes might tend to be lower if TVA were paying taxes along with other utility companies; and those in free enterprise that are looking for employment; all of these, will perhaps see the fundamental soundness of this suggestion.

These two enterprises are merely two of the hundreds that are now in being; and which are already proposed. There are thousands yet to come. Surely it is time that we fixed a policy of operation. Let the Government give aid in the development of the projects that give reasonable assurance that they are worth while. Once the project is developed let the Government withdraw and let the project then, having been born and nurtured to maturity, take its place in our free economy along with other enterprises. This seems to me to make sense. This then would get right now, a large number of so-called Government corporations, that are in full operation, with a record of many years, off the budgetary requirements of the Government; off the backs of the taxpayers; upright among other American corporations, doing their worthwhile services and paying their just taxes in support of the Government.

Let it ever be kept in mind: The people support the Government. The Government does not, cannot, support the people.

A Jam in the Courts

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. SCHWENGEL. Mr. Speaker, before Congress adjourns this session there should be favorable action on the omnibus judgeship bill. In Iowa, as in many other States, we have a logjam of cases crying for decisions. There just are not enough judges to hear all of these cases, and delay piles up on top of delay. Another Federal judgeship for Iowa would certainly go a long way toward easing and eventually eliminating the problem.

An editorial in the Des Moines, Iowa, Sunday Register of August 10 states the problem as it relates to Iowa and I know that this same situation applies to other States as well.

Under leave to extend my remarks, I ask that the editorial be printed in the Appendix of the RECORD.

The editorial follows:

A JAM IN THE COURTS

The congestion in Federal courts has been a problem for a long time.

In 1955, the Judicial Conference of the United States recommended that Congress pass an omnibus bill creating 21 new judgeships. Not a single one of those judgeships has been provided. The congestion problem in the meantime has grown more acute. Now the need is for at least 50 additional Federal judges.

That need has been established by a scientific method. It is based on statistical studies, district by district, of the handling of all types of criminal and civil cases in Federal courts.

The Judicial Conference, which makes the final recommendations, includes the Chief Justice of the Supreme Court, the chief judges of the circuit courts, and a judge representing the district courts of each circuit. The Judicial Conference's goal is to get the courts on a basis where an ordinary case can be disposed of within 6 months from the time of filing to trial. But in only 7 of the 94 districts has this goal been reached. The median time for disposing of cases in 1957 was 14.2 months. It took around 47 months to dispose of private civil cases in 1 New York district.

The omnibus judgeship bill now before Congress is one that very definitely should not be forgotten in rush for adjournment.

The obstacles are petty, unworthy ones. They include efforts of Congressmen to get more judges for their own States, regardless of need. Some Congressmen don't want the appointments made by a Republican President and would like to delay action on the bill until after the next election. The major explanation for Congress' failure to act, however, may be that the public hasn't become sufficiently aroused to demand action.

Iowans have a special interest in this bill because it provides for creating an additional judge for this State. The Judicial Conference first recommended a roving judge for Iowa—in addition to the two present judges—in 1953 and has renewed that recommendation at every session of Congress since then.

Iowa has a larger population than any of the other 33 two-judge districts in the country. It has a larger population than 6 States which have 3 judges each and 2 other States which have 4 and 5 judges. The Iowa judges also have to travel extensively. There are six places for holding court in both the northern and southern districts.

Despite the efforts of the two judges—Judge Henry N. Graven for the northern district and Judge Edwin R. Hicklin for the southern district—the congestion problem grows more acute. Both are holding court this August, the traditional vacation period for judges.

Criminal cases get first priority. There is little delay in handling them. The personal injury cases get next priority. The business cases—involving taxes and patents and other complicated matters that require long hearings—are at the bottom of the heap. It becomes a matter of years—not 6 months—before some of them can be disposed of.

The Iowa situation is no different than in other areas of the country where the Judicial Conference has recommended that additional judgeships be created. The congestion is far worse in some districts. It can be remedied by creating more judgeships.

Statement of Walter H. Sammis Submitted to the House Committee on Public Works, 85th Congress, 2d Session, July 29, 1958

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks I would like to include a statement made by Mr. Walter H. Sammis, who is president of the Ohio Edison Co.

In my opinion, Mr. Sammis in clear and concise words has expressed the

views of we who believe in free enterprise and in the liberties for which many of us fought. Mr. Sammis made an excellent statement before the Public Woks Committee and I highly recommend the reading of his statement to all of my colleagues in Congress.

His statement follows:

STATEMENT OF WALTER H. SAMMIS SUBMITTED TO THE HOUSE COMMITTEE ON PUBLIC WORKS, 85TH CONGRESS, 2D SESSION, JULY 29, 1958

My name is Walter H. Sammis. I am president of Ohio Edison Co., an electric utility company with general offices in Akron, Ohio, and president of its subsidiary, Pennsylvania Power Co., with headquarters in New Castle, Pa. I am a past president of the Edison Electric Institute, have served on the board of the National Association of Electric Companies and have been active in industry affairs for more than 30 years. I have been asked by representatives of our industry to submit a statement to your committee.

I appreciate the opportunity of being permitted to express an opinion in opposition to S. 1869 as passed by the Senate last August 9, which would authorize the Tennessee Valley Authority (TVA) to issue revenue bonds for the purpose of financing additions to its power system. I had the privilege of appearing in opposition to the bill on June 6, 1957, when it was being considered by the Flood Control Rivers and Harbors Subcommittee of the Senate Committee on Public Works. I also had the privilege of appearing before the Flood Control Subcommittee of your committee in opposition to bills containing similar proposals introduced by Representatives CLIFFORD DAVIS (H. R. 4266) and ROBERT E. JONES (H. R. 3236).

I am aware of the fact that since I testified in opposition to S. 1869 it has been amended in certain respects. However, so far as our industry is concerned such amendments do not remove our objections to this bill, and we are just as much opposed to the issuance by TVA of revenue bonds as we were when I testified in May 1957, before your Flood Control Subcommittee.

I realize that the time allowed for these hearings is limited, and that there are other electric utility witnesses who desire to express opposition to S. 1869. Also, inasmuch as my testimony in opposition to TVA's being authorized to issue revenue bonds is a matter of record, I do not wish to unnecessarily consume the time of this committee. Nevertheless, I wish to reaffirm the testimony that I have previously given and dispel any thoughts, if there are any, that the amendments which were made to S. 1869 prior to its passage by the Senate removed our industry's objections to the bill.

The issuance of revenue bonds by TVA as proposed in S. 1869 could complicate and impede, if not permanently bar, the correction of the basic inequities of TVA's existing tax and interest benefits, which are so involved in the economics of TVA's electric operations, and which result in unjust discrimination between electric customers using TVA power and electric customers of investor-owned companies.

Further, the declared intent of the bill as expressed on page 11, line 25, and page 12, lines 1 through 9, which I respectfully suggest deserves your close scrutiny, remains the same, namely, to aid TVA in "discharging its responsibility" to assure an ample supply of electric power in the area in which it conducts its operations. As I stated in the earlier hearings, I know of no constitutional or statutory mandate which requires TVA to assume the responsibility of furnishing present and future power requirements in the area served by TVA. Nor do I believe that the Federal Government should assume such a responsibility as provided in S. 1869. Finally, I do not believe that the Federal Government should engage in any proprietary business, including the electric power business, where taxpaying businesses are willing and able to do the job.

United States Cultural Aid in Israel

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1958

Mr. CURTIS of Massachusetts. Mr. Speaker, in extension of my remarks, I include an editorial from the Jerusalem Post, Israel's only English language daily newspaper, recently reprinted here in the America-Israel Bulletin. It gives a favorable report of the results of one small part of our mutual security program. The editorial follows:

Since World War II the United States has progressed rapidly toward the realization that generosity is a good policy. From an originally isolationist stand, the United States has developed a system of aid to war-impoverished and backward countries, backed by the realization that too much wealth concentrated in a single country, or even a half continent, will in the end suffocate trade. If the wisdom of this policy needed to be demonstrated, this could not have been more effectively done than by the fact that Soviet Russia has attempted to copy the method, despite far more limited resources at her disposal.

The grants-in-aid are, of course, a one-sided affair. One state grants, and the other is aided, applying for funds with a greater or lesser degree of supervision, as circumstances may dictate, but usually through the normal channels of the government at the receiving end. As a result, the population benefits, but in many cases the individual scarcely recognizes, and certainly fails to appreciate, the source from which his most pressing financial troubles are lightened a little.

In this respect the information mediums guaranty system introduced in Israel by the United States, as in other countries, has been an exception. Nor is it entirely a one-way traffic. Israel is enabled to buy books and other publications from America with Israel currency, which is deposited in favor of the American Government, which pays the publishers in dollars. As an avid book-reading country that now favors English over any other foreign language, Israel piled up a total of IL-7.2m by 1956, or four-fifths of the entire moneys accruing through the I. M. G. funds in all the countries in which the system is operated. It was then decided that the Israel currency should be applied to cultural and scientific progress in Israel, on the overall principle that the projects selected should tend to strengthen Israel-American ties.

Mr. Bernard Katzen, who was then appointed to select the projects that would benefit, has now been here again to see this work being carried out and leaves Israel today with a sense of gratification at what he has witnessed. Nothing would have been easier than to present an alternative list; there are few people who could be found to agree on priorities in matters of culture and teaching.

THE LARGEST GRANT

The largest single grant, of a million-and-a-half pounds, is going to the building of an archaeological museum to house Israel's treasures, which have been almost totally inaccessible to students for lack of exhibition space—a necessary luxury that Israel would not have been able to afford for many years to come. With this go such practical matters as the IL-200,000 grant for the furthering of research in desalting water, in which considerable progress has been made here, and where even a modest success could be of untold benefit to America itself as well as to Israel.

Many of the 44 grants are directly concerned with presenting America to Israel, including the establishment of 5 chairs in American studies at the 5 institutions of higher learning of Israel, and care has been taken that the facilities will reach all sections of the population of Israel including, of course, the minorities.

Many of the projects will have a permanent character, and taken together they may certainly expect to impress themselves much more clearly on the public consciousness than the much greater grants-in-aid to the Government itself.

It is pleasant to consider that their origin lies in the Israelis' own urge to buy and read books and thereby unwittingly contribute to a large and generous scheme.

Danger of Flight From the Dollar

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1958

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing in the Wall Street Journal of August 13, entitled "Flight From the Dollar":

FLIGHT FROM THE DOLLAR

One of the more puzzling things around Wall Street these days has been the sharp upward march of the stock market in the face of lower earnings, reduced and sometimes omitted dividends. And as brokers, economists, and other commentators seek an explanation, we hear more and more often a very ominous phrase.

A few examples will illustrate many. The E. F. Hutton Co. thinks the rising stock market and declining bond market underscore the flight from the dollar. Reynolds & Co. comments that last week "the flight from the dollar, which has been gathering momentum in recent weeks, turned into a stampede."

The same note is struck across the country. Wayne Hummer & Co. of Chicago observes that the "answer can be that investors have more confidence in the future value of stocks than they have in the dollar's stability." And the market comment of Daniel Reeves & Co. of Beverly Hills is both pointed and poignant: "It is sad but true that few people any longer believe that our currency can ever be worth more in terms of buying power and most likely will ultimately be worth considerably less."

Now admittedly many market comments are not necessarily compendiums of wisdom. Still, brokerage houses are by the nature of their business close to people who are concerned about how to manage their savings for an uncertain future. And when they note, with so much unanimity, such a strong feeling of fear about the dollar then it is surely time to pay attention.

In this instance, too, the feeling is confirmed by the figures on what people are doing. The bond market, including the market for obligations of the United States Government, has been depressed. Plainly the generality of people do not want to

lend money to their Government. They know the Government will pay them back dollar for dollar with interest. What they fear is that they will be paid back with eroded dollars.

Moreover, the economic figures from Washington suggest that the people's fears are not unfounded.

The already huge Government debt is again being lifted; the deficit this year alone will be $12 billion or more. Getting the money for this deficit would be a terrible problem anytime. With a country already inflation-conscious, it is almost an insurmountable problem. The Treasury is very likely to find that it can borrow little, or nothing, from the public savings; it may well have to turn to the Federal Reserve to create all the necessary credit dollars in the banking system. And almost everyone knows nowadays that this is just a fancy way of printing money.

Finally—and this is the saddest part of all—the political facts of Washington suggest that nobody is going to do anything about it. * * * Congressmen talk sorrowfully about the terrible things that inflation does to people, particularly the little people, and casually build the budget bigger.

The basic problem of inflation is not new. But what is suggested by these scattered and independent market reports is that the people may be developing a new attitude toward it. There is a strong suggestion that people generally are beginning to abandon hope that those appointed to manage their Government will halt inflation, an implication that the country may come to accept the rotting of the dollar as being as inevitable as death and taxes.

And that is why we think Washington had better heed the ominous tone in these reports. For though this country has suffered from its past inflations, all those troubles will be as nothing to what we shall have to bear if the people, privately and quietly, once get it into their minds that they can no longer put any trust for the future in the dollars of the United States.

Newsweek Given Correct Information About TVA

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. EVINS. Mr. Speaker, recently I had occasion to write Mr. Raymond Moley, the distinguished columnist of Newsweek magazine, in regard to the facts about the TVA and the self-financing bill pending before the Congress. Under unanimous-consent agreement, I insert this letter in the Appendix of the RECORD. The letter follows:

JULY 28, 1958.

Mr. RAYMOND MOLEY,
New York, N. Y.

DEAR MR. MOLEY: Reference is made to your recent comments which appeared in Newsweek magazine—which I have read with interest—concerning the pending bill in the Congress relating to the self-financing bill for the Tennessee Valley Authority.

I know that you would not want to communicate any inaccuracies in your statements to your readers, and while you are correct in some of your facts there are other statements that are subject to an erroneous interpretation and accordingly I am taking the liberty of calling your attention to some of these observations.

1. In the first paragraph of your column you state that the TVA is required to pay a small amount of the investment periodically to the United States Treasury. You later make the correct statement that the TVA is required to repay the full investment in power over a 40-year period.

The facts are that the TVA has repaid into the United States Treasury a total of $240 million from power revenue. This amount is far in excess of the amount required by law to be repaid annually. In other words, the TVA is paying annually into the Treasury, from power revenue, more than the law requires. Most great multipurpose Federal developments, and other Federal projects provide for an amortization payout on a 50-year basis. The TVA act requires full repayment of power investment on a 40-year basis and, as indicated, TVA is far ahead of its schedule, and over a lesser period than for other developments.

2. You indicate lack of payment or failure of payment of interest on the Federal investment. The TVA is owned by the Government and it is not customary for the Government to pay interest to itself. However, the profits of the TVA have amounted to a 4-percent return on the investment; the amount of the payback above indicated, represents more than a 2-percent return on the Government's investment in TVA power facilities.

3. Your statement might give the impression under the Kerr bill that the TVA would be required to pay only a minimum of $10 million annually. The fact is, that under the Kerr self-financing bill, the TVA would be required to pay:

(a) Interest on the net Federal appropriated investment in power facilities equal to the average interest rate payable by the Treasury on its total marketable public obligations estimated at more than $30 million annually.

(b) The TVA would also be required each year to either make repayments of the Government's investment to the Treasury from the reserves or to reinvest its annual depreciation reserves in new power facilities—thus further increasing the equity of the Government in its investment—or both.

(c) The bill would require the TVA to pay a minimum of $10 million annually into the Treasury in such repayments of principal and over and above interest. In short, the Kerr bill provides that the Federal Government would receive both interest on its investment, repayment of the investment, and an increase in value of the Government's ownership of this property, all through income from power proceeds.

4. You state that the overall Federal investment in the TVA is $2 billion. The total overall Government investment is less than $2 billion. The investment in power facilities, with which you are concerned, is only $1.4 billion. From this amount please subtract the $240 million which has been returned to the Treasury. This will give a true and more accurate picture of the Federal investment in TVA's power operations.

5. The general impression of your statement is that the Kerr bill is an attempt to free the TVA from control by the Congress. Actually, the TVA makes annual reports to the Congress as do other Government agencies. The TVA submits to the Bureau of the Budget and the Congress its annual budget and is constantly before committees of Congress who oversee and supervise the agency, probably closer than other Government agencies are supervised by Congress.

The Kerr bill would continue these budgetary controls provided by the Government Corporation Control Act. In addition, the bill provides that except with the approval of the President during a period of defense emergency, the TVA cannot build new power facilities with bond proceeds until the TVA notifies the President and the Congress of its plans in this area. Following such notice, the Congress may pass a concurrent resolution disapproving any proposed new construction. This is indeed control by Congress.

6. Concerning limitations of power service area: The TVA has never exceeded its territorial limits and is in fact not serving all the territory within its present limits. The Kerr bill specifically defines and limits the area to the counties now served or which lie in or in part within the Tennessee Drainage Basin. The one exception being that the TVA may serve the United States or defense agencies and interconnect with other utility systems for exchange power arrangements.

Please do not overlook and fail to emphasize, Mr. Moley, that more than 50 percent of the power produced by the TVA, goes to defense agencies of the Government, such as the AEC and Army Rocket Research Centers and others. The power costs of the Government are thus enormously reduced.

The navigation and flood-control features of the TVA alone justify its operations. Lives and property have been saved and commerce promoted. In addition, the TVA is a great symbol of democracy in action and the hundreds of visitors, dignitaries, and heads of state from foreign countries interested in this great Government agency's success serves an added purpose of usefulness to the United States.

Let us give all the facts and let us press the positive and affirmative advantages of the TVA. I believe that in view of the above provisions you should agree that the interest of the Federal Government and of the taxpayers is adequately protected.

I hope that you will reconsider your criticisms or give your readers the benefit of the above facts so that they may make a judgment based on the complete facts.

With kindest regards and best wishes, I am.

Very sincerely yours,

JOE L. EVINS.

The Anatomy of Discontent

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. Walter Lippmann, which appeared in the Washington Post and Times Herald on August 12, 1958:

THE ANATOMY OF DISCONTENT
(By Walter Lippmann)

Last week, speaking as a man who is deeply concerned, Senator FULBRIGHT brought into the open the dismay and anxiety about our foreign policy which are so widespread in this country today. There is, to be sure, no massive popular discontent such as there was, for example, when the Korean war had degenerated into a bloody stalemate. But among the leading minds and spirits of the country there exists a sense of foreboding that much of the postwar structure of our policy is undermined and that we are in grave danger of losing control over our affairs.

It might not take more than one more spectacular entanglement and embarrassment, like the present one in Lebanon and Jordan, to provoke so serious a public reaction that it might be impossible to correct our errors and agree upon a coherent and rational policy. We must, therefore, take a close look at the discontent with our policy in the hope that it will throw light on the problem.

Among the discontented critics of the Eisenhower-Dulles conduct of foreign policy, there are two principal schools of thought. The one holds that we could and should be powerful enough to contain, and some would say to reverse, the revolutionary movements which have their centers in Moscow, Peiping, and Cairo. The complaint of these critics against the administration is that it has starved our military establishment, and that it lacks the courage and resolution to intervene forcibly when, as for example in Iraq, a former ally of the West is submerged by the revolutionary tide.

The other school holds that our foreign policy in the postwar era, though often constructive as in the Marshall plan and NATO, has been in many ways vitiated by a very unsound estimate of the power available to the United States and of the forces at work in the contemporary world. Those of us who take this view believe that, while the United States must work to keep even in the race of armaments, it can never be powerful enough to contain, or to push back, by military force the enormous revolutionary movement of the postwar era. We believe, moreover, that the attempt to contain the revolutions by military force has led us to make a series of commitments which cannot be fulfilled without inordinate and incalculable risk.

Our commitments about the offshore islands, Quemoy and Matsu, on the China coast is, so we have been told, deliberately uncertain. But that does not improve it very much. An American defense of these islands is a strategic absurity, and it does not enhance our prestige in the world to say that we may, though we may not, go to war about these islands. Another such commitment was the promise of President Chamoun of Lebanon that we would land Marines if he asked for them. As for the recent London meeting of the remaining Baghdad Pact countries, we are in the sorry position of not knowing what Mr. Dulles has promised to do in a part of the world which is strategically at the end of our reach.

There are, in brief, those who think that our troubles can be cured if we arm more heavily and intervene more readily. And there are those who think that the United States has become overextended, that it has promised to do more things than it can do, and that the way out of our difficulties is to reduce our military commitments in the Far East, and in the Middle East, and to seek accommodations with the revolutionary movements.

This is, like deciding to diet or to live not on credit but on income, a painful thing to do. It is our equivalent in fact of what Britain and France have been going through in accommodating themsleves to the fact that they are no longer the great powers in the world that they were in the 19th century. We are no longer so great a power in the world as we seemed to be in 1945 when Russia had been devastated by the war, China was in the throes of a civil war, the Middle East had not yet risen in revolt, whereas we were intact, wealthy, and invincible.

The period of American supremacy was, as we can now see, a passing phase in human affairs, and our failure to learn to live with this great fact of life, the persistence of the illusion among us of our own supremacy, is almost certainly the root of our miscalculations in foreign policy.

It is the reason why Mr. Dulles has gone around the world promising every nation that would accept the promise an American military guaranty. In this, Mr. Dulles has shown himself to be not a prudent and calculating diplomat but a gambler who is more lavish than any other Secretary of State has ever dreamed of being with promissory notes engaging the blood, the treasure, and the honor of this country. The President who endorses all these promissory notes, is the man who, when they threaten to be cashed in, shrinks from the consequences and pulls back the country and Mr. Dulles from the brink.

It all adds up to the kind of policy which Theodore Roosevelt used to denounce as forcible-feeble. It is forcible in its promises and it is feeble in its deeds. That will not for long satisfy a Nation which respects itself and means to be respected abroad.

The Serious Condition Existing in the Field of Nursing

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. BARRETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include a letter I just received from Dr. Pascal F. Lucchesi, executive vice president and medical director of the Albert Einstein Medical Center, Philadelphia, Pa., in which he requests that I bring to the attention of the Congress the serious condition existing today in the field of nursing.

Doctor Lucchesi is one of the most outstanding men in the field of medicine today and has made a careful study of this nursing problem.

I sincerely believe his proposal to provide Federal nursing scholarships is excellent and would do much to alleviate this critical condition.

His letter follows:

ALBERT EINSTEIN MEDICAL CENTER,
Philadelphia, Pa., August 8, 1958.

Representative WILLIAM A. BARRETT,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE BARRETT: Since the southern division of the Albert Einstein Medical Center and other hospitals are located in your congressional district, I am taking the liberty of bringing to your attention the nursing shortage problem.

This shortage reaches to virtually all hospitals in the United States. A few months ago, the Women's Bureau of the United States Department of Labor disclosed that the Nation was short 70,000 trained nurses. If anything, the situation has worsened since then. It is acute in Philadelphia, but this is only one of many cities with a critical nursing shortage.

As you know, many hospitals including the Albert Einstein Medical Center, maintain schools to train nursing students. The schools operate at a financial loss to the institution. At Einstein Center, for instance, the charge to a student for the full 3-year course—including tuition, food, private room, uniforms, and books—is $455. A survey made last year by the center disclosed that it costs us $4,290 per student nurse for the 3 years, including both direct and indirect costs. As you can see, the cost is almost 10 times the charge to the student. We also provide a number of free scholarships.

Thus, you can see that hospitals such as ours are doing their best to supply nurses for the ill persons of the Nation.

However, because of the steadily rising costs in all operations, hospitals have reached the point where we are financially unable to increase our burden in this respect.

It would seem that the time has come for Congress to study this problem and to provide some help. There is more than a moral justification for Congress to step in at this point.

As a matter of fact, the armed services and Veterans' Administration do not train any nurses, but draw heavily on the trainees of the civilian hospitals.

As institutions operated by patriotic Americans, our civilian hospitals are proud to have our trainees enter military service and the Veterans' Administration.

However, I do not believe the shortage and financial problem, as I have outlined it above, is fully recognized. I think if Congress is made aware, it will take steps to provide nursing scholarships, at least to the extent that our graduates go into Government nursing service. This would help to bring more girls into nursing and, thus, to reduce the appalling shortage faced by the Nation.

I am writing as an individual, speaking only for the Albert Einstein Medical Center. But it is a fact that national organizations in the fields of medicine, hospital administration and nursing have all taken cognizance of the shortage and the need.

Anything you can do to bring the facts to the attention of the entire Congress would be most helpful at this time.

Respectfully yours,
PASCAL F. LUCCHESI, M. D.,
Executive Vice President, and Medical Director.

Outlook Shifts for Both Parties

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. WIGGLESWORTH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article by Gould Lincoln appearing in the Washington Star of August 7, entitled "Outlook Shifts for Both Parties."

OUTLOOK SHIFTS FOR BOTH PARTIES

Political leaders and strategists of both Democratic and Republican Parties are taking a new look at the situation and the issues. Election day, November 4, is still almost 3 months way and much can happen in that period—just as it has since the beginning of the year.

Earlier the Democrats were riding high, wide, and handsome. The big issues which they counted on to make big gains in both Houses of Congress and to elect Democratic governors of States have somewhat faded. First there was an uproar over the Russian sputniks. The Democrats claimed the Republican administration had permitted the United States to fall far behind the Soviet Government in the matter of scientific discovery and accomplishment; that this coun-

try was in imminent danger of becoming a second rate power militarily.

But now we have successfully launched four earth satellites of our own. In addition, and most important from a national defense point of view, we have just had remarkable success with an intercontinental missile, designed to hurl a tremendously destructive warhead more than 5,000 miles.

RECESSION MEASURES

Second, according to Democratic prophets earlier, this country was on its way to a depression that would rival that of the early 1930's. All kinds of panaceas, costing billions of dollars, were proposed in Congress.

President Eisenhower and his advisers, however, refused to be stampeded into these huge spending programs. The administration went to work on a saner course. It declined to recommend a reduction in taxes which some of the Democratic economists demanded, too. The economy has taken a distinct turn for the better. And most unexpectedly from the Democratic standpoint, American farm income has gone up and up, until in the first half of this year the net income of agriculture has increased about $3 billion. The Democrats may have to make a new estimate of their party's pulling power in the agricultural States of the Midwest, the East, and South.

Also, earlier in the year, and, indeed, more recently, President Eisenhower's foreign policy was under heavy fire from the Democrats.

They charged that the President was exerting no leadership; that things were at sixes and sevens, and that we had lost both prestige and all our friends, if we had ever had any, abroad. The sudden further development of the Middle East crisis, however, brought prompt and immediate action by President Eisenhower, who ordered the marines into Lebanon. Even after he had taken this necessary step, he was harshly criticized for imprudence which might hurl the world into a third world war. But that, too, has now changed. The Communist nations have taken no steps toward armed conflict, although Khrushchev ordered military maneuvers on the borders of Iran and Turkey, in a further effort to frighten the nations of Europe and the United States. It did not work. The British sent their troops into Jordan.

U. N. SITUATION CHANGES

Now there is strong likelihood of a special meeting of the United Nations General Assembly on the Middle East issue, possibly attended by heads of governments. Should such a meeting be attended by a measure of success in settling the Middle East problem, and the world can breathe easier, much of the credit will go to President Eisenhower. And another Democratic issue for the closing campaign will have faded into insignificance.

Since this country became immersed in the Middle East situation, the Sherman Adams-Bernard Goldfine incident, rated by the Democrats as a first-class issue against the Eisenhower administration and the GOP, has assumed more correct proportions. The House investigating committee has tried desperately to tar Mr. Adams, the President's first assistant at the White House. But it has failed to show any corrupt action, or attempted action by Mr. Adams.

Mr. Goldfine, the Boston industrialist and the giver of many presents to many men, Democrats as well as Republicans, is still under strong attack. However, Mr. Goldfine has testified that he contributed even more liberally to Democratic campaign funds than to Republican.

So far, the Democratic attempt to prove there is a mess in the Eisenhower administration has not progressed. Undoubtedly the House committee will keep at it. Up to date, what it has disclosed is a pale picture as compared to the mess in Washington during the last Democratic administration, when even the head man in the Internal Revenue Bureau was found to have transgressed.

The Republicans, who were down in the dumps—far down—a few months ago have plucked up courage. Democrats are wondering if everything is as rosy as they had believed. Early in 1948 and far into the summer the Democrats seemed in for a terrific defeat at the polls. Things changed in the last few weeks of that campaign. It could happen again.

Public Power Magazine Calls Private Utility Lobbyists Arrogant, Cynical, and Hypocritical

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. EVINS. Mr. Speaker, in the past weeks we have witnessed one of the most massive lobbying attempts of recent years in the effort of the private monopoly utilities to prevent the consideration by this body of the TVA self-financing bill. In this connection and under unanimous consent, I call the attention of my colleagues to the editorial in the August issue of Public Power which cogently and pointedly comments on the arrogance and hypocrisy of this attempt to cripple one of our great agencies and even to prevent debate on a measure which is essential to assure that 5 million of our people will be able to share the economic progress of the entire Nation. The editorial follows:

NEW WAR ON PUBLIC POWER

Reports of the recent Edison Electric Institute convention indicate that the private power companies have declared all-out war on all segments of public power. Speaker after speaker harangued against public power, and one wonders when this so-called statistical and fact-finding organization found time to devote to its avowed loftier purposes.

It took little time after the EEI convention for the power companies to implement their decision to wage allout war against public power. The recent hearings before the House Public Works Committee on the TVA revenue bond financing bill were one of the most arrogant, cynical and hypocritical displays of massive economic (and hence political) power that has been witnessed in Washington for many years. These are strong words, but they are backed up by the facts.

Massive economic power? This is proven by the unparalleled aggregation of utility executives and their allies who jammed the hearing room for this spectacle. A number of veteran observers said that never before in their memory had so many high-ranking power company officials appeared at a single congressional hearing. No less than 25 power company officials and their cohorts requested time to testify. These included presidents of some of the largest power companies in America. It is perhaps significant, too, that in the audience were Edgar H. Dixon, partner in the Dixon-Yates debacle; Edwin Vennard, managing director of the Edison Electric Institute; and top staff members of the National Association of Electric Companies and the electric companies' public information program, the lobbying and propaganda arms, respectively, of the private power industry.

Arrogant? How else could you describe a coal company official's message to a United States Senator that he should not testify in favor of the TVA self-financing bill?

Cynical? This is a mild word to use for the coal industry's opposition to the TVA bill. The coal industry's position is perhaps a classic example of biting the hand that feeds you. TVA is today the biggest single coal customer in the country. Moreover, its leadership in promoting electric house heating has opened up vast new markets for coal through increased use of electricity. Yet, the coal industry argues against a bill that will assure the continued successful operation of its largest customer.

Perhaps the coal industry's position on this bill can be explained more logically by two other factors: First, the fact that the private power companies are the coal industry's biggest class of customers (and power company suppliers have been known in the past to take up the cudgels for their clients); and, second, the fact that TVA's insistence on buying coal through competitive bidding has brought about a yardstick in utility coal-buying practices—a yardstick that has proven uncomfortable to the coal companies but beneficial to those electric utilities which truly want to keep their costs as low as possible.

Hypocritical? For years the private power companies have been saying that TVA should stand on its own feet. But now that TVA has proposed a method by which it will go out in the private bond market for its capital and finance its program through bonds that will not be exempt from Federal taxes, the private power companies appear en masse to attempt to block such a program.

Perhaps even more hypocritical is the sudden defense by some of the opponents of TVA of the appropriations process. To argue now for appropriations comes with poor grace from those who for years have fought TVA appropriations tooth and nail, and who even now would fight bitterly against appropriations for TVA power facilities.

The private utility campaign proves again that the power companies have only one objective: to take every opportunity to strike a death blow against public power, equally on the local and Federal level. And lest one think that these companies may be against Federal power but are tolerant of local public power, we should take note that some of the same companies whose officials testified against the TVA revenue bond plan were at the same time putting the squeeze on municipal systems in their own backyards (witness the case of Ohio Edison against Prospect, Ohio).

It is to the credit of the majority of the members of the House Public Works Committee that they saw through the arguments of the private power companies and approved the revenue bond financing bill, shortly after the close of hearings, by a vote of 19 to 15, and it is hoped that the House will enact this important, constructive legislation, which was approved in the Senate by an overwhelming vote last year, before the adjournment of this session.

Before continuing with such an extravagant campaign of vilification and this massive display of economic power, the more sober-minded utility executives may want to ponder where this course of action will take them. If socialism ever comes to this country, it will be brought in not by so-called public power zealots but by popular disgust with backward-looking, selfish groups whose tactics continually block more moderate programs designed to serve the people of the Nation.

The Danger of Appeasement

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence appearing in the Washington Star of August 7, entitled "Appeasement Leads to Defeat."

APPEASEMENT LEADS TO DEFEAT—DULLES' WARNING AGAINST LETTING SOVIET THREATS WEAKEN US CITED

Sometimes in a few sentences in a public utterance there is epitomized the whole background of a crisis in the world. Secretary of State Dulles, speaking in Brazil this week, said:

"The international situation is critical. Atheistic, materialistic, and aggressive forces that would dominate all the world, talk boldly; they suggest that efforts to halt them will mean nuclear war.

"We do not in fact believe they want war or would invoke war. No sane people want war. War would be for all an inexpressible disaster.

"The question is whether their threats will cause us to weaken and give in and thus sacrifice the genuine independence of nation after nation. That is not the path to peace. It is the road to war."

The foregoing is an eloquent answer to those critics here and abroad who frivolously exclaim that America has no foreign policy.

It is a courageous answer to those who keep on giving the impression that the American people are terrorized and that there is only one thing to do—to make concession after concession to the Soviets and the Red Chinese as well as to their stooges in the Middle East.

Many a so-called plan has been proposed by panicky-minded persons who seem to feel that the alternative to war is just plain surrender. They cloak their proposals in fancy phrases—indeed, they bring out the old cliches about neutralization of certain regions and talk glibly about bold and imaginative ideas for revising American policy. But paths of appeasement lead only to the same goal—defeatism.

For there are only two ways to try to maintain peace in the world. One of them involves military force, and this not always, but sometimes, means war. The other involves moral force, and this—when backed by a unified country and a willingness to use military force if every other effort fails—could succeed in keeping peace.

Some of the critics have derisively called this "brinkmanship." They use the term because Secretary Dulles once endeavored to express the need for courage in foreign policy and said that sometimes it is necessary to go to the brink of war in order to avoid war. He did not mean that he would merely resort to bluff. What he did mean is that, while it is imperative to exhaust every means of making a settlement, no nation which believes in the justness of its cause can avoid going to the very brink of war, itself, if that is necessary to impress its adversary that it is deeply in earnest.

There is a great advantage in applying moral force to the limit. If, for instance, war does come, it is then recognized by the people as the only choice left. Moral force means public discussion, good propaganda, debate in the forum of the United Nations General Assembly or in the press of the world or over the air waves. The theory is that people will control the hand of a government that threatens war. This is logical up to the point where censorship and suppression of ideas by a totalitarian government build an insurmountable barrier to communication between peoples.

Just now America has the most convincing case a nation ever had in the international arena. The United States stands for maintenance of the territorial integrity and political independence of all nations and is willing to supply military might, if necessary, to uphold that principle. For this is the key to peace in the Middle East and in every other area. To condone aggression, direct or indirect, is eventually to invite a world war.

America's record is untarnished. Though engaged victoriously in two world wars to defend its interests, it has not annexed a single foot of territory. When it has landed Marines anywhere, the reason always has been to protect the lives and property of its own citizens. The United States sent military forces to the Middle East last month to accomplish two purposes—to protect American lives there and to help preserve the political independence of a small nation, thus demonstrating to the Communists and their allies that the people and Government of this country are not pacifistic but ready to fight in the future as in the past for a just cause.

The fact that America, itself, may be in military danger unless such a determined stand is taken now is not perhaps generally appreciated. It wasn't widely understood either during the 1930's when it was being said that in the battle between the democracies and fascism the frontiers in the defense of America may be in the Middle East.

The United States has drawn a line in the Far East beyond which it has said the Communist forces must not advance. In an analogous fashion—through the Truman and Eisenhower doctrines—notification has been given that communistic infiltration of free countries in Europe and the Middle East can reach a point where, if necessary, it will be challenged by arms. The hope is that peoples everywhere will perceive the real issue and restrain any dictatorship governments from taking chances in a delicate situation that could break down the peace of the world.

United States in Mortal Danger, Lieutenant General Gavin States

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following review of Lt. Gen. James M. Gavin's book entitled, "War and Peace in the Space Age," with the review written by Mr. Orville Prescott, and which appeared in the New York Times of Monday, August 11, 1958:

"We are in mortal danger." This grim statement is made by a man singularly well qualified to assess the nature and degree of our peril. Lt. Gen. James M. Gavin, who retired last March from the Army he loved, felt that he could not speak his mind while under the restraint of its discipline. Now, as an angry, middle-aged ex-soldier, he has spoken it bluntly and passionately in a frightening book that may be one of the important volumes of our time, War and Peace in the Space Age.

General Gavin, who was a brilliant leader of parachute troops in Sicily, Normandy, and Germany in World War II, is no ordinary soldier. An intellectual who likes to quote poets, philosophers, economists, and historians, he has thought long and hard about the Nation's problems of defense in the atomic age—soon to become the space age. General Gavin's opinions are often caustic and violent. His criticisms of the Department of Defense and former Secretary Charles E. Wilson are savage. The department is accused of dilatory and muddled methods of decision making.

DENUNCIATION OF INDECISION

The general observes that the United States is years behind the Soviet Union in missile and satellite development and has only its own folly to thank for the plight. He says that we relied until recently upon manned bombers delivering nuclear bombs as a deterrent to war in an era when manned bombers had been made obsolete by surface-to-air missiles and that we wasted time and money on outmoded weapons and committed many other major mistakes.

He denounces the establishment of a separate Air Force, cuts in military budgets, reductions in military manpower, delay and confusion in launching a thorough missile and satellite program, the decision-making maze of the Defense Department and the pressure of industry for the continued manufacture of obsolete weapons.

Asserting that the lethargic procedures of the Defense Department could delay a decision for years, General Gavin continues: "All of the pleading and urging of those in uniform * * * can be of little avail if the Department of Defense declines to act. Its inability to act stems, in the last analysis, directly from the fact that hundreds of civilians, many of them lacking competence in their assigned field, have now transposed themselves between the senior civilian Secretaries of the services and Congress and the Executive."

The civilian for whom General Gavin has the least regard is Secretary Wilson: "He tended to deal with his Chiefs of Staff as though they were recalcitrant union bosses. The thought struck me a number of times that Walter Reuther, under the circumstances, would have been a more effective Chief of Staff than a professional soldier. As I heard another Chief of Staff say, 'He (Mr. Wilson) was the most uninformed man, and the most determined to remain so, that has ever been Secretary'."

The Soviet Union now has long, medium and shortrange nuclear missiles ready for action. The United States may overcome its lag, General Gavin says, but it will require an all-out effort and he is not certain that we are willing to make the necessary sacrifice. And so for the first time in our history we have field armies deployed overseas confronted with weapons against which they can neither retaliate nor defend themselves.

PREPARATION FOR LIMITED WARS

Although strategic nuclear missile attacks on urban centers may come in world war III, General Gavin believes that limited wars like those in Korea and Indochina are more likely and that they will be fought with tactical missile nuclear weapons. Some of the weapons, he notes, will be small enough to be fired from a man's shoulder. To be prepared for such wars, the general suggests, many new weapons will be necessary: pilotless drone reconnaissance planes, reconnaissance satellites, manned satellites, which he expects by 1965, and antimissile missiles.

Looking a little further ahead, General Gavin predicts the use of satellites as cameras, as communication centers, as weapons and even as antisatellite satellites. His forc-

casts are all dreadful and all convincing. He foresees the day when a United Nations force could control outer space, but suggests that if the United Nations should not undertake to do this we must be able to do so ourselves.

War and Peace in the Space Age is a brutally realistic work based upon one fundamental assumption: that the Soviet Union is at war with the West right now. A limited war probably seems a reasonable risk to the Kremlin, General Gavin reasons, but not a general war. He adds: "If we cannot afford to fight limited wars then we cannot afford to survive, for that is the kind of war we will be confronted with. That is the only kind that we can afford to fight. There is but one way to deal with such a war, and that is by having superior means at hand to respond to the aggression, swiftly and severely." And he contends that we do not have such means now.

In addition to its often rather technical military facts and arguments, this book contains a brief account of General Gavin's youth and Army career and an able analysis of Soviet military theory and capacities.

South Sends an SOS

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. WHITENER. Mr. Speaker, the August 11, 1958, edition of the Shelby Daily Star, Shelby, N. C., has a very fine editorial in connection with the efforts that have been made recently to have a farm bill considered in the House.

The Star editorial entitled "South Sends an SOS" points up the fact that it is the textile industry and the farmer who will suffer if the House fails to take action on a farm bill at this session. I believe the editorial will be of interest to every Member of the House, and I, therefore, ask unanimous consent that it be printed in the Appendix of the RECORD.

SOUTH SENDS AN SOS

Members of the House of Representatives will be doing the textile industry and the cotton farmers of the South a grave disservice if they adjourn without passing a new farm bill.

It appears that House Members want to give up on the farm bill because they failed to muster a two-thirds vote to pass it under a suspension of the rules. Speaker SAM RAYBURN has stated that as far as he is concerned farm legislation for this session of Congress is dead.

It's all right with us if Speaker RAYBURN and his fellow Democrats want to be piqued at Secretary Ezra Taft Benson and the Republicans for the opposition which defeated the bill.

But in the process they're cutting off a couple of prominent noses in the South to spite the Republicans' face. We're speaking, of course, of our textile industry and our cotton farming.

Alternative to the passing of a farm bill will be a serious cutback in cotton acreage, already dangerously low. It will mean a further market setback for cotton and strengthening of synthetics competition.

True, acreage reduction will raise the price of cotton (hurting cotton textiles in the process) and one might get the impression that this would help the cotton farmer. But it will actually work against his interests.

Anything which hurts the sale of cotton products hurts the farmer who produces. Furthermore, to leave cotton and rice farmers with overly rigid quotas for next year will hurt the farmers themselves—not Benson and the Republicans.

Lack of a new farm bill would mean a 22-percent cutback in cotton acreage to Cleveland County alone.

Speaker RAYBURN and Chairman HAROLD COOLEY, Democrat of North Carolina, of the House Agriculture Committee, need to take the bull by the horns and do battle for their fellow Democrats in North Carolina and elsewhere in the South.

These two House leaders are still free to seek a rule under which the bill could be freely debated and, we hope, passed by majority vote. There is clearly a majority in the House in favor of granting the cotton and rice farmers acreage relief next year.

To throw in the sponge now in the hope that the Republicans will get the blame would be meaningless. House Democrats should forget anger and politics and battle for the farmers who stand to be hurt.

Bring the bill back out. Get it debated and amended as the House desires. Chances are it will pass in some form and could then be reconciled with the Senate version in conference.

But, please, for the sake of the cotton textile industry and our cotton farmers, do not be content to say: "The Republicans did it to you."

It can be undone.

Saline Water Program

SPEECH
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. DOYLE. Mr. Speaker, on August 12, 1958, during the discussion of the joint resolution—Senate Joint Resolution 135—which provides for the construction by the Department of the Interior of 5 demonstration plants for testing and laboratory work and the discovery, if possible, of ways and means to produce water suitable for agricultural, industrial, and domestic use and any other likewise beneficial uses, I was at that moment unable to participate in the debate on the floor of the House, but was graciously extended unanimous consent to extend my remarks on the subject.

Therefore, Mr. Speaker, I accept this opportunity to state my wholehearted support of this legislation. I not only congratulate and compliment our committee in bringing this to our attention at this time, but I congratulate them on the apparent thoroughness with which they have produced for our information basic material and factual data upon which it is apparent the committee knows and believes we can rely.

Mr. Speaker, when I first came to this great legislative body 12 years ago I brought with me a specific and diligent interest in this subject matter. Shortly after my arrival I authorized a bill in this House of Representatives along somewhat the same lines as Senate Joint Resolution 135, and the legislation introduced in this body by the distinguished gentlemen from California: to wit, Messrs. ENGLE, TEAGUE, HOLIFIELD, WILSON, and ROOSEVELT, as well as by Mr. RHODES of Arizona. Being from California as we are, it is quite natural that we should be vigilantly interested and active in cooperation on any worthy program which would help relieve the water problem in my native State of California. Its rapidly growing population; with its expansion of all types of industry, and also with the rapidly extending and demanding agricultural uses of water, it is self-evident that California must have some relief from an on-pressing and tragic result if there is no relief available in the next several years. Additional fresh-water sources and supplies simply must be found. Not only does this statement apply to California but to many other States as well. The water problem is not an individual State problem, it is a nationwide problem. No doubt a sound and wise and extended use of our natural water sources would be of further benefit than they are at present, but even that supply would normally be sharply limited and found inadequate as a source of national supply. Therefore, to find ways and means to economically and practically produce saline water is an essential element and factor for us to give continuous attention to. The $10 million in this legislation involved is but a drop in the bucket. To illustrate, I think my memory is correct in stating that that portion of California commonly known as southern California by itself and alone financed the expenditure of about $220 million to bring fresh potable water from the fairly distant Colorado River in order to supply our reservoirs and to keep on tap this fresh water supply which is absolutely necessary for the survival of humankind, as well as agricultural products.

Having lived for many years on the seashore of the blue Pacific at Long Beach, Calif., I frequently used to dream of the time when it would be found practical to produce from those waves beating themselves on the beautiful seacoast beaches of California potable water available to mankind and beast and agriculture, too.

Members of the committee in charge of this bill have given such a thoroughgoing explanation thereof that I will not speak longer on the subject at this time. I repeat that I cordially support the passage of this bill and urge all Members to do so.

Are We Headed for Dayton, Tenn., Again?

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. WRIGHT. Mr. Speaker, under leave to extend my remarks, I am including a sermon delivered last Sunday

at the New York Avenue Presbyterian Chuch, by the Reverend Dr. Ernest T. Campbell, minister of the First Presbyterion Church, of York, Pa.:

ARE WE HEADED FOR DAYTON, TENN., AGAIN?

(By Rev. Dr. Ernest T. Campbell)

Back in the year 1925 the most talked about community in the United States was a small town in northeastern Tennessee. The name of the town was Dayton, a quiet agrarian community, capital of Rhea County, boasting at that time a population of about one thousand. Some have referred to it facetiously as the buckle on the Bible belt.

Dayton was catapulted into fame or notoriety (as you will) by a court trial that pitted the State of Tennessee against one John Scopes. In March of 1925 the State legislature had passed a law forbidding the teaching in public schools of anything which denies the story of the creation of man as taught in the Bible and the teaching instead that man is descended from a lower form of animal. John Scopes, a young schoolteacher, had allegedly broken the law.

The trial was billed as a "to the death" struggle between science and religion. Excitement was whipped to a whitened heat when the news broke that William Jennings Bryan, the peerless orator would be the leading voice of the prosecution, and Clarence Darrow, the wiley, crafty, criminal lawyer from Chicago, the dominant voice of the defense.

The Scopes trial was a sad chapter in the history of American Protestantism. Why sad? Did not the prosecution win? True enough, the State won its case. The trial wore on from July 10 to 21 and climaxed in a verdict of guilty against the defendant. So shaky was the evidence against Scopes, however, that the penalty exacted was nothing more than token, a mere $100 fine. Furthermore, the victory was short-lived. Two years later the State appellate court reviewed the case and reversed the decision.

Why sad? Sad, because in the minds of the general public the position that the State took was assumed to be the Christian position. In fact, the legislature that passed the controversial law reflected the convictions of but a small right-wing minority.

Sad, too, because nothing really vital was at stake. Far from being science versus the Bible, it was science versus one man's interpretation of the Bible. In the 17th century A. D. Bishop Ussher had attempted a chronology of the Scriptures. With the limitations under which he worked, he did an admirable job. He overstepped his cause, however, when he stated flatly that God had created the world in 4004 B. C. Bryan and his colleagues seemed bent on making this date stand up.

There can never be a tension between legitimate science and legitimate religion since God is one and cannot contradict Himself. It is a matter of domain. To science it is given to tell us the when and the how of creation: The Bible tells us Who—"In the beginning God." The creation narratives in Genesis do not have to be taken literally to be taken seriously.

And the Scopes trial was a sad event for us in that it depicted the Christian as a reactionary against truth. Scientists and philosophers alike suffered during the Middle Ages at the hands of a church to whom new modes of thought were heresies. We had come to expect something nobler from descendants of the Reformation. Where had freedom of inquiry gone?

The play, Inherit the Wind is based on the drama that unfolded in the Dayton courtroom. Toward the end of the first scene in the second act Brady (Bryan) and Drummond (Darrow) meet alone where tomorrow the trial will begin. Brady says with genuine warmth, "We were such good friends once. I was always glad of your support. What happened between us? Why is it, my old friend, that you have moved so far away from me?" Drummond's reply is perceptive, "All motion is relative. Perhaps it is you who have moved away by standing still."

"New occasions teach new duties,
Time makes ancient good uncouth.
They must ever up and onwards
Who would keep abreast of truths".

The Scopes trial was a sad chapter in the history of American Protestantism. Better that it never should have happened. But why bring it up today? We do so because of signs abroad that we are headed for Dayton, Tenn., again. In 1925 science was made the whipping boy for all that was unholy. In some circles of Christian thought today science is again being blamed for the woes of humanity. Reactionaries are with us still.

Science, of course, has worked some profound changes in the life of every one of us. We do not communicate or travel as we used to. Our health is protected by new and superior methods. Our military defenses are different from those that our fathers raised. The atom has yielded up its power. The privacy of outer space has been pierced. And the end is not yet.

How should a Christian respond to such an hour? There is, I feel, a right way and a wrong way. The wrong way is one of childish condemnation. A radio preacher whom I chanced to hear recently revealed his mental poverty when he said, "Man is overreaching himself by attempting to travel in outer space. Had God wanted man to venture into these yonder regions, he would have equipped him for the experience." The speaker went on to affirm his belief that only when the Christian is clothed upon with a resurrection body will interplanetary travel be possible.

This view, I contend, is puerility of the simplest kind. Finless, we have learned to negotiate the ocean depths. Wingless, we have learned to fly through the air. Outer space could well be the next to fall.

Such obscurantism denies the God-given faculty of curiosity. Pat Miller of Life magazine asked Albert Einstein if he would give his son, William, a word of advice before the young man went to college. The incomparable physicist replied, "Young man, never lose a holy curiosity." Holy, because God gives it. The truths of the universe do not lie on the surface where the indifferent may gather them. They are buried deep (or high) to tease and whet and challenge our curiosity.

The early chapters of Genesis reveal that God who engineered this universe enjoined upon man two responsibilities: To dominate the earth, and give names to every living thing. Science to this day continues to subdue the earth for man's good and classify the data that research has uncovered. No discipline can be faulted for following a divine directive.

I suspect that the protesting radio preacher was just fed up with change. How much more comfortable to stay as we are. It is not easy to adjust to changes that come in torrents. The boys at Annapolis say of the new submarines that they come up only often enough to allow the crew to reenlist. In this age of intercontinental ballistic missiles, Russia is but 18 minutes away from the United States. Such developments leave us breathless. But we can no more hold back the tides of progress than we can the tides of the sea.

There is a response more worthy of a Christian. Such a response would include three steps. First, we should not let ourselves or our generation forget that science is not total, but partial. It is not the be all or end all of life. While it can work wonders, there is much that it cannot do. It labors under some severe limitations.

Science can build a gorgeous house, but science cannot make that house a home. Science can give us fabulous schools complete to the latest appointments, but science cannot make scholars of the pupils that attend. Science can hold before us the promise of increased longevity, but science cannot tell a discouraged soul why he should want to live longer. Science can deal with the symptoms of my guilt, but science cannot reach in and down to remove the rooted cause.

There is more to life than science, another side. It is heartening to remember that M. I. T., the mecca of all technological studies, has a dean of humanities. Life has its goals, its purposes, its nobility, its poetry, its music, its immeasurables, and its God.

Secondly, we should never forget that it is God's world that is being explored. I understand that a quiet tension has existed for some years between the pure scientist and the applied, between the man who labors in unspectacular research and the man who converts the gains of science into marketable conveniences. Back in 1879 Professor Rowland, of Johns Hopkins University, said in an address to his fellow physicists: "He who makes two blades of grass grow where one grew before, is the benefactor of mankind; but he who obscurely worked to find the laws of such growth is the intellectual superior as well as the greater benefactor of the two." And the Christian goes on to affirm that the God who invested the universe with such discoverable laws and energies is infinitely greater than both.

J. B. Phillips in one of his books proposes a test that a friend of mine who is president of a midwestern university tried out. He visited a classroom of seniors and asked the question, "Does God understand radar?" With but one or two exceptions, the answer was "No." How can we be so naive. The creation cannot outgrow its creator. Call the planets by name or by number, the whole incredible host, and the Christian accounts for them each one as part of the all things made by Him without whom nothing was made. He's got the whole world—the exposive expansive, ever-changing, volatile world—He's got the whole world in His hands.

Finally, we should meet the hour in which we live with a renewed determination to be more fully Christian than we have ever been before. The pity of our age is not that the scientist has been too scientific, but that we Christians have not been Christian enough. There is a truth that our generation needs to hear from our lips, and an attitude that it yearns to see alive in us.

The truth is that men can be renewed into the likeness of their God. It is man's destiny to be over nature and under God. We have majored in the first and forgotten the second. Consequently, human nature—and not science—is the real culprit. Men are not what they ought to be because they are not God's.

It is ours to tell the world of Christ who makes a specialty of transforming men and women and bringing them back to God. This is good news for dark days, that the liar can become honest, the miser generous, the self-seeking self-giving, the drunkard sober, the proud humble, and the crooked straight.

And the attitude that our fellows yearn to see in us is one of compassionate care and understanding. Science is so impersonal. It cares for no man as such. Busily it charts trends, computes averages, and conducts research in cold, antiseptic objectivity. But people are still people, and they need to be wanted and loved. Many are lost for want of the touch of a hand made warm by Christ. Scientific advances will never render such concern obsolete.

Alexander Irvine has given us a memorable picture of his mother in the book, My Lady of the Chimney Corner. Born to poverty she makes a Christian home of a sparse

cottage in a fishing village in Ireland's County Antrim. Her favorite chair is a rocker by the hearth. To this chair her townsfolk come in time of need.

On one occasion a neighbor lady, Elizabeth, lost her grown son in an accident at sea. With her heart to the point of breaking she goes instinctively to Anna. Anna tells her to kneel by the bed and pray for comfort. This done, the woman asks, "And what shall I say to Him now?" "Ask Him to lay His hand upon your head in blessing." Elizabeth doubts that God would go so far for her, but she prays. And as she does, Anna lays her hand on the sobbing woman's head. Elizabeth rises to her feet, a new light in her face. "What was it like?" Anna asks. "Why it was soft and gentle like the fall of a leaf in autumn. And, Anna, it felt just like your hand."

Anna replies, "The hand was mine but it was God's too. God takes a han' wherever He can find it, an' jist dizs what He likes wi' it. Sometimes He takes a bishop's hand, an' lays it on a child's head in benediction; then He takes the han' of a docther t' relieve pain, th' han' of a mother t' guide her child, an' sometimes He takes the han' of an auld craither like me t' give a bit of comfort to a neighbor. But they're all han's touch't by His spirit, and His spirit is everywhere lukin for han's to use."

Does He have the promise of your hands in this grand and awful hour?

The New York Times Inspired Cuban Unrest and Interference in Cuba's Internal Affairs

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. RIVERS. Mr. Speaker, I again warn that the New York Times, and others who are knowingly or naively unknowingly part and parcel of the Communist line in this country are propagandizing to upset our friendly relations with legally established governments in the Caribbean, causing international complications, and harming our defense plans in that area.

Appearing in a wirephoto of the Associated Press is Fidel Castro's brother, who kidnaped some 50 United States servicemen and citizens, together with his chief lieutenant, Argentine National Ernesto Guevara, known as Che Guevara. The Time magazine in a previous special interview with Fidel Castro admitted this Che Guevara was a Communist follower.

Has the New York Times ever disapproved of the kidnaping of United States servicemen and citizens? Does the New York Times forget that kidnaping in the United States is a Federal offense punishable by death? Is not the dual editorial policy of the New York Times piling problems upon the United States Armed Forces responsible for the defense of the Caribbean? Is not the New York Times willingly or unwittingly conforming to the policy of Russia to create strife, diversions, and distractions to United States military commanders, in this very important part of our hemispheric defense of the Caribbean and the Americas?

Mr. Franz Pick, editor of Pick's World Currency Report, of New York, has this to say:

Cuban peso. The Banco Nacional de Cuba has once more conserved the value of the peso. Cuban bank note circulation has increased only 4 percent and is covered by 91 percent in gold and dollars. Cuba's debts are rather small: They amount to about 860 million pesos, or 136 pesos per capita. Cuba's national income of about 2 billion pesos, or 312 pesos per capita, is the highest in Latin America.

The peso is at par with the American dollar. Does the New York Times wish to wreck such a record as it tried to do by its propaganda during Castro's war of nerves and shootings in April 1958, when a run on the Cuban banks was stopped by the strong financial position and resources of Cuba's equivalent to our Federal Reserve System, the Banco Nacional de Cuba?

Will the New York Times ever realize that if orderly processes of government in Cuba are upset, the United States then would have great trouble appeasing 6 million Cubans thrown into turmoil by the results of the Times' propaganda campaign, producing unrest, trouble, and anarchical conditions in the Caribbean, to the heart's content of Russia and her Communist and pinko sympathizers?

Will the New York Times realize that Cuba is one of the few nations that do not come to us with hands extended for loans and giveaway funds because Cuba has a self-sustaining government?

The New York Times, a rabid fan of Fidel Castro, and some of those Castro fans at the State Department who follow its line of thinking are not playing only with propaganda, interests and diplomacy but are playing dangerously with fire and by lack of foresight aiding Russia's aims to establish a bridgehead in the Caribbean.

Mr. Speaker, under leave to extend my remarks, I shall insert an editorial from one of America's great newspapers, the Charleston News and Courier, under date of August 3, 1958, exposing the part of the New York Times in this unwarranted and persistent attack on a friendly government and people and on the purposes of United States defense in the Caribbean:

[From the News and Courier, Charleston (S. C.) Sunday, August 3, 1958]

UNITED STATES YIELDING TO CUBAN REBEL DEMAND SMACKS OF INFORMAL RECOGNITION

In reporting the removal of United States marines from an outpost in Cuba, the Associated Press said the action was designed to correct a touchy diplomatic situation.

The marines, 6 or 8 of them at a time, were sent at the request of the Cuban Government to protect the waterworks which serves the United States Naval Base at Guantanamo Bay. The waterworks are situated in the area where Fidel Castro's rebels operate. The rebels said assignment of the marines guard was an "invasion of the sovereign territory of Cuba."

The withdrawal of the marines in response to Castro's objections raises a question whether the State Department has given diplomatic recognition to the rebels.

As far as we know, the State Department itself has not used the term "diplomacy" in connection with its dealings with Castro. Nevertheless, it appears that the AP has recognized the Department's actions as a kind ordinarily reserved for dealings with legally recognized regimes.

The State Department has not indentified the channels through which it maintains communication with the rebels. Judging from the speed with which Castro followers are able to make themselves heard in Washington, it seems possible that they have some sort of secret ambassador in this country.

The rebels, of course, have well-known friends on the mainland. To put it another way, President Batista has enemies who have allied themselves with the rebels.

Among his enemies is the New York Times, a newspaper whose influence in some parts of Washington is conceded. When dispatch of the Marines to the waterworks was first announced, the Times said that Castro's word of honor not to permit his men to bomb the waterworks should be accepted as protection in place of the Marines. Long after the Times editorial was written—long enough for a copy to have reached the hills of Oriente Province—the rebel protest was announced.

Is the Times a secret ambassador for Castro in Washington?

If such is the case, that will explain why the Times denies the right of the United States to protect its interests in Cuba while supporting the same right in Lebanon.

The Marines have the same right to guard the waterworks that serves Guantanamo Bay that they have to occupy Beirut. In both cases they were invited in by friendly governments in trouble with rebels. It makes no more sense to pull guards away from the waterworks to please Castro than it would to pull United States troops out of Lebanon to satisfy the Lebanese rebels.

If the State Department has recognized another government in Cuba beside the one with headquarters in the Capitol at Havana, it should come out and say so.

Unity in Spirit

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. McCORMACK. Mr. Speaker, Gen. Thomas R. Phillips, military analyst for the St. Louis Post-Dispatch, in an interesting and provocative editorial of August 12, 1958, raises some questions concerning the adequacy of our military service schools to produce a sufficient number of properly qualified officers to serve as staff of unified commands, for duty in the Defense Department and with the Joint Staff, for joint military missions and military assistance advisory groups in foreign countries, and for technical liaison at installations of the other services, such as the missile ranges at Cape Canaveral and White Sands, N. Mex.

General Phillips points out that unification in the Armed Forces is more a matter of spirit and attitude than of organization.

He further points out that no individual or group at the Department of Defense level or in the Joint Staff has

any defined responsibility for planning interservice education and experience.

General Phillips takes a major premise from a statement made by Gen. Douglas MacArthur that "if the boys fight together, they must be trained together, and the training should begin at the earliest time." And that real unity in operations is impossible without unity of training at the early stages before the officers' minds are set.

He also states that a competent authority estimates "that requirements for officers qualified for joint staff and command duty have multiplied 20 times since the end of the last war. He maintains that interservice education at the upper level is able to supply only a small percentage of officers needed with adequate training for joint staff and command duty." General Phillips states, "the total gaining such experience and education is thus about 1 percent of the officers in the armed services."

Mr. Speaker, this is a subject of vital importance to the Nation and it is deserving of study. The educational process should equip individuals to take their places in society in their chosen fields. Does the present military service training setup adequately equip its graduates to do their work in unified commands and in other situations where unity in spirit is a prerequisite? General Phillips' editorial follows:

[From the St. Louis Post-Dispatch of Tuesday, August 12, 1958]

MILITARY UNIFICATION APPROVED, BUT PENTAGON MAKES NO PLANS FOR INTERSERVICE EDUCATION—INQUIRY DISCLOSES THAT NO INDIVIDUAL OR GROUP HAS DEFINED RESPONSIBILITY FOR WHAT MANY CONSIDER MOST IMPORTANT ASPECT OF UNIFIED DEFENSES

(By Brig. Gen. Thomas R. Phillips, U. S. Army (retired))

WASHINGTON.—Unification in the Armed Forces is more a matter of spirit and attitude than of organization.

Investigation in the Pentagon reveals that no individual or group at the Department of Defense level or in the Joint Staff has any defined responsibility for planning interservice education and experience.

Steps to improve the receptivity of officers to unification and to break down the parochial loyalties to one service and lack of understanding of other services are considered essential before unification becomes a fact.

No one disagrees with the President's statement that "separate ground, sea, and air warfare is gone forever," and that "peacetime preparatory and organizational activity must conform to this fact."

Few will disagree with Gen. Douglas MacArthur's testimony before the Congress that "if the boys fight together, they must be trained together, and the training should begin at the earliest possible time."

While the President has received from the Congress the legislative authority to reorganize the Defense Department, no new attention has been given in the Pentagon to the more important problem of increasing the acquaintance of all officers with those of the other services, nor of expanding interservice education and training.

TWO MAIN ASPECTS

The problem can be broken down into two main aspects:

1. To acquaint cadets and young officers with their contemporaries in the other services and to give them a basic understanding of the other services' traditions, missions, weapons, methods, capabilities, and limitations; and

2. To give joint training to officers, after they have become thoroughly grounded in the techniques of their own service—estimated to require 10 or 12 years—to fit them for duty on the staff of unified commands, for duty in the Defense Department and with the joint staff, for joint military missions and military assistance advisory groups in foreign countries, and for technical liaison at installations of the other services, such as the missile ranges at Cape Canaveral, Fla., and White Sands, N. Mex.

These are problems that require no legislation. Arranging for cross-service education and experience can be done entirely within the adminstrative authority of the Defense Department. Many believe that this aspect of unification is far more important than any organizational framework. Nevertheless it has been almost entirely neglected.

Oddly enough, the greatest effort has been made where it is precisely the most difficult to find the necessary time—for the cadets in the United States Military and Naval Academies. These institutions are primarily engaged in giving basic education at the undergraduate level. Military training and education must be imposed on top of an arduous college course.

THREE-WAY APPROACH

The Military and Naval Academies have met the need for interservice acquaintance and understanding in three ways:

1. Near the end of the third year all the cadets spend a weekend, from Thursday afternoon to Sunday afternoon, exchanging places with a cadet from the other Academy. Every cadet has this experience—he sleeps in the other man's dormitory, he attends his classes and he participates in his place in his opposite number's social activities.

2. In the summer or late spring of their third year all the cadets visit installations of the other service.

3. The two Academies hold joint maneuvers for all the cadets who have finished their third year, in the summer between the third and fourth years.

Discussions were initiated in April by the commandants of Military and Naval Academies with the commandants of the Air Force Academy and the Coast Guard Academy to extend their program to cover all four academies.

At present 25 percent of the graduates of the Military and Naval Academies are commissioned in the Air Force. After the Air Force Academy starts graduating officers an optional 12½ percent will be authorized to transfer to another service on graduation.

The Academy program has been highly successful and the cadets approve it enthusiastically. But only a small percentage of the officers in the Armed Forces are graduates from military academies.

OTHERS NEGLECTED

Little, or nothing, is programed to carry on the excellent Academy acquaintance, experience, and cross-service education program until an officer has had 15 or 20 years of service, at which time he becomes eligible for joint training at senior service schools.

By this time many of them have developed a narrow one-service loyalty and education, and joint staff work comes too late to change the parochialism of many.

A majority of military officials with whom the Post-Dispatch has discussed the problem of cross-service acquaintance and experience for junior officers agree, as a generalization, that it would be a good thing. But they also agree that administratively the solution is very difficult.

There are many who feel that too much time is already spent in service schools by officers. They look with horror on the idea of taking a young officer away from his job for a few months for service with another component of the Armed Forces for acquaintance and experience.

It would be difficult to place several thousand young Army and Air Force officers annually with the Navy for temporary duty on ships for example—hard to do without them in many units, and very difficult for the Navy to accommodate them on ships.

EXCHANGE IS FEASIBLE

Nevertheless, such an exchange for a brief period is feasible. What is needed, and is lacking, is a wider appreciation at the highest levels in the Pentagon that such action is essential if real unification is to come about in less than a generation. (It took the generation between World War I and World War II for the Army to unify itself.)

For senior officers, although for many it is too late for the education to take, more opportunity for joint education and joint duty is available. At the Army's Command and General Staff College and the Air Force's Air Staff College (the Navy has no equivalent school), there are instructors from the other services to give courses on their services.

Unfortunately, many officers are not enthusiastic about this duty and shun it, so that often the most able officers, who should be given such assignments, are just the ones who avoid them.

These schools have a small quota of students, 12 from each of the other services. Army officers take such assignments avidly, but the Navy and Air Force have difficulty filling their quotas.

At the senior service colleges, the Army, Navy, and Air Force War Colleges, the annual quota from the other services is 10 each.

There are three joint senior service schools: The National War College, the Armed Forces Staff College, and the Industrial College of the Armed Forces. The Armed Forces Staff College has two 5-month courses annually with 378 students divided equally among the services.

OTHER COLLEGE QUOTAS

The National War College and the Industrial College of the Armed Forces conduct courses of 10 months and take 99 and 120 students, respectively, annually from the three services.

Thus cross-service education in the military service school system is being given to about 660 officers annually out of a total of more than 260,000 officers.

It is estimated that about 2,000 other officers are on joint duty in the Pentagon, unified commands, military missions, and military assistance advisory groups. The total gaining such experience and education is thus about 1 percent of the officers in the armed services.

One competent authority estimates that requirements for officers qualified for joint staff and command duty have multiplied 20 times since the end of the last war. He maintains that interservice education at the upper level is able to supply only a small percentage of officers needed with adequate training for joint staff and command duty.

His solution for a minimum start is to double the capacity of the Armed Forces Staff College. The facilities are not available and would require appropriations.

There are some easy and simple ways of getting officers of the separate services to work together. These are not large in scope, but still useful. The Army, Navy, Air Force, and the State Department all conduct separate language schools. These could be combined in one with great advantage in instruction and economy. The students from the three services would have a year of close association with their brother officers of the other services.

PREVIOUS RECOMMENDATIONS

The same combination can be made in separate service information schools, intelli-

gence schools, counter-intelligence schools, military police training schools, and the like. The number is legion.

The Gerow Board in 1946 recommended the establishment of a joint national security university with five coordinate colleges: administrative college; intelligence college, national war college; industrial college; and State Department college. The requirements today for joint education parallel those at the time of this report, except that they are much more urgent. No positive action was taken on the recommendations.

Many experts believe that the whole subject urgently requires attention. However, few in the Pentagon are concerned about it. But, there is a definite body of opinion that unification will continue to drag, regardless of changes in organization, until a majority of officers are able to get cross-service acquaintance, experience and education.

The Bang-Jensen Case

EXTENSION OF REMARKS
OF

HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1958

Mr. BECKER. Mr. Speaker, following up a previous insertion in the RECORD on the case of Mr. Bang-Jensen, I wish to include hereunder another article from the Brooklyn Tablet under date of July 26, 1958, which I think is important to all of us Members, and I think the people would be interested to know what has happened in this shocking case.

The article follows:

DETAILS CRASH PROGRAM TO GET MR. BANG-JENSEN—CHARACTER ASSASSINATION AND FLAGRANT VIOLATIONS OF DUE PROCESS CITED—TRAVESTY OF JUSTICE—MEANWHILE ATTEMPTS IN U. N. TO SABOTAGE ANTI-RED REPORT GO UNPUNISHED

(By Don Zirkel)

The Bang-Jensen story is understandable only if one is aware first, that there are Communists in the United Nations whose loyalty is not to the international organization but to the international conspiracy; and second, that Mr. Povl Bang-Jensen is an intelligent, dedicated and resourceful anti-Communist and for that reason must be destroyed.

It was the good fortune of the free world to have Mr. Bang-Jensen appointed in January, 1957, as deputy secretary of the U. N. committee to investigate the Russian aggression which followed the Hungarian anti-Communist revolution of 1956.

SABOTAGING THE REPORT

The Reds' job, naturally, was to sabotage and smear the committee's investigation, its report and its authors, particularly Mr. Bang-Jensen. This is the story of their efforts.

William Jordan was named secretary of the committee but according to Mr. Bang-Jensen "whatever instructions Mr. Jordan had, it soon became obvious that he carried them out in such a way that it (the report) would be full of errors, many of such a nature that it would be easy to make it an object of ridicule for anyone who wanted to undermine confidence in its conclusions." Obviously the Communists wanted to undermine confidence in its conclusions.

Among the examples of Mr. Jordan's affinity for error is the statement that Imre Nagy was Prime Minister of Hungary for the first time in 1946–47 (the Prime Minister at that time was Ferenc Nagy, who is currently living in exile in the United States).

"After long argumentation," Mr. Bang-Jensen asserts, "Mr. Jordan agreed to delete the incorrect sentence; a day later I found, however, that he had not done so. When I again took up the matter, he refused to make the deletion before the rapporteur (the official assigned to draft the report) had seen the draft. However, after prolonged discussion, he promised that he would call the error to the rapporteur's attention.

"When the draft came back from the rapporteur, the error had not been corrected. Mr. Jordan first claimed that he had pointed the error out to the rapporteur; when I expressed doubt that he had done this since it had not been corrected, he admitted he had not but declared as follows:

" 'When the rapporteur has approved a draft and it states that Imre Nagy was Prime Minister in 1946, then as far as I am concerned, Imre Nagy was Prime Minister in 1946.' "

ATTEMPTED SUPPRESSION

Mr. Bang-Jensen pointed out many other errors and omissions in the report. Perhaps one more will suffice here because it concerns the central point in the committee's investigation: whether the intervention by Soviet military forces November 4, 1956, took place upon the request of the legal Hungarian Government.

While the report was being drafted, the secretariat came in possession of the full text of an address given by President Istvan Dobi of Hungary May 9, 1957.

Mr. Bang-Jensen reports that "Mr. Jordan, in spite of many arguments, refused to inform the members of the committee that Mr. Dobi in this official address to the Hungarian National Assembly had admitted that:

"* * * On November 3, Janos Kadar asked for the help of Soviet troops and, on November 4, as the constitutionally appointed premier of the country, began his wise and purposeful work * * *.

" 'As it had become obvious that the activity of Imre Nagy and his government had endangered the state and social order of the Hungarian People's Republic, the presidential council of the Hungarian People's Republic on November 4 withdrew its confidence from the government of Imre Nagy * * *.' "

Thus Kadar's request for foreign troops took place prior to his appointment, while Imre Nagy was recognized as the legitimate Prime Minister.

Mr. Bang-Jensen reports that "Mr. Jordan, after some arguments, finally sent a copy of this long address to the members of the committee together with many other papers during one of the last meetings of the committee, but he maintained that the Secretariat was not obliged nor permitted, to draw the particular passages in Mr. Dobi's address to the attention of the members."

The ousted Danish official explains the significance of this: It was not possible for any member of the Secretariat to master more than a part of the facts because there were 2,000 pages of oral testimony plus laws and regulations, Hungarian newspapers, transcribed broadcasts, photostats of important documents, many memorandums about special problems, etc.

"The committee had to trust that the Secretariat, as it could reasonably expect, would direct attention to it if important facts of interest to the commitee's investigation were found in the huge mass of material," Mr. Bang-Jensen says.

How could the members of the committee find errors, he asks, "if the Secretariat kept silent about them, as Mr. Jordan frequently did?"

Another of Mr. Bang-Jensen's attempts to correct the report was a memorandum to Mr. V. Duckworth-Barker, press officer of the committee:

"Mr. Duckworth-Barker asked me to do him the favor of dictating a memorandum about the errors instead of telling him orally so that he, with explanation and suggestions in writing, could make his corrections more quickly. I did so and went to lunch while the memorandum, which was addressed on the top to Mr. Duckworth-Barker, was being typed by a secretary.

"When I returned, I was told that just as the secretary was finished typing it, Mr. Jordan had come and taken the memorandum and the copies from her. I went to Mr. Jordan; he refused to give it back to me or to give it to Mr. Duckworth-Barker. He also refused to give any reasons. Nor was he willing to discuss the errors of facts."

Many similar examples could be given but space does not permit. We are merely trying to establish the background for the next phase, the punishment of Mr. Bang-Jensen for his role in salvaging the committee report and translating it from a comedy of errors into one of the most magnificent documents turned out to date by the United Nations.

Many serious errors were eventually corrected but "on the day the report was finally adopted by the committee, Mr. Jordan told a colleague that it was not worth the paper it was written on and should be thrown in the East River."

THE ATTACKS BEGIN

On June 4, 1957, Mr. Bang-Jensen called some examples of sabotage to the attention of United Nations Secretary General Dag Hammarskjold and his executive assistant, Andrew Cordier, an American. Three days later, Mr. Hammarskjold indicated in a short handwritten note that he would like to discuss the matter. That discussion has still not taken place.

Instead (now notice the Communist pattern) when Mr. Bang-Jensen reported new examples of sabotage one of the Under Secretaries threatened him "with disciplinary action and dismissal if I continued, by which he apparently meant bringing new examples of sabotage to your attention; he called me repeatedly a vilifier and accused me of making 'wild allegations,' while at the same time he refused to look at the evidence I offered him. 'It would be ridiculous to spend even 5 minutes to look at it,' he told me."

On August 26, Mr. Bang-Jensen was suddenly, without explanation, relieved of his duties as deputy secretary of the Committee on Hungary.

On December 4, the Secretary General established the so-called gross group in circumvention of the staff rules, according to Mr. Bang-Jensen, who charges it "has usurped the advisory functions of the Disciplinary Committee and the Joint Appeals Board."

SECRET CHARGES

The Gross group was composed of Constantin Stavropoulos, Philippe de Seynes, and a so-called independent outsider, Ernest A. Gross, an American.

Mr. Bang-Jensen asserts: "Though the latter acted in his professional capacity as a lawyer, for an unknown fee, the public was given the carefully cultivated impression that the United States Government, through Mr. Gross, was participating unofficially in the investigation; it was pointed out in United Nations press releases that Mr. Gross was a former Assistant Secretary of State and former Deputy Representative of the United States to the United Nations."

The Gross group invited the appellant to appear December 13 and 16 and to bring relevant documentation. The meaning of the term relevant was uncertain since Mr. Bang-Jensen did not know the charges against him; besides he did not have access to his documents in his office in the U. N.

building, from which he was accompanied by two guards December 4 and instructed not to come back.

During those two meetings, the administration promised to produce certain essential, nonconfidential documents; however, they have not been made available to this day.

He was permitted no counsel during those two interviews and after he protested meeting again without his counsel, he was not invited to return.

The transcript of the December 13 and 16 meetings, which he obtained only upon repeated requests "proved in some cases to report the contrary of what he said; many of his answers as transcribed were so garbled that they did not make sense; others were marked inaudible; altogether 231 of his answers were so incorrectly reported that the transcript was beyond correction."

On December 21, the Gross group suddenly turned itself into a committee to investigate Mr. Bang-Jensen's conduct and released its preliminary findings to the press without notifying the appellant; on January 15 it similarly released another interim report.

On the following day, Mr. Bang-Jensen and his counsel charged the report contained several indisputable errors of fact and several new allegations; but the Gross group refused them the opportunity to submit an answer although it did not present its final report to the Secretary General until February 8.

DENIED RIGHT TO COUNSEL

Informed that the Gross report was being submitted to the Joint Disciplinary Committee, Mr. Bang-Jensen on March 4, again requested the right to be represented by independent legal counsel and to have made available the necessary documents.

Although the U. N. had used independent counsel (Mr. Gross), it refused the same right to Mr. Bang-Jensen and offered a staff lawyer, who, according to Mr. Bang-Jensen, "would be placed in a most embarrassing position in relation to high secretariat officials."

After actions by the staff lawyer which made one doubt whose side he was on, he was fired by Mr. Bang-Jensen but continued to try to represent him.

On April 9 the committee announced that it would accept a statement from Mr. Bang-Jensen up to April 21, although the promised documents had not yet been provided.

On April 15 the committee reaffirmed its April 21 deadline and 4 days later Mr. Bang-Jensen appealed "for the Secretary General's personal protection against violations of due process and fundamental human rights" and took the first step in an appeal to the Joint Appeals Board.

On April 21, Mr. Hammarskjold refused "to intervene in or countermand any decision by the committee," although the charges had not yet been properly referred to the committee under staff rule 110.1 and the committee had not been properly constituted and convened by the Secretary General, under rule 110.5.

On May 27, the appellant was informed by the Secretary General's representative, Francis Green, that the case would rest in the Disciplinary Committee until final disposition of the appeal.

Nevertheless the committee proceeded in secret and on June 5 recommended that Mr. Bang-Jensen be fired. On July 3, he was.

He has been dismissed, he suggests, "in the hope that the appellant, when off the payroll, would not have the necessary financial means and the energy to carry the case through to the Appeals Board and the United Nations Tribunal and then, as others before him, would be willing to accept an offer of termination indemnity plus 3 month's salary."

RIGHT TO RELEVANT DOCUMENTS?

But he intends to appeal to the U. N. tribunal in the fall on the basis that "a defendant is entitled to have access to the relevant material necessary for his defense and to the testimony and all documentary material on which grave charges against him are based."

The Secretary General and his aids have not claimed that a single one of the 87 documents requested is secret or irrelevant.

Can there be any other credible answer for the refusal to provide them, Mr. Bang-Jensen asks, "than that the requested documents are much too relevant for the comfort of the administration?"

He claims that some of the documents referred to by the administration do not and never have existed and that some of them state something quite different from what they are reported as saying. It would seem reasonable to expect, if the appellant is in error, that the administration would remove the shadow of guilt over it and release the documents.

Mr. Bang-Jensen claims that Mr. Cordier's failure to produce the documents might be partly due to the fact that several of them will prove very embarrassing to Mr. Cordier himself. It would seem reasonable to expect, if the appellant is in error, that Mr. Cordier would be eager to remove himself from suspicion.

One of the most mysterious angles to the situation is the United Nations refusal to produce the testimony in clear violation of its own high-sounding Draft Convention on Human Rights.

Meanwhile, the Communists are apparently achieving their aim of discrediting the report by having the U. N. discredit its author.

The campaign of vilification includes stories placed in circulation that he was mentally unbalanced, an alcoholic, a psychopathic troublemaker, a McCarthyite, etc.

TRAVESTY OF JUSTICE

Besides the character assassination, Mr. Bang-Jensen is the victim of framed-up charges which were railroaded through an illegitimate committee and rubberstamped by an illegally convoked disciplinary committee which never heard the defendant, who has been denied counsel and the documents he is entitled to and who has been victimized by broken promises and flagrant violations of due process of law, staff rules, and the universal Declaration of Human Rights.

Compare the activities of Secretary Jordan and Deputy Secretary Bang-Jensen and note who is the target: not the culprit but the anti-Communist.

Indirect Aggression

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1958

Mr. DOYLE. Mr. Speaker, under date of August 5, 1958, in the Christian Science Monitor, a daily newspaper published at Boston, Mass., appeared the following editorial on the front page thereof. As it deals with a subject which is ever present to our daily attention these days, I felt sure that you and all my other distinguished colleagues in this legislative body would be pleased to have the same directed to your attention. The editorial follows:

INDIRECT AGGRESSION

(By William H. Stringer)

WASHINGTON.—Secretary of State John Foster Dulles, in isolating "indirect aggression" as the grave and great issue to be dealt with at the proposed summit conference, has singled out that phase of Soviet policy which has been disturbing, baffling, aggravating to a whole series of United States Secretaries of State.

When President Roosevelt recognized the Soviet Union back in his first term, the pledge of good behavior most desired from Moscow was a forswearing of international agitation. The Communists never gave that good behavior.

Now, once more, if we may credit not only Mr. Dulles' press conference remarks but various "inspired" stories since, President Eisenhower intends to tackle Soviet Premier Nikita S. Khrushchev personally and with utmost seriousness about Moscow's practice of "indirect aggression"—meaning attempts to burrow into, intimidate, and overthrow existing governments by means of intensive propaganda, infiltration of arms and conspirators, threats of assassination, subtle intrigues, and devious pressures.

It is very useful for Washington to let Moscow know how seriously it regards the tactics of international communism, even as it was useful 2 years ago for Sir Anthony Eden, then Britain's Prime Minister, to warn Mr. Khrushchev how seriously the British regarded the Soviet threat to their oil lifeline in the Middle East. The pattern of "indirect aggression" is, in Mr. Dulles' eyes, visible all the way from Morocco to southeast Asia and in Latin America as well. President Eisenhower is ready to tell Premier Khrushchev that this practice, if unchecked, could lead to major war.

There is a serious question whether a klieg-lighted summit conference is the best forum for a thoughtful discussion with the Soviet leader. It is also worth asking whether this kind of charge against Moscow—valid though it is—is all that the world expects from Washington at a climatic meeting of the great powers on the Middle East.

Undoubtedly, Mr. Dulles feels that now is the propitious moment, when the world is intensely watching, to unveil his great exposé of Soviet behavior.

Will the President, with all his earnestness, be able to obtain from Moscow a sudden promise to behave? The United States will be demanding that conspiratorial, grievance-exploiting international communism change its fundamental nature. Balked from military conquest by the nuclear stalemate, Moscow aggresses by indirection. Washington will be asking communism to stop being revolutionary.

As for a warning about "major war," this would be more persuasive if Washington were not at this very moment permitting Moscow to maintain a dangerous advantage over the United States in long-range ballistic missile development.

Conceivably, through the United Nations, some of the world's subversive practices could be documented and arrested; there is a plan, for instance, to set up monitoring stations to publicize before the world the lies and hates and assassination calls spewed forth by the Cairo radio. A permanent U. N. observer corps could be established, ready to mount guard against infiltration across threatened boundaries.

Some of Moscow's sinuous aggressing, however, is desperately difficult to pin down to isolate. The U. S. S. R., for instance, wins friends by loans, trade treaties, scholarships. These cannot be outlawed.

And when the delegates get right down to cases, although Egyptian-Syrian arms may have played a small role in Lebanon, and Egypt's example spurred the Iraqi revolution, still the hand of Moscow was very indistinct and distant. In fact, the street mobs and many intellectuals of the Middle East regard the Soviet Union as friend and champion. Charges of indirect aggression will not be very persuasive in that simmering area.

It is surpassing strange that Washington at this critical junction is not preparing to come forward with a much larger message on the Middle East. This is a time to have ready plans for territory neutralization, border guaranties, bans on arms shipments, economic development programs. This is a time to deal constructively with Arab nationalism. Perhaps Secretary Dulles will yet see fit to unveil the programs of this sort which other officials hint are being readied. Otherwise he will seem to have his eyes steadily fixed on Moscow the exploiter when the great grievances and problems which Moscow exploits are thousands of miles away.

Scholarship and Loan Program

SPEECH
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 13247) to strengthen the national defense and to encourage and assist in the expansion and improvement of education programs to meet critical national needs; and for other purposes.

Mr. ELLIOTT. Mr. Chairman, last night, the Delegate from Alaska, the Honorable E. L. BARTLETT, paid a call to my office to express his keep interest in this bill, and especially his concern over the fact that the bill treats Alaska as a Territory rather than as a State.

Delegate BARTLETT's question had been anticipated by the committee. As chairman of the Subcommittee of Special Education, I submitted on July 9, 1958, to the Department of Health, Education, and Welfare the question of whether it would recommend any amendments to H. R. 13247 insofar as Alaska was concerned. This was occasioned by the epoch-making decision of the Congress of a few weeks ago admitting Alaska to statehood. In reply to my letter, the Department of Health, Education, and Welfare pointed out that under Public Law 508 of the 85th Congress, Alaska will not become a State until the holding of the elections, and the issuance of the Presidential proclamation required in section 8 of the act.

So until the elections are held and the proclamation is issued, I believe that the treatment of Alaska as a Territory, as is done in H. R. 13247 is, therefore, technically correct.

Many laws administered by the Department of Health, Education, and Welfare authorizing programs of Federal assistance to States and individuals, analogous to those which would be authorized by H. R. 13247, contain special provisions on Alaska similar to those in this bill.

The Department advises me that it is now undertaking a careful study of all such provisions of existing laws with a view to developing sound and consistent policies for the treatment of Alaska which take due account of its new status as a State, and with a view to submitting to Congress such legislative proposals for amendment of these statutory provisions as may be appropriate.

Special treatment for Alaska, as a Territory, is also characteristic of many Federal assistance laws administered by Federal departments and agencies other than the Department of Health, Education, and Welfare.

The Department of Health, Education, and Welfare has assured me that its forthcoming recommendations for the treatment of Alaska, as a State, will be coordinated with whatever policies and recommendations these other agencies develop on the basis of similar studies which they are making.

So, Mr. Chairman, may I say that it is my judgment that it would not be wise for us to try to legislate further about Alaska in this bill.

So far as I am concerned, this is a matter that will have my continuing interest, and I look forward to helping enact appropriate legislation in this field.

Why Bernard Goldfine Should Be Cited for Contempt

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. HARRIS. Mr. Speaker, under unanimous consent to extend my remarks, I wish to insert in the Appendix of the RECORD for the information of the Members of the House the following statement of certain matters which should be considered in connection with the recommendation of contempt proceedings against Bernard Goldfine unanimously made by both the Special Subcommittee on Legislative Oversight and the Committee on Interstate and Foreign Commerce:

WHY BERNARD GOLDFINE SHOULD BE CITED FOR CONTEMPT

(Statement of Hon. OREN HARRIS, chairman, Special Subcommittee on Legislative Oversight of House Interstate and Foreign Commerce Committee)

There are several matters which deserve most careful consideration in connection with the Goldfine proceedings. The jurisdiction of the subcommittee; the subject of the inquiry; the manner in which the Securities and Exchange Commission is involved; and the pertinency of the questions to the inquiry which Mr. Goldfine refused to answer are topics which require explanation if we are to have a clear understanding of the significance of the challenge made to the right of the subcommittee to ask the questions cited in the report submitted to the House today.

The Special Subcommittee on Legislative Oversight of the House Committee on Interstate and Foreign Commerce was granted authority pursuant to House Resolutions 99 and 191, 85th Congress, to review, study, and examine the execution of the laws by the administrative and independent agencies of the Government, within the jurisdiction of the committee.

Resolution 99 expressly authorized the committee or any subcommittee thereof to make investigations and studies including, among others, the following matters:

"(4) Adequacy of the protection to investors afforded by the disclosure and regulatory provisions of the various securities acts:

* * * * *

"(13) The administration and enforcement by departments and agencies of the Government of provisions of law relating to subjects which are within the jurisdiction of such committee: *Provided*, That the committee shall not undertake any investigation of any subject which is being investigated by any other standing committee of the House."

Resolution 99 also provides that for the purpose of such investigations and studies, the committee, or any subcommittee thereof, may hold hearings and require by subpena or otherwise, the attendance and testimony of witnesses.

The purposes of the subcommittee and the scope of its jurisdiction has been stated in several places. By press release of Thursday, April 18, 1957, the then chairman of the subcommittee stated its purposes, the agencies to be examined by it and the subjects to be considered. On Monday, June 16, 1958, the present chairman of the full committee and of the subcommittee restated some of such purposes as follows (transcript 1553):

"The House of Representatives has charged this subcommittee with the responsibility of investigating the manner in which certain independent commissions or agencies are administering the law. We are directed to inquire if these administrative agencies are functioning within the scope of the statutes which established the independence of such agencies or commissions, if any of these agencies have improperly enlarged upon the scope of their statutory authority, whether or not any of the existing statutes require amendments in order to enable the administrative commissions properly to perform their licensing, regulatory and adjudicatory duties, if there are ambiguities in existing statutes which require correction in the public interest, and whether or not commission decisions are impartial and free from extra-record representations or pressure.

"These are fundamental questions concerning which this committee is bound to investigate and make appropriate recommendations to the Congress. This is our duty. This is our objective."

It must be remembered that except for the few constitutionally established departments of Government, the administrative and executive agencies exist only by the will of the Congress. There is no question but that Congress has the power to investigate these agencies to ascertain how they are functioning and to enact legislation expanding, contracting, or modifying powers granted to them by statute. There is also no question but that Congress may exercise such constitutional legislative authority through the medium of committees and subcommittees duly established by it.

The SEC is an administrative agency within the direct control of Congress and is subject to the investigatory powers of the committee and of the subcommittee. As I shall point out later, the questions which Mr. Goldfine refused to answer are concerned, exclusively, with the manner of functioning of the Securities and Exchange Commission; with the adequacy of the existing Securities Acts and with the eliciting of data useful and necessary to assist the subcommittee in

devising legislative proposals which it determines to be appropriate in the public interest.

On Monday, June 24, 1958, hearings were held at which Mr. Edward N. Gadsby, chairman of the Securities and Exchange Commission, its general counsel, its director of the division of corporation finance, and others, appeared and testified as witnesses. Before questioning of these witnesses the subcommittee's chief counsel said (transcript 2001):

"The hearing today concerns a series of episodes involving the Securities and Exchange Commission, the East Boston Co., and its controlled subsidiary, the Boston Port Development Co. It will be developed that, irrespective of any other issue in this case, there is a need for corrective legislation and for improvement in the administration of the Securities and Exchange statutes."

Counsel also stated:

"It is expected that in due course in connection with other cases more extensive hearings into Securities and Exchange matters will further develop the inadequacies of the present statute and allow us to evaluate and appraise whether these statutes are being administered in accordance with the intent of Congress."

Mr. Goldfine is the majority and dominant stockholder of the East Boston Co. which is registered with the Securities and Exchange Commission. He is also the dominant stockholder of its controlled subsidiary, the Boston Port Development Co. As shown in the committee report, page 11, he owns or controls more than 70 percent of the East Boston stock and 79 percent of the publicly held shares of the controlled subsidiary. In turn, East Boston owns 51 percent of the stock of its subsidiary, the Boston Port Development Co.

Companies registered with the SEC are required, under section 13 of the Securities and Exchange Act of 1934, to file with the Commission annual financial reports. From 1948 to 1956, East Boston Co. and its controlled subsidiary failed to file such reports. During this period, also, East Boston Co. and its subsidiary, the Boston Port Development Co., held no stockholders' meetings and rendered no reports to stockholders.

In April 1954, the SEC undertook legal proceedings to compel East Boston to file the necessary reports. The motion for summary judgment on this injunctive action brought in the Federal district court, at Boston, Mass., was heard on June 20, 1955. On July 15, 1955, the district judge ordered that such reports be filed by August 1, 1955. The order entered on July 14, 1955, changed the required filing date from August to November 1, 1955.

After the failure of the companies to file the reports as required by the judgment, the SEC, on November 4, 1955, filed a civil contempt petition against East Boston Co., Alwyne F. Jealous, H. Maxwell Goldfine, Roland M. Packard, and Bernard Goldfine.

On November 8, 1955, the Federal judge who had granted the motion for summary judgment in July 1955, disqualified himself. The case was then transferred to Judge Wyzanski.

On November 18, 1955, Judge Wyzanski entered an order granting the SEC's petition for contempt and imposed a suspended fine of $20,000 against East Boston Co. The contempt petition was dismissed as to the individual defendants. On December 16, 1955, the SEC received 10–K's from East Boston Co. On January 10, 1956, Mr. William H. Timbers, General Counsel of the Securities and Exchange Commission, advised the Federal court, the East Boston Co., and its officers and directors, that the 10–K's as filed were materially deficient.

On February 6, 1956, the SEC moved in court for an order that the East Boston Co. pay the $20,000 suspended fine. In so doing, the SEC submitted the affidavit of its chief accountant, alleging the failure of East Boston to file proper reports. Among other things, it was stated in the affidavit that the financial statements accompanying the reports were not certified to by an independent accountant, as required by section 13 (a) (2) of the act. It was also pointed out that the accounts receivable had not been classified to show transactions with directors and principal stockholders.

On April 2, 1956, the SEC filed an application in the Federal Court for an order to show cause why the defendant, East Boston, should not be punished for criminal contempt alleging, in part: (1) Defendant willfully failed and refused to file on or before November 1, 1955, the required reports; (2) defendant willfully disobeyed the order by filing reports which were improper in numerous respects, including the following:

(a) None of the financial statements included as part of the reports filed by the defendant were certified to by an independent public accountant;

(b) The profit and loss statements of Boston Port Development Co. included as part of said reports were false and misleading in that they understated said company's net loss for each of its calendar years;

(c) The balance sheets of Boston Port Development included were false and misleading.

Furthermore, it was alleged that uncollectible notes barred by the statute of limitations were included as current assets; interest on non-interest-bearing notes and uncollectible interest were included as accounts receivable in current assets; a defaulted mortgage receivable in the sum of $500,000 was included as a current asset with no notation as to collectibility; unupaid real estate taxes were understated by more than $18,000, and balance sheets and profit and loss statements of the East Boston Co. failed to give effect to losses sustained by its subsidiary, Boston Port Development Co.

On April 5, 1956, on stipulation of counsel for the SEC and East Boston, the court entered an order dismissing the contempt proceedings without prejudice and ordered the defendant, East Boston, to pay $3,000 in civil contempt to the Securities and Exchange Commission in reimbursement of SEC's expenses incurred by it in the proceeding against East Boston. The court also ordered that, within 90 days—from April 5, 1956—corrected profit and loss statements and corrected balance sheets for the years 1948 to 1955 should be filed by East Boston, and for the years 1947 to 1954 by Boston Port Development Co.

On November 7, 1956, the SEC filed another petition in the Federal court for an order directing East Boston to show cause why it should not be adjudged in civil contempt and for an order appointing a receiver.

On November 26, 1956, the SEC requested withdrawal of its petition for civil contempt and for appointment of a receiver on the ground that since November 7, 1956, namely, on November 15, 1956, the East Boston Co. had filed with the Securities and Exchange Commission its annual report on form 10–K for its fiscal year ended March 31, 1956.

On November 27, 1956, the court permitted the SEC's petition to be withdrawn without prejudice.

On March 23, 1956, Mr. Benjamin Brown, CPA for the East Boston Co., filed with the SEC an adjusted financial report as at December 31, 1954, for the Boston Port Development Co.

Each of the 22 questions which Mr. Goldfine refused to answer are based upon statements contained in this adjusted report on file with the SEC. The report is part of the record in the hearings before the subcommittee. Schedule B of such report is also incorporated in the committee report herein at page 16.

At page 10 and following, of the committee report herein, it is pointed out that the subcommittee is in possession of data showing derelictions by Mr. Goldfine as majority stockholder in the East Boston Co. and its controlled subsidiary, Boston Port Development Co., which have not been reached by the SEC or have not been adequately dealt with by the Commission. Data showing such derelictions is contained in the Brown CPA report on file with the SEC.

In essence, the subject matter of the inquiry deals not only with the failure of the companies to file required annual financial reports for many years and the failure of the SEC to require such filing, but also with the fact that when these reports were filed they disclosed numerous financial irregularities concerning which the Commission has no effective action. Whether this nonaction is because of inadequacies of the law or other reasons is a matter which requires most careful study. The questions directed to the witness and which he refused to answer were designed to obtain complete underlying information as to these pertinent matters.

As stated in *Watkins* v. *United States* (354 U. S. 178) at pages 206, 207:

"The Congress has practically abandoned its original practice of utilizing the coercive sanction of contempt proceedings at the bar of the House. The sanction there imposed is imprisonment by the House until the recalcitrant witness agrees to testify or disclose the matters sought, provided that the incarceration does not extend beyond adjournment. The Congress has instead invoked the aid of the Federal judicial system in protecting itself against contumacious conduct. It has become customary to refer these matters to the United States attorneys for prosecution under criminal law.

"The appropriate statute is found in title 2, United States Code, section 192. It provides: 'Every person who having been summoned as a witness by the authority of either House of Congress to give testimony or to produce papers upon any matter under inquiry before either House, or any joint committee established by a joint or concurrent resolution of the two Houses of Congress, or any committee of either House of Congress, willfully makes default, or who, having appeared, refuses to answer any question pertinent to the question under inquiry, shall be deemed guilty of a misdemeanor, punishable by a fine of not more than $1,000 nor less than $100 and imprisonment in a common jail for not less than 1 month nor more than 12 months.'"

Parenthetically, it should be noted that the Watkins case is not strictly applicable to the present matter because at page 200, in a footnote, the Supreme Court there states:

"We are not concerned with the power of the Congress to inquire into and publicize corruption, maladministration or inefficiency in agencies of the Government."

However, if the sanction of contempt is to be successful, it must be established that the witness has refused to answer a question pertinent to the question under inquiry and that the pertinency of the question to the inquiry has been brought home to the witness.

Before the 22 questions were propounded to Mr. Goldfine, and after they were propounded, the pertinency of these questions to the inquiry was fully explained to him. This appears in the committee report herein at pages 9–13 and again at pages 29–30. The witness was told clearly that the questions asked related to subjects under inquiry and study by the subcommittee relating to the Securities Acts, the rules and regulations issued by the SEC, the administrative enforcement of the law and regulations by the Commission, and the necessity or desirability of remedial legislation for the

protection of the public generally, and of minority stockholders. Also, Mr. Goldfine was given the opportunity in executive session of the subcommittee, at which his counsel was present, to reconsider his refusals to answer. This he declined.

All the questions asked Mr. Goldfine were directly related to a specified legislative purpose, and this legislative purpose was twice explained at length to the witness.

Under all the circumstances, I believe that there is no justification for the failure and refusal of Mr. Goldfine to answer the questions when directed to do so. If witnesses before committees can successfully refuse to answer questions pertaining to ascertaining the adequacy of existing laws and of their administration by regulatory commissions, the ability of Congress to enact sound laws based upon complete knowledge of pertinent facts would be most seriously impaired.

Citizenship Day and Constitution Week

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 12, 1958

Mr. THORNBERRY. Mr. Speaker, the State Bar of Texas, through its committee on American citizenship, has called for statewide observance of two highly significant events in September. These are Citizenship Day, September 17, and Constitution Week, designated by the President for observance, September 17th through the 23d.

The State bar this week communicated with officials of 190 local bar associations, urging them to help organize in their respective communities—including local civic and service clubs, women's organizations, churches, schools, city officials and the news mediums—appropriate programs which will bring about a spirit of public rededication to the great document of freemen—the Constitution of the United States.

In view of the significance of Citizenship Day and Constitution Week to freedom-loving peoples of the earth, I wish to call to the attention of my colleagues the admonitory foreword included with instructional and informational materials sent by the State bar to local bar associations of Texas:

FOREWORD

They are not alarmists who warn that once again our Nation is in grave peril. A godless, evil force not only threatens the security of the United States, but the security and freedom of the world.

The tangible and devastating force of subversion and aggression, characteristic of Communist Russia, make more significant the meaning of freedom, the most cherished of American heritages. If our cherished way of life is to endure, we must remain dedicated to the principles set forth in one of history's greatest documents: the Constitution of the United States.

What are the historic and basic concepts of constitutional government? What are the privileges of, and the responsibilities which go with, being an American citizen? The answers to these questions should be known by every American citizen, if we are to counter, effectively, Russian propaganda based on deceit, doubletalk, and plain lies.

The State Bar of Texas places equal emphasis on six long-range objectives. No. 1 is as follows:

"The preservation of representative government in the United States through a program of public education and understanding of the privileges and responsibilities of American citizenship."

Two particularly significant, closely related events will be observed in September: Citizenship Day, September 17, and Constitution Week, which has been designated by the President for observance, September 17–23.

Your bar association can and should organize your community and provide the leadership in planning and executing observance programs and activities to point up these important events.

Property on the Moon Is in Great Demand

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1958

Mr. McDONOUGH. Mr. Speaker, the proposed shot at the moon has its serious and amusing aspects according to reports from the Bureau of Land Management of the Department of the Interior that they are deluged with requests and applications for property on the moon and even on Mars.

Hope burns eternal in the human breast. Who can say what may be revealed from our exploration of outer space and the possibility of interplanetary communication and travel.

Who could have anticipated the great treasure discovered by Christopher Columbus before he landed on the shores of the Western Hemisphere, then unknown to the civilized world.

The following requests and applications indicate an amusing, serious and an avid interest in the future of outer space.

PROPERTY ON THE MOON IS IN GREAT DEMAND

(By Harry Kursh)

Now that the astronauts are getting closer to landing a rocket on the moon—the Air Force will fire one right at it shortly—the troubles of the United States Bureau of Land Management are apt to multiply.

As a matter of fact, the Bureau's troubles already have begun. Hardly a day passes without scores of letters, many requesting a homestead on the moon, arriving from all over the country.

Here are some excerpts from the letters:

"Gentlemen, I would greatly appreciate details on the cost and procedure of staking out a claim on the moon."

"DEAR SIR: I wish to file claim to those sections of the moon known as the Sea of Conflicts, Sea of Serenity, and Gulf of Dews."

"Gentlemen, please send me a deed to 5 acres of land on the moon for my four friends and me."

"SIR: Is it still possible to file homestead claims on the moon?"

Many citizens keep two steps ahead of the United States air space program, already are claiming land on other planets.

Typical is this letter received by the Bureau:

"DEAR SIR: I wish to register a claim on the planet Mars. I base this claim on the fact that I have studied this planet very thirly [sic] with telescope and in many books."

More than one American foresees good business opportunities in outer space. One wrote to say that he would be interested in obtaining the streetcar franchise on the moon; another requested all available information about land "on any of the planets or the moon * * *" to open some business."

But the Bureau of Land Management, which is responsible for granting leases and deeds for 380 million acres of the public domain in the United States, flatly refuses to accept the lunar burden. Its replies to prospective homesteaders on the moon, therefore, are discouraging.

On July 1 the Bureau began sending out this standard reply: "DEAR SIR: Thank you for your letter in which you asked about land on the moon or planets.

"It is not now, nor has it ever been, possible for anyone to make application for or obtain the rights to land on the moon or planets through the United States Government.

"The United States has as yet made no claim to any territory beyond the earth. To our knowledge, there are no specific provisions of national or international law covering outer space.

"Until there is some legal basis for regarding such lands as public lands of the United States, there is no method by which they may be officially claimed or obtained by anyone."

The Rot Goes On

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. MULTER. Mr. Speaker, although Lebanon is in the spotlight at the moment, it is not only that country which Nasser views with greed. In the following column by Joseph Alsop, Mr. Alsop points out that Libya and the Sudan are being eyed by Nasser as being vulnerable to acquisition.

I commend this column, as it appeared in the New York Herald Tribune of August 10, 1958, to the attention of our colleagues:

THE ROT GOES ON

(By Joseph Alsop)

WASHINGTON.—In its incorrigible way, the administration has been trying to tell the country that everything will now turn out for the best in the Middle East. Meanwhile, the administration is really sweating with fear that everything will shortly turn out for the worse. The signs of more trouble ahead may be itemized as follows:

Item: Apparently at the haughty request of Gamal Abdel Nasser, King Saud of Saudi Arabia and his brother, Prime Minister Crown Prince Faisal, have just received the Chief of Staff of the Egyptian Army, Gen. Hakim Amer, at the royal summer palace in the hills, at Taif.

It is known that the main subject of discussion was the return of an Egyptian military mission to Saudi Arabia, for the ostensible purpose of training the Saudi Army. The former mission was ejected from Saudi Arabia after the Egyptian military attaché was caught, red-handed, organizing terrorist groups for the overthrow of King Saud's government. It is further known that Gen. Hakim Amer paid hardly more than a cour-

tesy call on the King. Almost all his time was spent with the Crown Prince, who has been the real ruler of Saudi Arabia ever since the King's virtual abdication was forced by Nasser's customary propaganda-and-conspiracy pressures.

It seems highly likely, therefore, that the Egyptian military mission will soon rejoin the Saudi Army. In this event, Saudi Arabia's days of comparative independence are almost certainly numbered, and the transformation of the Saudi realm into another Nasser province must eventually be expected. This reading of the Saudi signs is made more likely by the further fact that King Saud's most anti-Western foreign affairs adviser, Sheikh Yussuf Yassim, is on his way to Cairo.

Item: Egypt's vulnerable neighbors to the south and west, the Sudan and Libya, have been subjected to the most extreme and flagrant propaganda-and-conspiracy pressures in the last 2 days. In both countries, the situation is rated as precarious at best.

A Nasser triumph in the Sudan will open interior Africa to Nasser and the Kremlin. A Nasser triumph in Libya will effectively rule out any peacable settlement between France, Tunisia, Morocco, and the Moslem population of Algeria. The American Strategic Air Command's most important single overseas base, Wheelus Field, will also be lost if Nasser wins Libya. The same threat, of course, hangs over the Dahran air base in Saudi Arabia, which is not used by SAC, but is invaluable for our world air transport plan.

Item: The position in Jordan is so critical that it may perhaps erupt in trouble, or even end in a surrender, before these words are printed. Not so very long ago, President Eisenhower was declaring that the security of Jordan was essential to the United States. Now the British and American Governments are anxiously talking about the need for King Hussein to abandon his little country, which his naked courage saved from Nasser and the local Communists only 15 months ago.

The idea is for King Hussein to announce that he is leaving the country (presumably in the same aircraft with the British paratroopers who are there now), so that his people can hold a free plebiscite. The Jordanians will be ironically offered the chance to invite their King back if they choose. So the surrender of Jordan will be gracefully covered up if this scheme is adopted.

The reasons for discussing this extraordinary scheme are highly practical. All Jordan's borders are now closed, and there is no access to the country except through the mud-hut port of Aqaba and by American transport overflying Israel. The overflights of Israel are the only real means of supplying the 2,000 British paratroops sent to guard Hussein against the conspiracy. After receiving a grossly threatening Soviet note, the Israelis recently withdrew permission for the overflights. In answer to strong United States protests, they have now allowed the overflights to continue, but only for a few days.

Hence the Jordanian position is literally untenable for the long pull, unless measures are taken to break the military blockade of Jordan that has been imposed by Egypt's Syrian province, the new Iraqi Government and Saudi Arabia. A partial withdrawal of United States Marines from Lebanon has not been started as yet, solely because of the desperate need to provide a kind of cover for the British troops in Jordan.

In short, the rot in the Middle East is proceeding more rapidly than ever. This was, of course, certain to happen when the British and American Governments took only the phoniest half measures to stop the rot that began in Baghdad.

Veterans' Hospital and Medical Program

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 5, 1958

Mr. ENGLE. Mr. Speaker, earlier in the session, I made a speech pointing out that the budgetary policies of the administration had, by the first of this year, resulted in the closing of 4,974 hospital beds which the Veterans' Administration is now listing as "not required to meet current operating plans." At that time, I stated that a more honest classification would be "sufficient budget not provided Veterans' Administration to operate these beds." I expressed the opinion then, and I continue to hold the opinion, that the administration is circumventing the intent of laws enacted by Congress which provided these facilities to the Veterans' Administration for the care of eligible veterans.

The House Committee on Veterans' Affairs has been concerned with this important issue and has just completed an extensive series of hearings, seeking to determine the reasons of the Administration for curtailing the veterans' hospital program. In its report which accompanied H. R. 10028, the committee stated that it was its opinion that the intent of the law enacted by the Congress is being circumvented by arbitrary administrative decisions, the result being that approximately 5,000 hospital beds made available to the Veterans' Administration for the care of eligible veterans are not being used, even though a large waiting list exists in all areas of the country.

The waiting list officially admitted by Veterans' Administration is in excess of 25,000. During its hearings, the Veterans' Affairs Committee challenged the authenticity of the Veterans' Administration waiting list and, at the demand of the committee, the Veterans' Administration produced evidence of its real waiting list, which is double that previously admitted by the Veterans' Administration and stands at about 52,000 veterans. In defending its failure to use its available beds, the Veterans' Administration has contended that there is not a demand in many areas of the country by eligible veterans for hospital care. Of course, if such a contention is to be advanced, it is embarrassing to admit the full extent of the waiting list as it actually exists.

Responsibility for closing 5,000 hospital beds in the Veterans' Administration hospital system, at a time when 52,000 eligible veterans are seeking care, must be laid squarely at the door of the White House. On April 22, 1958, the chairman of the House Veterans' Affairs Committee wrote to the President of the United States and asked the following question:

Will you please advise as to whether the closing of approximately 5,000 Veterans' Administration hospital beds * * * is being accomplished with the knowledge and approval of the President?

On June 13, 1958, the President replied to the chairman's letter and ignored entirely the pertinent questions raised by the chairman and stated that more detailed information would be provided by the Administrator of Veterans' Affairs.

During the 3 weeks of hearings conducted by the committee, the Administrator of Veterans' Affairs tried every way possible to obscure the facts of the situation, but the record is now clear that the preparation of the Veterans' Administration's budget was under direct supervision of the Bureau of the Budget and that the budget of the Veterans' Administration approved by the Bureau of the Budget and the White House contemplated a sharp curtailment of Veterans' Administration hospital facilities. When he appeared before the Independent Offices Appropriations Subcommittee to discuss the Veterans' Administration budget, Administrator Whittier made the following statement:

If the figure stands as it is now, as it has been submitted in this budget, it will mean the probable closing of a number of hospitals as far as we can estimate at this time—if the budget stands as submitted we would probably have to close seven hospitals.

The Veterans' Administration originally estimated that it would need $733,966,000 for in-patient hospital care for fiscal year 1959. This was cut to $707,100,000 by the Bureau of the Budget. In addition to cutting the operating budget of the Veterans' Administration and thereby curtailing the veterans' hospital and medical program, the administration has been seeking to curtail the program by the imposition of three arbitrary policies, as follows:

1. Veterans' Administration plans for the development of a program of care of long-term chronic or intermediate type patients will not be expanded.

2. Beds which are eliminated through alteration, modernization, or conversion programs may not be replaced.

3. Beds withdrawn from a particular use, such as the treatment of tuberculosis patients, may not be converted for the care of patients with other disabilities.

During the hearings, the Administrator of Veterans' Affairs claimed that he had secured a major concession from the Bureau of the Budget, which would allow him to convert tuberculosis beds for other purposes. Despite the claims of the Administrator, the concession by the Bureau of the Budget is meaningless, as can readily be seen from the following sentence from the Bureau of the Budget's letter conveying the authority:

The Bureau agrees that the VA shall have the right to make conversions of TB beds when there is need to convert them to other uses. Except in such instances, TB beds will be closed when they are no longer needed. In carrying out this policy it should, of course, be understood that it is subordinate to any over-riding policies which may be established by way of limitation on operating beds or daily patient load, and any financial limitations which may be imposed by reason of appropriation action."

In plain English, this means that the Veterans' Administration may convert a TB bed to other uses if it does not increase the patient load or spend any more money than it was planning to spend before the conversion. Under such a limitation, the only way that the Administrator can convert TB beds is to close the equivalent number of beds in some other hospital.

The Veterans' Administration is now preparing its budget for the next fiscal year. During the hearings, the witnesses of the Veterans' Administration and the Bureau of the Budget were repeatedly questioned concerning the intent of the administration in recognizing the rising cost of medical care. Twenty-three hospital managers of Veterans' Administration hospitals in the western States met early this year and adopted the following resolution:

The managers of the 23 Veterans' Administration hospitals, centers, and domiciliaries located in the 7 Western States have met to consider our hospital program for the next 2 years. Our deliberations have revealed a simple, stark reality. Current appropriations will not support presently legislated benefits and accepted concepts of veterans' medical care. The floodtide of price increases on all fronts is recognized throughout the hospital field. Voluntary hospitals, State hospitals, and university hospitals have experienced the effect of rising costs. With the possible exception of a few State hospitals, the costs are reflected in large rate increases and substantial appropriations each year. In nongovernmental hospitals these costs are passed on directly to the patients.

Our Veterans' Administration hospitals have not received funds over the past several years sufficient to keep abreast of these ascending costs. We are endeavoring to maintain a medical program equal to that offered in the community on preinflation appropriation levels. Neither have the managers funds adequate to discharge their specific responsibility in protecting the Government's investment in the physical plant and in equipment. We have economized to the extent that essential care to our patients is inevitably deteriorating.

Our 23 hospitals must have a substantial increase in fiscal year 1959 and a specific increase of $10 million for 1960 over and above the appropriation for 1958 in order to retain an acceptable level of medical care and to maintain our physical plants. These sums do not include whatever might come in a general pay raise for Federal employees or the automatic wage boost for the blue-collar workers.

Unless these sizable sums are made available, Congress must face these alternatives: (1) Lower quality of medical care and further deterioration of the physical plants, (2) reduced beds with the reduction in patient load; close selected hospitals throughout the country or close whole sections of beds in many hospitals.

We therefore unanimously resolve that the Bureau of the Budget and the Congress of the United States be apprised of this basic issue and be requested to take clear-cut remedial action.

This resolution was read to the Administrator of Veterans' Affairs and the Bureau of the Budget. However, no assurances were received that the views set forth by the 23 western Veterans' Administration hospital managers will be given full consideration in the preparation of the budget.

I agree with the expression of the committee in its report that new legislation on this subject is not necessary. Congress created a Veterans' Administration hospital system with a rated bed capacity of 127,832 beds, yet Veterans' Administration is operating only 120,526 of these beds. It is understandable that there will be a few beds unavailable for patient care at all times because of modernization and conversion work and, in some cases, the necessary medical personnel cannot be recruited. Aside from beds closed for these purposes, there is no legal basis for the Veterans' Administration withdrawing beds from use by eligible veterans purely as a result of the arbitrary administrative determinations of the Veterans' Administration, the Bureau of the Budget, and the White House. If the Veterans' Administration persists in flaunting the intent of Congress in this regard, it will be necessary that Congress enact a bill such as H. R. 10028, reported by the committee, which will set a specific number of operating beds and specify the average daily patient load to be cared for. In the committee's bill, it recommended a minimum of 125,000 operating beds to provide care for an average daily patient load of 113,000. If the policy recommended by the committee is carried forward, about 4,500 of the beds withdrawn from use by the Administration would be restored to operation.

The veterans hospital and medical program is second in importance only to the program of compensation for the service-connected disabled veteran. There is nothing of greater importance we can do for a veteran than to give him medical care when he is sick and unable to provide for himself. The veterans hospital and medical program should enjoy the highest priority, and it is my intention to do everything that I can to seek restoration of the beds which have been arbitrarily withdrawn from use by veterans by the Administration.

Plight of the Railroads

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 9, 1958

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks I include herewith an editorial by Mr. Elmer Price in the Lincoln County (Oreg.) Leader:

PLIGHT OF THE RAILROADS

We are glad to see that Congress and many States at long last have begun to take up the plight of the railroads of the Nation and attempt to solve some of the problems which have been strangling them for many years.

The railroads of the country had become the whipping boy of a host of Federal controls, State legislation, of counties and cities through which they operated, and of restrictive and oppressive union controls.

So serious had the problem become that few railroads have managed to operate profitably in recent years.

Some suggested as a solution that the rails should be taken over and operated by the Government. But this has never solved the basic problem of a business operating in the red. It merely means that Government should subsidize them, and, as in most Government functions, add the bills on in the form of higher taxes.

That railroads have been regulated to death goes without saying.

Being a monopoly enterprise, in many cases, they have been subjected to an overdose of Government regulation. And yet, because they are actually private enterprises, high taxes are piled on them not only by States, but by counties and cities.

And because they are one of the Nation's older and mature industries and long liberal in their thinking toward their employees, they were hamstrung down through the years by the demands and impositions of the strong unions which dominated them.

Toss all of it into the same kettle and one comes up with a strangling brew. It is the story of an industry so overregulated, overtaxed, and overunionized that its entire future is in jeopardy.

Add to this the industry's own basic lack of imagination in promoting its services to the public and we have one apparently dying on the vine.

Yet railroads are a basic industry and vital to the continued growth and development of the Nation. They need help and should get it as soon as possible.

Lone Tree Cemetery

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. MILLER of California. Mr. Speaker, during a recent visit to California I had the privilege of attending the Memorial Day services held in Lone Tree Cemetery in Hayward.

Lone Tree Cemetery is on the crest of one of the gently rolling hills that form the saucerlike Castro Valley. It is a beautiful wooded spot now completely surrounded by rambling ranch-type homes. This was not always so. Like many such institutions it was once way out in the country. It derives its name from the fact that once only a single tree grew within its boundaries.

One of those who participated in the services was my old and good friend Col. N. W. Armstrong. Colonel Armstrong was born not far from the site of Lone Tree. He has served his country honorably from the Mexican border to World War II. And, like any old soldier, chaffed and squirmed when the powers that be ruled him out of the Korean incident.

Colonel Armstrong is an old newspaperman and I asked him to prepare a story on the history of the cemetery and the services we attended. As one who loves and reveres Alameda County and her institutions, he did so. I am pleased to preserve it in the CONGRESSIONAL RECORD:

LONE TREE CEMETERY
(By Col. N. W. Armstrong, U. S. Army (Retired))

Lone Tree Cemetery at Hayward, Calif., is one of the historical landmarks of Alameda

County. It was established in 1870 by the purchase of 34 acres of land by an association of leading citizens formed for this purpose. Original incorporators of the association were George Brown, Thomas Cunningham, H. W. Rice, C. Ward, and E. Dole. Prior to 1870 burials of Protestants took place at nearby Squatterville, San Lorenzo, or in Oakland.

The cemetery is located about a mile and a half east of Hayward and commands a splendid view of Castro Valley to the north and the city of Hayward to the west. Lone Tree, according to legend, was the only tree in a certain location of the cemetery where at one time a lovelorn Indian maiden hung herself.

Many prominent pioneers have been laid to rest in Lone Tree including William Hayward, after whom the town of Hayward was named. One studying the grave markers will find names of immigrants who came to California in the first days of statehood from every country of Europe, indeed from all over the world. Private mausoleums contain the remains of entire families of pioneers.

Early in the history of Lone Tree a section known as Veterans Plot was set aside at the request of the Hayward Veterans League, a group of Civil War veterans. Members of the Grand Army of the Republic kept the plot in good condition for over half a century, planting lawns, and shrubs, and laying sidewalks.

After the last Civil War soldier was laid to rest, veterans of the Spanish-American War continued the upkeep of Veterans Plot. Today a committee composed of veterans of all wars has undertaken its care.

Many of the leading citizens of the area have shown a keen interest in this patriotic program. Among them are Capt. Harry A. Bradford, son of the late Alonzo Bradford, a Civil War veteran who is buried at Lone Tree.

Allen Strutz who now carries on the tradition of maintaining the cemetery is due a great deal of credit for his determined efforts in this enterprise. Mr. Strutz is prominent in civic and charitable affairs and a veteran of World War II.

Each year on Memorial Day appropriate exercises are held in this historic spot for the honored dead who rest there. Children from the public schools and ladies from the American Legion and Veterans of Foreign Wars Auxiliaries together with their families decorate every grave with fresh flowers.

For more than 50 years, starting during his days in grammar school, the writer of this article has participated in the Memorial Day ceremonies. The only exceptions were absences during service at the Mexican border and in World Wars I and II.

A typically well planned program was presented on Memorial Day, 1958. The committee responsible for arrangements was comprised of Allen Strutz, chairman, Bernie Overmiller, Anthony Ojeda, George Emerson, Edna Black, Arnold Luebeker, Harley Turkington, Burhl Harwood, William Brun, Arthur Varella and Joseph Spina. Mrs. Norene Overmiller headed a committee in charge of decorating the graves.

Judge Thomas Lester Foley, a past commander of Hayward Post 68, American Legion, delivered the principal speech of the day.

Veterans of the Spanish-American War headed by Comrade John Morgan cooperated with representatives of the Disabled American Veterans, Veterans of Foreign Wars, World War I Barracks, Order of the Purple Heart and the auxiliaries of all these splendid organizations in contributing time and talent for the occasion. Through the generosity of the musicians union the Hayward Municipal Band conducted by Leonard Rapose presented a musical program and concert.

Rev. James R. Swanson, pastor of Bethel Assembly of God Church, offered the invocation. The pledge to the flag was led by Andy Olivan, of Boy Scout Troop 528. Joe C. Martin, well known vocalist, led the audience in singing America.

General Logan's order and address were read by Robert Pomeroy, commander of World War I Barracks 306. A quartet from Epiphany Lutheran Church Choir offered several vocal selections." F. J. McNaughton, commandant, Marine Corps League of Hayward, read Lincoln's Gettysburg address.

A procession from the main gate of Lone Tree to the veterans plot was headed by the colors of the several veterans groups. The Marine Corps League and the Hayward Municipal Band was in the line of march followed by veterans and those attending the ceremonies.

Congressman GEORGE P. MILLER, Eighth District, California, was among the distinguished visitors in the audience. Congressman MILLER is a former first vice commander of the department of California, American Legion, and charter member of the Veterans of World War I, Oakland Barracks.

Also present were former Mayor John Purchio, of Hayward, a member of Hayward Post 68, American Legion; Peter J. De Bernardi, Sr., chairman of the Hayward Memorial Building Committee; Louis J. Silva, recipient of the Distinguished Service Cross in World War I.

Dr. Nelson Clemens, prominent Legionnaire; George Dasher, whose father rests in the Grand Army section of the veterans plot; Publisher George Henry Oakes, whose grandfather fought side by side with General Taylor in the Mexican War; George Perry, World War I veteran, and Del Brennan, who wears the coveted Purple Heart, also attended the ceremonies. Former Mayor Art Phillips, a veteran of World War I and prominent Hayward businessman and civic leader, played in the municipal band.

Judge Foley voiced the thoughts and sentiments of many of us at this memorable occasion. The text of his inspiring address follows:

"MEMORIAL DAY SPEECH GIVEN BY JUDGE THOMAS LESTER FOLEY AT LONE TREE CEMETERY, MAY, 30, 1958

"Ladies and gentlemen, 10 years ago today, in 1948, it was my privilege to speak here on this occasion. It was shortly after World War II. We thought of Iwo Jima, Pelielu, of the Battle of Britain, of the Battle of the Bulge—we reflected on the battles of World War I and we discussed the spread of communism in western Europe. Most of us had just returned from service in World War II.

"As I look about me today, I see many of the same friends and the same faces of 10 years ago, and I think of you men, then young, having just established yourselves after World War II, full of ambition, full of hope for the future, intensely patriotic, and most respectful of the dead we come here to honor.

"Now your positions in this community have given you greater responsibilities, and your families greater cares, yet each year most of you have been present on this occasion to honor those friends of ours, who so unselfishly served their community, their State, and their Nation.

"I want you to contemplate and reflect on those friends and comrades who served our country, who were here with us on that occasion 10 years ago, who are not here today—comrades and friends who stood here with us honoring our service heroes in the last few years, who have joined those heroes and we in turn are honoring them today. I can't help but think of Spike Shannan, Jesse Blankenship, Charlie Jarvis, Dave Pressley—to name a few—and of all the rest. I think of all the sad trips to San Bruno National Cemetery that many of you have made with me during these past 10 years, to say goodbye to comrades that have stood here with us on this occasion in the past.

"For these reasons this holiday and this service has ceased being a meaningless abstract holiday, but has become to me, and I am sure to you, a sad but warm personal occasion.

"This holiday is the most beautiful holiday on our national calendar. It is the only holiday that has not been corrupted by brash commercialism—it is a holiday that brings us closer to God, closer to our deceased comrades, and closer to each other because we have joined together to honor them today.

"It is not necessary for me on an occasion such as this to sermonize and pontificate, and try in my humble way to inspire those present, for the mere fact of your presence on this solemn but happy occasion is indicative of your intense patriotism, loyalty to your country, and respect for those who have gone before you.

"However, in paying respect to our deceased comrades, let us reflect on the horrible history of the past 10 years.

"Not one of us could have anticipated or foreseen in 1948, that in a few short years, once again, we would be enlarging the rolls of our honored dead in that bloody conflict of 1950, 1951, and 1952, called the Korean war.

"On this occasion in 1948 we were worrying about the spread of communism in the United States. We had not yet apprehended and convicted the Sobels and the Rosenbergs and their ilk. Not one of us could have anticipated or foreseen the spread of communism through Western Europe, the Middle East, Asia, Indochina, and now in South America.

"Who could ever have dreamt in 1948 that in 1958 the Vice President of the United States would be stoned by Communist students while on a goodwill mission in countries of our own Western Hemisphere.

"When I think of the peaceful years of my childhood until 1917, and of the peaceful years of the twenties, and of the peaceful though difficult years of the thirties, it is hard to believe the bloody horror of the forties and the fifties and the condition of our world today.

"I have purposely omitted today any reference to the great wars, the great battles of our country's brilliant historical past. In all humility I have tried within my inadequate abilities to bring about a realization that this holiday is not only a time in which we revere our honored dead, is not only a holiday when we review our historical past, but a holiday that is ever present to those of us who each year join on this occasion in Lone Tree Cemetery.

"It is a holiday when we forget our personal cares, when we forget our personal problems, it is the holiday when we rededicate ourselves to our community, our State, and our Nation."

Capital Gains Tax

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. WILSON of Indiana. Mr. Speaker, I spoke before this body on July 30 relative to the widespread public response I had received to a bill—H. R. 12709—I introduced on May 27 proposing a 50-percent reduction in the present Federal capital gains tax.

Frankly, I am surprised by the extent of this response. To date I have had hundreds of letters and telegrams from highly responsible individuals, bankers, financial and small business institutions—and they all endorse my proposal as a "shot in the arm" for the overall American economy.

This is very definitely a tax reform measure to create new jobs for the American people and additional tax revenue for the Government. It will do exactly that, because it will encourage investors to liquidate present holdings and reinvest in new enterprises and in small business. I short, it will set free a vast amount of investment capital now immobilized by an excessive tax rate which actually amounts to confiscation.

As I stated in my July remarks, Mr. Speaker, I am not going to press for passage, or even committee consideration, of this bill during the present session of Congress. My purpose now is to arouse interest in the proposal, with the objective of reintroducing it early in the 86th Congress. In the meantime there will be instituted a more comprehensive survey as to its probable effect on the national economy.

I wish to emphasize that the very term, "capital gains," is misleading in that it intimates such profits are socially evil and should be heavily penalized. For the most part, this tax is not a tax on income. It is largely an outright levy on capital. The gain or profit involved may have resulted principally from currency debasement and Government-induced inflation.

Canada, Great Britain, France, Germany, and other major nations do not impose such a tax. Why should we do so? Perhaps it was originated before our corporate tax rates were jacked up to 52 percent, and was designed primarily to collect taxes on income of corporations that was not distributed as dividends to shareholders. As long as there is a corporate income tax, there is no excuse for a capital-gains tax on long-term stock transactions.

If the intent of Congress in continuing this law on the statute books was to help destroy investment incentive, job security, and new job opportunities, it has succeeded. I am positive, Mr. Speaker, that such was not the will of Congress.

Furthermore, this tax was not designed to cruelly confiscate, as it does, the assets of elderly owners of homes and farms who, having raised their families, wish to sell their holdings and live in smaller and more economical circumstances.

We all should realize, Mr. Speaker, that the essence of private American capitalism lies only in the ability of some of us to produce more than we consume and put the difference to work in hope of a fair return in providing, directly or indirectly, job opportunities and better living standards for less fortunate people. Unless this system is to perish in favor of some form of statism, the laws of this land must continually encourage individual thrift, savings, and investment.

The capital-gains tax destroys this incentive by sterilizing huge pools of investment capital, large portions of which would otherwise be employed in new and small-business enterprises, thereby creating new jobs.

For the benefit of my colleagues, on whom I will call for support of this overdue legislation, I wish to herewith insert excerpts from additional letters I have received from highly qualified business leaders and investors throughout America.

The excerpts follow:

"Your bill, H. R. 12709, is certainly a fair one, and I am hopeful that the national survey will bear out your opinion that the Federal Treasury will not lose revenue if it is enacted. Strengthened by such a report, your bill should gain support and ultimately become law." (C. R. Gamble, president, Brown Shoe Co., St. Louis, Mo.)

"I know it is not necessary to tell you that a businessman will concur in your objective. We believe that anyone who is a student of economics will subscribe to the fact that the tax on long-term capital gains deters progress in the American system of individual accomplishments." (F. S. Elfred, chairman, Peabody Coal Co., St. Louis, Mo.)

"I certainly heartily agree with your view that the present long-term capital gains tax is largely a levy on capital and not on income and tends to sterilize billions of risk capital, a substantial portion of which would otherwise find its way into investment in new and small businesses, thereby providing many new job opportunities." (Kendrick R. Wilson, Jr., president, Avco Manufacturing Corp., New York.)

"Please be advised that I am in complete accord with this bill and shall support it in any manner that I can." (Samuel G. Rautbord, president, American Photocopy Equipment Co., Chicago, Ill.)

"I heartily endorse your bill. It will be a step in the right direction." (J. S. Fluor, president, the Fluor Corp., Ltd., Los Angeles, Calif.)

"As a matter of fact, the complete elimination of the capital gains tax would provide for a free and unfettered movement of capital assets. This, in turn, would result in an increase of equity funds for the purchase of new capital improvements. The amount of revenue involved in the so-called capital gains tax is not, and should not be, the controlling factor; rather the emphasis should be upon its effect on the economy of this country." (William L. Keady, San Francisco, Calif.)

"From personal contacts and experience I can assure you that this bill would release hundreds of thousands of dollars in this area. I have many friends that are sitting tight on very substantial investments that they would like to dispose of. I know of no easier, painless way of raising funds than through a change in law such as your bill provides. Second, I am positive the bill would increase the tax money to the Federal Government tremendously and in a way that no one could take exception to." (Milton H. Frank, vice president, Franklin Van Sant & Associates, Madison, Wis.)

"I thoroughly agree with you that the present capital gains tax rate of 25 percent does have the effect of retarding investment, particularly in small business. There is no question in my mind but that a reduction in the capital gains tax would encourage investment to the point of providing job opportunities." (Dan Gerber, president, Gerber Baby Foods, Fremont, Mich.)

"You indicate your bill rests upon an assumption that the rate reduction in question will not reduce the yield to the Treasury Department of this tax but will, instead, actually increase it. Accepting this assumption, I do not think there is any question but that your bill is a meritorious one." (C. J. Fitzpatrick, president, Chicago & North Western Railway System, Chicago, Ill.)

"I favor a bill which provides that the tax rate on capital gains be greatly reduced from the maximum of 25 percent, or be eliminated. My reasons are that such a tax has the following faults: (1) It mixes capital and income; (2) it freezes investment; (3) it prevents Government receipt of taxes in proportion to current ability to pay; (4) it greatly reduces the value of the stock market as a social institution for encouraging investment and appraising the value of invested capital; (5) it causes great injustice to savers and investors in times of inflation; (6) it interferes with saving." (Lewis H. Hanley, economic consultant, Port Washington, N. Y.)

"With regard to your bill, I agree that the tax on long-term capital gains is largely a levy on capital rather than income. I also agree that it unfairly penalizes elderly owners of homes and farms. I agree that a serious national survey to study this problem would be of great value." E. L. Teale, president, New York Shipbuilding Corp., Camden, N. J.

"I have felt for a long time that our present method of taxing capital gains—gains from appreciation in value of property disposed of—is a shortsighted one and needs drastic revision. I am happy to learn that you are attempting to bring about some change in the present law." (F. J. Blaise, Asst. secretary-treasurer, the Pure Oil Co., Chicago, Ill.)

"Basically, Mr. WILSON, I believe that Congress faces the necessity of reducing basic Government expenditures as well as reducing the tax rates on capital gains. It appears that the two go hand in hand." (W. R. Persons, president, Emerson Electric Manufacturing Co., St. Louis, Mo.)

"Your proposal has been advocated on a number of occasions by the securities exchanges and should be of real interest to investors. It is clear that the tax burden carried by corporations and by the American people today is very heavy. We recognize, of course, the pressing problems in meeting the heavy costs of Federal Government, but we feel strongly that the tax structure must preserve the incentives necessary for the continued dynamic growth of this Nation. Accordingly, any progress toward reducing the tax burden and distributing it more equitably would, in our view, be beneficial to the overall economy." (F. R. Kappel, president, American Telephone & Telegraph Co., New York.)

"Your bill would go a long way toward freeing equity capital markets from the artificial restrictions created by the 25-percent tax on long-term capital gains. If, as seems probable, its enactment would increase rather than decrease tax revenues, it would certainly be a boon to our economy." (A. S. Glossbrenner, president, Youngstown Sheet & Tube Co., Youngstown, Ohio.)

"Although I would like to see general relief from oppressive high taxes which are destroying the incentives of individuals to work, I nevertheless am in accord with your proposal. It is a step toward what I think should be an objective—namely, to abolish entirely all taxes on capital gains." (A. C. Ruber, president, Union Oil Company of California, Los Angeles, Calif.)

"This bill, which would reduce the capital-gains tax to 12½ percent, would, I believe, result in a substantial improvement in the Government's system of taxation. The present tax has not only frozen investors into many securities, but has also prevented such venturesome investors from supporting the new and speculative enterprises which are so necessary for the country's growth and prosperity." (Ernest J. Howe, president, Rochester Gas & Electric Corp., Rochester, N. Y.)

"I want to commend you for undertaking the task of securing the enactment of this legislation. The present tax rate no doubt slows market activities in property and securities in which the transaction would come within the classification of long-term gain or loss. Legislative action that will stimulate trade in that field will be helpful to our economy. It may very well be that the increase in trade resulting from the enactment of such legislation would actually increase the amount of taxes paid to the Federal Government. Certainly any plan that has a possibility of reducing the national debt should be supported." (Paul B. McKee, president, Pacific Power & Light Co., Portland, Oreg.)

"It is clear to my associates and to me that any reduction in—and preferably the elimination of—the capital-gains tax will stimulate investment in new and small business." (Charles T. Silloway, president, Chemway Corp., Mountain View, N. J.)

"It is my opinion that all taxes are too high at the present time particularly those paid by corporations and individuals who have sufficient income to supply the capital to continue this country's growth. The long-term capital gains taxes are, of course, applicable to these classes of taxpayers." (F. S. Hales, president, Nickel Plate Road, Cleveland, Ohio.)

"There would seem to be few situations where a tax can be decreased and result in added revenues to the Government, but from the evidence I have it seems that enactment of H. R. 12709 might do just that. Should the contemplated survey indicate that the Federal Treasury would not lose money I personally believe that the proposed legislation should be enacted as speedily as possible." (Reuben E. Sommer, president, Keystone Steel & Wire Co., Peoria, Ill.)

"I share very strongly the point of view expressed in your letter of July 18. I am also firmly of the conviction that a reduction in the tax rate on long-term capital gains would actually result over the years in a very substantial increase in tax revenues." (F. Ritter Shumway, president, Ritter Co., Inc., Rochester, N. Y.)

"I would think that this would be a worthwhile piece of legislation providing it did not materially affect the revenue to the Treasury Department." (C. S. Parke, president, the Harshaw Chemical Co., Cleveland, Ohio.)

"The present working of the capital gains tax in effect accelerates the trend toward the formation of larger and larger business complexes and makes increasingly difficult the role of smaller business in the economy. As I see it, the reason for this is that investments, already now long standing in the major and older corporations, are, in effect, locked in. The owner of these equities pays an enormous penalty in withdrawing his investment and placing it elsewhere, perhaps in a smaller enterprise, even though the smaller enterprise may, and often does, pay a higher rate of return. This prevents the smaller enterprise from obtaining equity capital, with a resulting disadvantage to its growth and future profitability. I am sure that you are going to be able to assemble some very convincing evidence in support of your program and you should be confident, I would think, in having the backing of every thinking individual in the United States." (Austin Goodyear, New Canaan, Conn.).

"With reference to your letter of July 18, I feel that your suggestion that the tax rate on long-term capital gains be reduced from the present maximum rate of 25 percent to a rate of 12½ percent would be a constructive amendment to our tax law and would probably result in increased tax revenues to the Federal Government." (Ernest R. Acker, president, Central Hudson Gas & Electric Corp., Poughkeepsie, N. Y.)

"I am interested in the bill you plan to reintroduce in the next Congress, and particularly interested in the national survey now being conducted. If the survey does convincingly indicate that the Federal Treasury will gain by this tax reduction, I and other businessmen cannot but endorse the move heartily." (Robert S. Solinsky, president, National Can Corp., Chicago, Ill.)

"We believe your measure is a very important step forward. We also think you are correct in your position that the Government itself will not lose in total revenues collected, even though this tax itself is reduced or eliminated. The removal of the tax, we think, would tend to create an economic environment in which people would be willing to take risk, thereby producing taxes on income—if they did not have to worry about the taxing of resulting capital gains." (W. J. Good, executive vice president, the Trane Co., La Crosse, Wis.)

"Your idea is excellent as it certainly will stimulate the turnover of capital. It would appear to me when an incentive is provided that will stimulate investments to create capital gains the result is bound to mean a gain eventually for the Federal Treasury." (George J. Pecaro, president, the Flintkote Co., Inc., New York.)

"I strongly support H. R. 12709 which you have introduce to the House. It is my opinion that the 25 percent capital gains tax results in a stagnation of billions of dollars of risk capital, which are sorely needed by the country. As investment bankers, we are constantly reminded that successful investors find the capital gains tax a barrier in the efficient use of capital funds. Lowering the capital gains tax to 12½ percent would accelerate the conversion of successful investments into new areas of risk, and attract funds to the risk capital field because of the added opportunity for a return commensurate with the risk. I believe it is entirely possible that the reduction in the capital gains tax would result in a larger total tax revenue from this source. Even more important to the Nation would be the increased availability of funds for new fields of investment." (Howard Butcher III, Butcher & Sherrerd, Philadelphia, Pa.)

"In my opinion there should be no place in our tax structure for a capital-gains tax. It is a confiscation of capital and, as such, is economically unsound. Many people believe, and I am inclined to agree, that its abolishment would ultimately produce an increase of revenue rather than a loss to the Treasury. We believe your program is constructive and we thoroughly endorse your opinion as to the benefits which H. R. 12709 would provide." (Frank L. Magee, president, Aluminum Company of America, Pittsburgh, Pa.)

"Agree 100 percent with your philosophy that a reduction of the capital-gains tax from 25 to 12½ percent would not only be constructive from the taxpayers' point of view, but nationally as well, because I think, without question, it would increase the tax revenue." (C. E. Kohlhepp, president, New Jersey Power & Light Co., Denville, N. J.)

"I think your ideas are very good and trust that the bill (H. R. 12709), which you have introduced in Congress, will meet with success." (A. E. Heimbach, president, General Railway Signal Co., Rochester, N. Y.)

"I thoroughly agree with your purpose in introducing a bill (H. R. 12709) to reduce the tax rate on long-term capital gains to 12½ percent. It has seemed reasonable to me that doing away with what amounts to a penalty on the use of capital would free capital for greater use; consequently, it would appear logical that a reduction in this levy would actually increase the revenues to the Government from this source." (A. Lightfoot Walker, president, Rheem Manufacturing Co., New York.)

Is a Co-Op Apartment for You?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 13, 1958

Mr. MULTER. Mr. Speaker, with cooperative apartments increasing in popularity, the following article which appeared in Today's Living of August 10, 1958, is most informative and timely. I commend its reading to the attention of our colleagues:

IS A CO-OP APARTMENT FOR YOU?

(By Arthur Owens)

Would it cost you less than renting? How much money would be tied up? Could you sublet your apartment? Could you eventually sell it? How much would you save in taxes? How much say would you have in running the building? Could you remodel as you saw fit? Would you have a voice in picking your neighbors?

Growing numbers of Americans are finding a solution to their personal housing problems in cooperative apartments. In the New York area alone, some 35,000 families have become co-op owners since World War II, and similar housing for another 27,000 local families is now either under construction or in the planning stage.

Why this sudden trend to co-ops? As one answer, consider the case of Bill and Edna Turner:

For years the Turners had lived in a small but comfortable apartment on New York's East Side. They liked the convenience of city living. But they'd become more and more irritated at their landlord's apparent reluctance to make needed repairs. And they couldn't help resenting the fact that they had nothing but canceled checks to show for the thousands of dollars they'd paid out in rent over the years.

Sure, they'd considered buying a split-level in Suburbia. But despite the obvious advantages of home ownership, they probably wouldn't have been happy living on Long Island or in Connecticut. For one thing, it would have meant leaving most of their old friends. For another, Bill just wasn't the type to enjoy spending an hour or so on a commuter train to come home to an overgrown lawn.

What the Turners obviously wanted were the advantages of both home ownership and apartment dwelling without the drawbacks of either. Surprisingly, they're now getting exactly what they wanted—without moving out of the city.

They have bought a cooperative apartment.

By doing so, they have eliminated the landlord's profit. So their monthly costs amount to less than they were paying as rent. And they can reduce expenses still further by taking the same type of income deduction for real estate taxes and mortgage interest that they would have been entitled to as homeowners. What is more, they will be acquiring an increasing amount of equity in their apartment. This may be turned into cash if they ever decide to sell.

Besides these economic benefits, the Turners and their fellow tenant-owners are virtually guaranteed permanent occupancy. And they can have the kind of maintenance and service they want—so long as they are willing to pay for it.

Their approach to the housing problem is not a new one: Cooperatives have existed for more than a century in England—and for more than 50 years in New York City itself. They did not become popular in this country

though, until the 1920's. Then, following the stock market crash in 1929, resale prices plunged. As a result, co-ops fell into disfavor, although the basic values were still there. It was not until about 15 years ago (when safeguards were provided and when the Federal income tax laws were revised to permit co-op owners to deduct their share of interest and property taxes) that cooperative ownership really started to snowball.

NOT ALL IN LUXURY CLASS

Perhaps the most significant fact about the current uptrend is this: More than half the cooperative apartments built in recent years have been planned expressly for middle-income, rather than upper-income families. Here is why:

A few years ago the Federal Government realized such families could no longer afford the rents then being asked for most privately owned residential apartments. So it authorized the Federal Housing Administration to insure long-term, low-interest mortgages on new co-op. This made it possible for private developers to put up attractive apartment buildings without investing much cash, and to sell them at prices most people could pay.

Meanwhile, the owners of many luxury apartment buildings found it more profitable to sell them to cooperative groups than to go on operating them as rentals.

Today cooperative housing is available to all but the lowest-income groups. A New Yorker, for example, can pay a small fortune for a cooperative palace—or he can buy a comfortable four-room apartment for about $1,000 down and $110 a month, including gas and electricity.

Assuming you can afford a co-op apartment, should you consider buying one? The answer is not simple. To help you decide, let us see how a typical cooperative works:

The plan of operation will vary somewhat according to whether it's an FHA-backed, middle-income project or a luxury building—so-called because of some special feature such as an exceptional view, a fashionable address, or maid service. We'll focus first on the typical luxury co-op. Later we'll see how the typical FHA project differs.

WHAT YOU'D REALLY OWN

As a tenant, you don't actually own the apartment you live in—but you have most of the rights and obligations of ownership. What you do own is a block of stock in a corporation set up to operate the building on a noprofit basis. This, in turn, entitles you to a long-term, renewable "proprietary" lease. You may continue to occupy your apartment as long as you hold the stock allocated to it. In other words, an individual apartment and the stock with it are inseparable.

The co-operative corporation's chief purpose in issuing stock is to raise money to meet that part of the purchase price of the building that's not covered by the mortgage. This amount (known as total equity) is equal in value to 100% of the corporation's stock.

Once the total equity has been determined, the selling agent decides how many shares of stock will be issued altogether. He then apportions the shares among the various apartments according to what he judges to be their respective rental values. Thus, if you selected a large, sunny suite overlooking a park, he'd naturally assign more stock to it than he would to a small, dingy apartment that boasted a fine view of the neighborhood delicatessen.

The original equity, or purchase price, of your apartment is determined in this way: The selling agent first divides the total equity by the total number of shares of stock to establish the value of one share. He then multiplies this figure by the number of shares allocated to you. The result is the amount you pay for your right to a proprietary lease.

YOUR MONTHLY CHARGES

You pay no rent in the usual sense. But you do pay a type of monthly rental that's usually called a "maintenance charge," representing your share of the corporation's estimated cash requirements for operation, maintenance, interest and amortization on the mortgage, real estate and other taxes, insurance, and a reserve for contingencies. The percentage of total maintenance charges that you pay is based on the number of shares of stock you hold.

If you're buying into a new building, you may sign a contract while it's still in the blueprint stage. You won't have to pay any maintenance charges except on your own apartment, and then not until you take possession. Reason: The seller normally assumes financial responsibility for the maintenance of any units that remain unsold when the cooperative corporation takes title. (Later he tries to recoup his expenses by selling these apartments for more than their original prices.)

When you do start paying maintenance charges, you'll find the amount is by no means constant; it fluctuates along with the co-op's expenses. But you have some indirect control over costs and all other policies except those covered by the lease.

WHO RUNS THE BUILDING?

Since it's impractical to call a stockholders' meeting to decide every minor question that comes up, the tenant-owners elect a board of directors—usually from their own ranks—to represent them. The board hires a professional managing agent, who operates under its direction. The agent's job is to see that the building is run the way the tenants want it run, and to prepare the annual budget.

The board's responsibilities are mainly supervisory. It must approve all changes in the budget, in operating policies, and in the building itself. Its approval is also needed before any tenant-owner can sublease or resell his apartment.

What happens when your proprietary lease expires? As all the other tenants' leases expire on the same date, this question, too, must be decided by a vote. If a majority so decides, the property can be sold and the net proceeds distributed among the members of the co-op. Generally, though, all leases are renewed for another long term.

That, briefly, is how the typical luxury co-op works. The FHA-approved project operates in much the same way. But from the point of view of the tenant-owner, according to Herbert Fischbach of Herbert Charles & Co., New York, specialists in this field, there are these differences:

Most important, perhaps, is the cost. A New Yorker can buy an apartment in an FHA co-op for about $500 a room equity and monthly carrying charges of about $35 a room. Comparable housing in a privately financed building, on the other hand, would cost him approximately twice as much. One reason for the difference: FHA mortgage terms are generally more favorable. Another reason: The developer's profit on an FHA co-op is limited by law to a fair fee for putting up the building.

Veterans get preference in the purchase of an FHA-approved apartment. And they don't lose any of their privileges under the GI bill.

Whereas the proprietary lease on a luxury apartment may run anywhere from 15 to 99 years, the FHA tenant signs an occupancy agreement that's effective for only about 3 years. But the term of the lease makes little difference, since both types are renewable.

Profits from resales of FHA-backed apartments are limited by Government regulations, but with privately financed apartments there's no limit. Also, the FHA co-op corporation itself has a 30-day option to buy an apartment before it's offered for resale on the open market.

WHAT YOU STAND TO GAIN.

Now that we've examined the principles of both types of cooperative ownership, let's take a closer look at their advantages, drawbacks, and possible pitfalls. First, the advantages:

You're assured of permanent occupancy. (That is, of course, unless a majority of the stockholders vote to sell the building—which isn't likely to happen—or unless you can't meet the payments.) So, unlike a rental tenant, you don't face the need to negotiate periodically for the renewal of your lease. You can go ahead and invest in decorations and furnishings with the assurance that you'll be there to enjoy them for a long time to come. Or you can sublease or sell it as specified in your lease and subject to the directors' approval of the new tenant.

The monthly cost is less than it would be for a rental apartment. After buying the equity, you pay only your share of actual operating costs. The corporation makes no profit, and waste is held to a minimum. So you're likely to pay anywhere from 10 to 30 percent less per month than you would to rent similar quarters. And the saving is even greater after taxes. To illustrate:

Suppose you're paying $200 a month in maintenance charges for a 6-room apartment with an estimated rental value of $300. Suppose, too, that your share of real-estate taxes and mortgage interest comes to $70 a month, or $840 a year. This means you can deduct $840 from your gross income before figuring your personal income tax. If you're lucky enough to be paying some of your Federal tax in the 50-percent bracket, you'll save $420 a year, or $35 a month, in Federal taxes alone. And if you live in New York State, you'll also save on your State income tax. Thus you'll be getting a $300-a-month apartment at a net cost of less than $165 a month. (But remember, you're losing whatever income you might get from the capital you've tied up in the apartment.)

You have some control over standards of maintenance. You and your fellow tenant-owners, acting through the board of directors and the managing agent, can thus prevent your property from deteriorating. As a result, the market value of your equity should remain at a high level. On the other hand, you also have the power to reduce your expenses by eliminating unnecessary services and uneconomical practices.

Your equity keeps on increasing. This, in effect, acts as a savings account. You can withdraw your savings by selling your apartment. If you do, you may make a sizable profit in addition to the equity you've paid in (unless your apartment is in an FHA building). At least that's been the experience of most luxury co-op owners who've cashed in their stock in recent years.

You aren't personally liable for the mortgage. It's strictly a corporate debt. Even if you're unable to continue paying your maintenance charges, a three-way escape clause in the typical proprietary lease allows you to free yourself of further financial responsibility in any of these ways: (1) You can sell your stock and lease; (2) you can sublease your apartment; or (3) failing both of these, you can turn over your stock and lease to the corporation, which will then assume the responsibility of selling or leasing your your apartment to pay current charges. (But here you'll be sacrificing your equity, as we'll explain later.)

Your neighbors are handpicked. The directors screen each prospective buyer to make sure his character, social standards, and degree of financial responsibility are acceptable to you and the other tenants.

CONSIDER THESE LIMITATIONS

Impressive as these advantages may be, you'll be wise to postpone signing a proprietary lease or occupancy agreement until you've also considered the negative aspects of cooperative ownership:

You must replace all equipment and do all the decorating in your own apartment. Being in a sense your own landlord, you're expected to pay the entire cost of any replacements, additions, remodeling, or redecorating. (The co-op corporation will normally replace any wornout equipment that's part of the building itself—such as faucets and wall switches. It will also redecorate and repair or replace equipment in those parts of the building shared by all tenants.)

Your maintenance charges may go up. If operating costs should rise, or if the majority of the tenants should vote to increase services, you'll naturally have to pay more per month. This could happen if the price of fuel went up, or if the corporation decided to hire another porter or doorman. You may also get hit with extra one-shot assessments—for redecorating the lobby, say, or for converting the building from direct to alternating current. The building's tax load may go up, too.

You can lose some or all of your equity. If the market prices of co-op apartments in general should plunge, as they did in the 30s, the value of your equity would automatically be diminished. But, says one New York realtor, "I can see no leveling off of prices yet."

A more serious threat to your investment lurks in the possibility that financial reverses will make it impossible for you to pay your maintenance charges. True, in such an event you could protect your investment by subleasing or reselling. But should you fail to find a buyer or lessee acceptable to the directors, and to do so within the time limit on arrears specified in your proprietary agreement, you'd not only be evicted but you'd also lose part or all of your equity.

You can lose eligibility for taxable-income deduction. Many apartment corporations rent some of their space to retailers and professional men in order to reduce the owners' maintenance charges. Ordinarily this has no effect on the tax-exempt status of that portion of maintenance charges that goes for real estate taxes and mortgage interest. But the Federal Revenue Act stipulates that such deductions are allowable only if the corporation receives at least 80 percent of its gross income from tenant-stockholders.

It's highly unlikely, therefore, that any such corporation would deliberately plan to get more than 20 percent of its income from rent. But suppose its rental income normally amounted to only slightly less than the 20 percent maximum. Then, if several stockholders defaulted in their payments, and if their apartments couldn't be resold immediately, the corporation would have to do one of two things: (1) Lease the evicted tenants' apartments—in which case the remaining owners would lose their tax advantage—or (2) levy a special assessment to cover maintenance charges on the vacant apartments. In either case, the tenant-owners would lose money.

You may not be able to sell or lease your apartment when and to whom you choose. Some proprietary leases will not allow the tenant-owner to evoke the escape clause during the first couple of years of ownership. And some severely limit the term for which an apartment may be leased.

Remember, too, that the board of directors has absolute authority to disapprove a prospective buyer—even, unless local law is violated, on grounds of race, religion, or nationality. Its judgment cannot legally be challenged. Nor does it have to explain its decisions. This right has been upheld by many courts.

Still another reason your apartment may be hard to resell is that its purchase cannot be refinanced, since there is no mortgage on an individual suite. The buyer must pay the entire value of the equity in cash. And, because this value increases with each successive year of occupancy, it becomes harder and harder to find someone with enough cash to close the deal.

You have no individual control over operating standards. There is no choice but to go along with the majority of tenants in such matters as doormen's hours, redecorating the lobby, garbage removal, and so on.

You have not full freedom to remodel your apartment. Here again, you must get the director's advance approval. The reason: Certain types of structural changes would increase the building's operating costs or impair the salability of your apartment.

You cannot use your stock and lease as security for a loan. These would be of little value to a lender unless he could demand possession of your apartment in case you defaulted. But he could not do so without the cooperative corporation's approval, which could not be given in advance. So a proprietary lease and stock are not usually regarded as acceptable collateral.

You cannot pay off your share of the mortgage at will. The corporation's indebtedness applies to the entire building, and is amortized over a specified number of years. So it is generally considered impractical for one tenant-owner to pay off his portion while the others continue to make monthly payments.

If you are seriously looking for a cooperative apartment, the Federal Housing Administration or your local real estate board can refer you to reputable sales agents who specialize in co-ops.

A LIST OF POINTS TO CHECK

The preceding article discusses a typical apartment co-op. But they aren't all alike. So, to be sure the particular co-op you're considering is a sound one, check these points:

Is it in a desirable neighborhood? (New construction within a radius of a few blocks is one sign that the area is probably on the upgrade.)

Is the apartment itself attractive? Is the layout convenient?

How do the monthly carrying charges compare with the cost of renting a similar apartment? (Make this comparison on a per room basis without taking tax deductions into account.)

If the co-op has been in operation for a while, has it been living within its budget? (Ask to see financial statements for the past several years.)

Are any major repairs needed? (These might soon necessiate heavy assessments.)

Does the proprietary lease give you the right to resell or sublease your apartment, subject to the board's approval?

Is it the co-op's policy to elect directors from among the tenants? Are the directors' decisions subject to the approval of the stockholders?

Is any immediate increase in maintenance charges or assessments being contemplated?

Is the economic status of the other tenant-owners similar to your own? (This may affect your future ability to pay maintenance charges and assessments.)

Is any legal action pending against the apartment corporation? Has it received any notice of violations of the building code?

Blonde, Bright, and Breezy

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1958

Mr. PORTER. Mr. Speaker, merit is the essence of the civil-service system. There is no merit in the President's nomination of Mrs. Barbara Bates Gunderson as Commissioner for Civil Service. The letter below speaks for itself as does the editorial from the Washington Post, August 13, 1958, both included under leave granted previously to extend my remarks:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., August 13, 1958.

Senator OLIN D. JOHNSTON,
Chairman, Post Office and Civil Service Committee, United States Senate, Washington, D. C.

DEAR SENATOR JOHNSTON: The confirmation of Barbara Bates Gunderson is of course a matter properly for the Senate and, initially, for the Committee on Post Office and Civil Service of which you are chairman. I trust you will permit me to express my opinion, however, for the consideration of the committee.

As a member of the House Post Office and Civil Service Committee and as a citizen, I protest. Mrs. Gunderson is not qualified. She admits it. This is a brutal slap in the face for 2¼ million civil-service employees and of the civil-service system itself.

I have no doubt that Mrs. Gunderson is, in the words of the picture caption in yesterday's New York Times, "blonde, bright, and breezy." But nothing in her experience equips her for the $20,000 per year position of Civil Service Commissioner. She is quoted as saying she had never made a study of the Civil Service Commission but "I sure intend to." This will make her the highest paid trainee in the Government.

This is an affront to all the able women in this country. There are many women superbly equipped by training and achievement to be a Civil Service Commissioner. It matters not to me that Mrs. Gunderson is a vigorous Republican Party official except that one supposes other qualifications to be essential also.

My earnest recommendation is that you use your considerable influence to persuade the administration to withdraw this unfortunate nomination or, in the alternative, that the Senate refuse to confirm her appointment.

Very sincerely,

CHARLES O. PORTER,
Member of Congress.

LETDOWN FOR THE CIVIL SERVICE COMMISSION

Most of the enthusiasm over the appointment of Barbara Bates Gunderson to be a member of the Civil Service Commission appears to be concentrated in the person of Mrs. Gunderson herself. She is a woman of boundless energy, and her eagerness to take on the assignment is readily apparent. But she does not claim any special qualifications for membership on the Government's top personnel agency, and indeed her experience in this field has been nil. Thus her nomination is disappointing.

The recent withdrawal of Bernard L. Flanagan's nomination to the CSC after he

had admitted errors in his own applications for civil service jobs should have been followed by the strongest appointment the President could make. Something extraordinary was needed to recover from that fumble. But the President has been content to bestow the post on the Republican National Committeewoman from South Dakota. The appointment is said to be in line with the President's policy of attracting more young people (Mrs. Gunderson is 41) into Government service, especially women. But it has all the earmarks of a routine political nomination, at the behest of Senator MUNDT, to a body created to keep politics out of the selection of Government personnel.

It is to Mrs. Gunderson's credit that she intends to resign her political office if she is confirmed and to refrain from participation in politics. Nevertheless, the naming of an active party official to the Civil Service Commission is almost as unfortunate as nominating an active politician to the bench. The CSC needs to do its work in a spirit of nonpartisanship. Public confidence in its devotion to the merit principle will be difficult to maintain if political patronage appears to dictate the choice of Commission members. Coming immediately after the Flanagan hearing, therefore, Mrs. Gunderson's nomination is a letdown regardless of how energetic and conscientious she may be.

Theory or National Safety?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 8, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following strong and forceful editorial on an important subject matter that should invite the attention of all patriotic Americans desirous of protecting our way of life from those who seek day after day to undermine our Government. This article appeared in the August 14 edition of the National Tribune—The Stars and Stripes entitled "Theory or National Safety?"

THEORY OR NATIONAL SAFETY?

Six Communists who were convicted of subversion in 1956 and given sentences of from 1 to 5 years were set free last week by a ruling of 3 judges of the United States Circuit Court of Appeals in New York City.

The 3 judges ruled the Government had failed to show the 6 Communist officers had urged people to do something rather than just to believe in something.

This was a distinction laid down by the Supreme Court in June 1957. The high tribunal said then the act does not forbid teaching overthrow of the Government as an abstract principle divorced from any effort to instigate action to that end.

Sometimes we wonder how silly the courts can get, from the highest to the lowest. Has devotion to purism and technicalities overshadowed devotion to principle? Has a desire to adhere to the strictest interpretation of the law become more important than the preservation of the Republic of the United States?

You may teach the principles of communism in the United States to our younger generations so long as you don't tell them to overthrow the Government of the United States, says the Supreme Court.

It would appear that the Supreme Court and its followers in the lower judicial echelons have lost sight of the fact that the very teaching of Communist principles is but one step toward the overthrow of our Government as we know it and have learned to respect it.

As we look back in retrospect, we have a distinct recollection of how communism was spread and developed in the minds of the Russian people.

First, it was an attack on religion, because Communist leaders were clever enough to realize that as long as people had religion they could not cleave to communism under the Marxist teachings and the even more radical ideas which were being developed under the early leaders of the U. S. S. R.

From the very beginning of their assumption of power in Russia the men in the Kremlin realized that they could not persuade the older generation to accept their theories of government. These older folks still felt the strong pull of religion and on Good Friday they were permitted to visit their churches and toll the bells in acknowledgment of their misdeeds and in atonement for the wrongs they might have committed in the year just past.

But the wily leaders of the Kremlin, realizing that they could not pierce the solid foundation of religion inherent in the older people, set out to teach the younger groups.

Of course, it took a couple of generations to instill the thought that religion, home, and parents were things to be discredited and that the state alone was supreme.

The idea took root slowly, at first, because the older folks still endeavored to bring up their children in the ways of righteousness, but as time marched on the older groups died off or were disposed of in the manner specifically provided by the Kremlin for those who opposed its wishes, and in due time there grew up a new generation of young men and women who despised all the things in which decent people believed, with the result that we now have a godless people whose only belief is down with God and up with the state, having in mind the conquest of the world.

To get back to the ruling of the Supreme Court which we have discussed and subsequent rulings by lower courts, upholding the right to teach "the principles of communism" provided actual overthrow of our Government is not urged, we get right back to what happened in Russia.

We can understand why it may be necessary to understand the evils of communism and that these evils should be explained to our students in high school or college, but we also believe that the instillation of the principles of communism may in time fill the minds of our youths to the end that they, like the younger people of Soviet Russia, will rise and scoff at the principles which we, of an older generation, hold dear and for which many of our young men have fought and died to uphold.

To say by pure technicality that it is right to teach the theory of communism in the schools of the United States or in public forums held for the general public is permissible is to open the way to the ultimate breakdown of our form of government.

Repetition of a falsehood, we have learned, is one of the most efficient methods of having that falsehood accepted as truth.

If our younger generations hear enough about the ideals of communism, enough of them may be impressed in their early years to accept those ideals, with the result that much sooner than we of the present day think we shall see the acceptance of communism here in our own country with the loss of everything for which we have stood since the Declaration of Independence brought a new era of freedom to the world.

Theory, as practiced in the courts of our land, may be one thing, but when theory is developed so tenuously that it could lead to the loss of our country to falsehood, then it is time for the Supreme Court to take stock of the situation and be guided not by theory but by practicality.

Their strict adherence to words and not meaning could well result in the wiping out of their own body, and jurisprudence, as we know it and have developed it from the English common law down to our present-day statutes, could well disappear from the earth.

We believe in freedom of speech as we believe in freedom of the press and freedom of religion, but if that right becomes license and such freedom of speech might extend itself to an eventual overthrow of our Government, then it is a right which should be curbed and the courts made aware, by act of Congress, if necessary, of the will of the majority of our people.

Laws were made for man by men and, fortunately, in our country the vast majority of our people obey and respect the law, but when a narrow construction of the law by any court in the land leads to a possible destruction not only of the law but of our Government, then a stricter ruling should be found to prevent what happened in Russia, once the Communists took over, from happening in this land of ours.

Farmers Union Grain Terminal Association Daily Radio Roundup

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, August 14, 1958

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the daily radio roundup for August 6, 1958, of the Farmers Union Grain Terminal Association, of St. Paul, Minn.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP OF THE FARMERS UNION GRAIN TERMINAL ASSOCIATION, ST. PAUL, MINN., AUGUST 6, 1958

The latest farm price report from the United States Government shows that farm prices dropped again between June 15 and July 15. They are down to 83 percent of parity now, and with the big new harvest hitting the market places, farmers are rapidly losing the small price gains they had chalked up since 1956. This naturally focuses even more attention on the farm bill in Congress, which probably will be either passed or rejected by the time you hear this broadcast.

But, to be realistic about it, both the Senate and House bills are such cut-up and hamstrung versions of what real farm legislation should be, that many farm people feel they would be better off without either one. And the dealing that is going on behind the scenes now, around the House bill, amounts to almost an insult to farm people, who deserve far better than what either the Democrats or the Republicans are talking about giving them. Just take a look at what is happening now, according to the newspaper reports. Apparently there's a lot of wheeling-and-dealing going on, with the result, as one headline puts it, that "Ike Hopes To Block Farm Bill."

How would he do it? Another newspaper story tells how administration Republicans and Secretary of Agriculture Benson are try-

ing to make a deal with SAM RAYBURN, the Democratic leader in the House, and JOE MARTIN, the Republican leader, to pass the House version and shoot it over into conference with the Senate. And that's where they'd chew it down to the 60-percent level acceptable to the administration and Benson. If they made a sure-death deal like this on the farm bill, it certainly would reflect with discredit on both Democrats and Republicans, at least in the farm areas. Farmers know what's going on, because they have their own good sources of information to get the facts, and they wouldn't be taken in. As a matter of fact, we don't believe that the farm Senators and Representatives from our area would be a party to such dealings, any more than GTA and the Farmers Union would.

Farm people have every right to be indignant over this administration plan to deal from a deck with five aces in it. The newspapers say that on Tuesday, White House liaison man Jack Anderson was over in Congress to talk with RAYBURN and MARTIN. He wanted to get "advance assurances" the newspaper said, that the bill would get Bensonized in the Senate-House conference, if the administration let it pass the House. When the votes are tallied, we'll see how successful he was.

We can't help but feel that farmers would have preferred a straight "yes or no" on farm legislation, rather than this slinking around behind the scenes. It's an amazing performance for an administration and a Secretary of Agriculture that publicly hold themselves above subterfuge. Maybe the attempts to work out deceitful deals behind the scenes won't work, but we won't know that until the farm measure is either rejected or approved. Either way, farmers are the losers, because with no farm bill, they'd go on as they are, and any bill that could pass would have to have administration approval, which would mean lower price supports.

It's the kind of a problem that will have to be answered after 1960, because that's the first chance farmers will have to vote for whatever changes they think are necessary in high Government offices.

Thanks for listening. This is GTA, the co-op way.

Why the Fight Goes On

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, August 14, 1958

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an exceedingly able editorial from the Richmond News Leader of Richmond, Va., entitled, "Why the Fight Goes On."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Richmond (Va.) News Leader of July 30, 1958]

WHY THE FIGHT GOES ON

Now and then, when it appears that everything has been said about school segregation that possibly could be said about school segregation, some events come along in the news and once again the necessity arises for a restatement of basic consideration.

Such a time is at hand now. A number of parents, who possibly have not pondered the problem wholly, are asking why the various Virginia localities are not permitted to go their own way. Here in Richmond, it is termed absurd to risk the closing of Westhampton and Nathaniel Bacon schools to prevent half a dozen Negro pupils from attending classes with a thousand white children. In the Arlington area, a few apostles of panic are protesting the possibility that even one child may lose as much as a single day from public school.

It may be useful, in view of the crisis now only a month away, to set down anew the reasons that underlie Virginia's policy of "massive resistance." What is the State fighting for?

Three things:

1. To preserve a constitutional position that ought never to be voluntarily surrendered.

2. To preserve the ethnic and social structure of the South against forces that would destroy it.

3. To preserve the greatest possible educational opportunities for the greatest number of children, white and Negro alike.

Those are the State's aims. They are the only aims. But it should be understood that meeting these aims demands a great deal of the people of Virginia. We are asked to rise above those interests which are personal, concrete, and immediate, and to dedicate ourselves instead to goals that, to a degree, are abstract and remote. We are asked to think earnestly upon the Constitution of the United States and the structure of the American Republic, and these are big things, hard to catch hold of. We will be asked, some of us, to accept temporary sacrifices that affect our own children, and this is hardest of all to understand.

But the fight is worth making. If Virginia quits now, we will repudiate the political heritage passed down to us, and we will leave to succeeding generations a shameful inheritance. It is no disgrace to be defeated, and in the end we may be defeated. The disgrace lies in failing to resist.

THE CONSTITUTION

The constitutional position taken by Virginia is simple, direct, unambiguous. Virginia entered the Union in 1788, at a time when she could have remained forever apart, upon certain clear understandings: This was to be a Federal union of sovereign States, in which the States would delegate certain limited powers to the Federal Government they were creating; all other powers, apart from those prohibited to the States by the Constitution itself, were to be retained by the States individually. This structure of the Union was in no way altered by the War of 1861–65.

After the war, when the 14th amendment was forced upon the South, northern legislators inquired what effect the amendment would have upon the maintenance by the States of racially separate schools. Proponents of the amendment agreed that the amendment was not intended to prohibit this power to the States; the power, therefore, was to be reserved to them. For a long period thereafter, pursuant to this explicit understanding of the correct meaning of the amendment States, both North and South, continued to maintain segregated schools. Their power to do so was repeatedly reaffirmed by the highest State and Federal courts; this construction of the 14th amendment, directly and vitally affecting millions of people and enormous investments in school property, became, in effect, a part of the Constitution of the United States.

The South's position is that the Constitution may be amended in one way only: That is by the consent of not fewer than three-fourths of the States, expressed in the ratification of a specific amendment. The Constitution cannot be amended by mandate of the Supreme Court. The Court's function is to interpret the Constitution; and as the Court applies its interpretive powers to new situations, so the Court properly may shape the Constitution to changing times. But the States power to maintain separate schools was not a new situation in May of 1954; it was an old situation, dating back to the adoption of the 14th amendment in 1868. And Virginia's position is that in the school cases, the Supreme Court usurped the amendatory power that is vested in the States alone.

Virginia's position is not limited to the school matter only. If the Court may usurp power so drastically in this instance, we have said, then the Court may usurp power in every instance. The concept of a Federal Union of States, held together by checks and balances, will be lost altogether.

If this trend is to be halted at all, it will be halted only because the States resist it—resist it dramatically, resist it steadfastly, resist it in every legal and honorable way that can be devised. If it takes a noise to arouse the rest of the country, then we must make that noise. If it requires a court fight to attract attention, then we will have to fight in court. Quiet submission to the Court's revolutionary demands would be an invitation to new judicial excesses. Stubborn and unyielding resistance, if it accomplishes nothing more, may deter the Court from fresh encroachments. This constitutional fight is of primary importance. It must not be abandoned.

THE SOCIETY

The second reason for Virginia's policy lies in subjective considerations that are most difficult for outsiders to understand—at least until they have experienced, over a considerable time, the much mocked "southern way of life." Our entire society is predicated on, and influenced by, the intimate coexistence of two races. This relationship has operated, until recently, upon well understood rules—rules that were not static, rules that in fact were steadily undergoing change—and under these rules the Negro people were making astonishing progress. What the Supreme Court has attempted to do is not only to amend the Constitution, which it had no right to do, but to revolutionize the social structure of the South, which it has no power to do.

This is because the public schools are perceived not only as educational institutions, but as social institutions also. In rural areas, especially, the schools provide a center for all community life. Everywhere else, the two races may meet and pass—in business, in farming, in transportation, in employment. It is only in schools that both races would be thrown together, social equals, in a compulsory relationship, intimate, personal, and prolonged.

The white South cannot accept the long-range prospect of such a relationship. We of Virginia know, in a hundred ways that our distant critics cannot know, something of the differences that divide white and Negro in the South. These are ethnic differences, racial differences—differences in morals, in behavior, in language, in inhibitions, in aspirations. The South acknowledges, of course, the achievements of many Negro citizens of exceptional competence and ambition; and the South is ruefully aware of its "po' white trash." But we view the classless society as sheer fiction. In one way or another, all men are divided into classes. And what the South holds is that the harm done by segregating these classes in the public schools (and admittedly, there is harm done) is infinitely less than the social chaos and civil decline that would follow inexorably in the wake of massive race mixing.

We are not talking here of the consequences this year, or next year, or the year after that. These are consequences 20, 30, or 50 years hence. And Virginia has only to point to the dismal history of civilizations dominated by mixed blood to insist that such a fate must be resisted here.

THE SCHOOL SYSTEM

The least of the considerations, though it may seem the most important to distressed parents whose children are directly affected, is the aim of keeping every public school open every single day. Virginia does not need any lectures on the importance of public schools; everyone concedes the importance of public schools. But the ultimate goal is not necessarily public education, by which is meant tax-supported education in publicly owned buildings. The ultimate goal is simply education. In one fashion or another, satisfactory educational opportunities must be provided, and they must be provided for the children of both races.

Virginia's position is that the public school system, as a statewide system, can be preserved for the foreseeable future only as a racially separate system. A little integration will not preserve the system. A little integration will destroy the system. This is because integration anywhere means inevitably, integration everywhere. And once a precedent is set, disruption follows. Talk of massive school closings. If Virginia were to accept integration in principle, in time Virginia truly would see massive school closings, county by county, city by city, in the wake of violence, bloodshed, and bitterness never knows before. And instead of facing the problems of establishing a relatively few private schools, Virginians would face the problems of private education across the whole State. In the resulting atmosphere of hatred and resentment, education would be all but impossible.

It now seems likely that as a consequence of Federal court orders and unyielding State policy, some schools will not be opened in Virginia in September. That will be unfortunate, regrettable, and to the parents directly involved, damnably inconvenient. But this newspaper does not regard the immediate prospect as catastrophic. The resourcefulness of the people will not let any substantial number of children go long without some adequate educational opportunity.

Virginians have known sacrifice before, and they have met hard challenges before; they are not lacking in character or energy. We can meet the multiple emergencies of September calmly, without panic, without violence, without hysterical pleas to surrender. All that is required is that we hold to the long view, abide by the law (no law compels Virginia to operate any schools), and maintain a steadfast faith in the inherent rightness of Virginia's position.

Pentagon Fiscal Planners Squirm as Defense Costs Keep Going Up

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, August 14, 1958

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Pentagon Fiscal Planners Squirm as Defense Costs Keep Going Up," which appeared in the July issue of Aeronautical Procurement magazine. The author, Allen M. Smythe, is a financial writer who has written many articles on defense procurement policies for a number of financial, business, and military journals.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PENTAGON FISCAL PLANNERS SQUIRM AS DEFENSE COSTS KEEP GOING UP

(By Allen M. Smythe)

Mounting defense costs are again causing concern in the Pentagon. If the services manage to keep their expenditures within budgetary limits—which is questionable—it will be at the expense of conventional aircraft, naval vessels, and other weapons. Defense Secretary McElroy is reported to have asked his fiscal experts for new analyses of spending trends.

Why the problem? New pay raises for military and Government defense workers will add substantially to defense costs. Maintenance costs for supersonic aircraft and liquid-propellent missiles are skyrocketing. Construction spending for dispersal of Strategic Air Command bases is rising toward a billion dollars a year. Broader and more intensive research requires increasing amounts of money and more is being committed for development.

Recent fiscal reports show that these increases more than equal the planned increases of $1.5 billion in the 1959 defense budget.

Pentagon's hesitancy to commit itself on future spending doesn't mean that it's going to cut expenditures for military hardware. But the rising costs and the faster shift to missiles and spacecraft than was anticipated 6 months ago mean that planners are having to do a tough and thorough screening job on all military projects.

Navy and Air Force have been having financial difficulties this last quarter of fiscal 1958, and will continue to have them into early 1959, despite additional appropriations. Army is in better fiscal condition. But all three services are under strict budgetary limitations and quarterly expenditure control.

The Defense Comptroller's efforts to hold expenditures for military hardware to $14 billion a year are painful to military contractors now. They will be agonizing in the next fiscal year.

The huge sums necessary for spaceships, ballistic missiles, Mach 3 aircraft and atomic submarines will be squeezed out of funds originally planned for conventional weapons. This shifting of funds for major procurement items is one of the most important and difficult duties of Pentagon officials at the moment.

Impact of technological progress is severe on combat planning as well as fiscal programing. For example, ground-to-air guided missiles have almost supplanted the 90- and 120-millimeter antiaircraft gun battalions. The last battleship has been retired. Naval gun factories and proving grounds have new duties. The Air Force has just about replaced all of the Convair B–36 piston-plus jet bomber wings with the Boeing B–52.

These changes were taking place even before the sputnik era. Now the demand is for more effort on advanced scientific projects and for less effort on programs likely to be made obsolete soon by technological progress. The 1959 fiscal year budget will reflect these trends, but spiraling costs may make the choice of approved projects very selective. For example, Secretary McElroy will continue to allow money to be spent for both the Thor and Jupiter IRBM's; but as soon as one shows a clear-cut advantage over the other, the boom will be dropped—fast—on the runner-up.

THE UPKEEP'S EXPENSIVE, TOO

McElroy has expressed concern over the high cost of field weapons. Previously, when new or improved weapons were approved, often it was performance only that was considered. McElroy now insists that mobility, and costs for shipping, storage, maintenance and operation, and for production, be considered.

Pentagon fiscal officials have produced some interesting comparisons. Today's operational fighters fly twice as high and 3 times as fast as World War II fighters—and cost 20 times as much. They also cost more to operate and maintain.

A World War II submarine cost less than $5 million. The *Nautilus*-type atomic submarine costs $45 million. A Polaris-equipped submarine—five are now planned—is expected to cost $100 million. McElroy has said that a Polaris system—the ship, missiles, spares, and shore supplies—would cost more than $200 million, which explains his opposition to the plans of a House group to appropriate for four more of the subs. He feels he can use the billion dollars better elsewhere.

An antiaircraft battalion equipped with the Western Electric-Bell Labs-Douglas Nike-Ajax missile costs about three times as much as the conventional AA gun battalions. The Nike-Hercules, which will soon be replacing the Ajax, will be three times as expensive, not counting the nuclear warhead. When the Nike-Zeus antimissile missile is installed, it will cost several times more than the Hercules.

The Air Force estimates on the cost of the Convair B–58 bomber are being scrutinized by the Defense Department. Average cost of the more than 2,000 Boeing B–47 medium bombers, now out of production for over a year, was less than $3 million, including spares and extra parts. The last extension of the contract carried a price tag of around $1.6 million each, flyaway. At the time, Air Force figured another 48 percent for spares and extras, making a total unit cost of about $2.4 million.

Five years of top-priority development of the B–58 have reportedly cost over $600 million, all under letters of intent. The first 77 planes will cost around $16 million each, flyaway. Air Force expects to hold cost of spares and extras under 30 percent, as a result of reliability planning and tests. This still would make the initial cost of the B–58 system around $20 million per plane.

Unit costs are expected to drop materially as production continues. However, the size of future orders will be influenced by the amount of money needed to complete the Boeing B–52 program, and the need for funds to push the second generation of solid-fueled ballistic missile projects.

Navy has been considering, at the highest level, three carrier fighters—the Chance Vought F8U–3, McDonnell F4H, and North American F3J. Although all had been programed for sizable production orders, it will be a surprise now if funds can be found for reduced orders for two of them.

Air Force has already stretched out its program for the Republic F–105 and Convair F–106, because of new spending controls. No contract extensions for the McDonnell F–101, Convair F–102, or Lockheed F–104 are in sight. Plans for extensive ground installations for the Boeing Bomarc area defense missile are being held up while Defense officials compare estimated costs with those for the Nike.

AGAINST THE TREND

To brighten this gloomy picture of rising defense costs, Army is able to light a couple of hopeful candles. The Martin Pershing solid-propellent missile, which is soon to replace the liquid-propellent Chrysler Redstone, is expected to cost only half as much as the $1 million Redstone. Elimination of the LOX fuel will drastically reduce shipping, storage, and maintenance expenses, Army Ordnance officials say. They expect

this highly mobile field weapon to have a range of over 700 miles.

The solid-propellent JPL-Sperry Sergeant is also expected to cost somewhat less than the $100,000 Gilfillan-Firestone Corporal which it will replace; its shipping and operating costs will be substantially lower. The nuclear warhead is not included in the costs. Sergeant is expected to be smaller and more mobile than Corporal, but to have the same range—80 miles.

Private Housing Starts Hit 2½-Year High

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, August 14, 1958

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published in today's Wall Street Journal entitled "Private Housing Starts in July Hit 2½-Year High."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal of August 14, 1958]

PRIVATE HOUSING STARTS IN JULY HIT 2½-YEAR HIGH—ADJUSTED ANNUAL RATE WAS 1,160,000—RISE IN USE OF FHA, VA MORTGAGES CITED—FNMA SHARES CREDIT

WASHINGTON.—Private housing starts in July mounted to a seasonally adjusted annual rate of 1,160,000—the highest adjusted rate since January 1956, the Labor Department reported.

The boost in the annual rate for July over the 1,090,000 for June came from the contra-seasonal rise in private housing starts during the month, the agency said. Private housing starts during the month totaled 107,300—the highest private total for any month since May 1956. The latest figure compared with 104,500 for June, and 93,900 in July 1957.

Prodding the total of private starts upward, the Labor Department indicated, was the increase in the number of homes begun under Federal Housing Administration and Veterans' Administration mortgage insurance programs.

Congress last spring provided the Federal National Mortgage Association with $1 billion of authorization for the purchase of mortgages backed by the FHA and VA on lower-cost homes—up to a value of $13,500.

Since the program was begun in April of this year, Fannie Mae has committed about $600 million for the future purchase of these mortgages. Housing industry officials have asserted that the Fannie Mae program has been responsible for much of the pickup in housing, although the increased availability of mortgage money also has received a good share of the credit.

Despite these views, Government housing officials have not yet publicly changed their estimates that about 1,100,000 private homes will be built in 1958.

When averaged for the first 7 months of 1958, the Department said, the annual rate of private starts thus far in the year comes to 1,013,700 units. At this time last year, the average of the annual rate was 970,000.

Total nonfarm housing starts—including both public and private—amounted to 111,000 in July, the Department reported. This was a drop of 4,000 units from June, the agency added, but the decline was less than usual for this time of year. All of it, however, was in public housing. The total number of housing starts in July 1957, came to 97,800.

Preliminary building permit reports indicate that the advance in private homebuilding came primarily in the North Central and Western States, although the South showed continued strength.

At the end of the first 7 months of 1958, a total of 605,200 private homes had been started—topping the figure for the like period of 1957 by 26,000. Housing started with FHA and VA mortgage assistance, the Department said, accounted for about two-thirds of the overall gain in private starts so far this year over the like period of last year.

Appointment of Miss Bertha S. Adkins To Be Under Secretary of the Department of Health, Education, and Welfare

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, August 14, 1958

Mr. BEALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three newspaper articles concerning the appointment of Miss Bertha S. Adkins to the position of Under Secretary of the Department of Health, Education, and Welfare. One of these articles appeared in the Baltimore Sun of Tuesday morning, July 22, 1958, and is a news dispatch from the Washington bureau of the Sun. The second article appeared in the women's section of the Baltimore-American of Sunday, July 27, 1958. The third is an editorial in the Washington Post of Friday, July 25, 1958.

Miss Adkins is a distinguished citizen of Maryland. All Maryland is proud of her and is pleased with her appointment. I am proud to number Miss Adkins among my friends.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of July 22, 1958]

IKE NOMINATES BERTHA ADKINS—PICKS HER TO SERVE AS UNDER SECRETARY IN CABINET

WASHINGTON, July 21.—President Eisenhower today nominated Bertha S. Adkins, assistant chairman of the Republican National Committee, to be Under Secretary of Health, Education and Welfare.

If her nomination is confirmed by the Senate, Miss Adkins, who lives in Salisbury, Md., will succeed John A. Perkins, who resigned March 1.

Miss Adkins has a long history in education and politics, but this will be her first job in government.

"It's exciting to think of the possibilities, provided the Senate approves," Miss Adkins said.

"AM PLEASED"

"I, of course, am pleased that the President and Dr. Flemming feel I can help them," she added.

Dr. Arthur S. Flemming, president of Ohio Wesleyan University, will become Secretary of Health, Education and Welfare August 1, succeeding the present Secretary, Marion B. Folsom.

Miss Adkins said today that "if confirmed" she will leave her Republican National Committee post as soon as she can wind up her political affairs.

She is the second woman to be plucked from the Republican party for a sensitive Government job.

ASKED ABOUT IDEAS

Mrs. Anne Wheaton, former director of women's publicity of the Republican women's organization, was named by President Eisenhower in June of last year to be associate presidential press secretary.

Asked whether she would carry any definite ideas with her to her new duties, Miss Adkins replied:

"I'll have to wait until I get there. I'll work with Dr. Flemming on whatever he and the President want."

Long an advocate of women in politics, Miss Adkins has been a GOP national committeewoman from Maryland since 1948. Since 1953, she has been head of the women's division of the national committee in addition to being assistant chairman.

[From the Baltimore American of July 27, 1958]

MISS ADKINS DESTINED FOR GOVERNMENT ROLE

Some women are born to politics and some are raised on politics but Miss Bertha S. Adkins, of Salisbury, swallowed politics when, at a tender age, she gulped down a Taft-for-President button which is now the proud possession of the Federation of Republican Women of Maryland.

This button may have caused an educator to become a politician and the politician then to turn to educational fields, for Miss Adkins, one of the top feminine politicians in the country, as assistant chairman of the Republican National Committee and its director of Women's Activities, has been nominated by President Eisenhower to be Under Secretary of Health, Education, and Welfare.

If approved by the Senate, she will be the first woman to hold the $21,000 a year post. Miss Adkins is quite pleased and gratified at the nomination.

As an educator Miss Adkins was, for 8 years dean of women at Western Maryland College and, for 4 years, dean of residence at Bradford Junior College in Massachusetts.

Being an Eastern Shore woman might have made Miss Adkins change from educational endeavors to politics since politics is taken seriously on the Shore. She plunged into politics in 1946 when she helped to elect Representative EDWARD T. MILLER, the first Republican from Maryland's First District in 25 years.

Her first political training was on the precinct level and she has never stopped preaching "everywhere" at "everytime," "everyone" must start on the precinct level. She emphasized that campaigns are won on this level.

Since 1948, she has been Maryland's national committeewoman. Recognition of her efficiency as national committeewoman led to her selection as executive director of the women's division of the national committee in 1950. She then was made assistant to the chairman of the national committee.

One of Miss Adkins first acts after the 1952 Republican Presidential victory was to set up regional and national conferences of Republican women leaders as a campaign strategy to maintain and further political gains and to keep women in the field posted on the Eisenhower administration's accomplishments.

An alumna of Salisbury High School and the Baldwin School in Bryn Mawr, Pa., Miss Adkins holds a bachelor of arts degree from Wellesley and a master of arts degree from Columbia University. In June, 1953, she was awarded an honorary doctor of laws degree from Western Maryland College and in 1955 she was elected a trustee of American University in Washington.

She is a life member of Pi Lambda Theta, an honorary society for women in education. Recently President Eisenhower appointed Miss Adkins to the Lincoln Sesquicentennial Commission and the members elected her chairman of the executive committee.

She has served as a board member of the Maryland Federation of Women's Clubs and the Maryland branch, American Association of University Women.

[From the Washington Post of July 25, 1958]

EQUIPPED FOR THE JOB

The dual background of politician and educator that Miss Bertha S. Adkins possesses makes her especially fitted for the position of Under Secretary of Health, Education, and Welfare to which she has just been nominated. The importance of political experience for a Government executive was once pointed out by an outstanding bureaucrat, who when asked what contributed most to his success, said it was the knowledge of people he attained in his early campaigning for office. Although Miss Adkins has never run for office, she has been in the thick of national politics since 1950, when she became executive director of the women's division of the Republican National Committee. Later she became assistant chairman of the committee. In these positions, and in her campaigning for President Eisenhower in 1952 and 1956, she had wide opportunity to meet at the grassroots the people the Government serves. As a former college teacher and dean of women, she has personal knowledge of the problems of education. Her background intelligence and vigor should enable her to handle successfully her new job, which she terms a "challenge"—not a reward.

Distinguished Service Citation to George Garrett, President of the Federal City Council

---

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, August 14, 1958

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two brief articles about a distinguished citizen of the Nation's Capital, Mr. George A. Garrett. Mr. Garrett was recently honored on his 70th birthday with the Federal City Council's first distinguished service citation.

An editorial and news story in the Washington Daily News of August 5 summarizes some of his many contributions to the physical and cultural improvement of Washington, D. C.

Mr. Garrett's abilities have received bipartisan recognition. Under a Democratic administration, he served as this country's first Ambassador to the Republic of Ireland, and more recently he was selected by President Eisenhower to expedite the important Southwest Washington redevelopment program.

Residents of the Capital City are indebted to him, and to his distinguished colleagues of the Federal City Council, for their tireless labors to give the Nation a modern, well-planned Capital.

Out of respect and admiration for Mr. Garrett, whom I know, I am making these few remarks about him.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

GEORGE GARRETT GIVEN CITY COUNCIL AWARD

The Federal City Council presented its first distinguished service citation for distinguished leadership to its president, George A. Garrett, today on his 70th birthday.

Mr. Garrett once served as President Eisenhower's personal representative to expedite the District's southwest redevelopment program. He was Ambassador to Ireland under President Truman.

President of the council since it was founded, Mr. Garrett has been instrumental in speeding up area development.

Last December he helped negotiate the $5.8 million loan for construction of the first units in pilot area B in the southwest.

Mr. Garrett's career started here 50 years ago as vice president of the Dupont National Bank. Since 1940 he has served as general partner with the investment banking firm of Merrill, Lynch, Pierce, Fenner & Smith at 719 15th Street NW.

He also has served as president of Emergency Hospital, vice president and director of the National Symphony Orchestra, and in the American National Red Cross.

HAPPY BIRTHDAY

We would like to add ours to the many Washington voices wishing George A. Garrett, president of the Federal City Council, a happy 70th birthday.

For over 50 years he's been a real wheelhorse in a long series of civic achievements, especially in the field of zoning, metropolitan area development and improvement, and redevelopment.

We're thankful that, through the years, Mr. Garrett has shown willingness and a gift for coming to grips with difficult problems and removing roadblocks. This he has consistently done in the southwest redevelopment program.

His days are long and full. But even so, Mr. Garrett has a reputation for taking time out to be a genuinely nice person.

Scholarship Program for Superior Students

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, August 14, 1958

Mr. PROXMIRE. Mr. President, I have said many times that the great challenge of our day is to make our educational system match in its effectiveness the brilliant achievements of our scholars and scientists. It is not enough that we produce a handfull of distinguished men; it is imperative that we give every student with the capacity to grow an opportunity to fulfill his possibilities.

Members of the faculty of the University of Wisconsin have been giving serious and sustained attention to the question of how we should go about expanding opportunity in the field of higher education. Sometime ago I placed in the RECORD a copy of a statement adopted by the faculty of the university. One of the leading persons in this searching inquiry is Prof. Joshua Lederberg, chairman of the department of medical genetics in the school of medicine. Dr. Lederberg is a brilliant scientist whose contribution to genetics is acclaimed around the world. I am glad indeed that Professor Lederberg has applied his great gifts to the problem of providing opportunity for the gifted student to receive the kind of education he deserves.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the letter from Professor Lederberg to me, and his proposal for a comprehensive national scholarship program.

There being no objection, the letter and the proposal were ordered to be printed in the Appendix of the RECORD, as follows:

THE UNIVERSITY OF WISCONSIN,
Madison, May 29, 1958.

Hon. WILLIAM A. PROXMIRE,
Senate Office Building,
Washington, D. C.

DEAR SENATOR PROXMIRE: Many of my colleagues and I have been delighted to note and second your determined and active interest in encouraging our national leadership in education and scientific research.

There are two pending bills which I would recommend to your sympathetic attention. One is the Health Research Facilities Act which I understand is in committee now. To complement the splendid research and training programs of the NIH which have done so much to advance medical research during the past decade we urgently need a steady expansion of the facilities to house the research activities of our eager young scientists. There is hardly a university or research institute in the country that could not make a splendid return on the investment of construction funds.

The second is the national scholarship program as envisaged in the pending bills, S. 3163 and S. 3187. Both bills have many splendid features marred by what I hope are only transitory defects, such as the vague statutory prescriptions for science and languages. These are so indefinite it would be better to delete them. I am also dubious about the effectiveness of the secondary programs which require matching funds and complicated administrative machinery to allocate them directly to private and public colleges in the several States. For this session, I would hope therefore that maximum emphasis be placed on the scholarship programs while we take time to work out the best formulas for supporting the institutions themselves.

I do have my own suggestions for such a formula which, I believe, can sidestep many of the purported hazards of Federal aid to education. This proposal would utilize the scholarship system to furnish automatic machinery for institutional support. My major premise is that financially healthy and independent universities are the best source of initiative in meeting the Nation's challenges in higher education. I am enclosing a memorandum outlining this bill of rights for gifted students which I suggest is the safest and most constructive way to encourage both these students and the institutions which must serve them.

More immediately, I would also criticize the criterion of need as an important factor in a scholarship program for gifted students. My arguments are summarized in appendix (2).

With all best regards.

Yours sincerely,

JOSHUA LEDERBERG,
Chairman, Department of Medical Genetics.

PROPOSAL FOR A COMPREHENSIVE NATIONAL SCHOLARSHIP PROGRAM

Any scheme of comprehensive Federal assistance to institutions of higher learning is bound to evoke reasonable fears of central domination of educational policy. The private institutions understandably will be particularly reluctant to have to justify their programs to central State or Federal authorities as a basis of allocation of funds; on the other hand the financial straits of all our universities, the support of which is too often thought of as philanthropy rather than investment, are tied up with the ambiguous incentives to our gifted youth to make their own investment in higher education.

The national stake in higher education is too vital for us to contemplate putting it on the market in a traditional sense—we cannot now afford to limit it to students who have private means to pay, but one way or another it must become economically self-sustaining if the colleges and universities are to achieve the health and self-reliance that mark other aspects of our free-enterprise culture. A comprehensive scholarship program can be devised that would, at the same time, insure that our most gifted students will be unimpeded in the pursuit of scholarship and reward and sustain our universities fairly, with a minimum of bureaucratic interference. This program has had a successful precedent in the postwar GI bill of rights, and is paralleled to some extent in the fellowship programs of pending bills and those now operative by the National Institutes of Health and National Science Foundation. What is perhaps new in this proposal is that the fellowship-scholarship program can be used to administer Federal support to the institutions as well as to the scholars in the most effective way.

The basic features of the program would be: (1) A national (or multi-State) scholarship examination; (2) stipends to the highest scoring students sufficient for minimum needs in college; (3) an award, to the institution of each student's choice, sufficient to cover the actual cost of his education, including liberal provisions for renewal and maintenance of facilities and expansion; (4) loan funds to cover unusual personal requirements, for example, family obligations.

Minor adjustments can be made through formulas of allocation of numbers of scholarships among the States. A liberal minimum should be established for item (3), and the award might indeed be fixed at a uniform high level. In this way, outstanding achievement by a school would be recognized by the interest of superior students in attending it. The diverse values of different kinds of institutions would be recognized by the free choices of the potential students. In general, the program would establish an effective market (in a technical economic sense) in which the consumers in whom the Nation has the greatest stake would be given the means to effect the national investment.

2. Need. The criterion of family income is often an unrealistic measure of individual needs, especially in advanced education. Since we still do not have a deepseated national respect for learning, many families may be reluctant, even hostile to supporting their children in scholarly studies, regardless of their apparent means. A means test carries an implication of charity rather than national investment, which is in any case likely to be repaid as taxes returned on augmented income, as well as the now recognized social values of scholarly and professional vocations. The administrative machinery needed to attempt a fair administration of a means test is already a fair argument against it. Finally, the progressive income tax is the fairest, most versatile and a sufficient tool for allocating the burdens of national activity on the basis of ability to pay: Why should the already tax-ridden middle class be specifically discriminated against in a national program of investment in higher education?

Greetings To National Citizens for Eisenhower-Nixon in Mobilizing the Independent Voters

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, August 14, 1958

Mr. WILEY. Mr. President, it is not very often that I comment on the floor of the Senate with regard to what might be considered as partisan matters. I would, however, like to say just a word with regard to the splendid efforts of the 1958 Committee of the National Citizens for Eisenhower-Nixon.

I am delighted to see that this organization is operating in high gear so as to give our President and Vice President the most effective teamwork in the next Congress.

It will be recalled that, in the 1952–56 Presidential elections, the National Citizens Committees for Eisenhower-Nixon played a leading role in the victories.

The reason is obvious.

INDEPENDENTS HOLD THE MARGIN OF POWER

There are millions of Americans who may not be affiliated with regular Republican organizations and who consider themselves as independents who were attracted by the National Citizens for Eisenhower-Nixon and who voted accordingly.

In talking with my Republican friends, I have repeatedly brought to their attention the fact that it is the independent voter in my own State, and in other States, who holds the margin of victory in his or her hands.

The President of the United States, and the Vice President of the United States, deservedly still hold the allegiance and the good wishes of millions upon millions of independent voters and, yes, millions of voters who ordinarily vote in the Democratic column, as well.

VOTERS CAN GIVE IKE AND DICK FULL TEAMWORK

In this November 1958, election, the electorate of our country will have a historic opportunity to vote for an 86th Congress which can carry out the ideals of Dwight D. Eisenhower and RICHARD NIXON.

We all realize that the fight for the ballots in November involves an extremely difficult series of Senate and House races for the Republican Party.

We wish, therefore, the greatest of success to the National Citizens for Eisenhower-Nixon in mobilizing independent voters on behalf of GOP candidates who will work hand in hand with the present Republican national administration.

REGULAR REPUBLICAN STRENGTH ESSENTIAL

Naturally, we know that the Republican National Committee, under Meade Alcorn, will continue to do a great job, as well. A strong Republican National Committee, together with the State organizations, is essential in this year in particular. In Wisconsin, the State voluntary committee is hard at work in our 71 counties on behalf of our National and State candidates.

LISTING OF OFFICERS AND COMMITTEEMEN

I send to the desk now a list of the distinguished citizens who serve as officers and members of the general committee of the National Citizens for Eisenhower-Nixon.

I congratulate the organization for the very high caliber of individuals associated with it this year, as in previous years.

By their diligent efforts, I am sure they are going to help bring an impressive vote to the Republican column in the crucial 1958 races.

I ask unanimous consent that the list of officers and general committee members be printed in the Appendix of the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

1958 COMMITTEE OF THE NATIONAL CITIZENS FOR EISENHOWER-NIXON

Officers: Lloyd F. MacMahon, chairman; Mrs. Valley Knudsen, cochairman; John W. Callaghan, treasurer; John H. Norris, field director; Robert P. Patterson, Jr., secretary; Robert L. Clare, Jr., general counsel; Frank Di Iuglio, campaign activities; Dan Donaldson, speakers bureau; Raymond C. Baker, publicity director.

General committee: John D. Ames, George H. Bailey, Thomas B. Butler, George M. Cheston, Jack F. Chrysler, Mrs. J. C. Cowdin, Mrs. Frank H. Cowgill, Nate L. Crabtree, James C. Dezendorf, Warren R. Dwyer, Howard S. Fahey, Jr., Helen Hayes, Leonard D. Henry, Mrs. Edwin I. Hilson, Michael J. Horan, Mrs. Dorothy D. Houghton, Mrs. Ada Fisher Jones, Thomas R. Knudsen, Robert P. Marcus, Gavin P. Murphy, James L. Murphy, James F. O'Neill, Roger V. Pugh, Jr., Nelson A. Rockefeller, John A. Roosevelt, Albert C. Simmonds, Jr., L. Corrin Strong, Ralph W. Stultz, George M. Vetter, Jr., Russell Ziegler.

Subsidies for American Children

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Thursday, August 14, 1958

Mr. MCNAMARA. Mr. President, the issue of Parents magazine for September 1958 contains a most timely article by our colleague, the junior Senator from Oregon [Mr. NEUBERGER], entitled "Subsidies for Children."

In this article Senator NEUBERGER points out that it seems to be easier to obtain a Federal subsidy for farm crops, for shipbuilding, for airports, than for the boys and girls of America.

I am pleased that our colleague from Oregon has emphasized the strong justification for Federal aid to education, which I have just been advocating on the Senate floor, Mr. President. In his article in Parents' magazine, Senator NEUBERGER writes:

Without a funneling of national wealth into school channels on a fair basis, children in States of low average incomes will be far less adequately educated than in those States with greater financial resources.

I understand that Parents' magazine has a circulation throughout the Nation of 1,785,000 copies. I trust the subscribers will come to a greater realization of the urgent need for Federal aid to schools through a reading of DICK NEUBERGER's article.

I am pleased to request, Mr. President, that the article by Senator NEUBERGER be printed in the Appendix of the RECORD, as it appeared originally in Parents' magazine for September.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUBSIDIES FOR CHILDREN

(By RICHARD L. NEUBERGER, United States Senator from Oregon)

On an afternoon when welfare legislation was before the United States Senate, we were debating an amendment to increase Federal matching funds by about $6.25 a month to each needy recipient of old-age assistance. It was a worthy proposal which I was happy to cosponsor. Abruptly, a message was sent in to me from the gallery by a social worker long active in the field of child welfare. She called to my attention a major omission in the pending amendment. I rushed back to the Senate floor and asked the principal sponsor if he would be willing to add to the proposals equal increases for aid to dependent children. He replied, "I do not think the amendment would receive any more votes if it contained a provision for dependent children."

My colleague was frank and candid, and of him I make no criticism. Indeed, he is a person with a humanitarian outlook. Yet Senator PAUL H. DOUGLAS of Illinois ambled over to my desk and muttered, "Perhaps you and I ought to offer a constitutional amendment fixing the right to vote during infancy—at the age of 1 year, let us say. That might give dependent children more influence than they have at present in the Halls of Congress."

I cite this episode only as evidence of a glaring fact. When subsidies are under discussion on Capitol Hill, those which inevitably receive the shortest shrift and the least consideration are subsidies for the Nation's children.

This stems, to my way of thinking, from two principal causes: (1) Sponsors of children's legislation are frequently too modest and timid in their demands; and (2) political pressure in behalf of programs for children is not nearly so intensive or overpowering as that mustered for business, labor, veterans, farmers or some other group.

In the Senate much of my time has been allocated to legislation to expand children's benefits and programs. It has taken many forms: advocacy of pilot courses to train teachers specializing in classes for retarded children; bills to raise the authorization ceilings on grants-in-aid for maternal and child health and crippled children services; a resolution calling for a formal Senate study of Canada's 12-year experiment with family allowances; cosponsorship of the Murray bill (which would authorize $25 per student in Federal funds for either classroom construction or teachers' salaries during the first year of its operation, rising to $100 per student in every State by the end of the fourth year); and authorship of Federal matching grants to encourage courses teaching the basic physiological facts about the impact on health of tobacco, liquor, and drugs. In addition, largely as a result of personal association with the illustrious Dr. Sidney Farber, director of the Children's Cancer Research Foundation, I am sponsoring a bill for $500 million grants for cancer research and study, in an effort to get at the origins of the disease which claims the lives of more children than any other cause except accidents.

Out of all this experience I have become thoroughly convinced that the devoted men and women promoting children's bills are not nearly aggressive enough in their requests. They use few postcard or telegraphic blitzkriegs, for example. I cannot help but believe that spokesmen for the next generation would seek wider benefits if they knew the scope and size of Federal subsidies to other groups in the population.

A subsidy is defined by Webster's New International Dictionary as "a grant of funds or property from a government * * * to a private person or company to assist in the establishment or support of an enterprise deemed advantageous to the public."

With most government subsidies I have scant quarrel although I would challenge an agricultural policy which pays price supports on peanuts and tobacco, but not on eggs and orchard fruits. Subsidies grew up with the United States, and they are now part of the warp and woof of our national fabric. The first transcontinental railroads were given every alternate section of land along their rights-of-way to induce them to build to the Pacific's shores. By President Abraham Lincoln's signature, the Homestead Act made the public domain of the West available for the taking to pioneering families who were unafraid of a hostile wilderness. Free locks and canals sent barges up the Mississippi and the Ohio and eventually up the surging Columbia River.

In our time, a $2,500 federally financed operation on a little girl born with a hole between her heart chambers is a subsidy, and so is a $20 million Government payment to a shipping corporation to enable it to cope with foreign competitors. These are the major subdivisions of Federal subsidies for the fiscal year 1957, as compiled by the Library of Congress:

[In millions of dollars]

Agriculture	$3,564
Business	1,011
Labor	333
War veterans	4,679
International (foreign aid, etc.)	3,998
Others	1,763

What do some of these subdivisions really mean? Under agriculture, for example, the Government spent $247 million in 1957 to maintain price supports on the corn crop. In the business category, the Federal budget set aside some $39 million for payments to private airline operations and $114 million to subsidize our shipping on the high seas. Virtually the entire labor classification was in the form of Federal support of and supervision over unemployment-compensation programs. The bulk of the veterans' program was made up of pensions and medical care. And, of course, the mutual-security system dominated Government disbursements in the realm of international aid.

All of these Government undertakings during fiscal year 1957, described as subsidies by the Legislative Reference Service, totaled $15.3 billion. Subsidies to children, such as they are, were lumped in the category containing some $1,763 million of this amount because it included many of the expenditures of the Department of Health, Education, and Welfare. Now, how much will really be spent on the children of the United States through the Federal budget in the fiscal year 1959? I would list these items:

[In millions of dollars]

School lunch program	110
Special milk program	75
Aid to dependent children	539
Crippled children services	15
Maternal and child health services	16½
Child welfare services	12
Salaries and expenses United States Children's Bureau	2
Aid to schools in federally impacted areas [1]	205½

[1] Estimated on basis of legislation passed by the House.

This total, representing the entire Federal subsidy to children, amounts to $975 million. Furthermore, the assistance to schools where Federal garrisons and construction projects are underway is actually not a child-aid program. Yet, even if we stretch a point and include the $205½ million allotted to schools in these realms of Federal defense activities, the whole expenditure for children in fiscal year 1959 is barely 5 percent of all Federal subsidies. According to the study prepared by the Library of Congress, it is much less than the subsidies disbursed to business, agriculture, veterans, or foreign countries. Is this fulfilling our obligation to our next generation of citizens?

Indeed, my own approach to Federal fiscal policy has been heavily conditioned by my profound conviction that our Government is far too penurious in its financial support of virtually all child-welfare programs. All existing children's programs should be greatly enlarged. This means funds for maternal and child health, for crippled children, for the school-lunch program, for aid to dependent children, and for children who are retarded through any kind of congenital defect. When we are spending some $45 billion for armaments, is it not a shameful disgrace when children with defective hearts no longer can obtain surgery because an appropriation of a mere $100,000 for the Government's open heart surgery project is exhausted? When these funds ran out, 70 children from 12 States were on the waiting list at the University of Minnesota Hospital, in urgent need of heart surgery. Sixty-nine more children had applied, but the requests had not even been processed. Bess Furman wrote in the New York Times that this plea had gone to the White House from the parents of a little girl born with a hole between the chambers of her heart: "We don't like to postpone this operation. We know the longer it is put off, the less chance she has."

Even as the heart surgery program for children came to a halt, my bill was pending in the Senate to raise the statutory limit on maternal and child health to $25 million annually, from the present $16.5 million and $15 million, respectively. The situation should have stirred a violent political eruption. Sad to relate, it was accepted passively. Only two Senators spoke to me about it. As I recollect, they were MARGARET CHASE SMITH, Republican of Maine, and HUBERT H. HUMPHREY, Democrat, of Minnesota, in whose State the hospital is located where the surgical experiment had aided 400 children born with crippled hearts since 1955.

Not only are we lamentably hesitant about expanding current programs for the health and welfare of America's children, but our reluctance is equally inexplicable with respect to new undertakings. Canada's island province of Newfoundland, despite its limited resources and Spartan way of life, has operated for nearly 2 years under a law providing that every child who has not attained his 16th birthday is entitled free of

charge to medical services of all kinds, including hospitalization and dental and optical services.

Prof. James C. Vadakin of Miami University has written, "In the United States, Federal expenditures on child welfare amounted to only about eight-tenths of 1 percent of total Federal expenditures in 1956. This represented only about 60 cents out of every $100 of Federal moneys spent. In Canada, during the same year, family allowances payments alone accounted for almost 9 percent of total Dominion expenditures, or about $9 out of every $100 of Dominion moneys spent for all purposes." The least we could do is to study thoroughly the operation of this program in the country which shares with us the bulk of the land of the North American Continent.

In all five Scandinavian nations—Denmark, Finland, Sweden, Norway, and Iceland—there are programs for the daytime care of children in nurseries or kindergartens. Because the rigors of the northern winter require maximum development of child health during the comparatively fleeting months of summer, most of these countries help to furnish zestful vacations for children in the vast outdoors. The railroads and other common carriers frequently provide free transportation to recreational centers. Adds a Danish Government commentary: "In Denmark it has been a custom for many years for farmers to extend invitations to poor children, particularly from the capital, to spend a free holiday in the country; transportation on the railways is, in these cases, provided free by the state."

The child, after all, is a citizen of the Nation. He may dwell in any 1 of the 48 States, but he will grow up to be a citizen of the United States of America. In an hour of emergency and crisis, the National Government can claim the child's services and perhaps even his life. Military duty is a national obligation to the United States Government, contributed in World War II by young women as well as by young men. Does the Government feel a commensurate obligation? The child, grown to young manhood, is regarded as a citizen of the Nation when an aggressor strikes at one of our military outposts, but evidently he is merely a citizen of his own particular State when he may be in need of nutrition, social guidance or medical care in his youth. High-income States like New York spend an average of $3.33 per child for child welfare services, but low-income States like Arkansas spend a mere $2 cents.

Wealth in the United States has been inequitably distributed. To begin with, most of the manufacturing takes place in a handful of great industrial States, such as Michigan, Pennsylvania, California, Illinois, and New York. American families elsewhere pay tribute to these States whenever they finance their automobiles, electrical appliances, home furnishings, or other products of industry. The only avenue by which some of this wealth can be spread throughout the country for support of the schools is through the Federal taxing power. Obviously, Idaho and Mississippi cannot levy on incomes in Ohio or Connecticut to help sustain their educational systems. Yet, without such a funneling of national wealth into school channels on a fair basis, children in States of low average incomes will be far less adequately educated than those in States with greater financial resources.

I would estimate that nearly half our rollcall votes in the Senate involve one kind of subsidy or another. Many of these subsidies even furnish benefits beyond our own international borders. Some 25 percent of the subsidy payments studied by the Library of Congress were in the realm of foreign aid, economic as well as military. Since becoming a Member of the Senate, I have supported President Eisenhower's recommendations on virtually every such rollcall, despite the fact that I am not of his political faith. It has seemed to me that the great question of continuing the free-world alliance cannot be shaped by partisan differences.
